Acknowledgments

Grateful acknowledgment is made to the following publishers and individuals for permission to reprint material which is in copyright or of which they are the authorized publishers:

Barnes and Noble, Inc., publishers, for the selections from ORIGINAL NARRATIVES OF EARLY AMERICAN HISTORY.

Dietz Press, publishers, and Louis B. Wright, editor, for the selections from THE SECRET DIARY OF WILLIAM BYRD OF WESTOVER, 1709-1712

Houghton Mifflin Company, for the selections from THE HEART OF EMERSON'S JOURNALS, edited by Bliss Perry, and from THE HEART OF THOREAU'S JOURNALS, edited by Odell Shepard.

Princeton University Press, for the selections from THE POETICAL WORKS OF EDWARD TAYLOR, edited by T. H. Johnson.

The United States Catholic Historical Society, for the selection from Waldseemüller's COSMOGRAPHIAE INTRODUCTIO, edited by Charles G. Herbermann.

Yale University Press, for the selections from THE AMERICAN NOTEBOOKS OF NATHANIEL HAWTHORNE, edited by Randall Stewart.

Preface

A NEW COLLEGE ANTHOLOGY of American literature, with which is integrated a comprehensive historical and critical survey, must be designed to meet the needs of students whose perspectives are growing with our complex times. It must offer to their active mentality adequate materials for study of the backgrounds of American thought, of our literary movements, and of the achievement of our best writers. With a review of the building of a national literature, it must also emphasize the internationalism or world-consciousness which has been increasingly prominent in American letters for a hundred years past and is so important today. It must present, moreover, the significant sociological aspects of our literature without neglecting or underrating distinctively esthetic considerations.

These aims have been those of the editors of this work throughout its planning and its making. They have given unusual space and attention to the achievement of the eight American writers now generally recognized to have contributed most conspicuously to the great stream of world literature—Poe, Emerson, Thoreau, Hawthorne, Melville, Whitman, Mark Twain, and Henry James. They have endeavored to present a comprehensive view of the growth of American culture in the development of our literature from the earliest times to the immediate present, but the emphasis has been placed squarely upon the masterpieces and the ideas which these authors, whose work transcends national boundaries, have contributed to the world. Here are the spokesmen whose words are that “something so written to after times” that Americans “should not willingly let it die.”

Each of the two volumes is divided into two Books. In Book I of Volume I, the period from the beginnings to 1800 is represented by many selections which are arranged to trace three broad, simple themes: (1) exploration, settlement, and travel; (2) religious thought and experience; and (3) the issues of democracy. It is believed that these generally recognized major themes in Colonial and Early National literature are nowhere else represented so amply or so followed through in orderly arrangement without further distracting groupings. In this section texts are modernized, and translations supplement the English documents to show the polyglot nature of our early culture. Book I is

also especially designed to be used as background in the study of the work of our authors with world stature; early writers on religion illuminate the work of Hawthorne and Emerson, and early commentators on democracy are valuable for the understanding of Thoreau, Emerson, and Whitman.

In Book II (Volume I) the period from 1800 to 1860 is approached in terms of cultural patterns—the founding of a national literature, the frontier, humanitarianism and reform, transcendentalism, and humanism. But a large proportion of the selections in Book II consists of leading works by the major writers of the period, each of whom is more fully represented than is usual in general anthologies. Poe, Emerson, Thoreau, Hawthorne, and Melville—five writers of world significance—may here be read in works which should form a part of every American's educational experience. In this section is evident the purpose of the editors to provide a rich context of the writing of the times largely in order to clarify and give point to the great contributions made by the major authors. Thus are included salient writings of Irving, Bryant, Cooper, Simms, Longfellow, Whittier, and Lowell, with briefer selections from minor figures. All these help to define the tendencies which are reflected, but at the same time transcended, by the work of the authors who occupy the central place in this anthology.

In Book III (Volume II) the period from 1860 to 1900 is similarly treated. Here the patterns are four: the reaffirmation of democracy, the new regionalism, the critical reflection of a changing America, and the international theme. The major writers are Whitman, Mark Twain, and Henry James. Their work emerges from a setting formed by selections from Lanier, Holmes, Emily Dickinson, Howells (who is especially well represented), and a considerable number of lesser writers.

In Book IV (Volume II) is found work of the period from 1900 to the present by writers whom the editors believe to have strong claims on our continuing attention. The first group of selections attempts to present adequately and relate significantly the work of recent philosophers and literary critics. This section serves to define both the ideological and the esthetic problems faced by Twentieth Century writers, and thus correlates with the two groups which follow—one devoted to fiction and one to poetry. The selections close with a limited sampling of the work of more recent writers who may be regarded as forerunners of tomorrow.

A leading feature of the present work is the series of historical and critical essays which accompany and interpret the groups of selections. The extensive historical introductions provided for each of the four Books, together with the full critical and biographical essays on each of the major writers and the briefer treatments (varying from short head-notes to rather full discussions) of lesser figures, are designed to form a concise but adequate critical survey of American

literature. This material is intended to help the student reader to understand and appreciate the selections. It is intended to be helpful to the teacher because it relieves him from the presentation in lecture form of necessary data. The authors have sought to avoid rash theorizing and innovation for its own sake as earnestly as they have sought to escape empty conventionality, to suggest new approaches, to point out the latest scholarship, and to challenge the thinking of the student.

The critical, historical, biographical, and bibliographical materials are closely integrated with the selections in both arrangement and substance. The annotated bibliographies list the standard authorities and the more recent works of importance and value.

There are many methods of teaching American literature. Any one of them may be successful in the practice of a great teacher. But it is the belief of the editors that the present work, with its unusually copious selections from the greatest writers and its offering of various and stimulating supplementary literature, together with its historical and critical surveys, will lend itself to the most diverse uses in actual teaching. With that conviction they offer it to their fellow teachers.

The editors wish to thank Messrs. Joseph Warren Beach, University of Minnesota, William Charvat, Ohio State University, and Thomas H. Johnson, Lawrenceville School, for aid and advice during the preparation of this anthology.

--	---

PART IV: TRANSCENDENTALISM

RALPH WALDO EMERSON	701	"The Poet"	752
"Concord Hymn"	712	"Montaigne"	765
"Good-bye"	713	From <i>Journals</i>	776
"Each and All"	713	HENRY DAVID THOREAU	782
"The Rhodora"	714	From <i>A Week on the Concord and Merrimack Rivers</i>	
"The Humble-Bee"	714	From "Saturday"	791
"Woodnotes I"	715	From "Sunday"	796
"Woodnotes II"	717	From "Tuesday"	797
"The Snow-Storm"	720	From "Friday"	800
"Forerunners"	721	From <i>Walden</i>	
"Forbearance"	721	"Economy"	801
"To J. W."	722	From "Where I Lived and What I Lived For"	838
"Hamatreya"	722	From "Sounds"	840
"Fable"	723	"The Bean-Field"	842
"Give All to Love"	723	"Conclusion"	848
"The Apology"	724	"Civil Disobedience"	855
"Brahma"	724	From <i>Excursions</i>	
"Days"	724	From "Wild Apples: The Fruit and its Flavor"	868
"Boston Hymn"	725	From <i>Journals</i>	870
"Terminus"	726		
"The Past"	726		
"The American Scholar"	726		
"Self-Reliance"	737		

PART V: HUMANISM AND BEYOND

NATHANIEL HAWTHORNE	877	"The Portent"	1056
"Sights from a Steeple"	892	From <i>Battle-Pieces and Aspects of the War</i>	
"Mr Higginbotham's Catastrophe"	895	"Malvern Hill"	1056
"Young Goodman Brown"	902	"Sheridan at Cedar Creek"	1056
"Wakefield"	910	"The College Colonel"	1057
"The Minister's Black Veil"	915	Prose Supplement to <i>Battle Pieces</i>	1057
"The Maypole of Merrymount"	922	Epilogue from <i>Clarel</i>	1062
"Endicott and the Red Cross"	929	"John Marr"	1063
"The Celestial Railroad"	932	"Far Off-shore"	1064
"Rappaccini's Daughter"	942	"To Ned"	1064
"The Old Manse"	959	"The Envious Isles"	1064
Source Material for "Ethan Brand"		"The Ravaged Villa"	1065
from <i>The American Notebooks</i>	975	"Monody"	1065
"Ethan Brand"	980	"The Enthusiast"	1065
HERMAN MELVILLE	990	<i>Billy Budd, Foretopman</i>	1065
From "Hawthorne and His Mosses"	1003		
"Benito Cereno"	1007

THE ISSUES OF DEMOCRACY

AMERICAN LITERATURE BEFORE 1800

I

CREATIVE writers and literary critics are in the habit of using the word "literature" somewhat narrowly to include only *belles-lettres* or writings distinguished by formal aesthetic intention and effect—in other words, poetry, drama, fiction, and the essay. Their exhortations, prophecies, and strictures—from Emerson, Whitman, and Lowell to H. L. Mencken, Branch Cabell, and Van Wyck Brooks—have tended to produce in the average reader the impression that American literature has always been, and still is, comparatively "young," that its real beginnings should be dated after 1800, that only in the 19th Century or our own day has it come of age, that its full maturity yet lies ahead.

Historians and bibliographers have an altogether different conception of the word "literature." They apply it loosely to embrace every kind of written document which yields information as to how men have lived or what they have thought or felt in a given period. The labors of such scholars—of Moses Coit Tyler in his *A History of American Literature During the Colonial Time* and *The Literary History of the American Revolution*, of Charles Evans in his *American Bibliography*, and of Joseph Sabin and Wilberforce Eames in their *Bibliotheca Americana*—have shown that American literature before 1800 consists of a vast body of documents representing the printing presses of two hemispheres and recording two centuries and more of experience and reflection.

Of these two seemingly antithetical views, the second is an indispensable corrective for the first. There is little doubt, of course, that the literature which "matters" for the average reader is "the literature of power" rather than "the literature of knowledge," to employ Thomas De Quincey's famous distinction. We should read to add to our stature, not as antiquarians, but as men and women. For this reason it is entirely valid to chart the history of American literature in terms of the emergence of the aesthetically first-rate, whatever one may consider this to be. But such charting is bound to be an arbitrary and capricious falsification unless it is based on a more than superficial acquaintance with the kind of writing Americans did in what may be called the pre-aesthetic centuries of their expression. In some of this writing the aesthetic motive is to be found in its germinal state alongside the practical motive. Much of this writing actually provided subject-matter for later belletristic achievements. Most of it helps us to understand some phase of the many-sided American spirit that inspired our best 19th Century writers and still inspires our best 20th Century ones—its adventurous self-reliance, its faith in divinely estab-

Not only were the disputants seeking a foreign jury; the issues with which they were belligerently concerned were the same ones that were being debated in the mother country. American printers, however, had plenty of work to do as they set up their presses. Either at their own risk or at the expense of the authors, they issued a great number of sermons in pamphlet form and eventually attempted such tomes as Samuel Willard's 988-page *A Compleat Body of Divinity*, Boston, 1726. Booksellers placed orders with them for psalters and psalm-books. Laws and ordinances of provincial governments were routine jobs.

Perhaps the three most important ventures undertaken by these printers were, in chronological sequence, almanacs, newspapers, and magazines. Matthew Day inaugurated the vogue of the almanac when he issued that of Captain William Pierce in 1638, no copy of which is extant, and that of Samuel Danforth "for the year of our Lord 1646," the oldest existing specimen of printing in the English-speaking colonies. Of the many almanacs that followed, those compiled by Daniel Leeds and his sons and printed by William Bradford and those both written and published by the brothers Franklin are the most interesting for their verse and essays. Preceded by a broadside entitled *The Present State of New English Affairs*, issued by Samuel Green in 1689, and a promptly suppressed news-sheet entitled *Publick Occurrences, Both Forreign and Domestick*, Boston, September 25, 1690, the first regularly published American newspaper was a weekly, the *Boston News-Letter*, started by John Campbell. Its initial number was dated "From Monday, April 17, to Monday, April 24, 1704." James Franklin's *New-England Courant*, which was the fourth weekly newspaper to be printed in the colonies, started the vogue of essay-writing in the style of the *Spectator* when it featured the "Silence Dogood" papers of Benjamin Franklin and other contributions intended to "expose the Vices and Follies of Persons of all Ranks and Degrees, under feign'd Names . . ." The first daily newspaper in America was the *Pennsylvania Evening Post, and Daily Advertiser*, which made its appearance in Philadelphia, June 17, 1783, and was published by Benjamin Towne, formerly a partner of William Goddard. In January, 1741, the first two American magazines were established, both in Philadelphia. Andrew Bradford, son of the printer William Bradford, brought out his *American Magazine, or a monthly view of the Political State of the Colonies*, three days ahead of Benjamin Franklin's *General Magazine, and Historical Chronicle, for all the British Plantations in America*. The first of these lasted for only three numbers, the second for only six, but they were forerunners of many more before 1800, some of which, such as the *American Museum*, the *Massachusetts Magazine*, and the *New York Magazine*, were of relatively long life. During the last three decades of the 18th Century, from the onset of the Revolution to the triumph of Jefferson at the polls, American printers issued a vast literature of political pamphlets, as well as important travel-books, histories, plays, novels, and volumes of poetry.

III

So much for the printing record. As for the literature itself, it is so extensive, heterogeneous, and inchoate that the schemes of presentation and frames of order commonly used by the literary historian cannot be applied to it without seeming somewhat inappropriate and futile. To treat of it according to periods, each with its *zeit-geist* or prevailing climate of opinion and taste, is to read into it patterns that only the literature of a full-fledged nation and a settled culture actually reflects. To discuss it in terms of literary types is to attribute to many of its writers a self-conscious concern with form which they in all likelihood did not possess and to lose oneself in attempts to define precisely the scope and limits of "the pamphlet of newes," frequently written to lure new colonists across the Atlantic, or of "the scientific essay," as this was developed by the almanac-makers, or of other genres still more indeterminate. A less misleading approach, even though it involves oversimplification and considerable omission, is to select the main themes or motifs, the broad obvious emphases and directions, of this literature, and to follow each one through from its beginnings to whatever point it had reached by 1800.

The earliest, the most persistent, the most fascinating of these themes was the mastering of the new physical environment, of the whole vast strange continent abounding with peril and promise, with infinite surprises of beauty and evil. This mastering had three main stages. First was the stage of exploration from European ports. It began long before Columbus, during the Norse revival that sent Viking swaggerers and brawlers eastward into Russia, southward into Normandy and England, and also westward to make important geographical discoveries. These discoveries were a kind of wild overture to the incredible sustained opera of bold enterprise that was to begin with the voyages of Columbus. The age of feudalism was passing. In the cities of mediaeval Europe had arisen a new capitalism, far more expansive than that of ancient Rome or of contemporaneous Byzantium. Baronial localism and ecclesiastical universalism, which between them had constituted the temporal and spiritual "order" of the Middle Ages, were yielding to powerful integrated national states, competing with each other for commercial supremacy. Developments in science, including the wide use and perfection of such instruments of navigation as the compass and the astrolabe and the rise of a new cosmography, a new astronomy, a new mathematics, affected the course which this competition was to take. Portugal, Spain, France, England, and the Netherlands sent explorers westward. The aim of finding a new and better passage to India yielded to the aim of exploiting the New World, which had been so inappropriately named "America" by an obscure pedantical cosmographer.

The second stage was that of settlement or colonization. The competition

Not only were the disputants seeking a foreign jury; the issues with which they were belligerently concerned were the same ones that were being debated in the mother country. American printers, however, had plenty of work to do as they set up their presses. Either at their own risk or at the expense of the authors, they issued a great number of sermons in pamphlet form and eventually attempted such tomes as Samuel Willard's 988-page *A Compleat Body of Divinity*, Boston, 1726. Booksellers placed orders with them for psalters and psalm-books. Laws and ordinances of provincial governments were routine jobs.

Perhaps the three most important ventures undertaken by these printers were, in chronological sequence, almanacs, newspapers, and magazines. Matthew Day inaugurated the vogue of the almanac when he issued that of Captain William Pierce in 1638, no copy of which is extant, and that of Samuel Danforth "for the year of our Lord 1646," the oldest existing specimen of printing in the English-speaking colonies. Of the many almanacs that followed, those compiled by Daniel Leeds and his sons and printed by William Bradford and those both written and published by the brothers Franklin are the most interesting for their verse and essays. Preceded by a broadside entitled *The Present State of New English Affairs*, issued by Samuel Green in 1689, and a promptly suppressed news-sheet entitled *Publick Occurrences, Both Forreign and Domestick*, Boston, September 25, 1690, the first regularly published American newspaper was a weekly, the *Boston News-Letter*, started by John Campbell. Its initial number was dated "From Monday, April 17, to Monday, April 24, 1704." James Franklin's *New-England Courant*, which was the fourth weekly newspaper to be printed in the colonies, started the vogue of essay-writing in the style of the *Spectator* when it featured the "Silence Dogood" papers of Benjamin Franklin and other contributions intended to "expose the Vices and Follies of Persons of all Ranks and Degrees, under feign'd Names . . ." The first daily newspaper in America was the *Pennsylvania Evening Post, and Daily Advertiser*, which made its appearance in Philadelphia, June 17, 1783, and was published by Benjamin Towne, formerly a partner of William Goddard. In January, 1741, the first two American magazines were established, both in Philadelphia. Andrew Bradford, son of the printer William Bradford, brought out his *American Magazine, or a monthly view of the Political State of the Colonies*, three days ahead of Benjamin Franklin's *General Magazine, and Historical Chronicle, for all the British Plantations in America*. The first of these lasted for only three numbers, the second for only six, but they were forerunners of many more before 1800, some of which, such as the *American Museum*, the *Massachusetts Magazine*, and the *New York Magazine*, were of relatively long life. During the last three decades of the 18th Century, from the onset of the Revolution to the triumph of Jefferson at the polls, American printers issued a vast literature of political pamphlets, as well as important travel-books, histories, plays, novels, and volumes of poetry.

III

So much for the printing record. As for the literature itself, it is so extensive, heterogeneous, and inchoate that the schemes of presentation and frames of order commonly used by the literary historian cannot be applied to it without seeming somewhat inappropriate and futile. To treat of it according to periods, each with its *zeit-geist* or prevailing climate of opinion and taste, is to read into it patterns that only the literature of a full-fledged nation and a settled culture actually reflects. To discuss it in terms of literary types is to attribute to many of its writers a self-conscious concern with form which they in all likelihood did not possess and to lose oneself in attempts to define precisely the scope and limits of "the pamphlet of newes," frequently written to lure new colonists across the Atlantic, or of "the scientific essay," as this was developed by the almanac-makers, or of other genres still more indeterminate. A less misleading approach, even though it involves oversimplification and considerable omission, is to select the main themes or motifs, the broad obvious emphases and directions, of this literature, and to follow each one through from its beginnings to whatever point it had reached by 1800.

The earliest, the most persistent, the most fascinating of these themes was the mastering of the new physical environment, of the whole vast strange continent abounding with peril and promise, with infinite surprises of beauty and evil. This mastering had three main stages. First was the stage of exploration from European ports. It began long before Columbus, during the Norse revival that sent Viking swaggerers and brawlers eastward into Russia, southward into Normandy and England, and also westward to make important geographical discoveries. These discoveries were a kind of wild overture to the incredible sustained opera of bold enterprise that was to begin with the voyages of Columbus. The age of feudalism was passing. In the cities of mediaeval Europe had arisen a new capitalism, far more expansive than that of ancient Rome or of contemporaneous Byzantium. Baronial localism and ecclesiastical universalism, which between them had constituted the temporal and spiritual "order" of the Middle Ages, were yielding to powerful integrated national states, competing with each other for commercial supremacy. Developments in science, including the wide use and perfection of such instruments of navigation as the compass and the astrolabe and the rise of a new cosmography, a new astronomy, a new mathematics, affected the course which this competition was to take. Portugal, Spain, France, England, and the Netherlands sent explorers westward. The aim of finding a new and better passage to India yielded to the aim of exploiting the New World, which had been so inappropriately named "America" by an obscure pedantical cosmographer.

The second stage was that of settlement or colonization. The competition

between the great states of Europe continued. Religious conflict and persecution, economic depression and insecurity, were European evils that now became added incentives to colonization. One of the last states of Europe to enter the competition for a place in the western sun—England—began to win out in North America, partly because, of all these states, she had the largest number of dissatisfied and exploited “good citizens.” These “good citizens” swarmed overseas to establish the Southern, the New England, and the Middle Colonies of the Atlantic seaboard. Each settlement had its individual problems, political, economic, religious, and all had to deal in one way or another with the Indians. As these individual problems were solved, as the Indians were Christianized or counter-massacred or driven farther inland, the seaboard settlements became true outposts of European civilization, and the frontier was created—a line of straggling, turbulent settlements moving ever westward.

At this point began the third stage of mastering the new environment—the stage of American travel, either from one part of the seaboard to another or into the still mysterious, the ever-beckoning West. These three great stages—exploration, settlement, and travel—were “matters” which the first poets, dramatists, and novelists of the new nation had at their disposal and which they did not neglect. The literature recording these three stages—from *The Flat Island Book* and Columbus’ Letter through the histories of Bradford and Winthrop to the travels of Jonathan Carver and William Bartram, and the historical fiction of Mrs. Rowson—exhibits all gradations of narrative art or the lack of it and reveals fully the kinds of personalities in which the polyglot national character of the early 19th Century had its roots.

IV

Another central theme in American literature before 1800 was religion. Although most of the colonists risked the tremendous hazards of the overseas voyage because they thought the New World would afford them a chance to make a better living, many of them put alongside this motive the need of worshipping God in their own way. What they encountered on the voyage and after they arrived confirmed them in their supernaturalism. Only a power greater than themselves had enabled them to surmount the malice of circumstance. Without belief in such a power, they could not confront intrepidly or calmly the hardships, the violence, the loneliness that they knew lay ahead.

Religion meant two things to them—a corpus of thought and a mode of experience. In treatises and sermons, they formulated their ideas about general and particular providence, grace and revelation, sin and repentance and judgment. In intimate prose narratives or ventures into verse, they recorded the ebb and flow of their spiritual feelings. Sometimes the ideas and the feelings

curiously commingled to produce versified doctrine, as in the case of Wigglesworth or Freneau, or philosophical rhapsody, as in the case of Jonathan Edwards.

Puritanism, Quaker and Methodist Enthusiasm, Deism—these were the three great religious forces that had most impact upon the literature of the English-speaking colonies. Each originated in Europe and had there a long and complicated history. Yet each developed peculiar nuances and distinctive spokesmen in the American environment. Puritanism, which in 17th Century England was rapidly transformed in the crucible of the Civil War and the laboratory of the Commonwealth, achieved in New England an orthodoxy that opposed all forms of sectarian and individualistic worship and that provided dogmatic patterns and limits for the guidance and advancement of scientific learning. This orthodoxy was gradually undermined from within as its leading concepts were subtly affected by the 18th Century climate of opinion. From without, this orthodoxy was formidably challenged by the rise of Enthusiasm and Deism, both of which appeared to some extent in New England itself but had their fullest growth and widest spread in the Middle and the Southern Colonies. Enthusiasm, whether Quaker or Methodist or of a more outlandish type, tended to exaggerate and democratize the emotive elements held in solution in the Puritan synthesis. In Deism, the Reason and Nature which Puritan thought regarded as among the sources of insight into God's plan were turned against the Scripture, which Puritan thought had asserted to be the supreme and final arbiter, at least when interpreted by a properly educated clergy.

Puritanism had the distinction of producing in Edward Taylor one of the finest poets, and in Jonathan Edwards one of the greatest philosophers, of America before 1800. Deism, although it did not *produce* writers as great as these, had the distinction of serving as the religion of a Freneau, a Paine, a Jefferson. Enthusiasm was responsible for a considerable amount of writing, but most of it was of indifferent literary merit. William Penn and John Woolman were the best prose stylists and thinkers that any Enthusiastic sect could boast of. Yet it was Enthusiasm that provided material for *Wieland*, one of the most readable books by the father of the American novel, Charles Brockden Brown.

V

Puritanism, Enthusiasm, Deism, and the unclassifiable individualistic credo of a Roger Williams, no matter what their differences, had one tenet in common—that there exists a fundamental moral law of divine origin. The belief in such a law was necessary for the full development of two ideas: (1) that the individual is free, in the sense that he can attain to understanding of the fundamental law and can conduct himself in obedience to it; and (2) that hence,

with the growth of a proper individualism, the external controls established by the state can be gradually minimized and even dispensed with. With the clear emergence of these ideas in the 19th Century, the American Dream was full-blown, and democracy became a world-shaking faith. But it still had its pros and cons, of long standing, and these may be said to have constituted a third main theme of American literature before 1800.

The importance of the state, and of the obligations which the individual owed to it, was a ruling concept of Renaissance political thought. Puritans had suffered persecution in England as a result of the hold which this concept had on the administrative mind. When they themselves faced the task of administering a state in the New World, they adopted the same concept, with a canny insensitivity to the contradiction, and were for a while as crustily disregarding of the rights of the individual as any high-church authoritarian back home. When they carried their policy too far, Roger Williams and others amongst their number challenged them. The challenge was significant because it eventually led to the establishment of one of the Four Freedoms—freedom of religion—as a Constitutional right. In the 17th Century the fight for this freedom was waged, not only in New England, but in the Southern Colonies as well. It was in New England, however, that its pros and cons found most adequate literary expression—in the writings of John Winthrop, John Cotton, Nathaniel Ward, and Roger Williams.

The next series of colonial documents setting forth the controversies of democracy was the offspring of conflicts during the 17th and early 18th Century between the colonists and their royal governors. These conflicts were not confined to any one colony or group of colonies. The three most significant involved Governors Berkeley of Virginia, Andros of New England, and Cosby of New York. Freedom from fear was one of the several rights for which the colonists were struggling; freedom of speech and the press was the real issue at the trial of the printer, John Peter Zenger. Already, however, conservative or Tory polemics were taking shape. Against the spirit of insurgency was advanced the view that the great foes of orderly rule were the demagogue and the mob. The profoundest expression of the spirit of insurgency during this period was the work of John Wise.

Most revolutions begin, not on the plane of action, but on the plane of the spoken and written word. The American Revolution was no exception. Such clergymen as Jonathan Mayhew and such publicists as John Adams prepared the way for it when they drew arguments for the rights of the colonists from the great tradition of England's own revolutionary apologetics, best represented perhaps by Milton and Locke. The Loyalist clergyman, Jonathan Boucher, tried to reanimate the tradition of England's anti-revolutionary propaganda, but to no avail. The three major writers of the Revolution were the radical democrats, Paine, Jefferson, and Freneau. One of the works of Paine, *Agrarian Justice*,

which was inspired by the French rather than by the American Revolution, outdistanced most of the political and economic writing of its time in visionary democracy by expounding a plan to promote freedom from want.

Democracy may be defined as that form of government in which the majority rules with constant respect for individual and minority rights. Among minority rights may be included (1) the rights of defeated political parties; (2) the rights of the states or of each section or region of which the nation is composed; (3) the rights of each of the socio-economic classes—workingmen, bourgeoisie, capitalists, and the like; (4) the rights of foreign, colored, and “racial” groups; (5) the rights of religious sects. It is arguable that the Four Freedoms are primarily individual and minority rights. Freedom of speech has meaning chiefly with reference to members of political parties out of power and to the intelligentsia as a class. Freedom of religion applies most to religious sects. Freedom from want has meaning largely for exploited working-class groups. Freedom from fear, save when interpreted as freedom from the threat of aggressive war, relates most closely to the status and treatment of foreign, colored and “racial” groups.

This definition of democracy is, of course, but one of many. Among its merits is the emphasis that democracy at its best is a precarious equilibrium of forces, a constantly threatened compromise between extremes, a dynamic resolution of paradoxical values. When the majority rules without proper respect for individual and minority rights, one form of tyranny insinuates itself. When majority rule is directly or indirectly usurped, and individual and minority rights are flaunted, by any one minority, such as a combination of states, or vested economic interests, or a bureaucracy of office-holders, democracy is negated or obstructed. And of course any form of legal slavery means that democracy is quite incomplete.

In the post-Revolutionary period, the discussion of the new Constitution, the strife between Federalists and anti-Federalists, with their very different concepts of the centralized and the decentralized state, and the excitement produced by the French Revolution and its refugees—all created a tremendous popular interest in the meaning of democracy. A soberer critical spirit may be said to have replaced revolutionary fervor. The Hamilton of *The Federalist*, the Franklin of the Constitutional Convention, the Jefferson of the 1801 Inaugural, the John Adams who now exchanged letters with Samuel Adams were more mature political thinkers than the John Adams of the *Dissertation on the Canon and the Feudal Law*, the Paine of *Common Sense*, the Jefferson of the Declaration of Independence. One of the literary monuments of this period of constructive criticism of the democratic ethos was the satire of Brackenridge. Even though the Federalists went down in defeat in the first year of the new century, suspicion of the demagogue and of the mob persisted, and Jefferson himself was to propose a plan of education that had among its objectives, not

only the raising of the general electorate's mental level, but also the creation of an aristocracy of talent to provide humane and rational political and other kinds of leadership.

VI

American literature before 1800 can be related in many ways to that of the 19th and 20th Centuries. Of the eight major American writers of the 19th Century, Melville and Mark Twain have an adventurous self-reliance and a narrative gusto that far surpass, but at least suggest, the spirit and style of some of the early explorers and travelers. The religious thought and experience of Puritans, Enthusiasts, and Deists involved concepts—of God, of the Inner Light, of Nature—that received a new formulation and synthesis in the essays and poems of Emerson. Hawthorne and Thoreau actually steeped themselves in colonial narratives of exploration, settlement, travel, and religious experience. The subject-matter of some of Hawthorne's best fiction, Thoreau's view of nature—these owe a good deal to such reading. Some of the poems of Freneau and the best novels of Charles Brockden Brown mark the beginnings of that concern for aesthetic effect that is so pronounced in the poetry and fiction of Poe. Whitman, in "Passage to India," celebrates the great explorers, in "Chanting the Square Deific," he adds Satan to the Trinity and so conceives the Holy Ghost that it might easily square the circle; in his *Democratic Vistas*, there is scathing criticism of the realities of democracy in the early Gilded Age and yet the most rhapsodic rhetoric about democracy's ideals and future. As for 20th Century American writers, the re-evaluation of democracy has been for them a constantly more important concern, as unprecedented national and international crises have produced cumulative repercussions in their creative consciousness. So necessary for this re-evaluation did John Dos Passos consider Roger Williams and several of the publicists of the Revolution that he wrote a book about them, *The Ground We Stand On* (1941), with an introductory chapter entitled "The Use of the Past." If such recognition seems somewhat belated, one should remember that on July 4, 1945, the city of New Rochelle, New York, officially conferred on Thomas Paine the American citizenship it had denied him 139 years before.

The best short histories of America before 1800 are Curtis Nettels' *The Roots of American Civilization* (New York, 1938) and Max Savelle's *The Foundations of American Civilization* (New York, 1942). John Clyde Oswald's *Printing in the Americas* (New York, 1938), Frank Luther Mott's *A History of American Magazines 1741-1850* (New York, 1930), the first volume of his three-volume work, and *American Journalism* (New York, 1941), and W. W. Sweet's *Religion in Colonial America* (New York, 1942) are standard treatments of their subjects. Moses Coit Tyler's *A History of American*

Literature During the Colonial Time in two volumes (revised edition, New York, 1897, of a work originally published in 1879) and *The Literary History of the American Revolution, 1763-1783*, also in two volumes (New York, 1897), have never been superseded. Among important contributions to American intellectual history before 1800 are V. L. Parrington's *The Colonial Mind* (New York, 1927), the first volume in his *Main Currents in American Thought*; B. F. Wright's *American Interpretations of Natural Law* (Cambridge, Mass., 1931); Joseph Haroutunian's *Piety Versus Moralism: the Passing of the New England Theology* (New York, 1932); E. A. J. Johnson's *American Economic Thought in the Seventeenth Century* (London, 1932); G. A. Koch's *Republican Religion: the American Revolution and the Cult of Reason* (New York, 1933); Perry Miller's *The New England Mind* (New York, 1939); Leon Howard's *The Connecticut Wits* (Chicago, 1943); Merle Curti's *The Growth of American Thought* (New York, 1943); Ralph Barton Perry's *Puritanism and Democracy* (New York, 1944); and Herbert W. Schneider's *A History of American Philosophy* (New York, 1947).

Among the more readable biographical studies devoted to early American worthies and men of letters may be listed the following: S. E. Morison's *Builders of the Bay Colony* (Boston, 1930), George F. Willison's *Saints and Strangers* (New York, 1945); S. H. Brodwin's *The Irrepressible Democrat, Roger Williams* (New York, 1945); Kenneth B. Murdock's *Increase Mather* (Cambridge, 1925), Ola Elizabeth Winslow's *Jonathan Edwards* (New York, 1940); Carl Van Doren's *Benjamin Franklin* (New York, 1938); Frank Smith's *Thomas Paine, Liberator* (New York, 1938); Claude G. Bowers' series, *Young Jefferson* (Boston, 1945), *Jefferson and Hamilton* (Boston, 1925), and *Jefferson in Power* (Boston, 1936); C. M. Newlin's *The Life and Writings of Hugh Henry Brackenridge* (Princeton, 1932); and Lewis Leary's *That Rascal Freneau* (New Brunswick, N. J., 1941).

Important essays on various aspects of American literature before 1800 are to be found in Perry Miller and T. H. Johnson's *The Puritans* (New York, 1938) and in F. L. Mott and C. E. Jorgenson's *Franklin* (New York, 1936), C. H. Faust and T. H. Johnson's *Edwards* (New York, 1935), H. H. Clark's *Paine* (New York, 1944), and F. C. Prescott's *Hamilton and Jefferson* (New York, 1934), all in *American Writers Series*.

American Literature Before 1800

I

EXPLORATION, SETTLEMENT, AND TRAVEL

From
The Vinland History of the
Flat Island Book

c. 1380 (MS.)

NOT LONG before the year 985, the Norseman, Eric the Red, discovered Greenland and later attempted to colonize it. The best account of Eric is contained in one of the Icelandic sagas or prose narratives known as *The Saga of Eric the Red*. It remained for Eric the Red's son, Leif, to discover Vinland about the year 1000. Having sailed from Greenland to Norway, where he was baptized at the court of King Olaf, he returned to Greenland, where he visited another explorer, Biarni Heriulfsson, also recently arrived from Norway and full of news of lands he had seen. The most circumstantial account of Leif's discovery of Vinland is contained in one of the Icelandic sagas or prose narratives in that vellum manuscript known as *The Flat Island Book* because it was long owned by a family that lived on Flat Island in Broad Firth on the north-western coast of Iceland. Most of the material contained in *The Flat Island Book* was transcribed about 1380 by two priests from originals of which nothing is known. [The following selection is taken from a translation of "The Vinland History" of *The Flat Island Book* included in *The Northmen, Columbus, and Cabot 985-1503*, New York, 1906, one of the volumes in the series, *Original Narratives of Early American History*.]

THERE was now much talk about voyages of discovery. Leif, the son of Eric the Red, of Brattahlid [Eric's home in the Eastern Settlement of Greenland], visited Biarni Heriulfsson and bought a ship of him, and collected a crew, until they formed altogether a company of thirty-five men. Leif invited his father, Eric, to become the leader of the expedition, but Eric declined, saying that he was then stricken in years, and adding that he was less able to endure the exposure of sea-life than he had been. Leif replied that he would nevertheless be the one who would be most apt to bring good luck, and Eric yielded

to Leif's solicitation, and rode from home when they were ready to sail. When he was but a short distance from the ship, the horse which Eric was riding stumbled, and he was thrown from his back and wounded his foot, whereupon he exclaimed, "It is not designed for me to discover more lands than the one in which we are now living, nor can we now continue longer together." Eric returned home to Brattahlid, and Leif pursued his way to the ship with his companions, thirty-five men; one of the company was a German named Tyrker. They put the ship in order, and when they were ready, they sailed out

to sea, and found first that land which Biarni and his ship-mates found last. They sailed up to the land and cast anchor, and launched a boat and went ashore, and saw no grass there; great ice mountains lay inland back from the sea, and it was as a flat rock all the way from the sea to the ice mountains, and the country seemed to them to be entirely devoid of good qualities. Then said Leif, "It has not come to pass with us in regard to this land as with Biarni, that we have not gone upon it. To this country I will now give a name, and call it Helluland." They returned to the ship, put out to sea, and found a second land. They sailed again to the land, and came to anchor, and launched the boat, and went ashore. This was a level wooded land, and there were broad stretches of white sand, where they went, and the land was level by the sea. Then said Leif, "The land shall have a name after its nature, and we will call it Markland." They returned to the ship forthwith, and sailed away upon the main with north-east winds, and were out two "doegr"¹ before they sighted land. They sailed toward this land, and came to an island which lay to the northward off the land. There they went ashore and looked about them, the weather being fine, and they observed that there was dew upon the grass, and it so happened that they touched the dew with their hands, and touched their hands to their mouths, and it seemed to them that they had never before tasted anything so sweet as this. They went aboard their ship again and sailed into a certain sound, which lay between the island and a cape, which jutted out from the land on the north, and they stood in westering past the cape. At ebb-tide there were broad reaches of shallow water there, and they ran their ship aground there, and it was a long distance from the ship to the ocean; yet were they so anxious to go ashore that they could not wait until the tide should rise under their ship, but hastened to the land, where a certain river flows out from a lake. As

soon as the tide rose beneath their ship, however, they took the boat and rowed to the ship, which they conveyed up the river, and so into the lake, where they cast anchor and carried their hammocks ashore from the ship, and built themselves booths there. They afterwards determined to establish themselves there for the winter, and they accordingly built a large house. There was no lack of salmon there either in the river or in the lake, and larger salmon than they had ever seen before. The country thereabouts seemed to be possessed of such good qualities that cattle would need no fodder there during the winters. There was no frost there in the winters, and the grass withered but little. The days and nights there were of more nearly equal length than in Greenland or Iceland. On the shortest day of winter the sun was up between "eyktarstad" and "dagmalastad."² When they had completed their house Leif said to his companions, "I propose now to divide our company into two groups, and to set about an exploration of the country; one half of our party shall remain at home at the house, while the other half shall investigate the land, and they must not go beyond a point from which they can return home the same evening, and are now to separate." Thus they did for a time; Leif himself, by turns, joined the exploring party or remained behind at the house. Leif was a large and powerful man, and of a most imposing bearing, a man of sagacity, and a very just man in all things.

It was discovered one evening that one of their company was missing, and this proved to be Tyrker, the German. Leif was sorely troubled by this, for Tyrker had lived with Leif and his father for a long time, and had been very devoted to Leif, when he was a child. Leif severely reprimanded his companions, and prepared to

¹ Doege was a period of twelve hours. A doege's sailing is estimated to have been about one hundred miles.

² These two words designate positions of the sun at two points of time.

go in search of him, taking twelve men with him. They had proceeded but a short distance from the house, when they were met by Tyrker, whom they received most cordially. Leif observed at once that his foster-father was in lively spirits. Tyrker had a prominent forehead, restless eyes, small features, was diminutive in stature, and rather a sorry-looking individual withal, but was, nevertheless, a most capable handicraftsman. Leif addressed him, and asked: "Wherefore art thou so belated, foster-father mine, and astray from the others?" In the beginning Tyrker spoke for some time in German, rolling his eyes, and grinning, and they could not understand him; but after a time he addressed them in the Northern tongue: "I did not go much further, and yet I have something of novelty to relate. I have found vines and grapes." "Is this indeed true, foster-father?" said Leif. "Of a certainty it is true," quoth he, "for I was born where there is no lack of either grapes or vines." They slept the night through, and on the morrow Leif said to his shipmates "We will now divide our labors, and each day will either gather grapes or cut vines and fell trees, so as to obtain a cargo of these for my ship." They acted upon this advice, and it is said, that their after-boat was filled with grapes. A cargo sufficient for the ship was cut, and when the spring came, they made their ship ready, and sailed away; and from its products Leif gave the land a name, and called it Wineland. They sailed out to sea, and had fair winds until they sighted Greenland, and the fells below the glaciers; then one of the men spoke up, and said, "Why do you steer the ship so much into the wind?" Leif answers: "I have my mind upon my steering, but on other matters as well. Do ye not see anything out of the common?" They replied, that they saw nothing strange. "I do not know," says Leif, "whether it is a ship or a skerry that I

see." Now they saw it, and said, that it must be a skerry, but he was so much keener of sight than they, that he was able to discern men upon the skerry. "I think it best to tack," says Leif, "so that we may draw near to them, that we may be able to render them assistance, if they should stand in need of it; and if they should not be peaceably disposed, we shall still have better command of the situation than they." They approached the skerry, and lowering their sail, cast anchor, and launched a second small boat, which they had brought with them. Tyrker inquired who was the leader of the party. He replied that his name was Thori, and that he was a Norseman; "but what is thy name?" Leif gave his name "Art thou a son of Eric the Red of Brattahlid?" says he. Leif responded that he was. "It is now my wish," says Leif, "to take you all into my ship, and likewise so much of your possessions as the ship will hold." This offer was accepted, and thus laden, they held away to Ericsfirth, and sailed until they arrived at Brattahlid. Having discharged the cargo, Leif invited Thori, with his wife, Gudrid, and three others, to make their home with him, and procured quarters for the other members of the crew, both of his own and Thori's men. Leif rescued fifteen persons from the skerry. He was afterward called Leif the Lucky. Leif had now goodly store both of property and honor. There was serious illness that winter in Thori's party, and Thori and a great number of his people died. Eric the Red also died that winter. There was now much talk about Leif's Wineland journey, and his brother, Thorvald, held that the country had not been sufficiently explored. Thereupon Leif said to Thorvald: "If it be thy will, brother, thou mayest go to Wineland with my ship, but I wish the ship first to fetch the wood, which Thori had upon the skerry." And so it was done.

1446(?) ~ Christopher Columbus ~ 1506

HOMEWARD bound from his first voyage, Columbus wrote an account of it in a Spanish letter addressed to no particular person but intended for the public at large. Of this letter, inclosed in one to Ferdinand and Isabella that has been lost, several manuscript copies were made for various court officials. One of these copies—endorsed to Luis de Santangel, *Escrivano de Racion* or high steward or controller of the expenditures of the royal household in the kingdom of Aragon—was printed in Barcelona, April, 1493, shortly before Columbus was received in state by the King and Queen. From another copy, a Latin version was made by Leander de Cosco, printed in Rome probably in May, 1493, and reprinted in Rome, Basel, Paris, Antwerp. Thus it was through this letter, rather than from the more extensive journal which Columbus kept of his first voyage, that the public first learned of his discoveries.

Samuel Eliot Morison, in his biography of Columbus, *Admiral of the Ocean Sea*, Boston, 1942, suggests that Columbus, in dating the letter as composed "off the Canary Islands," should have written the "Azores," of which he was within sight on the date given. [The translation reprinted here is that included in *The Northmen, Columbus, and Cabot 985-1503*, New York, 1906, one of the volumes in the series, *Original Narratives of Early American History*.]

THE FIRST VOYAGE

[1493]

SIR. As I know that you will have pleasure from the great victory which our Lord hath given me in my voyage, I write you this, by which you shall know that in thirty-three days I passed over to the Indies with the fleet which the most illustrious King and Queen, our Lords, gave me; where I found very many islands peopled with inhabitants beyond number. And, of them all, I have taken possession for their Highnesses, with proclamation and the royal standard displayed, and I was not gainsaid. To the first which I found, I gave the name San Salvador, in commemoration of His High Majesty, who marvelously hath given all this: the Indians call it Guanaham. The second I named the Island of Santa Maria de Conception, the third Fernandina, the fourth Isla bella,¹ the fifth La Isla Juana; and so for each one a new name. When I reached Juana,

I followed its coast westwardly, and found it so large that I thought it might be mainland, the province of Cathay. And as I did not thus find any towns and villages on the sea-coast, save small hamlets with the people whereof I could not get speech, because they all fled away forthwith, I went on further in the same direction, thinking I should not miss of great cities or towns. And at the end of many leagues, seeing that there was no change, and that the coast was bearing me northwards, whereunto my desire was contrary, since the winter was already confronting us, I formed the purpose of making from thence to the South, and as the wind also blew

¹ In the Journal for October 20, Columbus says that he named this island Isabella. This was either Fortune Island or Great Inagua. San Salvador was probably Watling's Island; Santa Maria was either Crooked Island or North Caico; Fernandina was either Long Island or Little Inagua; Juana was Cuba; Española was Hayti.

against me, I determined not to wait for other weather and turned back as far as a port agreed upon; from which I sent two men into the country to learn if there were a king, or any great cities. They travelled for three days, and found innumerable small villages and a numberless population, but nought of ruling authority; wherefore they returned. I understood sufficiently from other Indians whom I had already taken, that this land, in its continuousness, was an island; and so I followed its coast eastwardly for a hundred and seven leagues as far as where it terminated; from which headland I saw another island to the east, eighteen leagues distant from this, to which I at once gave the name *La Española*. And I proceeded thither, and followed the northern coast, as with *La Juana*, eastwardly for a hundred and eighty-eight great leagues in a direct easterly course, as with *La Juana*. The which, and all the others, are most fertile to an excessive degree, and this extremely so. In it, there are many havens on the sea-coast, incomparable with any others that I know in Christendom, and plenty of rivers so good and great that it is a marvel. The lands thereof are high, and in it are very many ranges of hills, and most lofty mountains incomparably beyond the island of *Tenerife*,² all most beautiful in a thousand shapes, and all accessible, and full of trees of a thousand kinds, so lofty that they seem to reach the sky. And I am assured that they never lose their foliage; as may be imagined, since I saw them as green and as beautiful as they are in Spain during May. And some of them were in flower, some in fruit, some in another stage according to their kind. And the nightingale was singing, and other birds of a thousand sorts, in the month of November, there where I was going. There are palm-trees of six or eight species, wondrous to see for their beautiful variety; but so are the other trees, and fruits, and plants therein. There are wonderful pine-groves, and very large plains of verdure, and there is honey, and many kinds of birds, and many various

fruits. In the earth there are many mines of metals; and there is a population of incalculable number. *Española* is a marvel; the mountains and hills, and plains, and fields, and the soil, so beautiful and rich for planting and sowing, for breeding cattle of all sorts, for building of towns and villages. There could be no believing, without seeing, such harbors as are here, as well as the many and great rivers, and excellent waters, most of which contain gold. In the trees and fruits and plants, there are great diversities from those of *Juana*. In this, there are many spiceries, and great mines of gold and other metals. The people of this island, and of all the others that I have found and seen, or not seen, all go naked, men and women, just as their mothers bring them forth; although some women cover a single place with the leaf of a plant, or a cotton something which they make for that purpose. They have no iron or steel, nor any weapons; nor are they fit thereunto; not because they be not a well-formed people and of fair stature, but that they are most wondrously timorous. They have no other weapons than the stems of reeds in their seeding state, on the end of which they fix little sharpened stakes. Even these, they dare not use; for many times has it happened that I sent two or three men ashore to some village to parley, and countless numbers of them sallied forth, but as soon as they saw those approach, they fled away in such wise that even a father would not wait for his son. And this was not because any hurt had ever been done to any of them:—on the contrary, at every headland where I have gone and been able to hold speech with them, I gave them of everything which I had, as well cloth as many other things, without accepting aught therefor;—but such they are, incurably timid. It is true that since they have become more assured,

² The Peak of *Teneriffe* in the Canaries is over 12,000 feet high, while *Mt. Tina*, the highest elevation in *Santo Domingo*, is only 10,300 feet. Thus *Columbus*' wonder misled him.

and are losing that terror, they are artless and generous with what they have, to such a degree as no one would believe but him who had seen it. Of anything they have, if it be asked for, they never say no, but do rather invite the person to accept it, and show as much lovingness as though they would give their hearts. And whether it be a thing of value, or one of little worth, they are straightways content with whatsoever trifle of whatsoever kind may be given them in return for it. I forbade that anything so worthless as fragments of broken platters, and pieces of broken glass, and strap buckles, should be given them; although when they were able to get such things, they seemed to think they had the best jewel in the world, for it was the hap of a sailor to get, in exchange for a strap, gold to the weight of two and a half *castellanos*,³ and others much more for other things of less value; while for new *blancas* they gave everything they had, even though it were [the worth of] two or three gold *castellanos*, or one or two *arrobas* of spun cotton.⁴ They took even pieces of broken barrel-hoops, and gave whatever they had, like senseless brutes; insomuch that it seemed to me bad. I forbade it, and I gave gratuitously a thousand useful things that I carried, in order that they may conceive affection, and furthermore may become Christians; for they are inclined to the love and service of their Highnesses and of all the Castilian nation, and they strive to combine in giving us things which they have in abundance, and of which we are in need. And they knew no sect, nor idolatry; save that they all believe that power and goodness are in the sky, and they believed very firmly that I, with these ships and crews, came from the sky; and in such opinion, they received me at every place where I landed, after they had lost their terror. And this comes not because they are ignorant: on the contrary, they are men of very subtle wit, who navigate all those seas, and who give a marvellously good account of everything, but because they never saw men wearing

clothes nor the like of our ships. And as soon as I arrived in the Indies, in the first island that I found, I took some of them by force, to the intent that they should learn [our speech] and give me information of what there was in those parts. And so it was, that very soon they understood [us] and we them, what by speech or what by signs, and those [Indians] have been of much service. To this day I carry them [with me] who are still of the opinion that I come from Heaven [as appears] from much conversation which they have had with me. And they were the first to proclaim it wherever I arrived; and the others went running from house to house and to the neighboring villages, with loud cries of "Come! come to see the people from Heaven!" Then, as soon as their minds were reassured about us, every one came, men as well as women, so that there remained none behind, big or little; and they all brought something to eat and drink, which they gave with wondrous lovingness. They have in all the islands very many *canoas*,⁵ after the manner of rowing-galleys, some larger, some smaller; and a good many are larger than a galley of eighteen benches. They are not so wide, because they are made of a single log of timber, but a galley could not keep up with them in rowing, for their motion is a thing beyond belief. And with these, they navigate through all those islands, which are numberless, and ply their traffic. I have seen some of those *canoas* with seventy and eighty men in them, each one with his oar. In all those islands, I saw not much diversity in the looks of the people, nor in their manners and language; but they all understand each other, which is a thing of singular advantage for what I hope their Highnesses will decide upon

³ The *castellano* was one-sixth of an ounce of gold.

⁴ The *blanca* was a coin worth about one-third of a cent. The *arroba* was 25 pounds.

⁵ Canoes: the first appearance of this West Indian word in Europe.

for converting them to our holy faith, unto which they are well disposed. I have already told how I had gone a hundred and seven leagues, in a straight line from West to East, along the sea-coast of the Island of Juana; according to which itinerary, I can declare that that island is larger than England and Scotland combined, as, over and above those hundred and seven leagues, there remain for me, on the western side, two provinces whereto I did not go—one of which they call Avan, where the people are born with tails—which provinces cannot be less in length than fifty or sixty leagues, according to what may be understood from the Indians with me, who know all the islands. This other, Española, has a greater circumference than the whole of Spain from Col[ibre in Catal]unya, by the sea-coast, as far as Fuente Ravia in Biscay; since, along one of its four sides, I went for a hundred and eighty-eight great leagues in a straight line from west to east.⁶ This is [a land] to be desired,—and once seen, never to be relinquished—in which (although, indeed, I have taken possession of them all for their Highnesses, and all are more richly endowed than I have skill and power to say, and I hold them all in the name of their Highnesses who can dispose thereof as much and as completely as of the kingdoms of Castile) in this Española, in the place most suitable and best for its proximity to the gold mines, and for traffic with the mainland both on this side and with that over there belonging to the Great Can,⁷ where there will be great commerce and profit, I took possession of a large town which I named the city of Navidad [Nativity]. And I have made fortification there, and a fort (which by this time will have been completely finished) and I have left therein men enough for such a purpose, with arms and artillery, and provisions for more than a year, and a boat, and a master of all sea-craft for making others; and great friendship with the king of that land, to such a degree that he prided himself on calling and holding me as his brother. And even

though his mind might change towards attacking those men, neither he nor his people know what arms are, and go naked. As I have already said, they are the most timorous creatures there are in the world, so that the men who remain there are alone sufficient to destroy all that land, and the island is without personal danger for them if they know how to behave themselves. It seems to me that in all those islands, the men are all content with a single wife; and to their chief or king they give as many as twenty. The women, it appears to me, do more work than the men. Nor have I been able to learn whether they held personal property, for it seemed to me that whatever one had, they all took share of, especially of eatable things. Down to the present, I have not found in those islands any monstrous men, as many expected, but on the contrary all the people are very comely; nor are they black like those in Guinea, but have flowing hair; and they are not begotten where there is an excessive violence of the rays of the sun. It is true that the sun is there very strong, although it is twenty-six degrees distant from the equinoctial line. In those islands, where there are lofty mountains, the cold was very keen there, this winter; but they endure it by being accustomed thereto, and by the help of the meats which they eat with many and inordinately hot spices. Thus I have not found, nor had any information of monsters, except of an island which is here the second in the approach to the Indies, which is inhabited by a people whom, in all the islands, they regard as very ferocious, who eat human flesh. These have many *canoes* with which they run through all the islands of India, and plunder and take as much as they can. They are no more ill-shapen than the

⁶ The area of Spain is about 191,000 square miles; that of Española or Hayti is 28,000. The extreme length of Hayti is 407 miles.

⁷ That is, with the mainland of Europe on this side of the Atlantic and with the mainland on that side of the ocean belong-

others, but have the custom of wearing their hair long, like women; and they use bows and arrows of the same reed stems, with a point of wood at the top, for lack of iron which they have not. Amongst those other tribes who are excessively cowardly, these are ferocious; but I hold them as nothing more than the others. These are they who have to do with the women of Matimno [Martinique]—which is the first island that is encountered in the passage from Spain to the Indies—in which there are no men. Those women practice no female usages, but have bows and arrows of reed such as above mentioned; and they arm and cover themselves with plates of copper of which they have much. In another island, which they assure me is larger than Española, the people have no hair. In this there is incalculable gold; and concerning these and the rest I bring Indians with me as witnesses. And in conclusion, to speak only of what has been done in this voyage, which has been so hastily performed, their Highnesses may see that I shall give them as much gold as they may need, with very little aid which their Highnesses will give me; spices and cotton at once, as much as their Highnesses will order to be shipped, and as much as they shall order to be shipped of mastic,—which till now has never been found except in Greece, in the island of Xio, and the Seignory sells it for what it likes;⁸ and aloe-wood as much as they shall order to be shipped,—and these shall be from idolators. And I believe that I have discovered rhubarb and cinnamon, and I shall find that the men whom I am leaving there will have discovered a thousand other things of value; as I made no delay at any point, so long as the wind gave me an opportunity of sailing, except only in the town of Navidad till I had left things safely arranged and well established. And in truth I should have done much more if the ships had served me as well as might reasonably have been expected. This is enough; and [thanks to] Eternal God our Lord who gives to all those who walk His

way, victory over things which seem impossible; and thus was signally one such, for although men have talked or written of those lands, it was all by conjecture, without confirmation from eyesight, amounting only to this much that the hearers for the most part listened and judged that there was more fable in it than anything actual, however trifling. Since thus our Redeemer has given to our most illustrious King and Queen, and to their famous kingdoms, this victory in so high a matter, Christendom should have rejoicing therein and make great festivals, and give solemn thanks to the Holy Trinity for the great exaltation they shall have by the conversion of so many peoples to our holy faith, and next for the temporal benefit which will bring hither refreshment and profit, not only to Spain, but to all Christians. This briefly, in accordance with the facts. Dated, on the caravel, off the Canary Islands, the 15 February of the year 1493.

At your command,

The Admiral.

Postscript which came within the Letter.

After having written this letter, and being in the sea of Castile, there rose upon me so much wind, South and Southeast, that it has caused me to lighten the vessels; however, I ran hither to-day into this port of Lisbon, which was the greatest wonder in the world, where I decided to write to their Highnesses. I have always found the seasons like May in all the Indies, whither I passed in thirty-three days, and returned in twenty-eight, but that these storms have delayed me twenty-three days running about this sea. All the seamen say here that there never has been so bad a winter, nor so many shipwrecks.

Dated the 14th of March.

Colom sent this letter to the Escrivano de Racion. Of the islands found in the Indies. Received with another for their Highnesses.

⁸ The Seignory was the government of Genoa to which Chios [Scio] belonged at this time.

determined to dedicate to your most sacred Majesty, since you are the lord of the world, feeling certain that I shall accomplish my end and shall be safe from the intrigues of my enemies under your protecting shield, as though under that of Achilles, if I know that I have satisfied, to some extent at least, your Majesty's keen judgment in such matters. Farewell, most illustrious Caesar. . . .

ORDER OF TREATMENT

Since no one can obtain a thorough knowledge of Cosmography without some previous understanding of astronomy, nor even of astronomy itself without the principles of geometry, we shall in this brief outline say a few words:

(1) Of the elements of geometry that will be helpful to a better understanding of the material sphere;

(2) Of the meaning of *sphere*, *axis*, *poles*, etc.;

(3) Of the circles of the heavens,

(4) Of a certain theory, which we shall propose, of the sphere itself according to the system of degrees;

(5) Of the five celestial zones, and the application of these and of the degrees of the heavens to the earth,

(6) Of parallels;

(7) Of the climates¹ of the earth;

(8) Of winds, with a general diagram of these and other things;

(9) Of the divisions of the earth, of the various seas, of islands, and of the distances of places from one another. There will be added also a quadrant useful to the cosmographer.

Lastly, we shall add the four voyages of Amerigo Vespucci. Thus we shall describe the cosmography, both in the solid and projected on the plane.

OF THE WINDS

. . . A wind . . . , as defined by the philosophers, is an exaltation, warm and

dry, moving laterally around the earth

Now, inasmuch as the sun has a triple rising and setting, the summer rising and setting, the equinoctial rising and setting, and the winter rising and setting, according to its relation to the two tropics and the equator, and inasmuch as there are also two sides—to the north and to the south, all of which have winds peculiar to them; therefore it follows that there are twelve winds in all, three eastern, three western, three northern, and three southern. . . .

The poets, however, by poetic license, according to their custom, instead of the principal winds use their secondary winds, which are also called side winds. Thus Ovid says:

Far to the east
Where Persian mountains greet the rising sun
Eurus withdrew. Where sinking Phœbus' rays
Glow on the western shores mild Zephyr fled.
Terrific Boreas frozen Scythia seiz'd,
Beneath the icy bear. On southern climes
From constant clouds the showery Auster rains.

—[*Metamorphoses*, i, 61-66.]

. . . Although the north winds are naturally cold, they are softened because they pass through the torrid zone. This has been found to be true of the south wind, which passes through the torrid zone before it reaches us. . . .

Wherever the cold south wind goes, it rages and binds the waters with tight fetters. But . . . it comes welcome to our shores and hurls back the merciless shafts of the north wind. The latter wind on the contrary, which deals harshly with us, slackening its flight, becomes in like manner gentler in the lowest part of the globe. The other winds, where they direct their various courses, soon change, as they go,

¹ The word *climate* is here used in its ancient sense of a zone of the earth's surface comprised between two specified parallels of latitude.

the natures which are proper to their homes.

We have said enough about winds . . .

OF CERTAIN ELEMENTS OF COSMOGRAPHY

It is clear from astronomical demonstrations that the whole earth is a point in comparison with the entire extent of the heavens; so that if the earth's circumference be compared to the size of the celestial globe, it may be considered to have absolutely no extent. There is about a fourth part of this small region in the world which was known to Ptolemy and is inhabited by living beings like ourselves. Hitherto it has been divided into three parts, Europe, Africa, and Asia.

. . . Europe is so called after Europa, the daughter of King Agenor. While with a girl's enthusiasm she was playing on the sea-shore accompanied by her Tyrian maidens and was gathering flowers in baskets, she is believed to have been carried off by Jupiter, who assumed the form of a snow-white bull, and after being brought over the seas to Crete seated upon his back to have given her name to the land lying opposite.

. . . Asia is so called after a queen of that name.

Now, these parts of the earth have been more extensively explored and a fourth part has been discovered by Amerigo Vespucci (as will be set forth in what follows) Inasmuch as both Europe and Asia received their names from women, I see no reason why any one should justly object to calling this part Amerige, i.e., the land of Amerigo, or America, after Amerigo, its discoverer, a man of great ability. Its position and the customs of its inhabitants may be clearly understood from the four voyages of Amerigo, which are subjoined.²

Thus the earth is now known to be divided into four parts. The first three parts are continents, while the fourth is an island, inasmuch as it is found to be surrounded on all sides by the ocean. Although there is only one ocean, just as there is only one earth, yet, being marked by many seas and filled with numberless islands, it takes various names. . . .

² A Portuguese expedition of 1501 sailed hundreds of miles along the coast of South America. Amerigo Vespucci, a Florentine merchant, was a member of this expedition and later claimed that he had made four western voyages between 1497 and 1503. His account of these voyages, sent to a friend, came to the attention of Waldseemüller and so impressed him that he made his unfortunate suggestion.

Alvar Nuñez Cabeza de Vaca

1490(?) ~ 1557(?)

AMONG Spanish explorations of the American mainland in the 16th century, that undertaken by Pámfilo de Narvaez, who sailed in five vessels with 600 colonists and soldiers from Sanlúcar de Barrameda, June 17, 1527, was one of the most remarkable from the point of view of adventure, privation, and suffering. After losses in a hurricane on the southern coast of Cuba, the expedition landed April, 1528, near what is now Tampa, Florida, and a part of it struck inland in a northerly direction. After arriving at a place called Aute near what is now St. Marks Bay, Florida, the inland expedition turned back to the sea, built five makeshift boats, and ventured to brave the tropical storms

of the Gulf of Mexico. At the mouth of the Mississippi, strong currents and winds dispersed the boats and carried them all beyond sight of land.

The boat containing Alvar Nuñez Cabeza de Vaca and his party was cast ashore on an island which was probably somewhere off the coast of what is now Texas and to which they gave the name of Malhado or "Misfortune." Of the twelve survivors who ultimately left the island, Cabeza and three companions, after many adventures, reached by 1536 a point on the Sonoro River in what is now Mexico where they fell in with Spanish slave-hunters who conducted them southward to the city of Compostela near the Pacific coast.

Returning to civilization, Cabeza de Vaca wrote a matter-of-fact account of the unsuccessful Narvaez expedition and the adventures of himself and his companions. This *Relacion* was first printed at Zamora, Spain, fifteen years before the death of its author.

[The following selection is composed of parts of Chapter 8, a section of Chapter 10, and all of Chapters 11 and 12, and tells how the makeshift boats were made at St Marks Bay and how Cabeza's party was given an unusual reception by the savages on the island of Malhado. The translation used is that reprinted in *Spanish Explorers in the Southern United States 1528-1543*, ed F W. Hodge and T. H. Lewis, New York, 1907, one of the volumes in the series, *Original Narratives of Early American History*.]

From
RELACION
[1542]

THE next morning we left Aute, and travelled all day before coming to the place I had visited. The journey was extremely arduous. There were not horses enough to carry the sick, who went on increasing in numbers day by day, and we knew of no cure. It was piteous and painful to witness our perplexity and distress. We saw on our arrival how small were the means for advancing farther. There was not anywhere to go; and if there had been, the people were unable to move forward, the greater part being ill, and those were few who could be on duty. I cease here to relate more of this, because any one may suppose what would occur in a country so remote and malign, so destitute of all resource, whereby either to live in it or go out of it; but most certain assistance is in God, our Lord, on whom we never failed to place reliance.

One thing occurred, more afflicting to us than all the rest, which was, that of the persons mounted, the greater part commenced secretly to plot, hoping to secure a better fate for themselves by abandoning the Governor and the sick, who were in a state of weakness and prostration. But, as among them were many hidalgos and persons of gentle condition, they would not permit this to go on, without informing the Governor and the officers of your Majesty,¹ and as we showed them the deformity of their purpose, and placed before them the moment when they should desert their captain, and those who were ill and feeble, and above all the disobedience to the orders of your Majesty, they determined to remain, and that whatever might happen to one should be the lot of all, without any forsaking the rest.

After the accomplishment of this, the Governor called them all to him, and of

¹ The *Relacion* is addressed to his "Sacred Caesarian Catholic Majesty," the Emperor Charles V.

each apart he asked advice as to what he should do to get out of a country so miserable, and seek that assistance elsewhere which could not here be found, a third part of the people being very sick, and the number increasing every hour; for we regarded it as certain that we should all become so, and could pass out of it only through death, which from its coming in such a place was to us all the more terrible. These, with many other embarrassments being considered, and entertaining many plans, we coincided in one great project extremely difficult to put in operation, and that was to build vessels in which we might go away. This appeared impossible to every one; we knew not how to construct, nor were there tools, nor iron, nor forge, nor tow, nor resin, nor rigging; finally, no one thing of so many that are necessary, nor any man who had a knowledge of their manufacture; and, above all, there was nothing to eat, while building, for those who should labor. Reflecting on all this, we agreed to think of the subject with more deliberation, and the conversation dropped from that day, each going his way, commending our course to God, our Lord, that he should direct it as should best serve Him.

The next day it was His will that one of the company should come saying that he could make some pipes out of wood, which with deer-skins might be made into bel-lows; and, as we lived in a time when anything that had the semblance of relief appeared well, we told him to set himself to work. We assented to the making of nails, saws, axes, and other tools of which there was such need, from the stirrups, spurs, crossbows, and the other things of iron there were; and we laid out for support, while the work was going on, that we should make four entries into Aute, with all the horses and men that were able to go, and that on every third day a horse should be killed to be divided among those who labored in the work of the boats and the sick. The incursions were made with the people and horses that were available,

and in them were brought back as many as four hundred fanegas² of maize; but these were not got without quarrels and contentions with the Indians. We caused many palmitos to be collected for the woof or covering, twisting and preparing it for use in the place of tow for the boats.

We commenced to build on the fourth, with the only carpenter in the company, and we proceeded with so great diligence that on the twentieth day of September five boats were finished, twenty-two cubits in length, each caulked with the fibre of the palmito. We pitched them with a certain resin, made from pine trees by a Greek, named Don Theodoro; from the same husk of the palmito, and from the tails and manes of the horses we made ropes and rigging, from our shirts, sails, and from the savins growing there we made the oars that appeared to us requisite. Such was the country into which our sins had cast us, that only by very great search could we find stone for ballast and anchors, since in it all we had not seen one. We flayed the horses, taking the skin from their legs entire, and tanning them to make bottles wherein to carry water.

During this time some went gathering shell-fish in the coves and creeks of the sea, at which employment the Indians twice attacked them and killed ten men in sight of the camp, without our being able to afford succor. We found their corpses traversed from side to side with arrows; and for all some had on good armor, it did not give adequate protection or security against the nice and powerful archery of which I have spoken. . . .

Before we embarked there died more than forty men of disease and hunger, without enumerating those destroyed by the Indians. By the twenty-second of the month of September, the horses had been consumed, one only remaining; and on that day we embarked in the following order: In the boat of the Governor went

² A Spanish measure somewhat in excess of the bushel.

forty-nine men; in another, which he gave to the comptroller and the commissary, went as many others, the third, he gave to Captain Alonzo del Castillo and Andrés Dorantes, with forty-eight men, and another he gave to two captains, Tellez and Penalosa, with forty-seven men. The last was given to the assessor and myself, with forty-nine men. After the provisions and clothes had been taken in, not over a span of the gunwales remained above water; and more than this, the boats were so crowded that we could not move. so much can necessity do, which drove us to hazard our lives in this manner, running into a turbulent sea, not a single one who went having a knowledge of navigation.

.
 . . . Because of winter and its inclemency, the many days we had suffered hunger, and the heavy beating of the waves, the people began next day to despair in such a manner that when the sun sank, all who were in my boat were fallen one on another, so near to death that there were few among them in a state of sensibility. Of the whole number at this time not five men were on their feet; and when night came, only the master and myself were left, who could work the boat. Two hours after dark, he said to me that I must take charge of her as he was in such condition he believed he should die that night. So I took the paddle, and going after midnight to see if the master was alive he said to me he was rather better, and would take the charge until day. I declare in that hour I would more willingly have died than seen so many people before me in such condition. After the master took the direction of the boat, I lay down a little while; but without repose, for nothing at that time was farther from me than sleep.

Near the dawn of day, it seemed to me I heard the tumbling of the sea; for as the coast was low, it roared loudly. Surprised at this, I called to the master, who answered me that he believed we were near the land. We sounded and found ourselves in seven fathoms. He advised that we

should keep to sea until sunrise; accordingly I took an oar and pulled on the land side, until we were a league distant, when we gave her stern to the sea. Near the shore a wave took us, that knocked the boat out of water the distance of the throw of a crowbar, and from the violence with which she struck, nearly all the people who were in her like dead, were roused to consciousness. Finding themselves near the shore, they began to move on hands and feet, crawling to land into some ravines. There we made fire, parched some of the maize we brought, and found rain water. From the warmth of the fire the people recovered their faculties, and began somewhat to exert themselves. The day on which we arrived was the sixth of November [1528]

After the people had eaten, I ordered Lope de Oviedo, who had more strength and was stouter than any of the rest, to go to some trees that were near by, and climbing into one of them to look about and try to gain knowledge of the country. He did as I bade, and made out that we were on an island. He saw that the land was pawed up in the manner that ground is wont to be where cattle range, whence it appeared to him that this should be a country of Christians; and thus he reported to us. I ordered him to return and examine much more particularly, and see if there were any roads that were worn, but without going far, because there might be danger.

He went, and coming to a path, took it for the distance of half a league, and found some huts, without tenants, they having gone into the field. He took from these an earthen pot, a little dog, some few mullets, and returned. As it appeared to us he was gone a long time, we sent two men that they should look to see what might have happened. They met him near by, and saw that three Indians with bows and arrows followed and were calling to him, while he, in the same way, was beckoning them on. Thus he arrived where we were, the natives remaining a little way back,

seated on the shore. Half an hour after, they were supported by one hundred other Indian bowmen, who if they were not large, our fears made giants of them. They stopped near us with the first three. It were idle to think that any among us could make defence, for it would have been difficult to find six that could rise from the ground. The assessor and I went out and called to them, and they came to us. We endeavored the best we could to encourage them and secure their favor. We gave them beads and hawk-bells, and each of them gave me an arrow, which is a pledge of friendship. They told us by signs that they would return in the morning and bring us something to eat, as at that time they had nothing.

At sunrise the next day, the time the Indians appointed, they came according to their promise, and brought us a large quantity of fish with certain roots, some a little larger than walnuts, others a trifle smaller, the greater part got from under the water and with much labor. In the evening they returned and brought us more fish and roots. They sent their women and children to look at us, who went back rich with the hawk-bells and beads given them, and they came afterwards on other days, returning as before. Finding that we had provision, fish, roots, water, and other things we asked for, we determined to embark again and pursue our course. Having dug out our boat from the sand in which it was buried, it became necessary that we should strip, and go through great exertion to launch her, we being in such a state that things very much lighter sufficed to make us great labor.

Thus embarked, at the distance of two crossbow shots in the sea we shipped a wave that entirely wet us. As we were naked, and the cold was very great, the oars loosened in our hands, and the next blow the sea struck us, capsized the boat. The assessor and two others held fast to her for preservation, but it happened to be far otherwise; the boat carried them over, and they were drowned under her.

As the surf near the shore was very high, a single roll of the sea threw the rest into the waves and half drowned upon the shore of the island, without our losing any more than those the boat took down. The survivors escaped naked as they were born, with the loss of all they had; and although the whole was of little value, at that time it was worth much, as we were then in November, the cold was severe, and our bodies were so emaciated the bones might be counted with little difficulty, having become the perfect figures of death. For myself I can say that from the month of May passed, I had eaten no other thing than maize, and sometimes I found myself obliged to eat it unpared; for although the beasts were slaughtered while the boats were building, I could never eat their flesh, and I did not eat fish ten times. I state this to avoid giving excuses, and that every one may judge in what condition we were. Besides all these misfortunes, came a north wind upon us, from which we were nearer to death than life. Thanks be to our Lord that, looking among the brands we had used there, we found sparks from which we made great fires. And thus were we asking mercy of Him and pardon for our transgressions, shedding many tears, and each regretting not his own fate alone, but that of his comrades about him.

At sunset, the Indians thinking we had not gone, came to seek us and bring us food, but when they saw us thus, in a plight so different from what it was before, and so extraordinary, they were alarmed and turned back. I went toward them and called, when they returned much frightened. I gave them to understand by signs that our boat had sunk and three of our number had been drowned. There, before them, they saw two of the departed, and we who remained were near joining them. The Indians, at sight of what had befallen us, and our state of suffering and melancholy destitution, sat down among us, and from the sorrow and pity they felt, they all began to lament so earnestly

that they might have been heard at a distance, and continued so doing more than half an hour. It was strange to see these men, wild and untaught, howling like brutes over our misfortunes. It caused in me as in others, an increase of feeling and a livelier sense of our calamity.

The cries having ceased, I talked with the Christians, and said that if it appeared well to them, I would beg these Indians to take us to their houses. Some, who had been in New Spain, replied that we ought not to think of it, for if they should do so, they would sacrifice us to their idols. But seeing no better course, and that any other led to a nearer and more certain death, I disregarded what was said, and besought the Indians to take us to their dwellings. They signified that it would give them delight, and that we should tarry a little, that they might do what we asked. Presently thirty men loaded themselves with wood and started for their houses,

which were far off, and we remained with the others until near night, when, holding us up, they carried us with all haste. Because of the extreme coldness of the weather, lest any one should die or fail by the way, they caused four or five very large fires to be placed at intervals, and at each they warmed us; and when they saw that we had regained some heat and strength, they took us to the next so swiftly that they hardly let us touch our feet to the ground. In this manner we went as far as their habitations, where we found that they had made a house for us with many fires in it. An hour after our arrival, they began to dance and hold great rejoicing, which lasted all night, although for us there was no joy, festivity nor sleep, awaiting the hour they should make us victims. In the morning they again gave us fish and roots, showing us such hospitality that we were reassured, and lost somewhat the fear of sacrifice. . . .

1494(?) ~ Jacques Cartier ~ 1555(?)

ON THE strength of a voyage made by Giovanni Verrazano in 1523-24, Francis I, King of France, felt that his country had a claim to North America and financed further voyages by Jacques Cartier, a Breton pilot of the port of St. Malo, who desired at first to discover a passage to the Orient and later to find gold and silver, establish a settlement on the St. Lawrence River, and Christianize the Indians. A report of Cartier's first voyage of 1534 was preserved in an Italian translation by Ramusio in the third volume of his *Navigazioni* published at Venice, 1556. An account of Cartier's second voyage of 1535-36 was printed in France under the title *Brief Récit et Succincte Narration*. The account of his third voyage of 1541-42 has survived only in fragmentary form in a translation made by Richard Hakluyt from the official French report. The following selection is from the account of Cartier's second voyage, during which he sailed up the St. Lawrence River past the site of Quebec to the Indian village of Hochelaga, lying at the foot of a mountain which the French named Mount Royal or Montreal. From this mountain Cartier was able to get a fine view of the country that was later to become New France.

[The translation used here is that made from Ramusio's version of the

Brief Récit et Succincte Narration and printed in the 1600 edition of Hakluyt's *Voyages*. This translation has been reprinted in *Early English and French Voyages*, ed. H. S. Burrage, New York, 1906, one of the volumes in the series, *Original Narratives of Early American History*. In the present selection, spelling and punctuation have been modernized.]

From
BRIEF RÉCIT
[1545]

SO soon as we were come near the town [Hochelaga], a great number of the inhabitants thereof came to present themselves before us after their fashion, making very much of us; we were by our guides brought into the midst of the town. They have in the middlemost part of their houses a large square place, being from side to side a good stone's cast, whither we were brought, and there with signs were commanded to stay; then suddenly all the women and maidens of the town gathered themselves together, part of which had their arms full of young children, and as many as could came to rub our faces, our arms, and what part of the body soever they could touch, weeping for very joy that they saw us, showing us the best countenance that possibly they could, desiring us with their signs that it would please us to touch their children. That done, the men caused the women to withdraw themselves back, then they every one sat down on the ground round about us, as if they would have shown and rehearsed some comedy or other show; then presently came the women again, every one bringing a four-square mat in manner of carpets, and spreading them abroad on the ground in that place, they caused us to sit upon them. That done, the Lord and King of the country was brought upon 9 or 10 men's shoulders (whom in their tongue they call Agouhanna) sitting upon a great stag's skin, and they laid him down upon the foresaid mats near to the Captain [Cartier], every one beckoning unto us that he was their Lord and King. This Agouhanna was a man about fifty years old: he was

no whit better apparelled than any of the rest, only excepted, that he had a certain thing made of the skins of hedgehogs like a red wreath, and that was instead of his crown. He was full of the palsy, and his members shrunk together. After he had with certain signs saluted our Captain and all his company, and by manifest tokens bid all welcome, he showed his legs and arms to our Captain, and with signs desired him to touch them, and so he did, rubbing them with his own hands, then did Agouhanna take the wreath or crown he had about his head, and gave it unto our Captain; that done, they brought before him divers diseased men, some blind, some cripple, some lame and impotent, and some so old that the hair of their eyelids came down and covered their cheeks, and laid them all along before our Captain, to the end they might of him be touched: for it seemed unto them that God was descended and come down from heaven to heal them. Our Captain seeing the misery and devotion of this poor people recited the Gospel of St. John, that is to say, "In the Beginning was the Word"; touching every one that were diseased, praying to God that it would please him to open the hearts of this poor people, and to make them know his holy word, and that they might receive baptism and Christendom: that done, he took a service-book in his hand, and with a loud voice read all the passion of Christ, word by word that all the standers by might hear him: all which while this poor people kept silence, and were marvellously attentive, looking up to heaven and imitating us in gestures. Then he caused the men all orderly to be set on one side, the women on another, and likewise the children on another, and to the chiefest of them he gave hatchets, to the other

knives, and to the women beads and such other small trifles. Then where the children were he cast rings, counters, and brooches made of tin, whereat they seemed to be very glad. That done, our Captain commanded trumpets and other musical instruments to be sounded, which when they heard, they were very merry. Then we took our leave and went to our boat: the women seeing that, put themselves before to stay us, and brought us out of their meats that they had made ready for us, as fish, pottage beans, and such other things, thinking to make us eat and dine in that place: but because the meats had no savor at all of salt, we liked them not, but thanked them, and with signs gave them to understand that we had no need to eat. When we were out of the town, diverse of the men and women followed us, and brought us to the top of the foresaid mountain, which we named Mount Royal, it is about a league from the town. When as we were on the top of it, we might discern and plainly see thirty leagues about. On the north side of it there are many hills to be seen running west and east, and as

many more on the south, amongst and between the which the country is as fair and as pleasant as possibly can be seen, being level, smooth, and very plain, fit to be husbanded and tilled: and in the midst of those fields we saw the river further up a great way than where we had left our boats, where was the greatest and the swiftest fall of water that anywhere hath been seen, and as great, wide, and large as our sight might discern, going southwest along three fair and round mountains that we saw, as we judged about fifteen leagues from us. Those which brought us thither told and showed us, that in the said river there were three such falls of water more, as that was where we had left our boats: but because we could not understand their language, we could not know how far they were from one another. Moreover they showed us with signs, that the said three falls being past, a man might sail the space of three months more amongst that river, and that along the hills that are on the north side there is a great river, which (even as the other) cometh from the West. . . .

1560 ~ Thomas Hariot ~ 1621

BEFORE the first settlement of the English at Jamestown in 1607, Sir Walter Raleigh attempted to plant colonies at Roanoke in Pimlico Sound. He sponsored the voyage of discovery led by Philip Amadas and Arthur Barlowe in 1584, a voyage reported by Barlowe to Raleigh in one of the classic accounts included in Richard Hakluyt's monumental *Principall Navigations*. Raleigh likewise sponsored the colony led by Richard Grenville and Ralph Lane in 1585 and the famous "lost colony," of 1587.

Among those in the unsuccessful Grenville-Lane expedition, most of which was brought back to England by Sir Francis Drake, were the English astronomer and mathematician, Thomas Hariot or Harriot, who acted as chronicler, and John White, a painter, who made sketches of the Indians and of the fauna and flora. Hariot's *A briefe and true report of the new found land of Virginia* was privately printed in London with a foreword by Ralph Lane and without the White illustrations.

In 1590 the great continental publisher of travel literature, Theodore de Bry, at Frankfurt-am-Main, reprinted, after a visit to London, the Hariot text with twenty-three realistic engravings, twenty made from the White sketches of Indian life and, for comparison, an appendix of five engravings of ancient Piets of early Britain from "pictures" provided him by John White "fownd as he did assure me in a ooldd English cronicle." Each of the plates is accompanied by a carefully written descriptive commentary in English prose. These commentaries are said to be translated by Richard Hakluyt "out of Latin." The Latin had probably been written out from John White's oral explanations, possibly by de Bry himself. De Bry's edition was later issued in both Latin and German.

Hariot's *Virginia*, included later in Hakluyt's *Principall Navigations*, may thus be regarded as the main source of Europeans' first detailed and systematically arranged information concerning what is now Virginia, a name originally applied to a vast territory lying north of Florida as the possession of Elizabeth, the Virgin Queen.

[The first five of the following selections have been taken from the copy of the excessively rare 1588 Hariot "quarto" at the William L. Clements Library of Americana at the University of Michigan; the last two are examples of the descriptive commentary accompanying White's illustrations from the 1590 de Bry Hariot; all selections have been modernized in spelling, etc.; the titles for the first five have been supplied by the present editors.]

From
BRIEF AND TRUE REPORT
[1588]

Ralph Lane's Foreword

ALBEIT (gentle reader) the credit of the reports in this treatise contained can little be furthered by the testimony of one as myself, through affection judged partial, though without desert: nevertheless, for so much as I have been requested by some, my particular friends, who conceive more rightly of me, to deliver freely my knowledge of the same, not only for the satisfying of them, but also for the true information of any other whatsoever, that comes not with a prejudicate mind to the reading thereof: thus much upon my credit I am to affirm: that things universally are so truly set down in this treatise by the author thereof, an actor in the colony and a man no less for his honesty than learning

commendable: as that I dare boldly avouch it may very well pass with the credit of truth even amongst the most true relations of this age. Which as for mine own part I am ready any way with my word to acknowledge, so also (of the certainty thereof assured by mine own experience) with this my public assertion, I do affirm the same. Farewell in the Lord.

From
HARIOT'S INTRODUCTION

Since the first undertaking by Sir Walter Raleigh to deal in the action of discovering of that country which is now called and known by the name of Virginia, many voyages having been thither made at sundry times to his great charge, as first in the year 1584, and afterwards in the years 1585, 1586, and now of late this last year of 1587: there have been divers and variable reports with some slanderous and

shameful speeches bruited abroad by many that returned from thence. Especially of that discovery which was made by the colony transported by Sir Richard Grenville in the year 1585, being of all the others the most principal and as yet of most effect, the time of their abode in the country being a whole year, when as in the other voyage before they stayed but six weeks and the others after were only for supply and transportation, nothing more being discovered than had been before. Which reports have not done a little wrong to many that otherwise would have also favored and adventured in the action, to the honor and benefit of our nation, besides the particular profit and credit which would redound to themselves, the dealers therein . . .

I have therefore thought it good, being one that have been in the discovery and in dealing with the natural inhabitants specially employed, and having therefore seen and known more than the ordinary, to impart so much unto you of the fruits of our labors as that you may know how injuriously the enterprise is slandered. . . .

The treatise whereof for your more ready view and easier understanding I will divide into three special parts. In the first I will make declaration of such commodities there already found or to be raised, which will not only serve the ordinary turns of you which are and shall be the planters and inhabitants, but such an overplus sufficiently to be yielded, or by men of skill to be provided, as by way of traffic and exchange with our own nation of England, will enrich yourselves the providers, those that shall deal with you, the enterprisers in general, and greatly profit our own countrymen, to supply them with most things which heretofore they have been fain to provide either of strangers or of our enemies: which commodities, for distinction sake, I call *Merchantable*.

In the second, I will set down all the commodities which we know the country by our experience doth yield of itself for victual and sustenance of man's life; such

as is usually fed upon by the inhabitants of the country, as also by us during the time we were there.

In the last part I will make mention generally of such other commodities besides as I am able to remember and as I shall think behooveful for those that shall inhabit and plant there to know of; which especially concern building, as also some other necessary uses: with a brief description of the nature and manners of the people of the country.

From the
FIRST PART

Silk of grass or grass silk. There is a kind of grass in the country upon the blades whereof there groweth very good silk in form of a thin glittering skin to be stripped off. It groweth two foot and a half high or better: the blades are about two foot in length and half inch broad. The like groweth in Persia, which is in the self-same climate as Virginia, of which very many of the silk works that come from thence into Europe are made. Hereof if it be planted and ordered as in Persia, it cannot in reason be otherwise but that there will rise in short time great profit to the dealers therein, seeing there is so great use and vent thereof as well in our country as elsewhere. And by the means of sowing and planting it in good ground, it will be far greater, better, and more plentiful than it is. Although notwithstanding there is great store thereof in many places of the country growing naturally and wild. Which also by proof here in England in making a piece of silk gogram we found to be excellent good.

From the
SECOND PART

Of fowl: turkey cocks and turkey hens, stockdoves, partridges, cranes, hernes, and in winter great store of swans and geese. Of all sorts of fowl I have the names in the country language of foreshore and six,

of which number besides those that be named we have taken, eaten, and have the pictures as they were there drawn with the names of the inhabitants of several strange sorts of water fowl eight, and seventeen kinds more of land fowl, although we have seen and eaten of many more, which for want of leisure there for the purpose could not be pictured; and after we are better furnished and stored upon further discovery, with their strange beasts, fish, trees, plants, and herbs, they shall be also published.

There are also parrots, falcons, and martin hawks, which although with us they be not used for meat, yet for other causes I thought good to mention.

From the
THIRD PART

It resteth I speak a word or two of the natural inhabitants, their natures and manners, leaving large discourse thereof until time more convenient hereafter . . .

For mankind, they say a woman was made first, which, by the working of one of the gods, conceived and brought forth children: and in such sort they say they had their beginning. . . .

They think that all the gods are of human shape and therefore they represent them by images in the forms of men. . . .

They believe also the immortality of the soul, that after this life as soon as the soul is departed from the body according to the works it hath done, it is either carried to heaven, the habitacle of gods, there to enjoy perpetual bliss and happiness, or else to a great pit or hole, which they think to be in the furthest parts of their part of the world toward the sunset, there to burn continually: the place they call *Popogusso*. . . .

Many times and in every town where I came, according as I was able, I made declaration of the contents of the Bible, that therein was set forth the true and only God and his mighty works, that therein was contained the true doctrine of salvation

through Christ, with many particularities of miracles and chief points of religion, as I was able then to utter and thought fit for the time. And although I told them the book materially and of itself was not of any such virtue as I thought they did conceive, but only the doctrine therein contained, yet would many be glad to touch it, to embrace it, to kiss it, to hold it to their breasts and heads, and stroke over all their body with it, to shew their hungry desire of that knowledge which was spoken of.

The *Werowance*¹ with whom we dwelt called *Wingina* and many of his people would be glad many times to be with us at our prayers and many times call upon us both in his own town, as also in others whither he sometimes accompanied us, to pray and sing psalms, hoping thereby to be partaker of the same effects which we by that means also expected.

Twice this *Werowance* was so grievously sick that he was like to die, and as he lay languishing, doubting of any help by his own priests, and thinking he was in such danger for offending us and thereby our god, sent for some of us to pray and be a means to our god that it would please him either that he might live or after death dwell with him in bliss, so likewise were the requests of many others in the like case.

On a time also when their corn began to wither by reason of a drouth which happened extraordinarily, fearing that it had come to pass by reason that in something they had displeased us, many would come to us and desire us to pray to our God of England that he would preserve their corn, promising that when it was ripe we also should be partakers of the fruit.

A CHIEF LADY OF POMEIOCK

About 20 miles from that island, near the lake of Paquippe, there is another town called Pomeioock hard by the sea. The ap-

¹ Harriot spells it "Wiroans": the word for chieftain.

parel of the chief ladies of that town differeth but little from the attire of those which live in Roanoe. For they wear their hair trussed up in a knot, as the maidens do which we spake of before, and have their skins pounced in the same manner, yet they wear a chain of great pearls or beads of copper or smooth bones 5 or 6 fold about their necks, bearing one arm in the same; in the other hand they carry a gourd full of some kind of pleasant liquor. They tie deer's skin doubled about them crotching higher about their breasts, which hang down before almost to their knees, and are almost altogether naked behind. Commonly their young daughters of 7 or 8 years old do wait upon them wearing about them a girdle of skin, which hangeth down behind, and is drawn underneath between their thighs and bound above their navel with moss of trees between that and their skins to cover their privities withal. After they be once past 10 years of age, they wear deer skins as the older sort do. They are greatly delighted with puppets and babes [dolls] which were brought out of England.

THEIR DANCES WHICH THEY USE AT THEIR HIGH FEASTS

At a certain time of the year they make a great and solemn feast wherunto their neighbors of the towns adjoining repair from all parts, every man attired in the most strange fashion they can devise, having certain marks on the backs to declare of what place they be. The place where they meet is a broad plain, about the which are planted in the ground certain posts carved with heads like to the faces of nuns covered with their veils. Then, being set in order, they dance, sing, and use the strangest gestures that they can possibly devise. Three of the fairest virgins of the company are in the midst, which, embracing one another, do as it were turn about in their dancing. All this is done after the sun is set for avoiding of heat. When they are weary of dancing, they go out out of the circle and come in until their dances be ended and they go to make merry. . . .

1580 ~ *Captain John Smith* ~ 1631

FROM his fifteenth to his twenty-fourth year, Captain John Smith, born in 1580, led a life of swashbuckling adventure on the European continent, serving in the French, Dutch, and Transylvanian armies. Having survived, according to his own account, such experiences as being robbed and beaten by outlaws, thrown into the sea as a heretic, captured by the Turks and sold into slavery to a Pasha, he managed to make his way back to England in 1604 by a route that led him through Russia and Africa.

Late in 1606, when an expedition financed by the Virginia Company of London to colonize Virginia sailed from England in three ships, Smith was one of the few shareholders to go with it. The expedition founded Jamestown, but would not have been able to maintain itself for long had not Smith, by his courageous leadership, forced even the disaffected to work and dealt diplomatically with the Indians. He likewise interested England in the new colony by writing such a "pamphlet of newes" as his *A True Relation*, published in London in 1608.

Leaving his ill-assorted and quarrelsome fellow colonists to work out their own destiny, Smith returned to England in 1609, became a colonization promoter for New England, and explored its coast in 1614. From 1615 to his death in 1631, he lived quietly in England devoting his time to writing, his best known works being *The Generall Historie of Virginia, New-England, and the Summer Isles*, London, 1624, and *The True Travels, Adventures, and Observations of Captaine John Smith*, London, 1630.

Of the three selections printed here, the first is the concluding section of his *A Map of Virginia, with a Description of the Countrey, the Commodities, People, Government and Religion*, and contains an account of Powhatan, the father of Pocahontas, and a succinct review of the difficulties of the first Jamestown colonists, the second is an exhortation to planters from his *A Description of New England*, an important document in the extensive literature of colonization promotion; and the third is an exposition of his hopes for the Massachusetts Bay Colony from *Advertisements For the unexperienced Planters of New England, or any where*.

[In all three selections, the texts of the original editions have been modernized in spelling and to some extent in punctuation. Bracketed interpolations are editorial. *Travels and Works of Captain John Smith*, ed. E. Arber (Edinburgh, 1910), contains complete texts.]

From
A MAP OF VIRGINIA
[1612]

ALTHOUGH the country people be very barbarous, yet have they amongst them such government as that their Magistrates for good commanding, and their people for due subjection and obeying, excel many places that would be counted very civil.

The form of their commonwealth is a monarchical government. One as Emperor ruleth over many kings or governors. Their chief ruler is called Powhatan, and taketh his name of the principal place of dwelling called Powhatan. But his proper name is Wahunsonacock.

Some countries he hath, which have been his ancestors', and came unto him by inheritance, as the country called Powhatan, Arrohatock, Appamatucke, Pamaunke, Youghtanund, and Mattapanient. All the rest of his Territories expressed in the Map, they report have been his several conquests.

In all his ancient inheritances, he hath

houses built after their manner like arbors; some 30, some 40 yards long; and at every house provision for his entertainment according to the time. At Werowocomoco he was seated upon the north side of the river Pamaunke, some 14 miles from James Town; where for the most part he was resident, but he took so little pleasure in our near neighborhood, that were able to visit him against his will in 6 or 7 hours, that he retired himself to a place in the deserts at the top of the river Chichahamania between Youghtanund and Powhatan. His habitation there is called Orapakes, where he ordinarily now resideth.

He is of personage a tall, well-proportioned man, with a sour look; his head somewhat gray, his beard so thin that it seemeth none at all. His age near 60; of a very able and hardy body to endure any labor. About his person ordinarily attendeth a guard of 40 or 50 of the tallest men his country doth afford. Every night upon the 4 quarters of his house are 4 sentinels, each standing from other a flight shoot: and

at every half hour one from the *corps du guard* doth holloa, unto whom every sentinel doth answer round from his stand. If any fail, they presently send forth an officer that beateth him extremely.

A mile from Orapakes in a thicket of wood he hath a house in which he keepeth his kind of treasure, as skins, copper, pearl, and beads, which he storeth up against the time of his death and burial. Here also is his store of red paint for ointment, and bows and arrows. This house is 50 or 60 yards in length, frequented only by priests. At the 4 corners of this house stand 4 images as sentinels: one of a dragon, another a bear, the 3 like a leopard, and the fourth like a giant-like man: all made evil-favoredly, according to their best workmanship.

He hath as many women as he will: whereof when he lieth on his bed, one sitteth at his head, and another at his feet; but when he sitteth, one sitteth on his right hand and another on his left. As he is weary of his women, he bestoweth them on those that best deserve them at his hands.

When he dineth or suppeth, one of his women, before and after meat, bringeth him water in a wooden platter to wash his hands. Another waiteth with a bunch of feathers to wipe them instead of a towel, and the feathers when he hath wiped are dried again.

His kingdom descendeth not to his sons nor children, but first to his brethren, whereof he hath 3, namely Opitchapan, Opechancanough, and Catataugh, and after their decease to his sisters. First to the eldest sister, then to the rest: and after them to the heirs male and female of the eldest sister; but never to the heirs of the males.

[Neither] he nor any of his people understand any letters whereby to write or read; the only laws whereby he ruleth is custom. Yet when he listeth, his will is a law and must be obeyed: not only as a king, but as half a God they esteem him.

His inferior kings whom they call *wero-wances* are tied to rule by customs and have

power of life and death as their command in that nature. But this word *werowance* which we call and conster [construe] for a king is a common word whereby they call all commanders: for they have but few words in their language and but few occasions to use any officers more than one commander, which commonly they call *werowances*.

They all know their several lands and habitations and limits to fish, fowl, or hunt in; but they hold all of their great *Wero-wance*, Powhatan, unto whom they pay tribute of skins, beads, copper, pearl, deer, turkeys, wild beasts, and corn. What he commandeth they dare not disobey in the least thing. It is strange to see with what great fear and adoration all these people do obey this Powhatan. For at his feet they present whatsoever he commandeth, and at the least frown of his brow, their greatest spirits will tremble with fear: and no marvel, for he is very terrible and tryannous in punishing such as offend him.

For example, he caused certain malefactors to be bound hand and foot; then, having of many fires gathered great store of burning coals, they rake these coals round in the form of a cockpit, and in the midst they cast the offenders to broil to death. Sometimes he causeth the heads of them that offend him to be laid upon the altar of sacrificing stone, and one with clubs beats out their brains. When he would punish any notorious enemy or malefactor, he causeth him to be tied to a tree, and, with mussel shells or reeds, the executioner cutteth off his joints one after another, ever casting what they cut off into the fire; then doth he proceed with shells and reeds to case the skin from his head and face; then do they rip his belly, and so burn him with the tree and all. Thus themselves reported they executed George Cassen.¹

Their ordinary correction is to beat them with cudgels. We have seen a man kneeling on his knees; and at Powhatan's command,

¹ Among the first planters of Jamestown, George Cassen is listed as a laborer.

two men have beat him on the bare skin till he hath fallen senseless in a swoon and yet never cry [cried] nor complained.

In the year 1608 he surprised the people of Payankatank, his near neighbors and subjects. The occasion was to us unknown, but the manner was thus. First he sent divers of his men as to lodge amongst them that night, then the *Ambuscadoes* environed all their houses, and at the hour appointed they all fell to the spoil: 24 men they slew; the long hair of the one side of their heads with the skin cased off with shells or reeds, they brought away. They surprised also the women and the children and the *Werowance*. All these they present [ed] to Powhatan. The *Werowance*, women and children became his prisoners and do him service.

The locks of hair with their skins he hanged on a line unto two trees. And thus he made ostentation as of a great triumph at Werowococo, shewing them to the Englishmen that then came unto him, at his appointment: they expecting provision; he, to betray them, supposed to half conquer them by this spectacle of his terrible cruelty.²

And this is as much as my memory can call to mind worthy of note, which I have purposely collected to satisfy my friends of the true worth and quality of Virginia. Yet some bad natures will not stick to slander the country, that will slovenly spit at all things, especially in company where they can find none to contradict them. Who though they were scarce ever 10 miles from James Town, or at the most but at the falls; yet holding it a great disgrace that amongst so much action their actions were nothing, exclaim of all things, though they never adventured to know anything, nor ever did anything but devour the fruits of other men's labors. Being for most part of such tender educations and small experience in martial accidents: because they found not English cities, nor such fair houses, nor at their own wishes any of their accustomed dainties, with feather beds and down pillows, taverns and alehouses in every breath-

ing place, neither such plenty of gold and silver and dissolute liberty as they expected, had little or no care of anything, but to pamper their bellies, to fly away with our pinnaces, or procure their means to return for England. For the country was to them a misery, a ruin, a death, a hell; and their reports here and their own actions there according.

Some other there were that had yearly stipends to pass to and again for transportation: who to keep the mystery of the business in themselves, though they had neither time nor means to know much of themselves; yet all men's actions or relations they so formally tuned to the temporizing time's simplicity, as they could make their ignorances seem much more than all the true actors could by their experience. And those with their great words deluded the world with such strange promises as abused the business much worse than the rest. For the business being builded upon the foundation of their feigned experience, the planters, the money, time, and means have still miscarried: yet they ever returning, and the planters so far absent, who could contradict their excuses? which, still to maintain their van glory and estimation, from time to time they have used such diligence as made them pass for truths, though nothing more false. And that the adventurers might be thus abused, let no man wonder, for the wisest living is soonest abused by him that hath a fair tongue and a dissembling heart.

There were many in Virginia merely projecting verbal and idle contemplators, and those so devoted to pure idleness that though they had lived two or three years in Virginia lordly, necessity itself could not compel them to pass the Peninsula or *Pallisadoes* of James Town; and those witty spirits, what would they not affirm in the behalf of our transporters, to get victual from their ships, or obtain their good words in England to get their passes?

² Smith probably refers here to a visit which he and a party of his men made to Powhatan January 12 1609

Thus from the clamors and the ignorance of false informers are sprung those disasters that spring in Virginia, and our ingenious verbalists were no less plague to us in Virginia than the locusts to the Egyptians. For the labor of 30 of the best only, preserved in Christianity, by their industry, the idle livers of near 200 of the rest: who lived near 10 months of such natural means as the country naturally of itself afforded.

Notwithstanding all this and the worst fury of the savages, the extremity of sickness, mutinies, faction, ignorances, and want of victual; in all that time I lost but 7 or 8 men: yet subjected the savages to our desired obedience and received contribution from 35 of their kings to protect and assist them against any that should assault them; in which order they continued true and faithful and as subjects to his Majesty so long after as I did govern there, until I left the country.

Since, how they have revolted, the country lost, and again replanted, and the businesses hath succeeded from time to time, I refer you to the relations of them returned from Virginia, that have been more diligent in such observations.

From

A DESCRIPTION OF NEW ENGLAND [1616]

Who can desire more content that hath small means or but only his merit to advance his fortune than to tread and plant that ground he hath purchased by the hazard of his life? If he have but the taste of virtue and magnanimity, what to such a mind can be more pleasant than planting and building a foundation for his posterity, got from the rude earth by God's blessing and his own industry, without prejudice to any? If he have any grain of faith or zeal in religion, what can he do less hurtful to any or more agreeable to God than to seek to convert those poor savages to know Christ and humanity, whose labors with discretion will triply requite thy charge and pains? What so truly suits

with honor and honesty as the discovering things unknown? erecting towns, peopling countries, informing the ignorant, reforming things unjust, teaching virtue, and gain to our native mother-country a kingdom to attend her: find employment for those that are idle because they know not what to do: so far from wronging any, as to cause posterity to remember thee; and remembering thee, ever honor that remembrance with praise?

Consider: what were the beginnings and endings of the monarchies of the Chaldeans, the Syrians, the Grecians, and Romans, but this one rule; what was it they would not do, for the good of the commonwealth or their mother-city? For example: Rome, what made her such a monarchess, but only the adventures of her youth, not in riots at home, but in dangers abroad? and the justice and judgment out of their experience when they grew aged. What was their ruin and hurt but this: the excess of idleness, the fondness of parents, the want of experience in magistrates, the admiration of their undeserved honors, the contempt of true merit, their unjust jealousies, their politic mereduties, their hypocritical seeming goodness, and their deeds of secret lewdness? finally, in fine, growing only formal temporists, all that their predecessors got in many years, they lost in few days. Those by their pain and virtues became lords of the world, they by their ease and vices became slaves to their servants. This is the difference betwixt the use of arms in the field and on the monuments of stones, the golden age and the leaden age, prosperity and misery, justice and corruption, substance and shadows, words and deeds, experience and imagination, making commonwealths and marring commonwealths, the fruits of virtue and the conclusions of vice.

Then, who would live at home idly (or think in himself any worth to live) only to eat, drink, and sleep, and so die? Or by consuming that carelessly, his friends got worthily? Or by using that miserably, that maintained virtue honestly? Or for being

descended nobly, pine with the vain vaunt of great kindred, in penury? Or (to maintain a silly show of bravery) toil out thy heart, soul, and time basely, by shifts, tricks, cards, and dice? Or by relating news of others' actions shark here or there for a dinner or supper; deceive thy friends, by fair promises and dissimulation, in borrowing where thou never intendest to pay; offend the laws, surfet with excess, burden thy country, abuse thyself, despair in want, and then couzen thy kindred, yea even thine own brother, and wish thy parents' death (I will not say damnation) to have their estates? though thou seest what honors and rewards the world yet hath for them [who] will seek them and worthily deserve them.

I would be sorry to offend or that any should mistake my honest meaning: for I wish good to all, hurt to none. But rich men for the most part are grown to that dotage, through their pride in their wealth, as though there were no accident could end it or their life.

And what hellish care do such take to make it their own misery and their country's spoil, especially when there is most need of their employment? drawing by all manner of inventions, from the prince and his honest subjects, even the vital spirits of their powers and estates: as if their bags or brags were so powerful a defence, the malicious could not assault them; when they are the only bait, to cause us not to be only assaulted, but betrayed and murdered in our own security, ere we well perceive it.

May not the miserable ruin of Constantinople, their impregnable walls, riches, and pleasures [at] last taken by the Turk (which are but a bit, in comparison of their now mightiness) remember us of the effects of private covetousness? at which time the good emperor held himself rich enough, to have such rich subjects, so formal in all excess of vanity, all kind of delicacy and prodigality. His poverty when the Turk besieged, the citizens (whose merchandizing thoughts were only to get

wealth, little conceiving the desperate resolution of a valiant expert enemy) left the emperor so long to his conclusions, having spent all he had to pay his young, raw, discontented soldiers, that suddenly he, they, and their city were all a prey to the devouring Turk. And what they would not spare for the maintenance of them who adventured their lives to defend them did serve only their enemies to torment them, their friends and country, and all Christendom to this present day. Let this lamentable example remember you that are rich (seeing there are such great thieves in the world to rob you) not to grudge to lend some proportion to breed them that have little, yet are willing to learn how to defend you: for it is too late when the deed is a-doing.

The Romans' estate hath been worse than this: for the mere covetousness and extortion of a few of them so moved the rest that, not having any employment but contemplation, their great judgments grew to so great malice as themselves were sufficient to destroy themselves by faction: let this move you to embrace employment for those whose educations, spirits, and judgments want but your purses, not only to prevent such accustomed dangers, but also to gain more thereby than you have. . . .

My purpose is not to persuade children from their parents, men from their wives, nor servants from their masters: only such as with free consent may be spared: but that each parish or village, in city or country, that will but apparel their fatherless children, of thirteen or fourteen years of age, or young married people, that have small wealth to live on: here by their labor may live exceeding well: provided always that first there be a sufficient power to command them, houses to receive them, means to defend them, and meet provisions for them. . . .

Who seeth not what is the greatest good of the Spaniard but these new conclusions in searching those unknown parts of the unknown world? By which means he dives

even into the very secrets of all his neighbors and the most part of the world: and when the Portugal [Portuguese] and Spaniard had found the East and West Indies, how many did condemn themselves, that did not accept of that honest offer of noble Columbus? who, upon our neglect, brought them to it, persuading ourselves the world had no such places as they had found: and yet ever since we find they still (from time to time) have found new lands, new nations, and trades, and still daily do find both in Asia, Africa, Terra Incognita, and America; so that there is neither soldier nor mechanic, from the lord to the beggar, but those parts afford them all employment: and discharge their native soil of so many thousands of all sorts that else, by their sloth, pride, and imperfections, would long ere this have troubled their neighbors or have eaten the pride of Spain itself.

Now he knows little that knows not England may well spare many more people than Spain and is as well able to furnish them with all manner of necessaries. And seeing, for all they have, they cease not still to search that they have not and know not, it is strange we should be so dull as not [to] maintain that which we have and pursue that we know.

ADVERTISEMENT
[1631]

The wars in Europe, Asia, and Africa taught me how to subdue the wild savages in Virginia and New England in America; which now after many a stormy blast of ignorant contradictors, projectors, and undertakers, both they and I have been so tossed and tortured into so many extremities, as despair was the next we both expected, till it pleased God now at last to stir up some good minds, that I hope will produce glory to God, honor to his Majesty, and profit to his kingdoms; although all our plantations have been so foiled and abused, their best good willers have

been for the most part discouraged, and their good intents disgraced, as the general history of them will at large truly relate [to] you.

Pardon me if I offend in loving that I have cherished truly by the loss of my prime fortunes, means, and youth: if it over-glad me to see industry herself adventure now to make use of my aged endeavors, not by such (I hope) as rumour doth report, a many of discontented Brownists, Anabaptists, Papists, Puritans, Separatists, and such factious Humorists: for no such they will suffer among them, if known, as many of the chief of them [John Winthrop, etc.] have assured me; and the much conferences I have had with many of them doth confidently persuade me to write thus much in their behalf.

I mean not the Brownists of Leyden and Amsterdam at New Plymouth, who although by accident, ignorance, and wilfulness have endured, with a wonderful patience, many losses and extremities; yet they subsist and prosper so well, not any of them will abandon the country, but to the utmost of their powers increase their numbers. But of those which are gone within this eighteen months [April, 1629—October, 1630] for Cape Anne and the Bay of Massachusetts. Those which are their chief undertakers are gentlemen of good estate, some of 500, some a thousand pound land a year, all which they say they will sell for the advancing this harmless and pious work; men of good credit and well-beloved in their country, not such as fly for debt or any scandal at home, and are good Catholic Protestants according to the reformed Church of England; if not, it is well they are gone. The rest of them men of good means, or arts, occupations, and qualities, much more fit for such a business and better furnished of all necessaries if they arrive well than was ever any plantation went out of England.

I will not say but some of them may be more precise than needs, nor that they all be so good as they should be; for Christ had but twelve apostles, and one was a

traitor: and if there be no dissemblers among them, it is more than a wonder; therefore do not condemn all for some. But however they have as good authority from his Majesty as they could desire: if they do ill, the loss is but their own; if well, a great glory and exceeding good to this kingdom, to make good at last what all our former conclusions have disgraced.

Now they take not that course the Vir-

ginia Company did for the planters there; their purses and lives were subject to some few here in London who were never there, that consumed all in arguments, projects, and their own conceits: every year trying new conclusions, altering everything yearly as they altered opinions, till they had consumed more than two hundred thousand pounds and near eight thousand men's lives.

Walam Olum

[Date uncertain]

CONSTANTINE SAMUEL RAFINESQUE, of French-German descent, born in Galata, a suburb of Constantinople, Oct. 22, 1783, visited the United States in 1802, then went to Sicily, where he carried on business under the name of his mother's family, "Schmaltz," returned to the United States in 1815, served as "Professor of Historical and Natural Sciences" at Transylvania University, Lexington, Kentucky, from 1819 to 1826, and died in Philadelphia, Sept. 18, 1840. A prolific writer of scientific and antiquarian essays, Rafinesque copied in 1820 a collection of bark or board plates incised and painted with the picture writings of the Lenape or Delaware Indians and in 1822 the verses in Lenape dialect that were supposed to accompany each ideograph.

Rafinesque published a translation of this *Walam Olum* or "Red Score" in 1836. This translation was once thought to be a forgery, but the manuscript of Rafinesque's copy of the original is now regarded as a fairly accurate rendering of some later copy of a very early oral culture-saga of the Lenape, "the earliest American book," as it has been called. [The following translation of the entire *Walam Olum* is reprinted from *Library of Aboriginal American Literature*, ed. D. G. Brinton, Vol. V, Philadelphia, 1885, pp. 171-217. Brackets and parentheses are Brinton's to indicate interpolations or problematical renderings.

I

At first, in that place, at all times, above the earth,
On the earth, [was] an extended fog, and there the great Manito was.
At first, forever, lost in space, everywhere, the great Manito was.
He made the extended land and the sky.
He made the sun, the moon, the stars.
He made them all to move evenly.
Then the wind blew violently, and it cleared, and the water flowed off far and strong.

And groups of islands grew newly, and there remained.
 Anew spoke the great Manito, a manito to manitos,
 To beings, mortals, souls and all, 10
 And ever after he was a manito to men, and their grandfather.
 He gave the first mother, the mother of beings
 He gave the fish, he gave the turtles, he gave the beasts, he gave the birds.
 But an evil Manito made evil beings only, monsters . . .
 He made the flies, he made the gnats. 15
 All beings were then friendly.
 Truly the manitos were active and kindly
 To those very first men, and to those first mothers, fetched them wives,
 And fetched them food, when first they desired it.
 All had cheerful knowledge, all had leisure, all thought in gladness. 20
 But very secretly an evil being, a mighty magician, came on earth,
 And with him brought badness, quarreling, unhappiness,
 Brought bad weather, brought sickness, brought death.
 All this took place of old on the earth, beyond the great tide-water, at the first.

II

Long ago there was a mighty snake and beings evil to men. 25
 This mighty snake hated those who were there (and) greatly disquieted those whom
 he hated.
 They both did harm, they both injured each other, both were not in peace.
 Driven from their homes they fought with this murderer.
 The mighty snake firmly resolved to harm the men.
 He brought three persons, he brought a monster, he brought a rushing water. 30
 Between the hills the water rushed and rushed, dashing through and through, destroying
 much.
 Nanabush, the Strong White One, grandfather of beings, grandfather of men, was on
 the Turtle Island.
 There he was walking and creating, as he passed by and created the turtle.
 Beings and men all go forth, they walk in the floods and shallow waters, down stream
 thither to the Turtle Island.
 There were many fishes, which ate some of them. 35
 The Manito daughter, coming, helped with her canoe, helped all, as they came and came.
 [And also] Nanabush, Nanabush, the grandfather of all, the grandfather of beings, the
 grandfather of men, the grandfather of the turtle.
 The men then were together on the turtle, like to turtles.
 Frightened on the turtle, they prayed on the turtle that what was spoiled should be
 restored. 40
 The water ran off, the earth dried, the lakes were at rest, all was silent, and the mighty
 snake departed.

III

After the rushing waters (had subsided) the Lenape of the turtle were close together, in
 hollow houses, living together there.
 It freezes where they abode, it snows where they abode, it storms where they abode, it is
 cold where they abode.

At this northern place they speak favorably of mild, cool (lands), with many deer and buffaloes.

As they journeyed, some being strong, some rich, they separated into house-builders and hunters, 45

The strongest, the most united, the purest, were the hunters

The hunters showed themselves at the north, at the east, at the south, at the west.

In that ancient country, in that northern country, in that turtle country, the best of the Lenape were the Turtle men.

All the cabin fires of that land were disquieted, and all said to their priest, "Let us go." To the Snake land to the east they went forth, going away, earnestly grieving. 50

Split asunder, weak, trembling, their land burned, they went, torn and broken, to the Snake Island.

Those from the north being free, without care, went forth from the land of snow, in different directions

The fathers of the Bald Eagle and the White Wolf remain along the sea, rich in fish and mussels.

Floating up the streams in their canoes, our fathers were rich, they were in the light, when they were at those islands. 55

Head Beaver and Big Bird said,

"Let us go to Snake Island," they said.

All say they will go along to destroy all the land.

Those of the north agreed,

Those of the east agreed.

Over the water, the frozen sea, 60

They went to enjoy it.

On the wonderful, slippery water,

On the stone-hard water all went,

On the great Tidal Sea, the mussel-bearing sea.

Ten thousand at night, 65

All in one night,

To the Snake Island, to the east, at night,

They walk and walk, all of them.

The men from the north, the east, the south,

The Eagle clan, the Beaver clan, the Wolf clan, 70

The best men, the rich men, the head men,

Those with wives, those with daughters, those with dogs,

They all come, they tarry at the land of the spruce pines;

Those from the west come with hesitation,

Esteeming highly their old home at the Turtle land. 75

IV

Long ago the fathers of the Lenape were at the land of spruce pines.

Hitherto the Bald Eagle band had been the pipe bearer,

While they were searching for the Snake Island, that great and fine land.

They having died, the hunters, about to depart, met together.

All say to Beautiful Head, "Be thou chief." 80

"Coming to the Snakes, slaughter at that Snake hill, that they leave it."

All of the Snake tribe were weak, and hid themselves in the Swampy Vales.

After Beautiful Head, White Owl was chief at Spruce Pine land.
 After him, Keeping-Guard was chief of that people.
 After him, Snow Bird was chief; he spoke of the south, 85
 That our fathers should possess it by scattering abroad.
 Snow Bird went south, White Beaver went east.
 The Snake land was at the south, the great Spruce Pine land was toward the shore;
 To the east was the Fish land, toward the lakes was the buffalo land.
 After Snow Bird, the Seizer was chief, and all were killed, 90
 The robbers, the snakes, the evil men, the stone men.
 After the Seizer there were ten chiefs, and there was much warfare south and east.
 After them, the Peaceable was chief at Snake land.
 After him, Not-Black was chief, who was a straight man.
 After him, Much-Loved was chief, a good man. 95
 After him, No-Blood was chief, who walked in cleanliness.
 After him, Snow-Father was chief, he of the big teeth.
 After him, Tally-Maker was chief, who made records.
 After him, Shiverer-with-Cold was chief, who went south to the corn land.
 After him, Corn-Breaker was chief, who brought about the planting of corn. 100
 After him, the Strong-Man was chief, who was useful to the chieftains.
 After him, the Salt-Man was chief; after him the Little-One was chief.
 There was no rain, and no corn, so they moved further seaward
 At the place of caves, in the buffalo land, they at last had food, on a pleasant plain.
 After the Little-One (came) the Fatigued; after him, the Stuff-One. 105
 After him, the Reprover; disliking him, and unwilling (to remain),
 Being angry, some went off secretly, moving east.
 The wise ones who remained made the Loving-One chief.
 They settled again on the Yellow river, and had much corn on stoneless soil.
 All being friendly, the Affable was chief, the first of that name. 110
 He was very good, this Affable, and came as a friend to all the Lenape.
 After this good one, Strong-Buffalo was chief and pipe-bearer.
 Big-Owl was chief; White Bird was chief.
 The Willing-One was chief and priest; he made festivals.
 Rich-Again was chief; the Painted-One was chief. 115
 White-Fowl was chief; again there was war, north and south.
 The Wolf-wise-in-Counsel was chief.
 He knew how to make war on all; he slew Strong-Stone.
 The Always-Ready-One was chief; he fought against the Snakes.
 The Strong-Good-One was chief; he fought against the northerners. 120
 The Lean-One was chief; he fought against the Tawa people.
 The Opossum-Like was chief; he fought in sadness,
 And said, "They are many, let us go together to the east, to the sunrise."
 They separated at Fish river; the lazy ones remained there.
 Cabin-Man was chief; the Talligewi possessed the east. 125
 Strong-Friend was chief; he desired the eastern land.
 Some passed on east; the Talega ruler killed some of them.
 All say, in unison, "War, war."
 The Talamatan, friends from the north, come, and all go together.
 The Sharp-One was chief; he was the pipe-bearer beyond the river. 130
 They rejoiced greatly that they should fight and slay the Talega towns.

The Stirrer was chief; the Talega towns were too strong.
 The Fire-BUILDER was chief; they all gave to him many towns.
 The Breaker-in-Pieces was chief; all the Talega go south.
 He-has-Pleasure was chief; all the people rejoice. 135
 They stay south of the lakes; the Talamatan friends north of the lakes.
 When Long-and-Mild was chief, those who were not his friends conspired.
 Truthful-Man was chief; the Talamatans made war.
 Just-and-True was chief; the Talamatans trembled.

V

All were peaceful, long ago, there at the Talega land. 140
 The Pipe-Bearer was chief at the White river.
 White-Lynx was chief; much corn was planted.
 Good-and-Strong was chief; the people were many.
 The Recorder was chief; he painted the records.
 Pretty-Blue-Bird was chief; there was much fruit. 145
 Always-There was chief; the towns were many.
 Paddler-up-Stream was chief, he was much on the rivers.
 Little Cloud was chief; many departed,
 The Nanticokes and the Shawnees going to the south.
 Big-Beaver was chief, at the White Salt Lick. 150
 The Seer, the praised one, went to the west.
 He went to the west, to the southwest, to the western villages.
 The Rich-Down-River-Man was chief, at Talega river.
 The Walker was chief; there was much war.
 Again with the Tawa people, again with the Stone people, again with the northern
 people. 155
 Grandfather-of-Boats was chief; he went to lands in boats.
 Snow-Hunter was chief; he went to the north land.
 Look-About was chief; he went to the Talega mountains.
 East-Villager was chief; he was east of Talega.
 A great land and a wide land was the east land, 160
 A land without snakes, a rich land, a pleasant land.
 Great Fighter was chief, toward the north.
 At the Straight river, River-Loving was chief.
 Becoming-Fat was chief at Sassafras land.
 All the hunters made wampum again at the great sea. 165
 Red-Arrow was chief at the stream again.
 The Painted-Man was chief at the Mighty Water.
 The Easterners and the Wolves go northeast.
 Good-Fighter was chief, and went to the north.
 The Mengwe, the Lynxes, all trembled. 170
 Again an Affable was chief, and made peace with all,
 All were friends, all were united, under this great chief.
 Great-Beaver was chief, remaining in Sassafras land.
 White-Body was chief on the sea shore.
 Peace-Maker was chief, friendly to all. 175
 He-Makes-Mistakes was chief, hurriedly coming.

At this time whites came on the Eastern sea.
 Much-Honored was chief; he was prosperous.
 Well-Praised was chief; he fought at the south.
 He fought in the land of the Talega and Koweta. 180
 White-Otter was chief; a friend of the Talamatans.
 White-Horn was chief; he went to the Talega,
 To the Hihim, to the Shawnees, to the Kanawhas
 Coming-as-a-Friend was chief, he went to the Great Lakes,
 Visiting all his children, all his friends. 185
 Cranberry-Eater was chief, friend of the Ottawas
 North-Walker was chief; he made festivals.
 Slow-Gatherer was chief at the shore.
 As three were desired, three those were who grew forth,
 The Unami, the Minsi, the Chikim. 190
 Man-Who-Fails was chief; he fought the Mengwe.
 He-is-Friendly was chief; he scared the Mengwe.
 Saluted was chief; thither,
 Over there, on the Scioto, he had foes.
 White-Crab was chief; a friend of the shore. 195
 Watcher was chief; he looked toward the sea.
 At this time, from north and south, the whites came.
 They are peaceful; they have great things; who are they?

SYNOPSIS OF THE WALAM OLUM

(Reprinted, with some omissions, from Brinton, *op. cit.*, pp. 166-168)

I

The formation of the universe by the Great Manito is described. In the primal fog and watery waste he formed land and sky, and the heavens cleared. He then created men and animals. These lived in peace and joy until a certain evil manito came, and sowed discord and misery. . . . The notion of the earth rising from the primal waters is strictly a part of the earliest Algonkin mythology. . . .

II

The Evil Manito, who now appears under the guise of a gigantic serpent, determines to destroy the human race, and for that purpose brings upon them a flood of water. Many perish, but a certain number escape to the turtle, that is, to solid land, and are there protected by Nanabush (Manibozho or Michabo). They pray to him for assistance, and he caused the water to disappear, and the great serpent to depart.

This canto is a brief reference to the conflict between the Algonkin hero god and the serpent of the waters, originally, doubtless, a meteorological myth. It is an ancient and authentic aboriginal legend, shared both by Iroquois and Algonkins, under slightly different forms. In one aspect, it is the Flood or Deluge Myth

III

The waters having disappeared, the home of the tribe is described as in a cold northern clime. This they concluded to leave in search of warmer lands. Having divided their people into a warrior and a peaceful class, they journeyed southward, toward

what is called the "Snake land." They approached this land in winter, over a frozen river. Their number was large, but all had not joined in the expedition with equal willingness, their members at the west preferring their ancient seats in the north to the uncertainty of southern conquests. They, however, finally united with the other bands, and they all moved south to the land of spruce pines.

IV

The first sixteen verses record the gradual conquest of most of the Snake land. It seems to have required the successive efforts of six or seven head chiefs, one after another, to bring this about, probably but a small portion at a time yielding to the attacks of these enemies. Its position is described as being to the southwest, and in the interior of the country. Here they first learned to cultivate maize.

The remainder of the canto is taken up with a long list of chiefs, and with the removal of the tribe, in separate bands and at different times, to the east. In this journey from the Snake land to the east, they encountered and had long wars with the Talega. These lived in strong towns, but by the aid of the Hurons (Talamatans), they overcame them and drove them to the south.

V

Having conquered the Talegas, the Lenape possessed their land and that of the Snake people, and for a certain time enjoyed peace and abundance. Then occurred a division of their people, some, as Nantocokes and Shawnees, going to the south, others to the west, and later, the majority toward the east, arriving finally at the Salt sea, the Atlantic ocean. Thence a portion turned north and east, and encountered the Iroquois. Still later, the three sub-tribes of the Lenape settled themselves definitely along the Delaware river, and received the geographical names by which they were known, as Minsi, Unami and Unalachtgo. They were often at war with the Iroquois, generally successfully. Rumors of the whites had reached them, and finally these strangers approached the river, both from the north (New York Bay) and the south. Here the song closes.

1590 ~ *William Bradford* ~ 1657

BORN in 1590 in Austerfield, England, of Yorkshire farming folk, William Bradford became an ardent student of the Scriptures at the age of twelve, joined a dissenting group that met at the house of William Brewster in Scrooby, and left England with them when, organized into a Separatist Church, they decided to remove to the Low Countries to escape persecution by intolerant Anglicans. After living first at Amsterdam and then at Leyden, they pondered emigration to America, but only a part of the Leyden congregation resolved to go. Through the good offices of Sir Edward Sandys they gained permission to found an independent settlement on land granted to the Virginia Company of London. From London promoters they obtained capital for their venture and

from James I. the promise that they would not be molested in their new home if they stirred up no strife.

Led by Brewster and Bradford, they sailed in 1620 from Delft Haven via Southampton and Plymouth, England, arrived early in November at Cape Cod in the *Mayflower* after much buffeting by adverse weather, and founded Plymouth, Massachusetts, which was in territory under the jurisdiction of the Council for New England rather than the Virginia Company of London. Their backers in England secured a patent in 1621 from the Council, and their leaders purchased this patent in 1629-30, but the colony was never the recipient of a royal charter. In 1691 the Plymouth colony was merged with that of Massachusetts Bay. Whereas the settlers of the latter were moderate Puritans or congregationalists who preferred not to think of themselves as separated from the Church of England, those of Plymouth, by their insistence on Separatism, were nearer the left-wing or radical fringe of the complex Puritan movement.

Bradford became second governor of Plymouth Colony in 1621 and held that office during thirty of the remaining thirty-six years of his life. He began writing his *History* in 1630 and probably brought it to completion about 1650, seven years before his death. The *History* remained in manuscript form for more than 200 years. Used freely by early New England historians, it was finally believed to be lost irrecoverably. By good luck and shrewd literary detective work, it was located in the Fulham Library, England, by Charles Deane in 1855 and first published, under his editorship and the auspices of the Massachusetts Historical Society, in 1856. The edition of William T. Davis, New York, 1908, is one of the volumes in the series, *Original Narratives of Early American History*.

[The present selections are modernized in spelling, punctuation, and, to some extent, in paragraphing. Titles have been supplied by the present editors.]

From
HISTORY OF PLYMOUTH
PLANTATION
[1856 (written 1630-1650)]

THE DECISION TO LEAVE ENGLAND

THE one side labored to have the right worship of God and discipline of Christ established in the church, according to the simplicity of the gospel, without the mixture of men's inventions, and to have and be ruled by the laws of God's word dispensed in those offices and by those officers of pastors, teachers, and elders, etc., according to the Scriptures. The other party,

though under many colors and pretences, endeavored to have the episcopal dignity (after the popish manner) with their large power and jurisdiction still retained; with all those courts, canons, and ceremonies, together with all such livings, revenues, and subordinate officers, with other such means as formerly upheld their anti-Christian greatness, and enabled them with lordly and tyrannous power to persecute the poor servants of God. This contention was so great as neither the honor of God, the common persecution, nor the mediation of Mr. Calvin and other worthies of the Lord in those places, could prevail with those thus episcopally minded, but they pro-

ceeded by all means to disturb the peace of this poor persecuted church, even so far as to charge (very unjustly and ungodly, yet prelate-like) some of their chief opposers with rebellion and high treason against the Emperor and other such crimes.

And this contention died not with Queen Mary, nor was left beyond the seas, but at her death these people returning into England under gracious Queen Elizabeth, many of them were preferred to bishopries and other promotions, according to their aims and desires, that inveterate hatred against the holy discipline of Christ in his church hath continued to this day. In so much that for fear it should prevail, all plots and devices have been used to keep it out, incensing the queen and state against it as dangerous for the commonwealth; and that it was most needful that the fundamental points of religion should be preached in those ignorant and superstitious times; and to win the weak and ignorant, they might retain divers harmless ceremonies; and though it were to be wished that divers things were reformed, yet this was not a season for it. And many the like, to stop the mouths of the more godly, to bring them over to yield to one ceremony after another and one corruption after another; by these wiles beguiling some and corrupting others till at length they began to persecute all the zealous professors in the land (though they knew little what this discipline meant) both by word and deed, if they would not submit to their ceremonies and become slaves to them and their popish trash, which have no ground in the word of God but are relies of that man of sin. And the more the light of the gospel grew, the more they urged their subscriptions to these corruptions. So as (notwithstanding all their former pretences and fair colors) they whose eyes God had not justly blinded might easily see whereto these things tended. And to cast contempt the more upon the sincere servants of God, they opprobriously and most injuriously gave unto and imposed upon them that name of Puritans, which it is said the

Novatians¹ out of pride did assume and take unto themselves. And lamentable it is to see the effects which have followed. Religion hath been disgraced, the godly grieved, afflicted, persecuted, and many exiled, sundry have lost their lives in prisons and other ways. On the other hand, sin hath been countenanced, ignorance, profaneness, and atheism increased, and the papists encouraged to hope again for a day. . . .

So many therefore of these professors as saw the evil of these things in these parts, and whose hearts the Lord had touched with heavenly zeal for his truth, they shook off this yoke of anti-Christian bondage, and as the Lord's free people joined themselves (by a covenant of the Lord) into a church estate, in the fellowship of the gospel, to walk in all his ways, made known or to be made known unto them, according to their best endeavors, whatsoever it should cost them, the Lord assisting them. And that it cost them something this ensuing history will declare.

These people became two distinct bodies or churches and in regard of distance of place did congregate severally, for they were of sundry towns and villages, some in Nottinghamshire, some of Lincolnshire, and some of Yorkshire, where they border nearest together. In one of these churches (besides others of note) was Mr. John Smith, a man of able gifts and a good preacher, who afterwards was chosen their pastor. But these afterwards falling into some errors in the Low Countries, there (for the most part) buried themselves and their names.

But in this other church (which must be the subject of our discourse) besides other worthy men, was Mr. Richard Clifton, a grave and reverend preacher, who by his pains and diligence had done much good, and under God had been a means of the

¹ A sect of Roman Christians who in 251, under the leadership of L. Novatianus, caused a schism which lasted for several centuries.

conversion of many. And also that famous and worthy man Mr. John Robinson, who afterwards was their pastor for many years until the Lord took him away by death. Also Mr. William Brewster, a reverent man, who afterwards was chosen an elder of the church and lived with them till old age.

But after these things they could not long continue in any peaceable condition, but were hunted and persecuted on every side, so as their former afflictions were but as flea-bitings in comparison of these which now came upon them. For some were taken and clapped up in prison, others had their houses beset and watched night and day, and hardly escaped their hands; and the most were fain to fly and leave their houses and habitations and the means of their livelihood. Yet these and many other sharper things which afterwards befell them were no other than they looked for, and therefore were the better prepared to bear them by the assistance of God's grace and spirit. Yet seeing themselves thus molested and that there was no hope of their continuance there, by a joint consent they resolved to go into the Low Countries, where they heard was freedom of religion for all men, as also how sundry from London and other parts of the land had been exiled and persecuted for the same cause, and were gone thither, and lived at Amsterdam and in other places of the land. So, after they had continued together about a year and kept their meetings every Sabbath in one place or other, exercising the worship of God amongst themselves, notwithstanding all the diligence and malice of their adversaries, they seeing they could no longer continue in that condition, they resolved to get over into Holland as they could, which was in the year 1607 and 1608, of which more at large in the next chapter.

THE DECISION TO LEAVE LEYDEN

... After they had lived in this city about some 11 or 12 years (which is the more observable being the whole time of

that famous truce between that state and the Spaniards) and sundry of them were taken away by death and many others began to be well stricken in years (the grave mistress, Experience, having taught them many things), those prudent governors, with sundry of the sagest members, began both deeply to apprehend their present dangers and wisely to foresee the future and think of timely remedy. In the agitation of their thoughts, and much discourse of things hereabout, at length they began to incline to this conclusion—of removal to some other place. Not out of any new-fangledness or other such like giddy humor, by which men are oftentimes transported to their great hurt and danger, but for sundry weighty and solid reasons, some of the chief of which I will here briefly touch

And first, they saw and found by experience the hardness of the place and country to be such, as few in comparison would come to them and fewer that would bide it out and continue with them. For many that came to them and many more that desired to be with them could not endure that great labor and hard fare, with other inconveniences, which they underwent and were contented with. But though they loved their persons, approved their cause, and honored their sufferings, yet they left them, as it were, weeping, as Orpah did her mother-in-law, Naomi, or as those Romans did Cato in Utica, who desired to be excused and borne with, though they could not all be Catos.² For many, though they desired to enjoy the ordinances of God in their purity and the liberty of the gospel with them, yet, alas, they admitted of bondage, with danger of conscience, rather than to endure those hardships; yea, some preferred and chose the prisons in England rather than this liberty in Holland, with these afflictions. But it was thought that if

² These allusions to the Book of Ruth in the Bible and to Plutarch's Life of Cato the Younger illustrate Bradford's fusion of Christian and classical learning, so typical of the Renaissance man of letters.

a better and easier place of living could be had, it would draw many and take away these discouragements. Yea, their pastor would often say that many of those who both wrote and preached now against them, if they were in a place where they might have liberty and live comfortably, they would then practice as they did.

Secondly, they saw that though the people generally bore all these difficulties very cheerfully and with a resolute courage, being in the best and strength of their years, yet old age began to steal on many of them (and their great and continual labors, with other crosses and sorrows, hastened it before the time) so as it was not only probably thought, but apparently seen, that within a few years more they would be in danger to scatter, by necessity's pressing them, or sunk under their burdens, or both. And therefore, according to the divine proverb that a wise man seeth the plague when it cometh and hideth himself (Pro.-22.3.), so they, like skillful and beaten soldiers, were fearful either to be entrapped or surrounded by their enemies, so as they should neither be able to fight nor fly; and therefore thought it better to dislodge betimes to some place of better advantage and less danger, if any such could be found.

Thirdly, as necessity was a taskmaster over them, so they were forced to be such, not only to their servants, but in a sort to their dearest children; the which, as it did not a little wound the tender hearts of many a loving father and mother, so it produced likewise sundry sad and sorrowful effects. For many of their children, that were of best dispositions and gracious inclinations, having learned to bear the yoke in their youth and willing to bear part of their parents' burden, were oftentimes so oppressed with their heavy labors that, though their minds were free and willing, yet their bodies bowed under the weight of the same and became decrepit in their early youth, the vigor of nature being consumed in the very bud, as it were. But that which was most lamentable, and of all sorrows to be borne, was that many of their children, by

these occasions and the great licentiousness of youth in that country and the manifold temptations of the place, were drawn away by evil examples into extravagant and dangerous courses, getting the reins off their necks and departing from their parents. Some became soldiers, others took upon them far voyages by sea, and others some worse courses tending to dissoluteness and the danger of their souls, to the great grief of their parents and dishonor of God. So that they saw their posterity would be in danger to degenerate and be corrupted.

Lastly (and which was not least), a great hope and inward zeal they had of laying some good foundation, or at least to make some way thereunto, for the propagating and advancing the gospel of the kingdom of Christ in those remote parts of the world; yea, though they should be but even as stepping-stones unto others for the performing of so great a work.

These and some other like reasons moved them to undertake this resolution of their removal; the which they afterward prosecuted with so great difficulties, as by the sequel will appear.

The place they had thoughts on was some of those vast and unpeopled countries of America, which are fruitful and fit for habitation, being devoid of all civil inhabitants, where there are only savage and brutish men, which range up and down little otherwise than the wild beasts of the same. This proposition being made public and coming to the scanning of all, it raised many variable opinions amongst men and caused many fears and doubts among themselves. Some, from their reasons and hopes conceived, labored to stir up and encourage the rest to undertake and prosecute the same; others, again, out of their fears, objected against it and sought to divert from it, alleging many things, and those neither unreasonable nor improbable, as that it was a great design and subject to many unconceivable perils and dangers; as, besides the casualties of the seas (which none can be freed from), the length of the voyage was such, as the weak bodies of women and

other persons worn out with age and travail (as many of them were) could never be able to endure. And yet, if they should, the miseries of the land which they should be exposed to would be too hard to be borne, and likely, some or all of them together, to consume and utterly to runate them. For there they should be liable to famine and nakedness and the want, in a manner, of all things. The change of air, diet, and drinking of water would infect their bodies with sore sicknesses and grievous diseases. And also those which should escape or overcome these difficulties should yet be in continual danger of the savage people, who are cruel, barbarous, and most treacherous, being most furious in their rage and merciless where they overcome; not being content only to kill and take away life, but delight to torment men in the most bloody manner that may be, flaying some alive with the shells of fishes, cutting off the members and joints of others by piecemeal, and, broiling on the coals, eat the collops of their flesh in their sight whilst they live, with other cruelties horrible to be related. And surely it could not be thought but the very hearing of these things could not but move the very bowels of men to grate within them and make the weak to quake and tremble. It was further objected that it would require greater sums of money to furnish such a voyage and to fit them with necessities than their consumed estates would amount to; and yet they must as well look to be seconded with supplies as presently to be transported. Also many precedents of ill success and lamentable miseries befallen others in the like designs were easy to be found, and not forgotten to be alleged; besides their own experience, in their former troubles and hardships in their removal into Holland, and how hard a thing it was for them to live in that strange place, though it was a neighbor country and a civil and rich commonwealth.

It was answered that all great and honorable actions are accompanied with great difficulties and must be both enterprised

and overcome with answerable courages. It was granted the dangers were great, but not desperate, the difficulties were many, but not invincible. For though there were many of them likely, yet they were not certain, it might be sundry of the things feared might never befall; others, by provident care and the use of good means, might in a great measure be prevented; and all of them, through the help of God, by fortitude and patience, might either be borne or overcome. True it was that such attempts were not to be made and undertaken without good ground and reason, not rashly or lightly as many have done for curiosity or hope of gain, etc. But their condition was not ordinary; their ends were good and honorable; their calling lawful and urgent; and therefore they might expect the blessing of God in their proceeding. Yea, though they should lose their lives in this action, yet might they have comfort in the same, and their endeavors would be honorable. They lived here but as men in exile and in poor condition; and as great miseries might possibly befall them in this place, for the twelve years of truce were now out and there was nothing but beating of drums and preparing for war, the events whereof are always uncertain. The Spaniard might prove as cruel as the savages of America, and the famine and pestilence as sore here as there, and their liberty less to look out for remedy.

After many other particular things answered and alleged on both sides, it was fully concluded, by the major part, to put this design in execution and to prosecute it by the best means they could.

ARRIVAL AT CAPE COD

. . . After they had enjoyed fair winds and weather for a season, they were encountered many times with cross winds and met with many fierce storms. . . In sundry of these storms the winds were so fierce and the seas so high, as they could not bear a knot of sail, but were forced to

hull for divers days together. And in one of them, as they thus lay at hull, in a mighty storm, a lusty young man (called John Howland) coming upon some occasion above the gratings, was, with a seel³ of the ship, thrown into the sea, but it pleased God that he caught hold of the top-sail hallyards, which hung overboard and ran out at length; yet he held his hold, though he was sundry fathoms under water, till he was hauled up by the same rope to the brim of the water, and then with a boat hook and other means got into the ship again, and his life saved; and though he was something ill with it, yet he lived many years after, and became a profitable member both in church and commonwealth. In all this voyage there died but one of the passengers, which was William Butten, a youth, servant to Samuel Fuller, when they drew near the coast.

But, to omit other things (that I may be brief), after long beating at sea they fell with that land which is called Cape Cod; the which being made and certainly known to be it, they were not a little joyful. After some deliberation had amongst themselves and with the master of the ship, they tacked about and resolved to stand for the southward (the wind and water being fair) to find some place about Hudson's river for their habitation. But after they had sailed that course about half the day, they fell amongst dangerous shoals and roaring breakers, and they were so far entangled therewith as they conceived themselves in great danger; and the wind shrinking upon them withal, they resolved to bear up again for the Cape, and thought themselves happy to get out of those dangers before night overtook them, as by God's providence they did. And the next day they got into the Cape harbor, where they rid in safety . . .

Being thus arrived in a good harbor and brought safe to land, they fell upon their knees and blessed the God of heaven, who had brought them over the vast and furious ocean and delivered them from all the perils and miseries thereof, again to set their feet on the firm and stable earth,

their proper element. And no marvel if they were thus joyful, seeing wise Seneca was so affected with sailing a few miles on the coast of his own Italy, as he affirmed that he had rather remain twenty years on his way by land than pass by sea to any place in a short time, so tedious and dreadful was the same unto him.

But here I cannot but stay and make a pause, and stand half amazed at this poor people's present condition; and so I think will the reader too, when he well considers the same. Being thus passed the vast ocean, and a sea of troubles before in their preparation . . ., they had now no friends to welcome them, nor inns to entertain or refresh their weather-beaten bodies, no houses or much less towns to repair to, to seek for succor. It is recorded in Scripture, as a mercy to the apostle and his ship-racked company, that the barbarians showed them no small kindness in refreshing them, but these savage barbarians, when they met them (as after will appear), were readier to fill their sides full of arrows than otherwise. And for the season, it was winter; and they that know the winters of that country know them to be sharp and violent and subject to cruel storms, dangerous to travel to known places, much more to search an unknown coast. Besides, what could they see but a hideous and desolate wilderness, full of wild beasts and wild men? and what multitudes there might be of them they knew not. Neither could they, as it were, go up to the top of Pisgah to view from this wilderness a more goodly country to feed their hopes; for which way soever they turned their eyes (save upward to the heavens), they could have little solace or content in respect of any outward objects. For summer being done, all things stand upon them with a weather-beaten face, and the whole country, full of woods and thickets, represented a wild and savage view. If they looked behind them, there was the mighty ocean which they had

³ A lurch of a ship under the impact of breakers.

passed and was now as a main bar and gulf to separate them from all the civil parts of the world. If it be said they had a ship to succor them, it is true; but what heard they daily from the master and company but that with speed they should look out a place with their shallop, where they would be at some near distance, for the season was such as he would not stir from thence till a safe harbor was discovered by them where they would be, and he might go without danger; and that victuals consumed apace, but he must and would keep sufficient for themselves and their return. Yea, it was muttered by some that, if they got not a place in time, they would turn them and their goods ashore and leave them. Let it also be considered what weak hopes of supply and succor they left behind them, that might bear up their minds in this sad condition and trials they were under; and they could not but be very small. It is true, indeed, the affections and love of their brethren at Leyden was cordial and entire towards them, but they had little power to help them or themselves; and how the case stood between them and the merchants at their coming away hath already been declared. What could now sustain them but the spirit of God and his grace? May not and ought not the children of these fathers rightly say: *Our fathers were Englishmen which came over this great ocean, and were ready to perish in this wilderness; but they cried unto the Lord, and he heard their voice, and looked on their adversity, etc. Let them therefore praise the Lord, because he is good, and his mercies endure forever. Yea, let them which have been redeemed of the Lord show how he hath delivered them from the hand of the oppressor. When they wandered in the desert wilderness out of the way, and found no city to dwell in, both hungry and thirsty, their soul was overwhelmed in them. Let them confess before the Lord his loving kindness, and his wonderful works before the sons of men.*

. . . I shall a little return back and begin with a combination made by them before

they came ashore, being the first foundation of their government in this place, occasioned partly by the discontented and mutinous speeches that some of the strangers amongst them had let fall from them in the ship—that when they came ashore they would use their own liberty, for none had power to command them, the patent they had being for Virginia, and not for New-England, which belonged to another government, with which the Virginia Company had nothing to do. And partly that such an act by them done (this their condition considered) might be as firm as any patent and in some respects more sure.

The form was as followeth.

In the name of God, Amen. We whose names are under-written, the loyal subjects of our dread sovereign Lord, King James, by the grace of God, of Great Britain, France, and Ireland king, defender of the faith, etc., having undertaken, for the glory of God, and advancement of the Christian faith, and honor of our king and country, a voyage to plant the first colony in the northern parts of Virginia, do by these presents solemnly and mutually in the presence of God, and one of another, covenant and combine ourselves together into a civil body politic, for our better ordering and preservation and furtherance of the ends aforesaid; and by virtue hereof to enact, constitute, and frame such just and equal laws, ordinances, acts, constitutions, and offices, from time to time, as shall be thought most meet and convenient for the general good of the Colony, unto which we promise all due submission and obedience. In witness whereof we have hereunder subscribed our names at Cape Cod the 11 of November, in the year of the reign of our sovereign lord, King James, of England, France, and Ireland the eighteenth, and of Scotland the fifty-fourth. An°. Dom. 1620.

After this they chose, or rather confirmed, Mr. John Carver (a man godly and well-approved amongst them) their Governor for that year. And after they had provided a place for their goods or common store (which were long in unlading for want of boats, foulness of winter weather, and sickness of divers) and begun some small cottages for their habitation, as time would admit, they met and consulted of laws and orders, both for their civil and military government, as the necessity of their condition did require, still adding thereunto as urgent occasion in several times and as cases did require. . . .

COMMUNISM TRIED AND FOUND WANTING

[1623] They began to think how they might raise as much corn as they could and obtain a better crop than they had done, that they might not still thus languish in misery. At length, after much debate of things, the Governor (with the advice of the chiefest amongst them) gave way that they should set corn every man for his own particular and in that regard trust to themselves; in all other things to go on in the general way as before. And so assigned to every family a parcel of land, according to the proportion of their number for that end, only for present use (but made no division for inheritance), and ranged all boys and youth under some family. This had very good success, for it made all hands very industrious, so as much more corn was planted than otherwise would have been by any means the Governor or any other could use, and saved him a great deal of trouble and gave far better content. The women now went willingly into the field and took their little ones with them to set corn, which before would allege weakness and inability; whom to have compelled would have been thought great tyranny and oppression.

The experience that was had in this common course and condition, tried sundry years, and that amongst godly and sober men, may well evince the vanity of that conceit of Plato's and other ancients, ap-

plauded by some of later times;—that the taking away of property and bringing in community into a commonwealth would make them happy and flourishing, as if they were wiser than God. For this community (so far as it was) was found to breed much confusion and discontent and retard much employment that would have been to their benefit and comfort. For the young men that were most able and fit for labor and service did repine that they should spend their time and strength to work for other men's wives and children without any recompense. The strong or man of parts had no more in division of victuals and clothes than he that was weak and not able to do a quarter the other could: this was thought injustice. The aged and graver men to be ranked and equalized in labors and victuals, clothes, etc., with the meaner and younger sort, thought it some indignity and disrespect unto them. And for men's wives to be commanded to do service for other men, as dressing their meat, washing their clothes, etc., they deemed it a kind of slavery; neither could many husbands well brook it. Upon the point all being to have alike and all to do alike, they thought themselves in the like condition and one as good as another; and so, if it did not cut off those relations that God hath set amongst men, yet it did at least much diminish and take off the mutual respects that should be preserved amongst them. And would have been worse if they had been men of another condition. Let none object this is men's corruption and nothing to the course itself. I answer, seeing all men have this corruption in them, God in his wisdom saw another course fitter for them. . . .

STRIFE WITH THOMAS MORTON

[1628] About some 3 or 4 years before this time, there came over one Captain Wollaston, a man of pretty parts, and with him 3 or 4 more of some eminency, who brought with them a great many servants, with provisions and other implements for to begin a plantation, and

pitched themselves in a place within the Massachusetts, which they called, after their captain's name, Mount-Wollaston. Amongst whom was one Mr. Morton, who, it should seem, had some small adventure (of his own or other men's) amongst them, but had little respect amongst them and was slighted by the meanest servants. Having continued there some time and not finding things to answer their expectations nor profit to arise as they looked for, Captain Wollaston takes a great part of the servants and transports them to Virginia, where he puts them off at good rates, selling their time to other men, and writes back to one Mr. Rasdall, one of his chief partners and accounted their merchant, to bring another part of them to Virginia likewise, intending to put them off there as he had done the rest. And he, with the consent of the said Rasdall, appointed one Fitcher to be his lieutenant and govern the remains of the plantation, till he or Rasdall returned to take further order thereabout. But this Morton abovesaid, having more craft than honesty (who had been a kind of pettifogger of Furnival's Inn⁴), in the others' absence watches an opportunity (commons being but hard amongst them) and got some strong drink and other junkets and made them a feast; and after they were merry, he began to tell them he would give them good counsel. You see (saith he) that many of your fellows are carried to Virginia; and if you stay till this Rasdall return, you will also be carried away and sold for slaves with the rest. Therefore I would advise you to thrust out this Lieutenant Fitcher, and I, having a part in the plantation, will receive you as my partners and consociates; so may you be free from service and we will converse, trade, plant, and live together as equals and support and protect one another, or to like effect. This counsel was easily received, so they took opportunity and thrust Lieutenant Fitcher out-a-doors and would suffer him to come no more amongst them, but forced him to seek bread to eat and other relief from his

neighbors, till he could get passage for England. After this they fell to great licentiousness and led a dissolute life, pouring out themselves into all profaneness. And Morton became lord of misrule and maintained (as it were) a school of Atheism. And after they had got some goods into their hands and got much by trading with the Indians, they spent it as vainly, in quaffing and drinking both wine and strong waters in great excess, and, as some reported, 10 *l.* worth in a morning. They also set up a maypole, drinking and dancing about it many days together, inviting the Indian women for their consorts, dancing and frisking together (like so many fairies, or furies rather) and worse practices. As if they had anew revived and celebrated the feasts of the Roman goddess Flora or the beastly practices of the mad Bacchanahans. Morton likewise (to show his poetry) composed sundry rimes and verses, some tending to lasciviousness and others to the detraction and scandal of some persons, which he affixed to this idle or idol maypole. They changed also the name of their place and instead of calling it Mount Wollaston, they call it Merry-mount, as if this jollity would have lasted ever. But this continued not long, for after Morton was sent for England (as follows to be declared), shortly after came over that worthy gentleman, Mr. John Endecott, who brought over a patent under the broad seal for the government of the Massachusetts, who, visiting those parts, caused that maypole to be cut down and rebuked them for their profaneness and admonished them to look there should be better walking; so they now, or others, changed the name of their place again and called it Mount-Dagon.

Now to maintain this riotous prodigality and profuse excess, Morton, thinking himself lawless and hearing what gain the French and fishermen made by trading of pieces, powder, and shot to the Indians, he, as the head of this consortship, began

⁴ One of the four Inns of Court in London where attorneys lodged and studied and maintained their fraternal groups.

the practice of the same in these parts; and first he taught them how to use them, to charge and discharge and what proportion of powder to give the piece, according to the size or bigness of the same, and what shot to use for fowl and what for deer. And having thus instructed them, he employed some of them to hunt and fowl for him, so as they became far more active in that employment than any of the English, by reason of their swiftness of foot and nimbleness of body, being also quick-sighted and by continual exercise well knowing the haunts of all sorts of game. So as when they saw the execution that a piece would do and the benefit that might come by the same, they became mad, as it were, after them and would not stick to give any price they could attain to for them, accounting their bows and arrows but baubles in comparison of them. . . . O the horribleness of this villany! how many both Dutch and English have been lately slain by those Indians, thus furnished; and no remedy provided, nay, the evil more increased and the blood of their brethren sold for gain, as is to be feared; and in what danger all those colonies are in is too well known. Oh! that princes and parliaments would take some timely order to prevent this mischief and at length to suppress it by some exemplary punishment upon some of these gainthrusty murderers (for they deserve no better title) before their colonies in these parts be overthrown by these barbarous savages, thus armed with their own weapons by these evil instruments and traitors to their neighbors and country. . . .

This Morton having thus taught them the use of pieces, he sold them all he could spare; and he and his consorts determined to send for many out of England and had by some of the ships sent for above a score. The which being known and his neighbors meeting the Indians in the woods armed with guns in this sort, it was a terror unto them who lived stragglingly and were of no strength in any place. And other places (though more remote) saw this

mischief would quickly spread over all, if not prevented. Besides, they saw they should keep no servants, for Morton would entertain any, how vile soever, and all the scum of the country or any discontents would flock to him from all places, if this nest was not broken; and they should stand in more fear of their lives and goods (in short time) from this wicked and debauched crew than from the savages themselves.

So sundry of the chief of the straggling plantations, meeting together, agreed by mutual consent to solicit those of Plymouth (who were then of more strength than them all) to join with them to prevent the further growth of this mischief and suppress Morton and his consorts before they grew to further head and strength. Those that joined in this action (and after contributed to the charge of sending him for England) were from Pascataway, Mankeake, Wmismett, Weesagascusett, Natasco, and other places where any English were seated.

Those of Plymouth, being thus sought to by their messengers and letters and weighing both their reasons and the common danger, were willing to afford them their help, though themselves had least cause of fear or hurt. So, to be short, they first resolved jointly to write to him and in a friendly and neighborly way to admonish him to forbear these courses and sent a messenger with their letters to bring his answer. But he was so high as he scorned all advice and asked who had to do with him; he had and would trade pieces with the Indians in despite of all, with many other scurrilous terms full of disdain. They sent to him a second time and bade him be better advised and more temperate in his terms, for the country could not bear the injury he did; it was against their common safety and against the king's proclamation. He answered in high terms as before and that the king's proclamation was no law, demanding what penalty was upon it. It was answered, more than he could bear, his majesty's

displeasure. But insolently he persisted and said the king was dead and his displeasure with him and many the like things, and threatened withal that, if any came to molest him, let them look to themselves, for he would prepare for them.

Upon which, they saw there was no way but to take him by force, and having so far proceeded, now to give over would make him far more haughty and insolent. So they mutually resolved to proceed and obtained of the Governor of Plymouth to send Captain Standish and some other aid with him to take Morton by force. The which accordingly was done, but they found him to stand stiffly in his defence, having made fast his doors, armed his consorts, set divers dishes of powder and bullets ready on the table; and if they had not been over-armed with drink, more hurt might have been done. They summoned him to yield, but he kept his house, and they could get nothing but scoffs and scorns from him; but at length, fearing they would do some violence to the house, he and some of his crew came out, but not to yield, but to shoot; but they were so steeled with drink as their pieces were too heavy for them; himself with a car-

bine (over-charged and almost half-filled with powder and shot, as was after found) had thought to have shot Captain Standish; but he stepped to him, and put by his piece, and took him. Neither was there any hurt done to any of either side, save that one was so drunk that he ran his own nose upon the point of a sword that one held before him as he entered the house, but he lost but a little of his hot blood.

Morton they brought away to Plymouth, where he was kept till a ship went from the Isle of Shoals for England, with which he was sent to the Council of New England and letters written to give them information of his course and carriage, and also one was sent at their common charge to inform their Honors more particularly and to prosecute against him. But he fooled off the messenger, after he was gone from hence, and though he went for England, yet nothing was done to him, not so much as rebuked, for aught was heard, but returned the next year. Some of the worst of the company were dispersed and some of the more modest kept the house till he should be heard from. But I have been too long about so unworthy a person and bad a cause . . .

1588 ~ *John Winthrop* ~ 1649

JOHN WINTHROP belonged to a prosperous middle-class family of Suffolk, England. His grandfather had been a clothier; his father was a lawyer who served for fifteen years as auditor for St. John's and Trinity Colleges, Cambridge. While his father held the latter position, John Winthrop attended Trinity College for a year and some months and then, at the age of seventeen, abandoned his university career to get married. He became a justice of the peace, proprietor of the family estate of Groton Manor, and a prominent attorney. At the age of forty-two, having been married thrice, blessed with a numerous brood of children and grandchildren, and enjoying a sizeable annual income, he decided to risk "a hazard of new fortunes" as co-leader with Thomas Dudley of an expedition sponsored by the Massachusetts Bay Company to strengthen the settlement it supported at Salem in New England.

The Winthrop-Dudley expedition left England in March, 1630, took with it the government and charter of the Massachusetts Bay Company, landed at Salem, and eventually founded Boston and several of its adjacent towns. Sailing on the flag-ship of the small fleet, the *Arbella*—so named for the Lady Arbella Johnson, who was one of its passengers and who died two months after the arrival at Salem—Winthrop began his *Journal* at Southampton as the ship was preparing to embark, he continued it, as a repository for occasional jottings, until his death. Because Winthrop played so important a part in the Massachusetts Bay Colony, serving as governor or deputy-governor so frequently, this *Journal*, contained in three notebooks difficult to decipher, is one of the most valuable source-books for early New England history and was drawn upon by such early New England historians as William Hubbard, Cotton Mather, and Thomas Prince. Two of the notebooks were published in 1790; the third, regarded as lost, was found in 1816; the *Journal* in its entirety was not published until 1825-6, its editor, James Savage, having made a careful modernized transcript from the originals.

[For the present selections titles have been supplied by the editors of this anthology. A convenient edition is that of J. K. Hosmer (New York, 1908), comprising two volumes in the series *Original Narratives of Early American History*. The most authoritative version of the original text of the *Journal* is that in the *Winthrop Papers*, Vol II, Massachusetts Historical Society, 1939 —. See Book I, Part 3, for further selections from Winthrop.]

JOURNAL
[1790, 1825-26 (written 1630-1649)]

VOYAGE AND ARRIVAL

[Thursday, April 8, Yarmouth] About six in the morning (the wind being E. and N. and fair weather) we weighed anchor and set sail, and before ten we gat through the Needles,¹ having so little wind as we had much to do to stem the tide, so as the rest of our fleet (we being nine in all, whereof some were small ships, which were bound for Newfoundland) could not get out all then till the ebb. In the afternoon the wind came S. and W. and we were becalmed, so as being not able to get above three or four leagues from the Needles, our captain tacked about, and putting his four-sheets aback stays, he stayed for the rest of the fleet, and as they came by us we spake to them, and about eight in the evening we let fall an

anchor, intending to stop till the ebb. But before ten at night the wind came about to the N. a good gale, so we put up a light in the poop, and weighed and set sail, and by dayhght, Friday 9, we were come to Portland; but the other ships being not able to hold up with us, we were forced to spare our mainsail, and went on with a merry gale. In the morning we descried from the top eight sail astern of us, (whom Capt. Lowe told us he had seen at Dunnose in the evening). We supposing they might be Dunkirkers,² our captain caused the gun-room and gundeck to be cleared; all the hammocks were taken down, our ordnance loaded, and our powder-chests and fireworks made ready, and our landmen quartered among the seamen, and twenty-five of them appointed for muskets, and

¹ Three pointed rocks, English Channel, west of Isle of Wight.

² Dunkirk was then a possession of Spain, at that time at war with England.

every man written down for his quarter.

The wind continued N. with fair weather, and afternoon it calmed, and we still saw those eight ships to stand towards us; having more wind than we, they came up apace, so as our captain and the masters of our consorts were more occasioned to think they might be Dunkirkers, (for we were told at Yarmouth, that there were ten sail of them waiting for us;) whereupon we all prepared to fight with them, and took down some cabins which were in the way of our ordnance, and out of every ship were thrown such bed matters as were subject to take fire, and we heaved out our long boats, and put up our waste cloths, and drew forth our men, and armed them with muskets and other weapons, and instruments for fireworks; and for an experiment our captain shot a ball of wild-fire fastened to an arrow out of a cross-bow, which burnt in the water a good time. The lady Arbella and the other women and children were removed into the lower deck, that they might be out of danger. All things being thus fitted, we went to prayer upon the upper deck. It was much to see how cheerful and comfortable all the company appeared, not a woman or child that showed fear, though all did apprehend the danger to have been great, if things had proved as might well be expected, for there had been eight against four, and the least of the enemy's ships were reported to carry thirty brass pieces; but our trust was in the Lord of Hosts; and the courage of our captain, and his care and diligence, did much encourage us. It was now about one of the clock, and the fleet seemed to be within a league of us; therefore our captain, because he would show he was not afraid of them, and that he might see the issue before night should overtake us, tacked about and stood to meet them, and when we came near we perceived them to be our friends,—the *Little Neptune*, a ship of some twenty pieces of ordnance, and her two consorts, bound for the Straits; a ship of Flushing, and a Frenchman, and three other English ships bound for Canada and

Newfoundland. So when we drew near, every ship (as they met) saluted each other, and the musketeers discharged their small shot; and so (god be praised) our fear and danger was turned into mirth and friendly entertainment. Our danger being thus over, we espied two boats on fishing in the channel; so every of our four ships manned out a skiff, and we bought of them great store of excellent fresh fish of divers sorts. . . .

[Saturday, May 1] All the night much wind at S.S.W. and rain. In the morning the wind still strong, so as we could bear little sail, and so it continued a growing storm all the day, and towards night so much wind as we bore no more sail but so much as should keep the ship stiff. Then it grew a very great tempest all the night with fierce showers of rain intermixed, and very cold.

[Lord's day, 2] The tempest continued all day, with the wind W. and by N., and the sea raged and tossed us exceedingly, yet, through God's mercy, we were very comfortable, and few or none sick, but had opportunity to keep the Sabbath, and Mr. Phillips preached twice that day. The *Ambrose* and *Jewel* were separated far from us the first night, but this day we saw them again, but Capt. Kirk's ships we saw not since.

[Monday, 3] In the night the wind abated, and by morning the sea was well assuaged, so as we bare our foresail again, and stood W.S.W.; but all the time of the tempest we could make no way, but were driven to the leeward, and the *Ambrose* struck all her sails but her mizzen, and lay a hull. She brake her main yard. This day we made observation, and found we were in forty-three and a half north latitude. We set two fighters in the bolts till night, with their hands bound behind them. A maid-servant in the ship, being stomach-sick, drank so much strong water, that she was senseless, and had near killed herself. We observed it a common fault in our young people, that they gave themselves to drink hot waters very immoderately. . . .

[Saturday, June 12, 1630, Salem] About four in the morning we were near our port. We shot off two pieces of ordnance, and sent our skiff to Mr. Peirce³ his ship (which lay in the harbor, and had been there — days before). About an hour later, Mr. Allerton⁴ came aboard us in a shallop as he was sailing to Pemaquid. As we stood towards the harbor, we saw another shallop coming to us; so we stood in to meet her, and passed through the narrow strait between Baker's Isle and Little Isle, and came to an anchor a little within the islands.

After Mr. Peirce came aboard us, and returned to fetch Mr. Endecott,⁵ who came to us about two of the clock, and with him Mr. Skelton⁶ and Capt. Levett. We that were of the assistants,⁷ and some other gentlemen, and some of the women, and our captain, returned with them to Nahumkeek, where we supped with a good venison pasty and good beer, and at night we returned to our ship, but some of the women stayed behind.

In the mean time most of our people went on shore upon the land of Cape Ann, which lay very near us, and gathered store of fine strawberries.

An Indian came aboard us and lay there all night.

ROGER WILLIAMS ESCAPES ARREST

[January 11, 1636] The governor⁸ and assistants met at Boston to consider about Mr. Williams, for that they were credibly informed, that, notwithstanding the injunction laid upon him (upon the liberty granted him to stay till the spring) not to go about to draw others to his opinions, he did use to entertain company in his house, and to preach to them, even of such points as he had been censured for; and it was agreed to send him into England by ship then ready to depart. The reason was, because he had drawn above twenty persons to his opinion, and they were intended to erect a plantation about the Narragansett Bay, from whence the infec-

tion would easily spread into these churches, (the people being, many of them, much taken with the apprehension of his godliness). Whereupon a warrant was sent to him to come presently to Boston, to be shipped, etc. He returned answer, (and divers of Salem came with it,) that he could not come without hazard of his life, etc. Whereupon a pinnace was sent with commission to Capt. Underhill, etc., to apprehend him, and carry him aboard the ship, (which then rode at Natascutt;) but, when they came at his house, they found he had been gone three days before; but whither they could not learn.

He had so far prevailed at Salem, as many there (especially of devout women) did embrace his opinions, and separated from the churches, for this cause, that some of their members, going into England, did hear the ministers there, and when they came home the churches here held communion with them.

THE ANTINOMIAN CRISIS

[October 21, 1636] One Mrs. Hutchinson, a member of the church of Boston, a woman of a ready wit and bold spirit, brought over with her two dangerous errors: 1. That the person of the Holy Ghost dwells in a justified person. 2. That no sanctification can help to evidence to us our justification.⁹—From these two grew

³ William Peirce, a sailor in the service of the Plymouth colony.

⁴ Isaac Allerton, a leading financier of the Plymouth colony.

⁵ John Endecott (1589-1665) had come to Salem two years before and was its governor.

⁶ Pastor of the church at Salem.

⁷ Magistrates, who were elected by the church members and composed the main governing body.

⁸ John Haynes, who later went to Connecticut, was governor of the Bay Colony at this time.

⁹ Sanctification referred to the good works and behavior of a person who had presumably received God's grace; justification was the inward experience of this grace.

many branches; as, 1. Our union with the Holy Ghost, so as a Christian remains dead to every spiritual action, and hath no gifts nor graces, other than such as are in hypocrites, nor any other sanctification but the Holy Ghost himself.

There joined with her in these opinions a brother of hers, one Mr. Wheelwright, a silenced minister sometimes in England

[October 25] The other ministers in the bay, hearing of these things, came to Boston at the time of a general court, and entered conference in private with them, to the end they might know the certainty of these things, that if need were, they might write to the church of Boston about them, to prevent (if it were possible) the dangers, which seemed hereby to hang over that and the rest of the churches. At this conference, Mr. Cotton was present, and gave satisfaction to them, so as he agreed with them all in the point of sanctification, and so did Mr. Wheelwright, so as they all did hold, that sanctification did help to evidence justification. The same he had delivered plainly in public, divers times, but, for the indwelling of the person of the Holy Ghost, he held that still, as some others of the ministers did, but not union with the person of the Holy Ghost, (as Mrs. Hutchinson and others did,) so as to amount to a personal union . . .

[November 17] The governor, Mr. Vane, a wise and godly gentleman, held, with Mr. Cotton and many others, the indwelling of the person of the Holy Ghost in a believer, and went so far beyond the rest, as to maintain a personal union with the Holy Ghost; but the deputy, with the pastor and divers others,¹⁰ denied both; and the question proceeded so far by disputation, (in writing, for the peace sake of the church, which all were tender of,) as at length they could not find the person of the Holy Ghost in scripture, nor in the primitive churches three hundred years after Christ. So that, all agreeing in the chief matter of substance, viz. that the Holy Ghost is God, and that he doth dwell in the believers, (as the Father and Son both are

said also to do,) but whether by his gifts and power only, or by any other manner of presence, seeing the scripture doth not declare it,—it was earnestly desired, that the word person might be forborn, being a term of human invention, and tending to doubtful disputation in this case. . . .

[January 20, 1637] The differences in the said points of religion increased more and more, and the ministers of both sides (there being only Mr. Cotton of one party) did publicly declare their judgments in some of them, so as all men's mouths were full of them.

[February 3] And there being . . . a ship ready to go for England, and many passengers in it, Mr. Cotton took occasion to speak to them about the differences, etc., and willed them to tell our countrymen, that all the strife amongst us was about magnifying the grace of God; one party seeking to advance the grace of God within us, and the other to advance the grace of God towards us, (meaning by the one justification, and by the other sanctification;) and so bade them tell them, that, if there were any among them that would strive for grace, they should come hither; and so declared some particulars. Mr. Wilson spake after him, and declared, that he knew none of the elders or brethren of the churches, but did labor to advance the free grace of God in justification, so far as the word of God required; and spake also about the doctrine of sanctification, and the use and necessity, etc, of it; by occasion whereof no man could tell (except some few, who knew the bottom of the matter) where any difference was: which speech, though it offended those of Mr. Cotton's party, yet it was very seasonable to clear the rest, who otherwise should have been reputed to have opposed free grace. Thus every occasion increased the contention, and caused great alienation of minds; and the members of Boston (frequenting the lectures of other ministers) did make much disturb-

¹⁰ The "deputy" was Winthrop, deputy-governor; the pastor was John Wilson.

ance by public questions, and objections to their doctrines, which did any way disagree from their opinions; and it began to be as common here to distinguish between men, by being under a covenant of grace or a covenant of works, as in other countries between Protestants and papists. . . .

[March 9] Mr. Wheelwright, one of the members of Boston, preaching at the last fast, inveighed against all that walked in a covenant of works, as he described it to be, viz., such as maintain sanctification as an evidence of justification, etc., and called them antichrists, and stirred up the people against them with much bitterness and vehemency. For this he was called into the court, and his sermon being produced, he justified it, and confessed he did mean all that walk in such a way. Whereupon the elders of the rest of the churches were called, and asked whether they, in their ministry, did walk in such a way. They all acknowledged they did. So, after much debate, the court adjudged him guilty of sedition, and also of contempt, for that the court had appointed the fast as a means of reconciliation of the differences, etc., and he purposely set himself to kindle and increase them. The governor and some few more (who dissented) tendered a protestation, which, because it wholly justified Mr. Wheelwright, and condemned the proceedings of the court, was rejected. The church of Boston also tendered a petition in his behalf, justifying Mr. Wheelwright's sermon. The court deferred sentence till the next court, and advised with the ministers, etc., whether they might enjoin his silence, etc. They answered, that they were not clear in that point, but desired rather, that he might be commended to the church of Boston to take care of him, etc., which accordingly was done, and he enjoined to appear at the next court. Much heat of contention was this court between the opposite parties; so as it was moved, that the next court might be kept at Newtown. . . .

[May 17] Our court of elections was at Newtown. So soon as the court was set, being about one of the clock, a petition was

preferred by those of Boston. The governor would have read it, but the deputy said it was out of order, it was a court for elections, and those must first be dispatched, and then their petitions should be heard. Divers others also opposed that course, as an ill precedent, etc., and the petition, being about pretence of liberty, etc., (though intended chiefly for revoking the sentence given against Mr. Wheelwright), would have spent all the day in debate, etc.; but yet the governor and those of that party would not proceed to election, except the petition was read. Much time was already spent about this debate, and the people crying out for election, it was moved by the deputy, that the people should divide themselves, and the greater number must carry it. And so it was done, and the greater number by many were for election. But the governor and that side kept their place still, and would not proceed. Whereupon the deputy told him, that, if he would not go to election, he and the rest of that side would proceed. Upon that, he came from his company, and they went to election; and Mr. Winthrop was chosen governor, Mr. Dudley deputy and Mr. Endecott of the standing council; and Mr. Israel Stoughton and Mr. Richard Saltonstall were called in to be assistants; and Mr. Vane, Mr. Coddington, and Mr. Dummer, (being all of that faction,) were left quite out.

There was great danger of a tumult that day; for those of that side grew into fierce speeches, and some laid hands on others; but seeing themselves too weak, they grew quiet. They expected a great advantage that day, because remote towns were allowed to come in by proxy; but it fell out, that there were enough beside . . .

[August 30] The synod, called the assembly, began at Newtown. There were all the teaching elders through the country, and some new come out of England, not yet called to any place here, as Mr. Davenport, etc.

The assembly began with prayer, made by Mr. Shepherd, the pastor of Newtown.

Then the erroneous opinions, which were spread in the country, were read, (being eighty in all) next the unwholesome expressions, then the scriptures abused. Then they chose two moderators for the next day, viz., Mr. Buckley and Mr. Hooker, and these were continued in that place all the time of the assembly. There were about eighty opinions, some blasphemous, others erroneous, and all unsafe, condemned by the whole assembly; whereto near all the elders, and others sent by the churches, subscribed their names, but some few liked not subscription, though they consented to the condemning of them. . . .

[November 1] There was great hope that the late general assembly would have had some good effect in pacifying the troubles and dissensions about matters of religion; but it fell out otherwise. For though Mr. Wheelwright and those of his party had been clearly confuted and confounded in the assembly, yet they persisted in their opinions, and were as busy in nourishing contentions (the principal of them) as before. Whereupon the general court, being assembled in the 2 of the 9th month,¹¹ and finding, upon consultation, that two so opposite parties could not contain in the same body, without apparent hazard of ruin to the whole, agreed to send away some of the principal; . . . Then the court sent for Mr. Wheelwright, and, he persisting to justify his sermon, and his whole practice and opinions, and refusing to leave either the place or his public exercises, he was disfranchised and banished. Upon which he appealed to the king, but neither called witnesses, nor desired any act to be made of it. The court told him, that an appeal did not lie; for by the king's grant we had power to hear and determine without any reservation, etc. So he relinquished his appeal, and the court gave him leave to go to his house, upon his promise, that, if he were not gone out of our jurisdiction within fourteen days, he would render himself to one of the magistrates.

The court also sent for Mrs. Hutchinson,

and charged her with divers matters, as her keeping two public lectures every week in her house, whereto sixty or eighty persons did usually resort, and for reproaching most of the ministers (viz., all except Mr. Cotton) for not preaching a covenant of free grace, and that they had not the seal of the spirit, nor were able ministers of the New Testament; which were clearly proved against her, though she sought to shift it off. And, after many speeches to and fro, at last she was so full as she could not contain, but vented her revelations; amongst which this was one, that she had it revealed to her, that she should come into New England, and should here be persecuted, and that God would run us and our posterity, and the whole state, for the same. So the court proceeded and banished her; but, because it was winter, they committed her to a private house, where she was well provided, and her own friends and the elders permitted to go to her, but none else. . . .

After this, many of the church of Boston, being highly offended with the governor for this proceeding, were earnest with the elders to have him called to account for it, but they were not forward in it, and himself, understanding their intent, thought fit to prevent such a public disorder, and so took occasion to speak to the congregation to this effect:—

. . . He did nothing in the cases of the brethren, but by the advice and direction of our teacher and other of the elders. . . .

He would give them one reason, which was a ground for his judgment, and that was, for that he saw, that those brethren, etc., were so divided from the rest of the country in their judgment and practice, as it could not stand with the public peace, that they should continue amongst us. So, by the example of Lot in Abraham's family, and after Hagar and Ishmael, he saw they must be sent away. . . .

¹¹ November, according to Winthrop's calendar.

[March 1, 1638] While Mrs. Hutchinson continued at Roxbury, divers of the elders and others resorted to her, and finding her to persist in maintaining those gross errors beforementioned, and many others, to the number of thirty or thereabout, some of them wrote to the church at Boston, offering to make proof of the same before the church, etc., [March] 15; whereupon she was called, (the magistrates being desired to give her license to come,) and the lecture was appointed to begin at ten. . . . When she appeared, the errors were read to her. . . . These were also clearly confuted, but yet she held her own; so as the church (all but two of her sons) agreed she should be admonished, and because her sons would not agree to it, they were admonished also.

Mr. Cotton pronounced the sentence of admonition with great solemnity, and with much zeal and detestation of her errors and pride of spirit. The assembly continued till eight at night, and all did acknowledge the special presence of God's spirit therein; and she was appointed to appear again the next lecture day. . . .

[March 22] Mrs. Hutchinson appeared again; (she had been licensed by the court, in regard she had given hope of her repentance, to be at Mr. Cotton's house, that both he and Mr. Davenport might have the more opportunity to deal with her); and the articles being again read to her, and her answer required, she delivered it in writing, wherein she made a retraction of near all, but with such explanations and circumstances as gave no satisfaction to the church; so as she was required to speak further to them. Then she declared, that it was just with God to leave her to herself, as he had done, for her slighting his ordinances, both magistracy and ministry; and confessed that what she had spoken against the magistrates at the court (by way of revelation) was rash and ungrounded; and desired the church to pray for her. This gave the church good hope of her repentance; but when she was examined about some particulars, as that she had

denied inherent righteousness, etc., she affirmed that it was never her judgment; and though it was proved by many testimonies, that she had been of that judgment, and so had persisted, and maintained it by argument against divers, yet she impudently persisted in her affirmation, to the astonishment of all the assembly. So that, after much time and many arguments had been spent to bring her to see her sin, but all in vain, the church, with one consent, cast her out. Some moved to have her admonished once more; but, it being for manifest evil in matter of conversation, it was agreed otherwise, and for that reason also the sentence was denounced by the pastor, matter of manners belonging properly to his place.

After she was excommunicated, her spirits, which seemed before to be somewhat dejected, revived again, and she gloried in her sufferings, saying, that it was the greatest happiness, next to Christ, that ever befel her. Indeed, it was a happy day to the churches of Christ here, and to many poor souls, who had been seduced by her, who, by what they heard and saw that day, were (through the grace of God) brought off quite from her errors, and settled again in the truth. . . .

After two or three days, the governor sent a warrant to Mrs. Hutchinson to depart this jurisdiction before the last of this month, according to the order of court, and for that end set her at liberty from her former constraint, so as she was not to go forth of her own house till her departure; and upon the 28th she went by water to her farm at the Mount, where she was to take water, with Mr. Wheelwright's wife and family, to go to Pascataqua; but she changed her mind, and went by land to Providence, and so to the island in the Narragansett Bay, which her husband and the rest of that sect had purchased of the Indians, and prepared with all speed to remove unto. For the court had ordered, that, except they were gone with their families by such a time, they should be summoned to the general court. . . .

NOTES ON EDUCATION

(October 5, 1642) Nine bachelors commenced at Cambridge, they were young men of good hope, and performed their acts, so as gave good proof of their proficiency in the tongues and arts. The general court had settled a government or superintendency over the college, viz, all the magistrates and elders over the six nearest churches and the president, or the greatest part of these. Most of them were now present at this first commencement,¹² and dined at the college with the scholars' ordinary commons, which was done of purpose for the students' encouragement, etc., and it gave good content to all.

At this commencement, complaint was made to the governors of two young men, of good quality, lately come out of England, for foul misbehavior, in swearing and ribaldry speeches, etc., for which, though they were adults, they were corrected in the college, and sequestered, etc., for a time.

(July 3, 1645) Divers free schools were erected, as at Roxbury¹³ (for maintenance whereof every inhabitant bound some house or land for a yearly allowance forever) and at Boston (where they made an order to allow forever 50 pounds to the master and an house, and 30 pounds to an usher, who should also teach to read and write and cipher, and Indians' children were to be taught freely, and the charge to be by yearly contribution, either by voluntary allowance, or by rate of such as refused, etc., and this order was confirmed by the general court [blank]). Other towns did the like, providing maintenance by several means.

By agreement of the commissioners, and the motions of the elders in their several churches, every family in each colony gave one peck of corn or twelve pence to the college at Cambridge.

(April 13, 1645) Mr. Hopkins, the governor of Hartford upon Connecticut, came to Boston, and brought his wife with him, (a godly young woman, and of special parts,) who was fallen into sad infirmity,

the loss of her understanding and reason, which had been growing upon her divers years, by occasion of her giving herself wholly to reading and writing, and had written many books. Her husband, being very loving and tender of her, was loath to grieve her, but he saw his error, when it was too late. For if she had attended her household affairs, and such things as belong to women, and not gone out of her way and calling to meddle in such things as are proper for men, whose minds are stronger, etc., she had kept her wits, and might have improved them usefully and honorably in the place God had sent her. He brought her to Boston, and left her with her brother, one Mr. Yale, a merchant, to try what means might be had for her. But no help could be had.¹⁴

PROVED AND SUSPECTED ADULTERY

[March 7, 1644] . . . At this court of assistants, one James Britton, a man ill affected both to our church discipline and civil government, and one Mary Latham, a proper young woman about 18 years of age, whose father was a godly man and had brought her up well, was condemned to die for adultery, upon a law formerly made and published in print. It was thus occasioned and discovered. This woman, being rejected by a young man whom she had an affection unto, vowed she would marry the next that came to her, and accordingly, against her friends' minds, she matched with an ancient man who had neither honesty nor ability, and one whom she had no affection unto. Whereupon, soon after she was married, divers young men solicited her chastity, and drawing her into bad company, and giving her wine and other gifts, easily prevailed with her, and among others this Britton. But God smiting him with a deadly palsy and fearful horror of conscience withal, he could not keep secret,

¹² Harvard College was founded in 1636.

¹³ The first common school in New England was established in Boston 1635-6.

¹⁴ Mrs. Hopkins was aunt of Elihu Yale, founder of Yale University.

but discovered this, and other the like with other women, and was forced to acknowledge the justice of God in that having often called others fools, etc., for confessing against themselves, he was now forced to do the like. The woman dwelt now in Plymouth patent, and one of the magistrates there, hearing she was detected, etc., sent her to us. Upon her examination, she confessed he did attempt the fact, but did not commit it, and witness was produced that testified (which they both confessed) that in the evening of a day of humiliation through the country for England, etc., a company met at Britton's and there continued drinking sack, etc., till late in the night, and then Britton and the woman were seen upon the ground together, a little from the house. It was reported also that she did frequently abuse her husband, setting a knife to his breast and threatening to kill him, calling him old rogue and cuckold, and said she would make him wear horns as big as a bull. And yet some of the magistrates thought the evidence not sufficient against her, because there were not two direct witnesses; but the jury cast her, and then she confessed the fact, and accused twelve others, whereof two were married men. Five of these were apprehended and committed, (the rest were gone,) but denying it, and there being no other witness against them than the testimony of a condemned person, there could be no proceeding against them. The woman proved very penitent, and had deep apprehension of the foulness of her sin, and at length attained to hope of pardon by the blood of Christ, and was willing to die in satisfaction to justice. The man also was very much cast down for his sins, but was loth to die, and petitioned the general court for his life, but they would not grant it, though some of the magistrates spake much for it, and questioned the letter, whether adultery was death by God's law now. ~~The~~ Britton had been a professor in England, but coming hither he opposed our church government, etc., and grew dissolute, losing both power and profession of godliness.

[March 21] They were both executed, they both died very penitently, especially the woman, who had some comfortable hope of pardon of her sin, and gave good exhortation to all young maids to be obedient to their parents, and to take heed of evil company, etc. . . .

[March 5, 1645] A sad business fell out this year in Boston. One of the brethren of the church there, being in England in the parliament service about two years, had committed the care of his family and business to another of the same church, (a young man of good esteem for piety and sincerity, but his wife was in England,) who in time grew over familiar with his master's wife, (a young woman no member of the church,) so as she would be with him oft in his chamber, etc., and one night two of the servants, being up, perceived him to go up into their dame's chamber, which coming to the magistrates' knowledge, they were both sent for and examined, (but it was not discovered till about a quarter of a year after, her husband being then come home,) and confessed not only that he was in the chamber with her in such a suspicious manner, but also that he was in bed with her, but both denied any carnal knowledge; and being tried by a jury upon their lives by our law, which makes adultery death, the jury acquitted them of the adultery, but found them guilty of adulterous behavior. This was much against the minds of many, both of the magistrates and elders, who judged them worthy of death; but the jury attending what was spoken by others of the magistrates, 1. that seeing the main evidence against them was their own confession of being in bed together, their whole confession must be taken, and not a part of it; 2. the law requires two witnesses, but here was no witness at all, for although circumstances may amount to a testimony against the person, where the fact is evident, yet it is otherwise where no fact is apparent; 3. all that the evidence could evince was but suspicion of adultery, but neither God's law nor ours doth make suspicion of adultery (though never so

strong) to be death; whereupon the case seeming doubtful to the jury, they judged it safest in case of life to find as they did. So the court adjudged them to stand upon the ladder at the place of execution with halters about their necks one hour, and then to be whipped, or each of them to pay 20 pounds. The husband (although he condemned his wife's immodest behavior, yet) was so confident of her innocency in point of adultery, as he would have paid 20 pounds rather than she should have been whipped; but their estate being but mean, she chose rather to submit to the rest of this punishment than that her husband should suffer so much for her folly. So he received her again, and they lived lovingly together. All that she had to say for herself upon her trial was the same which she had revealed to her husband as soon as he came home, before the matter had been

discovered, viz. that he did indeed come into bed to her, which so soon as she perceived, she used the best arguments she could to dissuade him from so foul a sin, so as he lay still, and did not touch her, but went away again as he came, and the reason why she did not cry out, was because he had been very faithful and helpful to her in her husband's absence, which made her very unwilling to bring him to punishment or disgrace.

This punishment of standing upon the gallows was not so well approved by some of the magistrates; because the law of God appoints in case of whipping, that they should not exceed forty stripes, and the reason given is, lest thy brother should seem despised in thine eyes, and why this reason should not hold in all cases and punishments not capital doth not appear.

(?) ~ *Thomas Morton* ~ 1647

LITTLE is known of the early life and antecedents of the Jacobean attorney, Thomas Morton. Of gentle birth, probably from a Catholic family, he was living in Somerset, England, in 1619, where he had a none too savory reputation, and in 1622, the date he alleged that he first came to New England, he was defendant in a lawsuit in the Star Chamber Court in England. First appearing in New England in June, 1624, he established himself on Mount Wollaston, a hill in what is now Quincy, Mass., and proceeded to conduct himself in a fashion offensive to the Plymouth Colony. In 1628 he was seized by Captain Miles Standish and sent for punishment to England, as Bradford relates. Although he returned a year and a half later, he was not allowed to continue at his plantation of Merry-mount. A party of Salem Puritans led by John Endecott destroyed his famous maypole and banished him.

In 1637 Morton published at Amsterdam his *New English Canaan*, wherein he sought to satisfy the taste for "pamphlets of newes" from the New World, to justify himself, to display his gifts as a scoffing humorist and libertine wit, and to satirize New England Puritanism, plastering the leaders of both the Plymouth and Massachusetts Bay Colony with derogatory names worthy of the cast of characters in a comedy by Ben Jonson or one of his Puritan-baiting Caroline "Sons." Another motive that probably actuated Morton in the writing

of his "curiosity of literature" was to ingratiate himself further with his patron, Sir Ferdinando Gorges, who had a claim on the territory where the Puritans had settled, but Gorges did not apparently approve of the book. In 1643 Morton once more came to Massachusetts, but was forced to leave. After going to Maine and Rhode Island, he came still again to Massachusetts. This time he was imprisoned for a year; he died in 1647, two years after his release.

[The following selections from Morton have been modernized in both spelling and punctuation and are, respectively, from Book I, Chapters II, XIX, XX, and Book III, Chapters XIV, XV, XXI, XXIII, XXVIII of *New English Canaan*, with their original titles.]

From
NEW ENGLISH CANAAN
[1637]

OF THE ORIGINAL OF THE NATIVES

IN the year since the incarnation of Christ, 1622, it was my chance to be landed in the parts of New England, where I found two sorts of people, the one Christians, the other infidels, these I found most full of humanity and more friendly than the other, as shall hereafter be made apparent in due course by their several actions from time to time whilst I lived among them. After my arrival in those parts, I endeavored by all the ways and means that I could to find out from what people or nation the natives of New England might be conjectured originally to proceed; and by continuance and conversation amongst them, I attained to so much of their language as by all probable conjecture may make the same manifest: for it hath been found by divers, and those of good judgment, that the natives of this country do use very many words, both of Greek and Latin, to the same signification that the Latin and Greeks have done . . .

And whereas it hath been the opinion of some men, which shall be nameless, that the natives of New England may proceed from the race of the Tartars and come from Tartaria into those parts over the frozen sea, I see no probability for any such conjecture . . .

But it may perhaps be granted that the

natives of this country might originally come of the scattered Trojans, for after that Brutus, who was the fourth from Aeneas, left Latium . . ., this people were dispersed there is no question but the people that lived with him, by reason of their conversation with the Grecians and Latins, had a mixed language that participated of both, . . . for this is commonly seen where 2 nations traffic together, the one endeavoring to understand the others' meaning makes them both many times speak a mixed language, as is approved by the natives of New England, through the covetous desire they have to commerce with our nation and we with them . . .

Therefore . . . now I am bold to conclude that the original of the natives of New England may be well conjectured to be from the scattered Trojans, after such time as Brutus departed from Latium.¹

¹ It must be remembered that Morton's fantastic theory of Indian origins was no more fantastic than that set forth by Roger Williams in a letter to Thomas Thorowgood in England dated October 20, 1640, giving three reasons for believing that Indians were Jews, descendants of the lost tribes of Israel. This letter is quoted in Thorowgood's *Jewes in America, or, Probabilities That the Americans are of that Race*, London, 1650, p. 6. Williams, author of *A key into the language of America*, London, 1643, based his theory, partly at least, on linguistic observation, as did Morton. Williams adds to his three other reasons in the Thorowgood letter: ". . . and some tast of affinity with the Hebrew I have found."

OF THEIR INCLINATION TO DRUNKENNESS

Although drunkenness be justly termed a vice which the savages are ignorant of, yet the benefit is very great that comes to the planters by the sale of strong liquor to the savages, who are much taken with the delight of it, for they will pawn their wits to purchase the acquaintance of it. Yet in all the commerce that I had with them, I never proffered them any such thing; nay, I would hardly let any of them have a dram unless he were a sachem, or a *Winnaytue*, that is, a rich man of estimation next in degree to a sachem or sagamore. I always told them it was amongst us the sachems drink . . .

THAT THE SAVAGES LIVE A CONTENTED LIFE

I cannot deny but a civilized nation hath the preeminence of an uncivilized by means of those instruments that are found to be common amongst civil people, and the uncivil want the use of, to make themselves masters of those ornaments that make such a glorious show, that will give a man occasion to cry, *sic transit gloria mundi*.

Now since it is but food and raiment that men that live needeth (though not all alike), why should not the natives of New England be said to live richly, having no want of either? Clothes are the badge of sin, and the more variety of fashions is but the greater abuse of the creature: the beasts of the forest there do serve to furnish them at any time when they please: fish and flesh they have in great abundance, which they both roast and boil.

They are indeed not served in dishes of plate with variety of sauces to procure appetite; that needs not there. The rarity of the air, begot by the medicinable quality of the sweet herbs of the country, always procures good stomachs to the inhabitants.

I must needs commend them in this particular, that, though they buy many commodities of our nation, yet they keep but few and those of special use.

They love not to be cumbered with many

utensils, and although every proprietor knows his own, yet all things (so long as they will last) are used in common amongst them: a biseut cake given to one, that one breaks it equally into so many parts as there be persons in his company and distributes it. Plato's commonwealth is so much practiced by these people.

According to human reason, guided only by the light of nature, these people leads [lead] the more happy and freer life, being void of care, which torments the minds of so many Christians. . . .

OF THE REVELS OF NEW CANAAN

The inhabitants of Pasonagesst, having translated the name of their habitation from that ancient savage name to Ma-re Mount,² and being resolved to have the new name confirmed for a memorial to after-ages, did devise amongst themselves to have it performed in a solemn manner with revels and merriment after the old English custom; [they] prepared to set up a Maypole upon the festival day of Philip and Jacob, and therefore brewed a barrel of excellent beer and provided a case of bottles, to be spent, with other good cheer, for all comers of that day. And because they would have it in a complete form, they had prepared a song fitting to the time and present occasion. And upon May Day they brought the Maypole to the place appointed, with drums, guns, pistols, and other fitting instruments for that purpose, and there erected it with the help of savages that came thither of purpose to see the manner of our revels. A goodly pine tree of eighty foot long was reared up, with a pair of buck's horns nailed on somewhat near unto the top of it; where it stood as a fair sea-mark for directions how to find out the way to mine host of Ma-re Mount.

² Morton's insistence throughout *New English Canaan* on this name, meaning a hill on the sea, was probably a pun on the name "Merie-mounte," as Bradford spells it, being designed to confound Separatists and their kind.

And because it should more fully appear to what end it was placed there, they had a poem in readiness made, which was fixed to the Maypole, to show the new name confirmed upon the plantation; which, although it were made according to the occurrences of the time, it being enigmatically composed, puzzled the Separatists most pitifully to expound it . . .

The setting up of this Maypole was a lamentable spectacle to the precise Separatists that lived at New Plymouth. They termed it an idol; yea, they called it the calf of Horeb, and stood at defiance with the place, naming it Mount Dagon, threatening to make it a woeful mount and not a merry mount . . .

There was likewise a merry song made, which, to make their revels more fashionable, was sung with a chorus, every man bearing his part; which they performed in a dance, hand in hand about the Maypole, while one of the company sung and filled out the good liquor, like Ganymede and Jupiter.

The Song

Chorus

Drink and be merry, merry, merry boys;
 Let all your delight be in the Hymen's joys,
 Iô [i.e., Joy] to Hymen! now the day is come,
 About the merry Maypole take a room.
 Make green garlands, bring bottles out,
 And fill sweet nectar freely about;
 Uncover thy head and fear no harm,
 For here's good liquor to keep it warm.
 Then drink and be merry, etc.
 Iô to Hymen, etc.
 Nectar is a thing assigned
 By the deity's own mind
 To cure the heart oppressed with grief,
 And of good liquors is the chief.
 Then drink, etc.
 Iô to Hymen, etc.
 Give to the melancholy man
 A cup or two of't now and then;
 This physic will soon revive his blood,

And make him to be of a merrier mood.
 Then drink, etc.

Iô to Hymen, etc.

Give to the nymph that's free from scorn

No Irish stuff nor Scotch overworn.

Lasses in beaver coats, come away,

Ye shall be welcome to us night and day.
 To drink and be merry, etc.

Iô to Hymen, etc.

This harmless mirth made by young men (that lived in hope to have wives brought over to them, that would save them a labor to make a voyage to fetch any over) was much distasted of the precise Separatists . . .

OF A GREAT MONSTER SUPPOSED TO BE AT MA-RE MOUNT AND THE PREPARATION MADE TO DESTROY IT

The Separatists, envying the prosperity and hope of the plantation at Ma-re Mount, which they perceived began to come forward and to be in a good way for gain in the beaver trade, conspired together against mine host especially, who was the owner of that plantation, and made up a party against him; and mustered up what aid they could, accounting of him as of a great monster.

Many threatening speeches were given out both against his person and his habitation, which they divulged should be consumed with fire; and taking advantage of the time when his company, which seemed little to regard their threats, were gone up into the islands to trade with the savages for beaver, they set upon my honest host at a place called Wessaguscus, where by accident they found him. The inhabitants there were in good hope of the subversion of the plantation at Ma-re Mount, which they principally aimed at; and the rather because mine host was a man that endeavored to advance the dignity of the Church of England, which they, on the contrary part, would labor to vilify with

uncivil terms, inveighing against the sacred Book of Common Prayer and mine host, that used it in a laudable manner amongst his family as a practice of piety . . .

Much rejoicing was made that they had gotten their capital enemy, as they concluded him, whom they purposed to hamper in such sort that he should not be able to uphold his plantation at Ma-re Mount.

The conspirators sported themselves at my honest host, that meant them no hurt, and were so jocund that they feasted their bodies and fell to tippling as if they had obtained a great prize, like the Trojans when they had the custody of Hippius' pine-tree horse.

Mine host feigned grief and could not be persuaded either to eat or drink, because he knew emptiness would be a means to make him as watchful as the geese kept in the Roman capitol: whereon the contrary part, the conspirators, would be so drowsy that he might have an opportunity to give them a slip instead of a tester.³ Six persons of the conspiracy were set to watch him at Wessaguscus. But he kept waking, and in the dead of night (one lying on the bed for further surety) up gets mine host and got to the second door that he was to pass, which, notwithstanding the lock, he got open, and shut it after him with such violence that it affrighted some of the conspirators.

The word, which was given with an alarm, was. "Oh, he's gone, he's gone! What shall we do? He's gone!" The rest, half asleep, start up in amaze, and like rams ran their heads one at another full butt in the dark.

Their grand leader, Captain Shrimp,⁴ took on most furiously and tore his clothes for anger to see the empty nest, and their bird gone.

The rest were eager to have torn their hair from their heads; but it was so short that it would give them no hold. Now Captain Shrimp thought in the loss of this prize, which he accounted his masterpiece, all his honor would be lost forever.

In the meantime mine host was got home

to Ma-re Mount through the woods, eight miles round about the head of the river Monatoquit that parted the two plantations, finding his way by the help of the lightning (for it thundered as he went, terribly); and there he prepared powder, three pounds dried, for his present employment, and four good guns for him and the two assistants left at his house, with bullets of several sizes, three hundred or thereabouts, to be used if the conspirators should pursue him thither; and these two persons promised their aids in the quarrel and confirmed that promise with health in good *rosa solis*.

Now Captain Shrimp, the first captain in the land (as he supposed) must do some new act to repair this loss and to vindicate his reputation, who had sustained blemish by this oversight; begins now to study how to repair or survive his honor. In this manner, calling of council, they conclude.

He takes eight persons more to him, and like the nine worthies of New Canaan they embark with preparation against Ma-re Mount, where this monster of a man, as their phrase was, had his den: the whole number, had the rest not been from home, being but seven, would have given Captain Shrimp (a quondam drummer) such a welcome as would have made him wish for a drum as big as Diogenes' tub, that he might have crept into it out of sight.

Now the nine worthies are approached, and mine host prepared, having intelligence by a savage that hastened in love from Wessaguscus to give him notice of their intent.

One of mine host's men proved a craven; the other had proved his wits to purchase a little valor before mine host had observed his posture.

The nine worthies coming before the den of this supposed monster (this seven-

³ Morton here puns on the meanings of these words. "Slip" was a counterfeit coin; "tester" was slang for sixpence.

⁴ Morton's name for Captain Miles Standish.

headed Hydra, as they termed him), and began, like Don Quixote against the wind-mill, to beat a parley and to offer quarter if mine host would yield, for they resolved to send him for England and bade him lay by his arms.

But he, who was the son of a soldier, having taken up arms in his just defense, replied that he would not lay by those arms, because they were so needful at sea if he should be sent over. Yet, to save the effusion of so much worthy blood as would have issued out of the veins of these nine worthies of New Canaan if mine host should have played upon them out at his portholes (for they came within danger like a flock of wild geese, as if they had been tailed one to another, as colts to be sold at a fair), mine host was content to yield upon quarter, and did capitulate with them in what manner it should be, for more certainty, because he knew what Captain Shrimp was.

He expressed that no violence should be offered to his person, none to his goods nor any of his household, but that he should have his arms and what else was requisite for the voyage, which, their herald returns, it was agreed upon and should be performed.

But mine host no sooner had set open the door and issued out, but instantly Captain Shrimp and the rest of the worthies stepped to him, laid hold of his arms, and had him down; and so eagerly was every man bent against him (not regarding any agreement made with such a carnal man) that they fell upon him as if they would have eaten him. Some of them were so violent that they would have a shree with scabbard, and all for haste; until an old soldier ("of the Queen's," as the proverb is) that was there by accident, clapped his gun under the weapons and sharply rebuked these worthies for their unworthy practices. So the matter was taken into more deliberate consideration.

Captain Shrimp and the rest of the nine worthies made themselves, by this outrageous riot, masters of mine host of

Ma-re Mount and disposed of what he had at his plantation.

This they knew, in the eye of the savages, would add to their glory and diminish the reputation of mine honest host, whom they practiced to be rid of upon any terms, as willingly as if he had been the very Hydra of the time.

OF CAPTAIN LITTLEWORTH . . .

In the meantime . . . there was a great swelling fellow, of Littleworth,⁵ crept over to Salem (by the help of Master Charterparty, the Treasurer, and Master Ananias Increase, the Collector for the Company of Separatists) to take upon him their employments for a time.

He, resolving to make hay while the sun did shine, first pretended himself to be sent over as Chief Justice of the Massachusetts Bay and Salem, forsooth, and took upon him a council, and a worthy one, no doubt, for the Cowkeeper of Salem was a prime man in those employments, and to add a majesty, as he thought, to his new-assumed dignity, he caused the patent of the Massachusetts, new brought into the land, to be carried where he went in his progress to and fro, as an emblem of his authority: which the vulgar people, not acquainted with, thought it to be some instrument of music locked up in that covered case, and thought (for so some said) this man of littleworth had been a fiddler, and the rather because he had put into the mouths of poor silly things, that were sent along with him, what skill he had in engines, and in things of quaint device: all which proved in conclusion to be but imposture.

OF A GREAT BONFIRE MADE FOR JOY OF THE ARRIVAL OF GREAT JOSUA, SURNAMED TEMPERWELL . . .

Seven ships set forth at once, and altogether arrived in the Land of Canaan, to take a full possession thereof . . .

⁵ Morton's name for John Endecott.

And here comes their Josua⁶ too among them; and they make it a more miraculous thing for these seven ships to set forth together and arrive at New Canaan together than it was for the Israelites to go over Jordan dry-shod . . .

These are the men that come prepared to rid the land of all pollution . . . These men have brought a very snare indeed; and now mine host must suffer . . .

A court is called of purpose for mine host: he there convened and must hear his doom before he go . . .

There they all with one assent put him to silence, crying out, "Hear the Governor! Hear the Governor!"—who gave this sentence against mine host at first sight that he should be put in the bilboes, his goods should be all confiscated, his plantation should be burned down to the ground, because the habitation of the wicked should no more appear in Israel, and his person banished from those territories; and this put in execution with all speed.

The harmless savages, his neighbors, came the while (grieved, poor silly lambs, to see what they went about) and did reprove these Elphants⁷ of wit for their inhuman deed: the Lord above did open their mouths like Balaam's Ass and make them speak in his behalf unexpected divinity, besides morality, and told them that God would not love them that burned this good man's house and plainly said that they who were new come would find the want of such a house in the winter: so much themselves to him confessed.

The smoke that did ascend appeared to be the very sacrifice of Cain. Mine host (that a far off aboard a ship did there behold this woeful spectacle) knew not what he should do in this extremity but bear and forbear, as Epictetus says: it was bootless to exclaim.

He did consider then these transitory things are but *ludibria fortunæ*⁸, as Cicero calls them. All was burnt down to the ground and nothing did remain but the bare ashes as an emblem of their cruelty:

and unless it could (like to the Phoenix) rise out of these ashes and be new again (to the immortal glory and renown of this fertile Canaan the new), the stumps and posts in their black liveries will mourn, and piety itself will add a voice to the bare remnant of that monument and make it cry for recompense, or else revenge, against the sect of cruel schismatics . . .

OF THEIR POLICY IN PUBLIC JUSTICE

Now that I have anatomized the two extreme parts of this politic commonwealth, the head and the inferior members, I will show you the heart and read a short lecture over that too which is Justice.

I have a petition to exhibit to the high and mighty Mr. Temperwell, and I have my choice whether I shall make my plaint in a case of conscience or bring it within the compass of a point in law. And because I will go the surest way to work, at first I will see how others are answered in the like kind, whether it be hab or nab, as the judge did the countryman.⁹

Here comes Mr. Hopewell: his petition is in a case of conscience, as he says. But, see, great Josua allows conscience to be of his side, yet cuts him off with this answer: law is flat against him. Well, let me see another. Aye, marry! here comes one Master Doubtnot: his matter depends, I am sure, upon a point in law: alas, what will it not do, look ye it is affirmed that law is on his side, but conscience, like a blanket, overspreads it. This passage is like to the Procestes of Rome,

⁶ Joshua Temperwell is Morton's name for John Winthrop.

⁷ A pun on the word "elephants" and "Eliphants", i.e., high priests of Eli or of Israel.

⁸ Jests of the Goddess Fortuna or Fortune. The reference is to Cicero's *Paradoxa*, I, i.

⁹ "Hab or nab" means "hit or miss." Morton is probably alluding to an incident in Act IV, sc. i of Ben Jonson's *Tale of a Tub*.

methinks; and therefore I may very well say of them:

Even so, by racking out the joints and chopping off the head,
Procustes fitted all his guests into his iron bed.

And if these speed no better, with whom they are friends, that neither find law nor conscience to help them, I do not wonder to see mine host of Ma-re Mount speed so ill, that has been proclaimed an enemy so many years in New Canaan to their church and state.

1602 ~ *Peter Stuyvesant* ~ 1672

PETER STUYVESANT was sent by the Dutch West India Company in 1647 to be director of New Netherland, which had been settled in 1624 and which was inefficiently administered by the Company and inadequately supported by the Estates-General. Contemptuous of popular elections, harassed by the state of affairs resulting from unwise remote control, Stuyvesant subjected the colonists to irascible dictatorship and high-handed exploitation, provoking from his council of nine—consisting of merchants, artisans, petty tradesmen, and landowners—a remonstrance against his rule to the Estates-General.

When Stuyvesant was forced to yield the colony to English conquest in 1664, the Estates-General summoned him home to give an account of himself. He arrived in Holland in October, 1665, and presented his report, the original of which was committed to the National Archives at the Hague. After the English were granted New York by the treaty of Breda in 1667, Stuyvesant returned there to spend the rest of his life on his farm, Great Bouwery.

[The following selection is from the English translation of this report, printed in *Narratives of New Netherland, 1609-1664*, ed. J. F. Jameson, New York, 1909, one of the volumes in the series, *Original Narratives of Early American History*.]

From the
REPORT
[1858 (1665)]

ILLUSTRIOUS, High and Mighty Lords: Whilst I, your Illustrious High Mightinesses' humble servant, was still in New Netherland I was informed, verbally and in writing, that the unfortunate loss and reduction of New Netherland were, in consequence of ignorance of the facts, spoken of and judged in this country by many variously, and by most people not consistently with the truth, according to

the appetite and learning of each. Therefore your Illustrious High Mightinesses' servant, sustained by the tranquillity of an upright and loyal heart, was moved to abandon all, even his most beloved wife, to inform you, Illustrious, High and Mighty, of the true state of the case, that you, when so informed, may decide according to your profound wisdom . . .

I dare not interrupt your Illustrious High Mightinesses' most important business by a lengthy narrative of the poor condition in which I found New Netherland on my assuming its government. The open country was stripped of inhabitants

to such a degree that, with the exception of the three English villages of Heemstede, New Flushing and Gravesend, there were not fifty bouweries and plantations on it, and the whole province could not muster 250, at most 300 men capable of bearing arms.

Which was caused, first, (in default of a settlement of the boundary so repeatedly requested) by the troublesome neighbors of New England, who numbered full fifty to our one,¹ continually encroaching on lands within established bounds, possessed and cultivated in fact by your Illustrious High Mightinesses' subjects.

Secondly, by the exceedingly detrimental, land-destroying and people-expelling wars with the cruel barbarians, which endured two years before my arrival there, whereby many subjects who possessed means were necessitated to depart, others to retreat under the crumbling fortress of New Amsterdam, which, on my arrival, I found resembling more a molehill than a fortress, without gates, the walls and bastions trodden under foot by men and cattle.

Less dare I, to avoid self-glorification, encumber your weighty occupations, Illustrious, High and Mighty, with the trouble, care, solicitude and continual zeal with which I have endeavored to promote the increase of population, agriculture and commerce; the flourishing condition whereunto they were brought, not through any wisdom of mine, but through God's special blessing, and which might have been more flourishing if your formerly dutiful, but now afflicted, inhabitants of that conquest had been, Illustrious, High and Mighty, protected and remained protected by a suitable garrison, as necessity demanded, against the deplorable and tragical massacres by the barbarians,

whereby (in addition to ten private murders) we were plunged three times into perilous wars, through want of sufficient garrisons; especially had they, on the supplicatory remonstrances of the people and our own so iterated entreaties, which must be considered almost innumerable, been helped with the long sought for settlement of boundary, or in default thereof had they been seconded with the oft besought reinforcement of men and ships against the continual troubles, threats, encroachments and invasions of the English neighbors and government of Hartford Colony, our too powerful enemies.

That assistance, nevertheless, appears to have been retarded so long (wherefore and by what unpropitious circumstances the Honorable Directors best know) that our above-mentioned too powerful neighbors and enemies found themselves reinforced by four royal ships, crammed full with an extraordinary amount of men and warlike stores. Our ancient enemies throughout the whole of Long Island, both from the east end and from the villages belonging to us united with them, hemmed us by water and by land, and cut off all supplies. Powder and provisions failing, and no relief nor reinforcement being expected, we were necessitated to come to terms with the enemy, not through neglect of duty or cowardice, as many, more from passion than knowledge of the facts, have decided, but in consequence of an absolute impossibility to defend the fort, much less the city of New Amsterdam, and still less the country . . .

¹ A considerable exaggeration. In 1647 New Netherland had probably a population of about 1,500, New England of about 25,000.

1603(?) ~ *Roger Williams* ~ 1683

BORN in London, his father a merchant tailor, Roger Williams was assisted by the famous jurist, Sir Edward Coke, in completing his education. Receiving a B. A. degree from Pembroke College, Cambridge, in 1627, he came to New England in 1631, served as pastor of the church in Salem, later functioned as an unordained minister at Plymouth, and then returned to his Salem pastorate, but not for long. He clashed with the Massachusetts Bay authorities on a number of issues, including his advocacy of complete separation from the Church of England and his insistence that the state had no right to persecute anyone for holding any kind of religious opinion, and was banished from the colony in October, 1635, as a radical comparable to some of the more extreme sectarians who were bringing Puritanism into discredit in England.

Early in 1636 he had to flee to the Narragansett country to escape arrest. Here, by founding Providence, he established the colony of Rhode Island, in whose government and affairs he played a major role until his death in 1683. To orthodox Puritans 17th Century Rhode Island seemed a bedlam anarchy of heretics. Later Americans have hymned it as the very cradle of our democracy, where all those, such as the Quakers, who were hounded and imprisoned and even put to death for their beliefs by Puritans and other tyrants, were able to find haven and to worship undisturbed. The truth lies somewhere between these extreme views. The Quakers, for example, who had received incredibly harsh treatment in Massachusetts, were permitted to settle in Rhode Island; they were not left entirely undisturbed, however, but were challenged to justify their heresies in open and free debate by Roger Williams himself.

Williams' challenge, setting forth the numerous "positions" or points on which he desired them to give him satisfaction, was directed to the great English Quaker leader, George Fox, who had come on a missionary expedition to Newport. Fox either chose deliberately to evade Williams' challenge, as the latter seemed to believe, or, as the Quakers insisted, left before he received it, but other Quakers were willing to meet and argue with Williams. After the debate, part of which was held at the Quaker stronghold of Newport on August 9, 10, and 12, 1672, and part of which took place in Williams' home town of Providence on August 17 of the same year, Williams published his account of the proceedings under the punning title, *George Fox Digg'd out of his Burrowes*, the reference being to Edward Burroughs, another Quaker, who had asked for debate in his preliminary epistle to one of Fox's controversial works, *The Great Mystery of the Great Whore unfolded*, London,

1659. Fox and one of the Quaker participants in the Williams debate, John Burnyeat, drew up an answer to Williams' tome in another entitled, *A New England Firebrand Quenched*, London, 1678.

[The following modernized selection from Williams' account, relating how the Quakers finally took up his gage and how he made the trip to Newport and began the first round of the prolonged theological bout, reveals much of the spirit of early Rhode Island and of the character of its founder. For further selections from Williams' works, see Book I, Parts 2 and 3.]

From
GEORGE FOX DIGG'D OUT OF HIS
BURROWES
[1676]

WITHIN some few days after that our Deputy Governor had delivered my paper to them, the strange Quakers (as was agreed with G. Fox) came to Providence—John Stubs [Stubbs], John Burnet [Burnyeat], and others—and came to my house six or seven together; their salutations were (like the meetings of their dumb spirit) in silence. I bid them welcome, etc. John Stubs began and said they had received a paper from me, and they came to me to tell me that they accepted my offer, and that they had appointed (according to the liberty given them by myself in my paper) the 9th of the present August to be the day at Newport. I told them they were welcome and the more welcome because they brought me tidings of their resolution, for I longed for opportunities of such exercises, to which I thought the most High invited us by our precious liberties, etc. I added that my paper was in the first place directed to G. Fox, but they suddenly caught at my word, and John Burnet told me that G. Fox was departed before my letters were opened, and that G. Fox never saw my paper (and probably as afterward in the dispute he spake honestly, not knowing the mystery); John Stubs added that my paper gave liberty to G. Fox or his friends. I said therefore I would not fail (if God pleased) to meet them at the place, and by nine in the morning, on the day they had appointed.

They departed (after drink offered and accepted by some), but the next morning, being the first of the week, I sent them word in writing that divers of our neighbors were grieved that the conference should be carried away from Providence to Newport wholly; (as some of them had also spoken) I told them that the accepting of my proffer necessarily included the conference about the latter seven [points of debate] at Providence; I told them their consciences and credits lay on it and therefore desired them to fix on a day for the dispute of the latter seven at Providence before their departure hence. This paper was delivered to one of their company in the room where they were together, but, whether on purpose or (as 'tis possible) by mistake, they say the paper was lost; so, receiving no answer from them, I late in the evening sent them another writing, signifying that I could not hold myself engaged to meet them at Newport about the first seven without their promise of discussing the latter seven at Providence. Then they wrote to me that I had seemed willing and that they had given notice and the country would come in; therefore they challenged me to appear and prove my malicious and bitter charges against them, and withal promised that upon the finishing of the first seven at Newport, some of them would give me a meeting at Providence, etc. Upon the receipt of this, I sent them a third writing signifying that I rested in their promise, and therefore (if God pleased) I would not fail to be with them at the time and place appointed. And God graciously assisted me in rowing all day

with my old bones so that I got to Newport toward the midnight before the morning appointed.

Then I sent them a fourth paper (with a copy of my first that miscarried as they said) and signified to them that it would be convenient to agree about some order of transition or passing from one position to another, as also, since they were many and I but one, I presumed their reason told them that I expected but one at once, and that, if another desired to speak, the first should hold his peace; as also I signified that some were scrupulous of going into the Quakers' meeting-house, and therefore I desired some thoughts about it, they thought it convenient to send H. Bull to request me to go to his house to them; I went; they urged the capaciousness and conveniency of their house, and I told such as scrupled that it was one thing to go into a Jewish synagogue or a Popish chapel to worship or countenance their worships, another thing to profess and contest against them, in which respect Paul disputed many days in the Jews' synagogues against them, and I could freely go into the Pope's chapel to dispute against the Pope and his worship.

I knew our aged Governor, Mr. Nich. Easton and other magistrates (of their judgment) would be there, and so the civil peace maintained, and I had a strange assurance given in to my spirit from God in answer to my poor requests, etc., viz., that by moderation and patience I should conquer their immoderations and impatencies; I therefore thought it in vain to spend time about a moderator. 'Tis true they gave me no answer either by speech or writing concerning their coming on me one at once, but to their seeming great advantage they constantly fell on me all at once and one of them, William Edmundson, with grievous language and insulting.

When I came into the place aforesaid I found three able and noted preachers amongst them, viz. John Stubs, John Burnet, William Edmundson sitting together on a high bench with some of the magis-

trates of their judgment with them. I had heard that John Stubs was learned in the Hebrew and the Greek (and I found him so); as for John Burnet, I found him to be of a moderate spirit and a very able speaker. The third, W. Edmundson, was newly come (as was said) from Virginia, and he proved the chief speaker, a man not so able nor so moderate as the other two. For the two first would speak argument and discuss and produce Scripture, but William Edmundson was very ignorant in the Scripture or any other learning. He had been a soldier in the late wars, a stout portly man of a great voice, and fit to make a Bragadocio¹ (as he did) and a constant exercise merely of my patience: he would often vapour and preach long, and, when I had patiently waited till the gust was over, and began to speak, then would he stop my mouth with a very unhandsome clout of a grievous interruption, so that sometimes I was forced to play the moderator and to protest that such practices were against the sober rules of civility and humanity. It pleased God to help me with such patience to weather them that John Stubs openly confessed twice that, though some others had given them some interruptions, yet that I had not done it.

I took my seat at the other end of the house opposite to them, and began telling them that the most High was my witness that not out of any prejudice against or disrespect to the persons of the Quakers (many of whom I knew and did love and honor) nor any foolish passion or pride or boldness (for I desired to be sensible of my many decays of my house of clay, and other ways) nor any earthly or worldly ends I had that occasioned this trouble to myself and them.

I was first commanded this work from Heaven. Why should not this argument be good for me and for others as well as the Quakers? They say their commands are immediate (for interpretations are immediate), but I say they herein suffer

¹ An allusion to Braggadocio, a swaggering boaster in Spenser's *Faerie Queene*.

Satan to cheat them, for they say they pray, they fast, they wait, they listen, they judge of the motions that arise within them, and so have I done. The great maker and searcher of all hearts knows that none but his holy Majesty was privy to the conception of this business.

1. My end was the vindicating his most holy name, which my soul saw was trodden in the dirt by Satan clothed with Samuel's mantle and the bright garment of an angel of light, which once he was, but pride deceived him.

2. I had in mine eye the vindicating this colony for receiving of such persons whom others would not; we suffer for their sakes and are accounted their abettors; that therefore, together with the improvement of our liberties which the God of Heaven and our King's Majesty have graciously given us, I might give a public testimony against their opinions in such a way and exercise, I judged it incumbent upon my spirit and conscience to do it (in some regards) more than most in the colony. I may also truly say that

3. I had also in mine eye that this exercise might occasion some soul consideration in many. I told them that we had a doleful alarum and instruction lately, we were taught what salvation and saving was, in the late death and drowning of a person so known to us (and all N England)—Nicholas Davis. I told them our case and the case of all mankind is his (in spiritual and soul matters)—Oh, a world for an oar, a rope, a plank! Only it must be to all of us our work, to try whether our savior, our salvation be real and not failing in so great a straight.

Some of these blessed ends it hath pleased God to propagate by this occasion all this colony over, and all of us round about have put forth ourselves in disquisitions and searchings after the true grounds of the Christian religion and worship.

I had many thoughts of beginning such an exercise with prayer unto God for his presence, but I knew I could not join with them nor would they own my pray-

ers, I had thoughts (as Eliah among the Baalites) to have prayed in the singular number. But some considerations made my spirit content with this kind of petition unto God. For not only in my closet and my heart, but publicly before them all I said "I do humbly hope and beg of God, the father of spirits, so to order and direct our spirits in these our agitations that his holy name may receive glory and the souls of all of us some soul-profit and advantage."

I began with the first position, which I think W. Edmundson also read out of the paper, viz.—

"That the people called Quakers are not true Quakers according to the Scriptures."

I said I knew they did not own that name Quakers as imposed on them by God or taken up by themselves, but given them in scorn and derision, as G. Fox, Ed. Burrowes (and I had heard John Stubbs who joined with them) declared, and that one Gervase Bennet, a justice in Derby, first so called them in the year 1650.² And yet I had cause to judge that the name was given by Justice Bennet and others to them from that strange and uncouth possessing of their bodies, with quaking and shaking of their bodies even in public assemblies and congregations, which extraordinary motions I judged to come upon them, not from the holy spirit and power of God, but from the spirit and power of Satan for divers reasons . . .

To this purpose I told them at the first coming of this spirit to London and Westminster, some parliament men told me that themselves went to one of the Quakers' meeting about Charing Cross, but were so affrighted with the shaking of their own bodies and of their chairs and stools under them that they could never again be got into their assemblies.

I added that such shakings, motions,

² George Fox records in his *Journal* that Bennet applied this name to the zealots brought before him for trial with the following explanation, "I bid them tremble at the word of the Lord."

ecstasies, etc., were known to be the frequent workings of Satan upon his servants in all ages. Such were the furious motions of Baal's priests, the motions of the possessed mentioned in the Gospels, and other histories, and known to be amongst the Barbarians, our neighbors about this time. John Burnet and William Edmundson rose up and said that I had laid many deep and heavy charges upon the people of the Lord, which I should never be able to prove: I had denied them to be Christians and so had wronged the good spirit of God in them and their profession of worshipping God in the spirit. Yea, I had taken away

their being (as men) out of the world as a dangerous people to nations and kingdoms and commonweals, yea to kings and princes, and so not fit to live amongst men in the world. These speeches were often uttered and enlarged by one or other of them and that with zeal (and passion in W. Edmundson).

I waited patiently till these gusts of their angry spirit was [were] over, and then I told them I had not wronged them in a tittle, but by the help of the most High I would make all good against them and then leave it to every man's and woman's soul to judge at their own peril . . .

1619(?) ~ *Claude Dablon* ~ 1697

AMONG the Jesuit missionaries of New France in the 17th Century, Jacques Marquette, 1637-1675, distinguished himself as an explorer of the Mississippi and a bearer of the gospel to far-flung Indian tribes. The following account of his last voyage, his death, and his final obsequies is part of a document written by Claude Dablon, Marquette's superior at Quebec. From manuscripts in the possession of St. Mary's College, Montreal, this and other Marquette documents were published in several collections after 1850; the best texts, with translations, are in *The Jesuit Relations*. This great series, in seventy-three volumes, was published between 1896 and 1901 under the editorship of the American historian, Reuben Gold Thwaites, and contains the French, Latin, and Italian texts with English translations.

[The present selection, with a few revisions in punctuation, capitalization, and spelling, is reproduced from Vol. LIX, 185-205. The title has been supplied by the present editors.]

THE LAST VOYAGE, THE DEATH, AND THE FINAL OBSEQUIES OF FATHER MARQUETTE [Written 1677]

I

FATHER Jacques Marquette, having promised the Illinois on his first voyage to them, in 1673, that he would return to them the following year, to teach them the mysteries of our religion, had much difficulty in keeping his word. The great hard-

ships of his first voyage had brought upon him a bloody flux, and had so weakened him that he was giving up the hope of undertaking a second. However, his sickness decreased; and, as it had almost entirely abated by the close of the summer of the following year, he obtained the permission of his superiors to return to the Illinois and there begin that fair mission.

He set out for that purpose, in the month of November of the year 1674, from

the Bay des Puants, with two men, one of whom had made the former voyage with him. During a month of navigation on the lake of the Illinois, he was tolerably well; but, as soon as the snow began to fall, he was again seized with his bloody flux, which compelled him to halt in the river which leads to the Illinois. It was there that they constructed a cabin in which to pass the winter, amid such inconveniences that, his malady increasing more and more, he saw clearly that God was granting to him the favor which he had so many times besought from him; and he even told his two companions very plainly that he would certainly die of that malady, and during that voyage. Duly to prepare his soul, despite the severe indisposition of his body, he began this so severe winter sojourn by the retreat of St. Ignatius, which he performed with every feeling of devotion, and many celestial consolations, and then he passed the whole of the remaining time in holding communion with all Heaven—having, in these deserts, no intercourse with the earth except with his two companions. He confessed them and administered communion to them twice in the week, and exhorted them as much as his strength permitted him. A short time after Christmas, that he might obtain the favor of not dying without having taken possession of his dear mission, he invited his companions to make a novena¹ in honor of the immaculate conception of the blessed virgin. His prayer was answered, against all human probability; and, his health improving, he prepared himself to go to the village of the Illinois as soon as navigation should open—which he did with much joy, setting out for that place on the 29th of March. He spent eleven days on the way, during which time he had occasion to suffer much, both from his own illness, from which he had not entirely recovered, and from the very severe and unfavorable weather.

On at last arriving at the village, he was received as an angel from Heaven. After he had assembled at various times the

chiefs of the nation, with all the old men, that he might sow in their minds the first seeds of the gospel, and after having given instruction in the cabins, which were always filled with a great crowd of people, he resolved to address all in public, in a general assembly which he called together in the open air, the cabins being too small to contain all the people. It was a beautiful prairie, close to a village, which was selected for the great council, this was adorned, after the fashion of the country, by covering it with mats and bearskins. Then the father, having directed them to stretch out upon lines several pieces of Chinese taffeta, attached to these four large pictures of the blessed virgin, which were visible on all sides. The audience was composed of 500 chiefs and elders, seated in a circle around the father, and of all the young men, who remained standing. They numbered more than 1,500 men, without counting the women and children, who are always numerous—the village being composed of 5 or 600 fires. The father addressed the whole body of people, and conveyed to them 10 messages, by means of ten presents which he gave them. He explained to them the principal mysteries of our religion, and the purpose that had brought him to their country. Above all, he preached to them Jesus Christ, on the very eve (of that great day) on which he had died upon the cross for them, as well as for all the rest of mankind; then he said holy mass. On the third day after, which was Easter Sunday, things being prepared in the same manner as on Thursday, he celebrated the holy mysteries for the 2nd time, and by these two, the only sacrifices ever offered there to God, he took possession of that land in the name of Jesus Christ, and gave to that mission the name of the Immaculate Conception of the blessed virgin.

He was listened to by all those peoples with universal joy; and they prayed him with most earnest entreaty to come back to them as soon as possible, since his sick-

¹ A nine days' devotion.

ness obliged him to return. The father, on his side, expressed to them the affection which he felt for them, and the satisfaction that they had given him; and pledged them his word that he, or some other of our fathers, would return to carry on that mission so happily inaugurated. This promise he repeated several times, while parting with them to go upon his way; and he set out with so many tokens of regard on the part of those good peoples that, as a mark of honor, they chose to escort him for more than 30 leagues on the road, vying with each other in taking charge of his slender baggage

II

After the Illinois, filled with great esteem for the gospel, had taken leave of the father, he continued his journey, and shortly after reached the lake of the Illinois, upon whose waters he had to journey nearly a hundred leagues, by an unknown route, whereon he had never before traveled; for he was obliged to coast along the southern shore of the lake, having come by the northern. But his strength was so rapidly diminishing that his two men despaired of being able to bring him alive to the end of their journey. Indeed, he became so feeble and exhausted that he was unable to assist or even to move himself, and had to be handled and carried about like a child.

Meanwhile, he preserved in that condition an admirable equanimity, resignation, joy, and gentleness, consoling his dear companions and encouraging them to suffer patiently all the hardships of that voyage, in the assurance that God would not abandon them after his death. It was during this voyage that he began to make more special preparation for death. He held communion, sometimes with our Lord, sometimes with his holy mother, or with his guardian angel, or with all paradise. He was often overheard repeating these words, *Credo quod redemptor meus vivit; or, maria, mater gratiae, mater dei, memento mei.*² In addition to the spiritual

exercise, which was read to him every day, he requested toward the close that they would read to him his meditation preparatory for death, which he carried about with him. He recited every day his breviary; and although he was so low that his sight and strength were greatly enfeebled, he continued to do so to the last day of his life, despite the remonstrance of his companions.

Eight days before his death, he was thoughtful enough to prepare the holy water for use during the rest of his illness, in his agony, and at his burial, and he instructed his companions how it should be used.

The evening before his death, which was a Friday, he told them, very joyously, that it would take place on the morrow. He conversed with them during the whole day as to what would need to be done for his burial, about the manner in which they should inter him, of the spot that should be chosen for his grave; how his feet, his hands, and his face should be arranged; how they should erect a cross over his grave. He even went so far as to counsel them, 3 hours before he expired, that as soon as he was dead they should take the little hand-bell of his chapel, and sound it while he was being put under ground. He spoke of all these things with so great tranquillity and presence of mind that one might have supposed that he was concerned with the death and funeral of some other person, and not with his own.

Thus did he converse with them as they made their way upon the lake—until, having perceived a river, on the shore of which stood an eminence that he deemed well suited to be the place of his interment, he told them that that was the place of his last repose. They wished, however, to proceed farther, as the weather was favorable, and the day was not far advanced; but God raised a contrary wind, which compelled them to return, and enter

² "I believe that my redeemer lives" and "Mary, mother of grace, mother of God, remember me."

the river which the father had pointed out. They accordingly brought him to the land, lighted a little fire for him, and prepared for him a wretched cabin of bark. They laid him down therein, in the least uncomfortable way that they could; but they were so stricken with sorrow that, as they have since said, they hardly knew what they were doing.

The father, being thus stretched on the ground in much the same way as was St. Francis Xavier, as he had always so passionately desired, and finding himself alone in the midst of these forests, for his companions were occupied with the disembarkation, he had leisure to repeat all the acts in which he had continued during these last days.

His dear companions having afterward rejoined him, all disconsolate, he comforted them, and inspired them with the confidence that God would take care of them after his death, in these new and unknown countries. He gave them the last instructions, thanked them for all the charities which they had exercised in his behalf during the whole journey, and entreated pardon for the trouble that he had given them. He charged them to ask pardon for him also, from all our fathers and brethren who live in the country of the Outaouacs. Then he undertook to prepare them for the sacrament of penance, which he administered to them for the last time. He gave them also a paper on which he had written all his faults since his own last confession, that they might place it in the hands of the father superior, that the latter might be enabled to pray to God for him in a more special manner. Finally, he promised not to forget them in paradise. And, as he was very considerate, knowing that they were much fatigued with the hardships of the preceding days, he bade them go and take a little repose. He assured them that his hour was not yet so very near, and that he would awaken them when the time should come—as, in fact, 2 or 3 hours afterward he did summon them, being ready to enter into the agony.

They drew near to him, and he embraced them once again, while they burst into tears at his feet. Then he asked for holy water and his reliquary; and having himself removed his crucifix, which he carried always suspended round his neck, he placed it in the hands of one of his companions, begging him to hold it before his eyes. Then, feeling that he had but a short time to live, he made a last effort, clasped his hands, and, with a steady and fond look upon his crucifix, he uttered aloud his profession of faith, and gave thanks to the divine majesty for the great favor which he had accorded him of dying in the Society, of dying in it as a missionary of Jesus Christ—and, above all, of dying in it, as he had always prayed, in a wretched cabin in the midst of the forests and bereft of all human succor.

After that, he was silent, communing within himself with God. Nevertheless, he let escape from time to time these words, *Sustinuit anima mea in verbo ejus*; or these, *mater dei, memento mei*—³ which were the last words that he uttered before entering his agony, which was, however, very mild and peaceful.

He had prayed his companions to put him in mind, when they should see him about to expire, to repeat frequently the names of Jesus and Mary, if he could not himself do so. They did as they were bidden; and, when they beheld him to be near his end, one of them called aloud, "Jesus, Mary!" The dying man repeated the words distinctly, several times; and as if, at these sacred names, something presented itself to him, he suddenly raised his eyes above his crucifix, holding them riveted on that object, which he appeared to regard with pleasure. And so, with a countenance beaming and all aglow, he expired without any struggle, and so gently that it might have been regarded as a pleasant sleep.

His two poor companions, shedding many tears over him, composed his body

³ "My soul sustains itself in his word" and "mother of God, remember me."

in the manner which he had prescribed to them. Then they carried him devoutly to burial, ringing the while the little bell as he had bidden them, and planted a large cross near to his grave, as a sign to passers-by.

When it became a question of embarking, to proceed on their journey, one of the two, who for some days had been so heartsick with sorrow, and so greatly prostrated with an internal malady, that he could no longer eat or breathe except with difficulty, bethought himself, while the other was making all preparations for embarking, to visit the grave of his good father, and ask his intercession with the glorious virgin, as he had promised, not doubting in the least that he was in Heaven. He fell, then, upon his knees, made a short prayer, and having reverently taken some earth from the tomb, he pressed it to his breast. Immediately his sickness abated, and his sorrow was changed into a joy which did not forsake him during the remainder of his journey.

III

God did not permit that a deposit so precious should remain in the midst of the forest, unhonored and forgotten. The savages named Kiskakons, who have been making public profession of Christianity for nearly ten years, and who were instructed by Father Marquette when he lived at the point of St. Esprit, at the extremity of Lake Superior, carried on their last winter's hunting in the vicinity of the lake of the Illinois. As they were returning in the Spring, they were greatly pleased to pass near the grave of their good father, whom they tenderly loved; and God also put it into their hearts to remove his bones and bring them to our church at the mission of St. Ignace at Missihmakinac, where those savages make their abode.

They repaired, then, to the spot, and resolved among themselves to act in regard to the father as they are wont to do toward those for whom they profess great respect. Accordingly, they opened the

grave, and uncovered the body, and, although the flesh and internal organs were all dried up, they found it entire, so that not even the skin was in any way injured. This did not prevent them from proceeding to dissect it, as is their custom. They cleansed the bones and exposed them to the sun to dry, then, carefully laying them in a box of birch-bark, they set out to bring them to our mission of St. Ignace.

There were nearly 30 canoes which formed, in excellent order, that funeral procession. There were also a goodly number of Iroquois, who united with our Algonquin savages to lend more honor to the ceremonial. When they drew near our house, Father Nouvel, who is its superior, with Father Piercon, went out to meet them, accompanied by the Frenchmen and savages who were there, and, having halted the procession, he put the usual questions to them, to make sure that it was really the father's body which they were bringing. Before conveying it to land, they intoned the *de profundis* in the presence of the 30 canoes, which were still on the water, and of the people who were on the shore. After that, the body was carried to the church, care being taken to observe all that the ritual appoints in such ceremonies. It remained exposed under the pall, all that day, which was Whitsun Monday, the 8th of June; and on the morrow, after having rendered to it all the funeral rites, it was lowered into a small vault in the middle of the church, where it rests as the guardian angel of our Outaouac missions. The savages often come to pray over his tomb. Not to mention more than this instance, a young girl, aged 19 or 20 years, whom the late father had instructed, and who had been baptized in the past year, fell sick, and applied to Father Nouvel to be bled and to take certain remedies. The father prescribed to her, as sole medicine, to come for 3 days and say a *pater* and three *ave's* at the tomb of Father Marquette. She did so, and before the 3rd day was cured, without bleeding or any other remedies . . .

1635(?) ~ *Mrs. Mary Rowlandson* ~ 1678(?)

ONE OF the most stirring periods of New England colonial history was that of King Philip's War. Philip, son of the Wampanoag chieftain, Massasoit, began to make raids on the settlements in 1675, partly in protest against what he considered an unjust treaty imposed upon his tribesmen in 1671. Other tribes, such as the Narragansets and Nipmucks, became his allies. New England, surprised and unprepared, suffered numerous defeats, but by the end of 1675 had taken the offensive. Although peace was made in 1676 with some of the tribes, the war dragged on until 1678, involving New Hampshire and Maine

Perhaps the most vivid piece of narrative writing produced by the war was the account by Mrs. Mary Rowlandson of her experiences as a captive among Philip's Indians. She was the wife of a minister of Lancaster, Mass., and had three children living at the time she was taken captive. Her account, published in Cambridge, Mass., under the title, *The Sovereignty & Goodness of God, Together with the Faithfulness of His Promises Displayed; Being a Narrative of the Captivity and Restoration of Mrs. Mary Rowlandson*, was a best seller in both America and England. After describing the attack, which took place while her husband was in Boston, Mrs. Rowlandson develops her story by detailing the events which occurred on each of the twenty removes she made with the Indians, to one of whom, a sagamore, named Quannopin, she was sold as a slave by her Narraganset captor.

[For the first and last of the following selections, titles have been supplied by the present editors. The text has been modernized. *Narratives of the Indian Wars 1675-1699*, ed. C. H. Lincoln, New York, 1913, one of the volumes in the series, *Original Narratives of Early American History*, contains a complete text.]

From
THE CAPTIVITY AND RESTORATION
[1682]

THE ATTACK

ON THE 10th of February, 1676, came the Indians with great numbers upon Lancaster. Their first coming was about sun-rising. Hearing the noise of some guns, we looked out; several houses were burning, and the smoke ascending to Heaven.

There were five persons taken in one

house; the father and the mother and a sucking child, they knocked on the head; the other two they took and carried away alive. There were two others, who, being out of their garrison upon some occasion, were set upon; one was knocked on the head, the other escaped. Another there was, who, running along, was shot and wounded, and fell down; he begged of them his life, promising them money, as they told me, but they would not hearken to him, but knocked him in head, and stripped him naked, and split open his bowels. Another,

seeing many of the Indians about his barn, ventured and went out, but was quickly shot down. There were three others belonging to the same garrison who were killed, the Indians, getting up upon the roof of the barn, had advantage to shoot down upon them over their fortification. Thus these murderous wretches went on, burning and destroying before them.

At length they came and beset our own house, and quickly it was the dolefullest day that ever mine eyes saw. The house stood upon the edge of a hill; some of the Indians got behind the hill, others into the barn, and others behind anything that could shelter them; from all which places they shot against the house, so that the bullets seemed to fly like hail, and quickly they wounded one man among us, then another, and then a third.

About two hours, according to my observation in that amazing time, they had been about the house before they prevailed to fire it, which they did with flax and hemp which they brought out of the barn, and there being no defense about the house, only two flankers¹ at two opposite corners and one of them not finished, they fired it once, and one ventured out and quenched it, but they quickly fired it again, and that took.

Now is the dreadful hour come that I have often heard of in time of war, as it was in the case of others, but now mine eyes see it. Some in our house were fighting for their lives, others wallowing in their blood, the house on fire over our heads, and the bloody heathen ready to knock us on the head, if we stirred out. Now might we hear mothers and children crying out for themselves and one another, "Lord, what shall we do?" Then I took my children (and one of my sisters, hers) to go forth and leave the house, but as soon as we came to the door and appeared, the Indians shot so thick that the bullets rattled against the house as if one had taken a handful of stones and threw them, so that we were fain to give back. We had six stout dogs belonging to our garrison,

but none of them would stir, though another time, if any Indian had come to the door, they were ready to fly upon him and tear him down. The Lord hereby would make us the more to acknowledge his hand, and to see that our help is always in him. But out we must go, the fire increasing and coming along behind us roaring and the Indians gaping before us with their guns, spears, and hatchets to devour us.

No sooner were we out of the house but my brother-in-law (being before wounded, in defending the house, in or near the throat) fell down dead, whereat the Indians scornfully shouted and hallooed, and were presently upon him, stripping off his clothes. The bullets flying thick, one went through my side, and the same, as would seem, through the bowels and hand of my dear child in my arms. One of my elder sister's children, named William, had then his leg broken, which the Indians perceiving, they knocked him on the head. Thus were we butchered by those merciless heathen, standing amazed, with the blood running down to our heels.

My eldest sister being yet in the house and seeing those woeful sights, the infidels halng mothers one way and children another, and some wallowing in their blood, and her elder son telling her that her son William was dead and myself was wounded, she said, "And, Lord, let me die with them," which was no sooner said but she was struck with a bullet and fell down dead over the threshold. . . . The Indians laid hold of us, pulling me one way and the children another, and said, "Come, go along with us." I told them they would kill me, they answered, if I were willing to go along with them, they would not hurt me . . .

There were twelve killed, some shot, some stabbed with their spears, some knocked down with their hatchets. When we are in prosperity, oh, the little that we think of such dreadful sights and to see

¹ Projections behind which defenders could operate.

our dear friends and relations lie bleeding out their heart-blood upon the ground. There was one who was chopped into the head with a hatchet, and stripped naked, and yet was crawling up and down. It is a solemn sight to see so many Christians lying in their blood, some here and some there, like a company of sheep torn by wolves, all of them stripped naked by a company of hell-hounds, roaring, singing, ranting, and insulting, as if they would have torn our very hearts out, yet the Lord by his almighty power preserved a number of us from death, for there were twenty-four of us taken alive and carried captive.

I had often before this said that, if the Indians should come, I should choose rather to be killed by them than taken alive, but, when it came to the trial, my mind changed; their glittering weapons so daunted my spirit that I chose rather to go along with those (as I may say) ravenous beasts than that moment to end my days. And that I may the better declare what happened to me during that grievous captivity, I shall particularly speak of the several removes we had up and down the wilderness. . . .

THE EIGHTH REMOVE

On the morrow morning we must go over the river, i.e., Connecticut, to meet with King Philip. Two canoes full they had carried over; the next turn I myself was to go; but, as my foot was upon the canoe to step in, there was a sudden outcry among them, and I must step back; and instead of going over the river, I must go four or five miles up the river farther northward. Some of the Indians ran one way, and some another. The cause of this rout was, as I thought, their espying some English scouts who were thereabout. In this travel up the river, about noon the company made a stop and sat down, some to eat and others to rest them. As I sat amongst them, musings of things past, my son Joseph unexpectedly came to me: we

asked of each other's welfare, bemoaning our doleful condition and the change that had come upon us

We traveled on till night, and in the morning we must go over the river to Philip's crew. When I was in the canoe, I could not but be amazed at the numerous crew of pagans that were on the bank on the other side. When I came ashore, they gathered all about me, I sitting alone in the midst: I observed they asked one another questions, and laughed, and rejoiced over their gains and victories.

Then my heart began to fail, and I fell a-weeping, which was the first time to my remembrance that I wept before them. . . . There one of them asked me why I wept; I could hardly tell what to say, yet I answered, they would kill me. "No," said he, "none will hurt you." Then came one of them and gave me two spoonfuls of meal to comfort me, and another gave me half a pint of peas, which was worth more than many bushels at another time.

Then I went to see King Philip. He bade me come in and sit down and asked me whether I would smoke it (a usual compliment nowadays amongst saints and sinners), but this no way suited me, for though I had formerly used tobacco, yet I had left it ever since I was first taken. It seems to be a bait the devil lays to make men lose their precious time, I remember with shame how, formerly, when I had taken two or three pipes, I was presently ready for another, such a bewitching thing it is; but I thank God he has now given me power over it; surely there are many who may be better employed than to lie sucking a stinking tobacco-pipe.

Now the Indians gather their forces to go against Northampton. Over night one went about yelling and hooting to give notice of the design. Whereupon they fell to boiling of ground-nuts and parching of corn (as many as had it) for their provision; and in the morning away they went. During my abode in this place, Philip spake to me to make a shirt for his boy, which I did, for which he gave me a shill-

ing. I offered the money to my master, but he bade me keep it, and with it I bought a piece of horseflesh.

Afterward he asked me to make a cap for his boy, for which he invited me to dinner. I went, and he gave me a pancake, about as big as two fingers; it was made of parched wheat, beaten and fried in bear's grease, but I thought I never tasted pleasanter meat in my life. There was a squaw who spake to me to make a shirt for her *saimup* [husband], for which she gave me a piece of bear. Another asked me to knit a pair of stockings, for which she gave me a quart of peas. I boiled my peas and bear together and invited my master and mistress to dinner, but the proud gossip, because I served them both in one dish, would eat nothing except one bit that he gave her upon the point of his knife.

Hearing that my son was come to this place, I went to see him and found him lying flat upon the ground. I asked him how he could sleep so. He answered me that he was not asleep, but at prayer, and lay so that they might not observe what he was doing. I pray God he may remember these things now he is returned in safety.

At this place (the sun now getting higher), what with the beams and heat of the sun and the smoke of the wigwams, I thought I should have been blind. I could scarce discern one wigwam from another. There was here one Mary Thurston of Medfield who, seeing how it was with me, lent me a hat to wear; but as soon as I was gone, the squaw (who owned that Mary Thurston) came running after me and got it away again. Here was the squaw that gave me one spoonful of meal. I put it in my pocket to keep it safe, yet notwithstanding somebody stole it, but put five Indian corns in the room of it, which corns were the greatest provisions I had in my travel for one day.

The Indians, returning from Northampton, brought with them some horses and sheep and other things which they had taken. I desired them that they would carry

me to Albany upon one of those horses and sell me for powder, for so they had sometimes discoursed. I was utterly hopeless of getting home on foot the way that I came. I could hardly bear to think of the many weary steps I had taken to come to this place.

THE THIRTEENTH REMOVE

Instead of going toward the Bay, which was that I desired, I must go with them five or six miles down the river into a mighty thicket of brush, where we abode almost a fortnight. Here one asked me to make a shirt for her papoose, for which she gave me a mess of broth, which was thickened with meal made of the bark of a tree, and to make it the better, she had put into it about a handful of peas and a few roasted ground-nuts.

I had not seen my son a pretty while, and here was an Indian of whom I made inquiry after him, and asked him when he saw him. He answered me that such a time his master roasted him and that himself did eat a piece of him as big as his two fingers and that he was very good meat. But the Lord upheld my spirit under this discouragement, and I considered their horrible addictedness to lying and that there is not one of them that makes the least conscience of speaking of truth.

In this place, on a cold night, as I lay by the fire, I removed a stick that kept the heat from me; a squaw moved it down again, at which I looked up, and she threw a handful of ashes in mine eyes. I thought I should have been quite blinded, and have never seen more; but, lying down, the water run out of my eyes, and carried the dirt with it, that by the morning I recovered my sight again. . . .

About this time they came yelping from Hadley, where they had killed three Englishmen and brought one captive with them, viz., Thomas Read. They all gathered about the poor man, asking him many questions. I desired also to go and see him, and when I came, he was crying bitterly, supposing

they would quickly kill him. Whereupon I asked one of them whether they intended to kill him; he answered me they would not. He, being a little cheered with that, I asked him about the welfare of my husband, he told me he saw him such a time in the Bay and he was well but very melancholy. By which I certainly understood (though I suspected it before) that whatsoever the Indians told me respecting him was vanity and lies. Some of them told me he was dead and they had killed him; some said he was married again and that the Governor wished him to marry, and told him he should have his choice, and that all persuaded I was dead. So like were these barbarous creatures to him who was a liar from the beginning.

As I was sitting once in the wigwam here, Philip's maid came in with the child in her arms and asked me to give her a piece of my apron to make a flap for it; I told her I would not, then my mistress bade me give it, but still I said no; the maid told me if I would not give her a piece, she would tear a piece off it, I told her I would tear her coat then. With that, my mistress rises up and takes up a stick big enough to have killed me and struck at me with it, but I stepped out and she struck the stick into the mat of the wigwam. But while she was pulling it out, I ran to the maid and gave her all my apron, and so that storm went over.

Hearing that my son was come to this place, I went to see him and told him his father was well but very melancholy. He told me he was as much grieved for his father as for himself. I wondered at his speech, for I thought I had enough upon my spirit in reference to myself to make me mindless of my husband and everyone else, they being safe among their friends. He told me also that, a while before, his master, together with other Indians, were going to the French for powder; but by the way the Mohawks met with them and killed four of their company, which made the rest turn back again, for which I desire that myself and he may bless the

Lord, for it might have been worse with him had he been sold to the French than it proved to be in his remaining with the Indians. . . .

I asked his master to let him stay a while with me that I might comb his head and look over him, for he was almost overcome with lice. He told me, when I had done, that he was very hungry, but I had nothing to relieve him, but bid him go into the wigwams as he went along and see if he could get anything among them. Which he did, and it seems tarried a little too long, for his master was angry with him, and beat him, and then sold him. Then he came running to tell me he had a new master and that he had given him some ground-nuts already. Then I went along with him to his new master, who told me he loved him and he should not want. So his master carried him away, and I never saw him afterward, till I saw him at Pascataqua in Portsmouth.

That night they bade me go out of the wigwam again; my mistress's papoose was sick, and it died that night, and there was one benefit in it, that there was more room. I went to a wigwam, and they bade me come in, and gave me a skin to lie upon and a mess of venison and ground-nuts, which was a choice dish among them. On the morrow they buried the papoose; and afterward, both morning and evening, there came a company to mourn and howl with her, though I confess I could not much condole with them. . . .

THE TWENTIETH REMOVE

It was their usual manner to remove when they had done any mischief, lest they should be found out; and so they did at this time. We went about three or four miles, and there they built a great wigwam, big enough to hold an hundred Indians, which they did in preparation to a great day of dancing. They would say now amongst themselves that the Governor would be so angry for his loss at Sudbury that he would send no more about the

captives, which made me grieve and tremble.

My sister being not far from the place where we now were, and hearing that I was here, desired her master to let her come and see me, and he was willing to it and would go with her, but she, being ready before him, told him she would go before and was come within a mile or two of the place. Then he overtook her and began to rant as if he had been mad and made her go back again in the rain, so that I never saw her till I saw her in Charlestown. But the Lord requited many of their ill doings, for this Indian, her master, was hanged afterward in Boston.

The Indians now began to come from all quarters, against their merry dancing day. Among some of them came one Goodwife Kettle. I told her my heart was so heavy that it was ready to break. "So is mine too," said she, but yet said, "I hope we will hear some good news shortly." I could hear how earnestly my sister desired to see me, and I as earnestly desired to see her; and yet neither of us could get an opportunity. My daughter was also now about a mile off, and I had not seen her in nine or ten weeks, as I had not seen my sister since our first taking. I earnestly desired them to let me go and see them; yea, I entreated, begged, and persuaded them but to let me see my daughter, and yet so hard-hearted were they that they would not suffer it. They made use of their tyrannical power whilst they had it, but through the Lord's wonderful mercy, their time was now but short.

On a Sabbath day, the sun being about an hour high in the afternoon, came Mr. John Hoar (the Council permitting him and his own forward spirit inclining him) . . . When they had talked their fill with him, they suffered me to go to him. We asked each other of our welfare and how my husband did and all my friends. He told me they were all well and would be glad to see me. Amongst other things which my husband sent me, there came a pound of tobacco, which I sold for nine shillings

in money, for many of the Indians, for want of tobacco, smoked hemlock and ground-ivy. It was a great mistake in any who thought I sent for tobacco, for through the favor of God that desire was overcome.

I now asked them whether I should go home with Mr. Hoar. They answered no, one and another of them; and, it being night, we lay down with that answer. In the morning Mr. Hoar invited the sagamores to dinner, but, when we went to get it ready, we found that they had stolen the greatest part of the provision Mr. Hoar had brought, out of his bags, in the night. And we may see the wonderful power of God in that one passage, in that when there was such a great number of the Indians together and so greedy of a little good food and no English there, but Mr. Hoar and myself, that there they did not knock us in the head and take what we had, there being not only some provision, but also trading cloth, a part of the twenty pounds agreed upon. But, instead of doing us any mischief, they seemed to be ashamed of the fact and said it were some *matchut* [wicked] Indian that did it. Oh, that we could believe that there is no thing too hard for God! God showed his power over the heathen in this, as he did over the hungry lions when Daniel was cast into the den.

Mr. Hoar called them betime to dinner, but they ate very little, they being so busy in dressing themselves and getting ready for their dance, which was carried on by eight of them, four men and four squaws, my master and mistress being two. He was dressed in his Holland shirt, with great laces sewed at the tail of it; he had his silver buttons, his white stockings, his garters were hung round with shillings; and he had girdles of wampum upon his head and shoulders. She had a kersey coat and covered with girdles of wampum from the loins upward; her arms, from her elbows to her hands, were covered with bracelets; there were handfuls of necklaces about her neck and several sorts of jewels in her ears. She had fine red stock-

ings and white shoes, her hair powdered and face painted red, that was always before black. And all the dancers were after the same manner.

There were two others singing and knocking on a kettle for their music. They kept hopping up and down one after another, with a kettle of water in the midst, standing warm upon some embers, to drink of when they were dry. They held on till it was almost night, throwing out wampum to the standers by. At night I asked them again if I should go home. They all as one said no, except my husband would come for me. When we were lain down, my master went out of the wigwam and by and by sent in an Indian called James the Printer, who told Mr. Hoar that my master would let me go home tomorrow, if he would let him have one pint of liquors. Then Mr. Hoar called his own Indians, Tom and Peter, and bid them go and see whether he would promise it before them three, and if he would, he should have it; which he did, and he had it. Then Philip, smelling the business, called me to him and asked me what I would give him to tell me some good news and speak a good word for me. I told him I could not tell what to give him; I would anything I had and asked him what he would have. He said, "Two coats and twenty shillings in money, and half a bushel of seed corn, and some tobacco." I thanked him for his love, but I knew the good news as well as the crafty fox. My master, after he had had his drink, quickly came ranting into the wigwam again and called for Mr. Hoar, drinking to him, and saying he was a good man, and then again he would say, "Hang him, Rogue!" Being almost drunk, he would drink to him, and yet presently say he should be hanged. Then he called for me. I trembled to hear him, yet I was fain to go to him, and he drank to me, showing no incivility. He was the first Indian I saw drunk all the while that I was amongst them. At last his squaw ran out, and he after her, round the wigwam, with his

money jingling at his knees. But she escaped him. But having an old squaw, he ran to her; and so, through the Lord's mercy, we were no more troubled that night. . . .

On Tuesday morning they called their General Court (as they call it) to consult and determine whether I should go home or no. And they all as one man did seemingly consent to it, that I should go home, except Philip, who would not come among them. . . .

At first they were all against it, except my husband would come for me; but afterwards they assented to it and seemed much to rejoice in it, some asked me to send them some bread, others some tobacco, others shaking me by the hand, offering me a hood and scarf to ride in, not one moving hand or tongue against it. Thus hath the Lord answered my poor desire and the many earnest requests of others put upunto God for me. In my travels an Indian came to me and told me, if I were willing, he and his squaw would run away and go home along with me. I told him no, I was not willing to run away, but desired to wait God's time, that I might go home quietly and without fear. And now God hath granted me my desire.

THE RETURN AND REUNION

Oh, the wonderful power of God that I have seen and the experience that I have had. I have been in the midst of these roaring lions and savage bears, that feared neither God nor man nor the devil, by night and day, alone and in company, sleeping all sorts together, and yet not one of them ever offered me the least abuse of unchastity to me, in word or action. Though some are ready to say I speak it for my own credit, but I speak it in the presence of God and to his glory. God's power is as great now, and as sufficient to save, as when he preserved Daniel in the lions' den or the three children in the fiery furnace. . . . Let the redeemed of the Lord say so, whom he hath redeemed from

the hand of the enemy, especially that I should come away in the midst of so many hundreds of enemies quietly and peaceably and not a dog moving his tongue.

So I took my leave of them, and, in coming along, my heart melted into tears, more than all the while I was with them, and I was almost swallowed up with the thoughts that ever I should go home again. About the sun going down, Mr. Hoar and myself and the two Indians came to Lancaster, and a solemn sight it was to me. There had I lived many comfortable years amongst my relations and neighbors, and now not one Christian to be seen nor one house left standing. We went on to a farmhouse that was yet standing, where we lay all night, and a comfortable lodging we had, though nothing but straw to lie on. The Lord preserved us in safety that night, and raised us up again in the morning, and carried us along, that before noon we came to Concord. Now was I full of joy, and yet not without sorrow: joy to see such a lovely sight, so many Christians together, and some of them my neighbors . . .

Being recruited with food and raiment, we went to Boston that day, where I met with my dear husband, but the thoughts of our dear children, one being dead and the other we could not tell where, abated our comfort each to other. I was not before so much hemmed in with the merciless and cruel heathen, but now as much with pitiful, tender-hearted, and compassionate Christians. In that poor and distressed and beggarly condition I was received in, I was kindly entertained in several houses. . . . The twenty pounds, the price of my redemption, was raised by some Boston gentlemen and Mrs. Usher, whose bounty and religious charity I would not forget to make mention of. Then Mr. Thomas Shepard of Charlestown² received us into his house, where we continued eleven weeks, and a father and mother they were to us. And many more tender-hearted friends we met with in that place. We were now in the midst of love, yet not

without much and frequent heaviness of heart for our poor children and other relations, who were still in affliction.

The week following, after my coming in, the Governor and Council sent forth to the Indians again, and that not without success; for they brought in my sister and Goodwife Kettle . . .

About this time the Council had ordered a day of public thanksgiving,³ though I thought I had still cause of mourning, and being unsettled in our minds, we thought we would ride toward the eastward, to see if we could hear anything concerning our children. And as we were riding along (God is the wise disposer of all things) between Ipswich and Rowley we met with Mr. William Hubbard,⁴ who told us that our son Joseph was come in to Major Waldron's, and another with him, which was my sister's son. I asked him how he knew it. He said the Major himself told him so. So along we went till we came to Newbury; and their minister being absent, they desired my husband to preach the thanksgiving for them; but he was not willing to stay there that night, but would go over to Salisbury to hear farther, and come again in the morning, which he did, and preached there that day.

At night, when he had done, one came and told him that his daughter was come in at Providence. Here was mercy on both hands . . . Now we were between them, the one on the east and the other on the west. Our son being nearest, we went to him first, to Portsmouth, where we met with him, and with the Major also, who told us he had done what he could, but could not redeem him under seven pounds, which the good people thereabouts were pleased to pay. . . . On Monday we came

² Son of the more famous Rev. Thomas Shepard of Cambridge.

³ This was the Thanksgiving of June 29, 1676.

⁴ Minister of Ipswich whose *A Narrative of the Troubles with the Indians in New-England*, Boston, 1677, is the best history of Philip's War.

to Charlestown, where we heard that the Governor of Rhode Island had sent over for our daughter, to take care of her, being now within his jurisdiction; which should not pass without our acknowledgments. But she being nearer Rehoboth than Rhode Island, Mr. Newman went over and took care of her, and brought her to his own house. And the goodness of God was admirable to us in our low estate, in that he raised up passionate [i.e. compassionate] friends on every side to us, when we had nothing to recompense any for their love. . . .

Our family being now gathered together (those of us that were living), the South Church in Boston hired an house for us. Then we removed from Mr. Shepard's (those cordial friends) and went to Boston, where we continued about three quarters of a year. . . .

I can remember the time when I used to sleep quietly without workings in my thoughts whole nights together, but now it is other ways with me. When all are fast about me and no eye open, but his who ever waketh, my thoughts are upon things past, upon the awful dispensation of the Lord towards us, upon his wonderful power and might in carrying of us through so many difficulties, in returning us in safety, and suffering none to hurt us. I remember in the night season how the other day I was in the midst of thousands of enemies and nothing but death before me. It is then hard work to persuade myself that ever I should be satisfied with bread again. But now we are fed with the finest of the wheat, and, as I may say, with honey out of the rock: instead of the husk we have the fatted calf . . .

I have seen the extreme vanity of this world: one hour I have been in health and wealth, wanting nothing: but the next hour in sickness and wounds and death, having nothing but sorrow and affliction.

Before I knew what affliction meant, I was ready sometimes to wish for it. When I lived in prosperity, having the comforts of the world about me, my relations by me, my heart cheerful, and taking little care for anything, and yet seeing many, whom I preferred before myself, under many trials and afflictions, in sickness, weakness, poverty, losses, crosses, and cares of the world, I should be sometimes jealous lest I should have my portion in this life, and that scripture would come to my mind, Heb. 16. 6: "For whom the Lord loveth he chasteneth and scourgeth every son whom he receiveth." But now I see the Lord had his time to scourge and chasten me. The portion of some is to have their afflictions by drops, now one drop and then another, but the dregs of the cup, the wine of astonishment, like a sweeping rain that leaveth no food, did the Lord prepare to be my portion. Affliction I wanted, and affliction I had, full measure (I thought) pressed down and running over, yet I see, when God calls a person to anything and through never so many difficulties, yet he is fully able to carry them through and make them see and say they have been gainers thereby. And I hope I can say in some measure, as David did, "It is good for me that I have been afflicted." The Lord hath showed me the vanity of these outward things, that they are the vanity of vanities, and vexation of spirit, that they are but a shadow, a blast, a bubble, and things of no continuance. . . .

1612 ~ *Daniel Gookin* ~ 1687

EFFORTS in 17th Century Massachusetts to Christianize the Indians were considerably successful because of the "apostleship" of the Rev. John Eliot, 1604-1690, who preached to them in their own language and translated the entire Bible into Indian dialect, his New Testament being printed at Cambridge in 1661 and his complete text in 1663.

One of Eliot's most ardent supporters was Daniel Gookin. Born in England, probably in Kent, Gookin came to Virginia with his father in 1621. Because of persecution of those who would not conform to the established Episcopal Church in Virginia, Gookin emigrated to Massachusetts in 1644, residing first at Boston and later at Cambridge. He held several offices of public trust, including the Major-Generalship of the colony, and in 1656 was appointed Superintendent of the Indians within the jurisdiction of Massachusetts. His experience in the latter position provided him with materials for two unusual works, *Historical Collections of the Indians in New England*, with dedicatory epistles dated 1674, and *An Historical Account of the Doings and Sufferings of the Christian Indians in New England, in the Years 1675, 1676, 1677*, with dedicatory epistle dated 1677. He also wrote a history of New England, the manuscript of which was lost when fire destroyed the home of his son at Sherburne, Mass. The two extant works on the Christian Indians remained in manuscript and were first published, respectively, in 1792 and 1836.

The first of the following selections, slightly modernized from the text of *Historical Collections* in *Collections of the Massachusetts Historical Society*, I (1792), 141-227, reveals to what an extent the unconverted Indians were inclined to commit atrocities on the Christian Indians before the outbreak of King Philip's War. The second and third of the following selections have been slightly modernized from the text of *An Historical Account of the Doings and Sufferings of the Christian Indians* or *History of the Christian Indians* in *Transactions and Collections of the American Antiquarian Society*, II (1836), 423-534. One shows how precarious was the lot of the Christian Indians during King Philip's War, when, looked upon as Fifth Columnists by many of the colonists, they were routed out of such superintended villages as that of Nashobah and consigned to Deer Island, which seems to have been a kind of concentration camp for "red aliens." The other selection enables us to realize what an important role the Christian Indians played in making negotiations for the return of such captives of the unregenerate Indians as Mrs. Rowlandson, her children, and friends.

Gookin died at Cambridge, having never swerved in his zeal to see that the large minority of Christian Indians should receive just treatment,

especially in a time of dire emergency. This zeal may partly be ascribed to his memories of another kind of intolerance in Virginia.

[The titles have been supplied by the present editors.]

AN INCIDENT IN THE WARFARE
BETWEEN THE UNCHRISTIAN
AND THE CHRISTIAN
INDIANS

[1792 (written 1674)]

IN the year 1670, a party of Mauqas [Mohawks], being looking after their prey, met with some Indians in the woods, belonging to Naamkeek, or Wamesit, upon the north side of Merrimac River, not far from some English houses; where, falling upon these Indians, that were travelling in a path, they killed some, and took others, whom they also killed; and, among the rest, a young maid of about fourteen years old was taken, and the scalp of her head taken off, and her skull broken, and left for dead with others. Some of the Indians escaping, came to their fellows; and with a party of men, they went forth to bring off the dead bodies, where they found this maid with life in her. So they brought her home, and got Lieutenant Thomas Henchman, a good man, and one that hath inspection over them by my order, to use means for her recovery; and though he had little hope thereof, yet he took the best care he could about it; and as soon as conveniently he could, sent the girl to an ancient and skillful woman living at Woburn, about ten miles distant, called Goodwife Brooks, to get her to use her best endeavors to recover the maid: which, by the blessing of God, she did, though she were about two years or more in curing her. I was at Goodwife Brooks' house in May, 1673, when she was in cure; and she showed me a piece or two of the skull, that she had taken out. And in May last, 1674, the second day, I being among the Indians at Pawtucket, to keep court, and Mr. Elliot, and Mr. Richard Daniel, and others, with me, I saw the maid alive and in health, and looked upon

her head, which was whole, except a little spot as big as a sixpence might cover, and the maid fat and lusty, but there was no hair come again upon the head, where the scalp was flayed off. This cure, as some skillful in chirurgery apprehend, is extraordinary and wonderful, and hence the glory and praise is to be ascribed to God, that worketh wonders without number. . . .

THE PLIGHT OF THE CHRISTIAN
INDIANS OF NASHOBAH

[1836 (1677)]

ABOUT this time [February, 1676] there befell another great trouble and exercise to the Christian Indians of Nashobah, who sojourned in Concord by order; the matter was this. The Council had, by several orders, empowered a committee, who, with the consent of the selectmen of Concord, settled those Indians at that town, under the government and tuition of Mr. John Hoare; the number of those Indians were about fifty-eight of all sorts, whereof were not above twelve able men, the rest were women and children. These Indians lived very soberly, and quietly, and industriously, and were all unarmed; neither could any of them be charged with any unfaithfulness to the English interest. In pursuance of this settlement, Mr. Hoare had begun to build a large and convenient work-house for the Indians, near his own dwelling, which stood about the midst of the town, and very nigh the town watch-house. This house was made, not only to secure those Indians under lock and key by night, but to employ them and set them to work by day, whereby they earned their own bread, and in an ordinary way (with God's blessing) would have lived well in a short time. But some of the inhabitants of the town, being influenced with a spirit of animosity and distaste against all Indians, disrelished this

settlement; and therefore privately sent to a Captain of the army,¹ that quartered his company not far off at that time, of whom they had experience that he would not be backward to put in execution anything that tended to distress the praying Indians; for this was the same man that had formerly, without order, seized upon divers of the praying Indians at Marlborough, which brought much trouble and disquiet to the country of the Indians, and was a great occasion of their defection. . . . This Captain accordingly came to Concord with a party of his men, upon the Sabbath day, into the meeting-house, where the people were convened in the worship of God. And after the exercise was ended, he spake openly to the congregation to this effect: "That he understood there were some heathen in the town, committed to one Hoare, which he was informed were a trouble and disquiet to them; therefore if they desired it, he would remove them to Boston;" to which speech of his, most of the people being silent, except two or three that encouraged him, he took, as it seems, the silence of the rest for consent; and immediately after the assembly were dismissed, he went with three or four files of men, and a hundred or two of the people, men, women, and children, at his heels, and marched away to Mr. Hoare's house, and there demanded of him to see the Indians under his care. Hoare opened the door and showed them to him, and they were all numbered and found there; the Captain then said to Mr. Hoare that he would leave a corporal and soldiers to secure them, but Mr. Hoare answered, there was no need of that, for they were already secured, and were committed to him by order of the Council, and he would keep and secure them. But yet the Captain left his corporal and soldiers there, who were abusive enough to the poor Indians by ill language. The next morning the Captain came again, to take the Indians and send them to Boston. But Mr. Hoare refused to deliver them unless he showed him an order of the Council; but the Captain could

show him no other but his commission to kill and destroy the enemy; but Mr. Hoare said, these were friends and under order. But the Captain would not be satisfied with his answer, but commanded his corporal forthwith to break open the door and take the Indians all away, which was done accordingly; and some of the soldiers plundered the poor creatures of their shirts, shoes, dishes, and such other things as they could lay their hands upon, though the Captain commanded the contrary. They were all brought to Charlestown with a guard of twenty men. And the Captain wrote a letter to the General Court, then sitting, giving them an account of his action. This thing was very offensive to the Council, that a private captain should (without commission or some express order) do an act so contradictory to their former orders; and the Governor and several others spake of it at a conference with the Deputies² at the General Court, manifesting their dissatisfaction at this great irregularity, in setting up a military power in opposition to the chief authority of the country; declaring of what evil consequence such a precedent was; instancing the ill effects of the like practices in England in latter times; urging that due testimony might be borne against the same, by the whole Court. The Deputies seemed generally to agree to the reason of the magistrates in this matter; yet, notwithstanding, the Captain (who appeared in the Court shortly after, upon another occasion) met with no rebuke for this high irregularity and arbitrary action. To conclude this matter, those poor Indians, about fifty-eight of them of all sorts, were sent down to Deer Island, there to pass into the furnace of affliction with their brethren and countrymen. But all their corn and other provision, sufficient to maintain them for six months, was lost at Concord; and all their

¹ Captain Mosely.

² Representing the towns and elected by popular vote, the deputies were to the magistrates or assistants a kind of lower house or subordinate governing body.

other necessities, except what the soldiers had plundered. And the poor Indians got very little or nothing of what they lost, but it was squandered away, lost by the removal of Mr. Hoare and other means, so that they were necessitated to live upon clams as the others did, with some little corn provided at the charge of the Honorable Corporation for the Indians, residing in London. Besides, Mr. Hoare lost all his building, and other cost, which he had provided for the entertainment and employment of those Indians, which was considerable . . .

THE CHRISTIAN INDIANS AND THE
ROWLANDSONS
[1836 (1677)]

MR. ROWLANDSON, minister of Lancaster, a pious and good man, having his wife, children, and several friends in captivity among the enemy, being surprised at Lancaster . . ., himself, and several other ministers in his behalf, had some time since petitioned the Council to use what means they could for the redemption of his wife, etc.; which the Council consented to, and, in pursuance thereof, ordered Major Gookin to endeavor to procure at Deer Island one or two Indians that for a reward might adventure to go with a message to the enemy, to offer for the redemption of our captives, particularly Mrs. Rowlandson. But, although the Major went to the Island, and did his utmost endeavors to procure an Indian to adventure upon this service at that time, yet could not prevail with any; so the matter lay dormant a good space of time.

But, on the 23rd of March, some friends advised Mr. Rowlandson to make another petition to revive the former motion; which he did that day. The Council declared themselves ready to promote it, and send a messenger, if any could be procured. Major Gookin, who stirred up Mr. Rowlandson hereunto, was informed that one of the Indians lately brought down from Concord, named Tom Dublot, *alias* Nep-

ponit, had some inclination to run that adventure; of which the Major informing the Council, they ordered Capt. Henchman to treat and agree with him, which he accordingly did, and brought him up from Deer Island some few days after, and he was sent to Major Gookin's, at Cambridge, where he was, according to the order of the Council, fitted and furnished for this enterprise; and had a letter from the Council to the enemy, concerning the redemption of the captives; and upon Monday, April 3rd, he was sent away from Cambridge upon his journey, and he did effect it with care and prudence, and returned again upon the 12th of April, with this answer in writing, from the enemy:—

“To Governor and Council in Boston, and people that are in war with us.

“We now gave answer by this one man: but if you like my answer, send one more man besides this Tom Neppanit, and send with all true heart, and with all your mind, by two men. Because you know, and we know, you have great sorrowful with crying; for you lost many, many hundred men, and all your house, all your land, and woman, child, and cattle, and all your things that you have lost.” Moreover they add that Mrs. Rowlandson and other captives are alive. This was signed by Sam and Kutquen Quanoht, sagamores, and Peter Jethro, scribe. To this letter the Council gave answer, tending to abate their pride and insolence; and sent again Tom Neppanit, and another Indian named Peter Conway, to move further about the redemption of Mrs. Rowlandson and her friends, which the enemy inclined unto. Those two Indians were sent a second, third, and fourth time, and some English with them; and at last prevailed so far, that Mrs. Rowlandson and some others were redeemed, and brought home about the Election time following. This treaty about the captives, and the consequences thereof, had no small influence into the abatement of the enemy's violence and our troubles, and had a tendency to dividing them and break their union, and consequently their

strength; for Philip, and some others of the enemy's chief men, were utterly against treating with the English or surrendering the captives. But some other of their principal sachems, that were more inclinable to a reconciliation with the English, thought that their compliance with the English about surrendering the captives (especially being well paid for their redemption) would mollify the Englishmen's minds in order to a peace. This contest about the treaty caused them to fall out

and divide. Philip and most of the Narraganset Indians separated from the inland Indians, and went down into their own country, and the inland Indians stayed about Wachuset mountain, which was a means under God to weaken and destroy them . . . This was another piece of service done by our praying Indians; at least they broke the ice and made way for it, by their first adventuring to treat with the enemy . . .

1644 ~ *William Penn* ~ 1718

WILLIAM PENN, son of an English baronet and admiral, dreamed, while he was still a student at Oxford, of an ideal colony governed in accord with Quaker principles. In seeking satisfaction for a claim of 16,000 pounds his father had held against the crown, Penn petitioned Charles II in June, 1680, for a tract of land contiguous to the New Jersey settlements, in the management of whose affairs he had had some experience since 1675. On March 4, 1681, the King signed Penn's charter for a domain as extensive as England itself.

Shortly thereafter, Penn wrote a pamphlet from which the following selections are taken. Published in London in 1681, it is one of the most lucidly written and unswervingly truthful documents in the literature of colonization promotion. On October 28, 1682, Penn first came to Pennsylvania, where his cousin, William Markham, acting as his Deputy Governor, had already made considerable progress toward putting the new plantation upon a lasting basis and where the flow of immigration had been steady since the spring of that year, partly, no doubt, as a result of Penn's pamphlet.

[The text has been modernized. *Narratives of Early Pennsylvania, West New Jersey, and Delaware 1630-1707*, ed. A.C. Myers, New York, 1912, one of the volumes in the series, *Original Narratives of Early American History*, contains a complete text.]

From

SOME ACCOUNT OF THE PROVINCE OF PENNSYLVANIA [1681]

SINCE (by the good providence of God)
a country in America is fallen to my lot,

I thought it not less my duty than my honest interest to give some public notice of it to the world that those of our own or other nations, that are inclined to transport themselves or families beyond the seas, may find another country added to their choice, that, if they shall happen to like the place, conditions, and con-

stitutions (so far as the present infancy of things will allow us any prospect), they may, if they please, fix with me in the province hereafter described . . .

The place lies 600 miles nearer the sun than England, for England begins at the 50th degree and ten minutes of north latitude, and this place begins at forty, which is about the latitude of Naples in Italy or Montpellier in France. I shall say little in its praise to excite desires in any, whatever I could truly write as to the soil, air, and water. This shall satisfy me, that by the blessing of God and the honesty and industry of man, it may be a good and fruitful land.

For navigation it is said to have two conveniences; the one by lying ninescore miles upon Delaware River, that is to say, about threescore and ten miles before we come to the falls, where a vessel of two hundred tons may sail (and some creeks and small harbors in that distance, where ships may come nearer than the river into the country) and above the falls, for sloops and boats, as I am informed, to the extent of the patent. The other convenience is through Chesapeake Bay.

For timber and other wood, there is variety for the use of man.

For fowl, fish and wild deer, they are reported to be plentiful in those parts. Our English provision is likewise now to be had there at reasonable rates. The commodities that the country is thought capable of are silk, flax, hemp, wine, cider, woad, madder,¹ liquorish, tobacco, potashes, and iron, and it does actually produce hides, tallow, pipe-staves, beef, pork, sheep, wool, corn, as wheat, barley, rye, and also furs, as your peltry, minks, racecons, martins, and such like—store of furs which is to be found among the Indians, that are profitable commodities in Europe.

The way of trading in those countries is thus: they send to the Southern plantations corn, beef, pork, fish, and pipe-staves, and take their growth and bring for England, and return with English goods to their own country. Their furs they bring for

England, and either sell them here or carry them out again to other parts of Europe, where they will yield a better price. And for those that will follow merchandize and navigation, there is conveniency and timber sufficient for shipping.

For the constitutions of the country, the patent shows, first, that the people and governor have a legislative power, so that no law can be made nor money raised but by the people's consent.

2dly. That the rights and freedoms of England (the best and largest in Europe) shall be in force there.

3dly. That making no law against allegiance (which, should we, 'twere by the law of England void of itself that moment), we may enact what laws we please for the good prosperity and security of the said province.

4thly. That so soon as any are engaged with me, we shall begin a scheme or draught together such as shall give ample testimony of my sincere inclinations to encourage planters and settle a free, just, and industrious colony there.

My conditions will relate to three sorts of people: 1st, those that will buy; 2dly, those that take up land upon rent; 3dly, servants. To the first, the shares I sell shall be certain as to number of acres; that is to say, every one shall contain five thousand acres, free from any Indian incumbrance, the price a hundred pounds, and for the quit-rent but one English shilling or the value of it yearly for a hundred acres; and the said quit-rent not to begin to be paid till 1684. To the second sort, that take up land upon rent, they shall have liberty so to do, paying yearly one penny per acre, not exceeding two hundred acres. To the third sort, to wit, servants that are carried over, fifty acres shall be allowed to the master for every head and fifty acres to every servant when their time is expired. And because some engage with me that may not be disposed to go, it were

¹ Woad and madder were dyes made from herbs.

very advisable for every three adventurers to send an overseer with their servants, which would well pay the cost.

The dividend may be thus: if the persons concerned please, a tract of land shall be surveyed, say fifty thousand acres to a hundred adventurers; in which some of the best shall be set out for towns or cities; and there shall be so much ground allotted to each in those towns as may maintain some cattle and produce some corn, then the remainder of the fifty thousand acres shall be shared among the said adventurers (casting up the barren for commons and allowing for the same) whereby every adventurer will have a considerable quantity of land together; likewise every one a proportion by a navigable river and then backward into the country. The manner of dividend I shall not be strict in; we can but speak roughly of the matter here; but let men skillful in plantations be consulted, and I shall leave it to the majority of votes among the adventurers, when it shall please God we come there, how to fix it to their own content.

These persons that providence seems to have most fitted for plantations are:

1st. Industrious husbandmen and day-laborers that are hardly able (with extreme labor) to maintain their families and portion their children.

2dly. Laborious handicrafts, especially carpenters, masons, smiths, weavers, tailors, tanners, shoemakers, shipwrights, etc., where they may be spared or are low in the world: and as they shall want no encouragement, so their labor is worth more there than here, and there provision cheaper.

3dly. A plantation seems a fit place for those ingenious spirits that, being low in the world, are much clogged and oppressed about a livelihood, for the means of subsisting being easy there, they may have time and opportunity to gratify their in-

clinations and thereby improve science and help nurseries of people.

4thly. A fourth sort of men to whom a plantation would be proper takes in those that are younger brothers of small inheritances, yet, because they would live in sight of their kindred in some proportion to their quality and can't do it without a labor that looks like farming, their condition is too strait for them. and, if married, their children are often too numerous for the estate and are frequently bred up to no trades, but are a kind of hangers on or retainers to the elder brother's table and charity: which is a mischief, as in itself to be lamented, so here to be remedied. For land they have for next to nothing, which with moderate labor produces plenty of all things necessary for life, and such an increase as by traffic may supply them with all conveniences.

Lastly, there are another sort of persons, not only fit for but necessary in plantations, and that is, men of universal spirits, that have an eye to the good of posterity and that both understand and delight to promote good discipline and just government among a plain and well-intending people; such persons may find room in colonies for their good counsel and contrivance, who are shut out from being of much use or service to great nations under settled customs. These men deserve much esteem and would be harkened to. Doubtless 'twas this . . . that put some of the famous Greeks and Romans upon transplanting and regulating colonies of people in divers parts of the world; whose names, for giving so great proof of their wisdom, virtue, labor, and constancy, are with justice honorably delivered down by story to the praise of our own times, though the world, after all its higher pretences of religion, barbarously errs from their excellent example . . .

Selections from the New England Witchcraft Papers

MODERN spiritualists, among whom have been men of considerable intellectual distinction, have believed in the existence of individuals with the power of extra-sensory perception that enables them to hold converse with, and in a certain measure control, the spirits of the dead. In the 17th Century, when the premise that a supernatural world impinges on the domain of the natural was accepted without question by most men, it was inevitable that, in continental Europe, in England, and in America, there should be widespread belief in witchcraft, i.e., the existence of individuals with special powers to hold converse with evil spirits, to harbor them as parasites upon their persons, and to control them in such a way as to produce mysterious afflictions in their enemies. It was inevitable, too, that scholars and intellectuals should regard the investigation of the phenomena of witchcraft as a legitimate field of scientific curiosity and that laws should be enacted to punish witches for their alleged nefarious practices.

In New England, during the last two decades of the 17th Century, the question of witchcraft became one of vital social importance when Increase Mather, 1629-1723, and his son, Cotton Mather, 1663-1728, two of the leading Puritan intellectuals and learned men of letters, grew interested in its manifestations, from a scientific as well as a theological point of view. Their writings and sermons on the subject led to the apprehension, trial, and execution of a number of suspected witches, proceedings that had long been common in old England. At the time when the persecution of suspected witches was at its height, the New England legal mind, with scientific training in the criteria of testimony—a mind best represented by Thomas Brattle, 1658-1716—entertained doubts as to the validity of the evidence by which convictions of witches were obtained. It was this mind that soon prevailed to bring to a close the witch-hunting frenzy, although at the time no attempt was made to challenge the fundamental assumptions on which belief in witches rested.

[The following selections, designed to bring into contrast the theological-scientific and the legal-scientific attitudes toward witchcraft, are taken, respectively, from Cotton Mather's *Memorable Providences, Relating to Witchcrafts and Possessions*, and a private letter written by Thomas Brattle in 1692 and widely circulated in manuscript, but not published until 1798. The texts have been modernized and titles supplied. Both documents are reprinted in *Narratives of the Witchcraft Cases 1648-1706*, ed. G.L. Burr, New York, 1914, one of the volumes in the series, *Original Narratives of Early American History*.]

MATHER'S ACCOUNT OF THE GOOD-
WIN CASE
[1689]

THERE dwells at this time, in the south part of Boston, a sober and pious man, whose name is John Goodwin, whose trade is that of a mason, and whose wife (to which a good report gives a share with him in all the characters of virtue) has made him the father of six (now living) children. Of these children, all but the eldest, who works with his father at his calling, and the youngest, who lives yet upon the breast of its mother, have labored under the direful effects of a (no less palpable than) stupendous witchcraft. Indeed that exempted son had also, as was thought, some lighter touches of it, in unaccountable stabs and pains now and then upon him, as indeed every person in the family at some time or other had, except the godly father and the sucking infant, who never felt any impressions of it. But these four children mentioned were handled in so sad and strange a manner as has given matter of discourse and wonderment to all the country and of history not unworthy to be considered by more than all the serious or the curious readers in this New-English world.

The four children (whereof the eldest was about thirteen and the youngest was perhaps about a third part so many years of age) had enjoyed a religious education and answered it with a very towardly ingenuity. They had an observable affection unto divine and sacred things, and those of them that were capable of it seemed to have such a resentment [realization] of their eternal concerns as is not altogether usual. Their parents also kept them to a continual employment, which did more than deliver them from the temptations of idleness, and as young as they were, they took a delight in it, it may be as much as they should have done. In a word, such was the whole temper and carriage of the children that there cannot easily be anything more unreasonable than to imagine that a

design to dissemble could cause them to fall into any of their odd fits . . .

About midsummer, in the year 1688, the eldest of these children, who is a daughter, saw cause to examine their washerwoman upon their missing of some linen, which 'twas feared she had stolen from them; and of what use this linen might be to serve the witchcraft intended, the thief's tempter knows! This laundress was the daughter of an ignorant and a scandalous old woman in the neighborhood, whose miserable husband before he died had sometimes complained of her that she was undoubtedly a witch and that, whenever his head was laid, she would quickly arrive unto the punishments due to such an one. This woman, in her daughter's defence, bestowed very bad language upon the girl that put her to the question; immediately upon which, the poor child became variously indisposed in her health and visited with strange fits, beyond those that attend an epilepsy or a catalepsy or those that they call the diseases of astonishment.

It was not long before one of her sisters and two of her brothers were seized, in order one after another, with effects like those that molested her. Within a few weeks, they were all four tortured everywhere in a manner so very grievous that it would have broke an heart of stone to have seen their agonies. Skilful physicians were consulted for their help and particularly our worthy and prudent friend, Dr. Thomas Oakes, who found himself so affronted [nonplussed] by the distempers of the children that he concluded nothing but an hellish witchcraft could be the original of these maladies. And that which yet more confirmed such apprehension was that, for one good while, the children were tormented just in the same part of their bodies all at the same time together; and though they saw and heard not one another's complaints, though likewise their pains and sprains were swift like lightning, yet when (suppose) the neck or the hand or the back of one was racked, so it was at that instant with t'other too.

The variety of their tortures increased continually; and though about nine or ten at night they always had a release from their miseries and ate and slept all night for the most part indifferently well, yet in the day time they were handled with so many sorts of ails that it would require of us almost as much time to relate them all as it did of them to endure them. Sometimes they would be deaf, sometimes dumb, and sometimes blind, and often all this at once. One while their tongues would be drawn down their throats; another while they would be pulled out upon their chins to a prodigious length. They would have their mouths opened unto such a wideness that their jaws went out of joint and anon they would clap together again with a force like that of a strong spring-lock. The same would happen to their shoulder-blades and their elbows and hand-wrists and several of their joints. They would at times lie in a benumbed condition and be drawn together as those that are tied neck and heels, and presently be stretched out, yea, drawn backwards, to such a degree that it was feared the very skin of their bellies would have cracked. They would make most piteous outcries that they were cut with knives and struck with blows that they could not bear. Their necks would be broken, so that their neck-bone would seem dissolved unto them that felt after it; and yet on the sudden it would become again so stiff that there was no stirring of their heads; yea, their heads would be twisted almost round; and if main force at any time obstructed a dangerous motion which they seemed to be upon, they would roar exceedingly. Thus they lay some weeks most pitiful spectacles; and this while, as a further demonstration of witchcraft in these horrid effects, when I went to prayer by one of them that was very desirous to hear what I said, the child utterly lost her hearing till our prayer was over . . .

The report of the calamities of the family for which we were thus concerned arrived now unto the ears of the magistrates, who presently and prudently applied

themselves with a just vigor to enquire into the story. The father of the children complained of his neighbor, the suspected ill woman, whose name was Glover; and she, being sent for by the justices, gave such a wretched account of herself that they saw cause to commit her unto the jailer's custody. Goodwin had no proof that could have done her any hurt, but the hag had not power to deny her interest in the enchantment of the children and when she was asked whether she believed there was a God, her answer was too blasphemous and horrible for any pen of mine to mention. An experiment was made whether she could recite the Lord's Prayer; and it was found that, though clause after clause was most carefully repeated unto her, yet when she said it after them that prompted her, she could not possibly avoid making nonsense of it, with some ridiculous depravations. This experiment I had the curiosity since to see made upon two more, and it had the same event. Upon the commitment of this extraordinary woman, all the children had some present ease, until one (related unto her), accidentally meeting one or two of them, entertained them with her blessing, that is, railing, upon which three of them fell ill again, as they were before.

It was not long before the witch thus in the trap was brought upon her trial; at which, through the efficacy of a charm, I suppose, used upon her by one or some of her crew, the court could receive answers from her in none but the Irish, which was her native language, although she understood the English very well and had accustomed her whole family to none but that language in her former conversation; and therefore the communication between the bench and the bar was now chiefly conveyed by two honest and faithful men that were interpreters. It was long before she could with any direct answers plead unto her indictment; and when she did plead, it was with confession rather than denial of her guilt. Order was given to search the old woman's house, from whence

there were brought into the court several small images or puppets or babies made of rags and stuffed with goat's hair and other such ingredients. When these were produced, the vile woman acknowledged that her way to torment the objects of her malice was by wetting of her finger with her spittle and stroking of those little images. The abused children were then present, and the woman still kept stooping and shrinking as one that was almost pressed to death with a mighty weight upon her. But one of the images being brought unto her, immediately she started up after an odd manner and took it into her hand, but she had no sooner taken it than one of the children fell into sad fits before the whole assembly. This the judges had their just apprehensions at and, carefully causing the repetition of the experiment, found again the same event of it. They asked her whether she had any to stand by her. She replied she had and, looking very pertly in the air, she added, "No, he's gone." And she then confessed that she had one who was her prince, with whom she maintained I know not what communion. For which cause, the night after, she was heard expostulating with a devil for his thus deserting her, telling him that because he had served her so basely and falsely, she had confessed all. However, to make all clear, the court appointed five or six physicians one evening to examine her very strictly whether she were not crazed in her intellectuals and had not procured to herself by folly and madness the reputation of a witch. Divers hours did they spend with her, and in all that while no discourse came from her but what was pertinent and agreeable, particularly when they asked her what she thought would become of her soul. She replied, "You ask me a very solemn question and I cannot well tell what to say to it." She owned herself a Roman Catholic and could recite her Pater Noster in Latin very readily, but there was one clause or two always too hard for her, whereof she said she could

not repeat it if she might have all the world. In the upshot the doctors returned her *compos mentis* [of sound mind] and sentence of death was passed upon her. . . .

While the miserable old woman was under condemnation, I did myself twice give a visit unto her. She never denied the guilt of the witchcraft charged upon her, but she confessed very little about the circumstances of her confederacies with the devils; only she said that she used to be at meetings which her prince and four more were present at. As for those four, she told who they were, and, for her prince, her account plainly was that he was the devil. She entertained me with nothing but Irish, which language I had not learning enough to understand without an interpreter. . . .

However, against her will I prayed with her, which, if it were a fault, it was in excess of pity. When I had done, she thanked me with many good words, but I was no sooner out of her sight than she took a stone, a long and slender stone, and with her finger and spittle fell to tormenting it, though whom or what she meant, I had the mercy never to understand.

When this witch was going to her execution, she said the children should not be relieved by her death, for others had a hand in it as well as she, and she named one among the rest, whom it might have been thought natural affection would have advised the concealing of. It came to pass accordingly that the three children continued in their furnace as before, and it grew rather seven times hotter than it was. All their former ails pursued them still, with an addition of ('tis not easy to tell how many) more, but such as gave more sensible demonstrations of an enchantment growing very far towards a possession by evil spirits. . . .

My employments were such that I could not visit this afflicted family so often as I would; wherefore, that I might show them what kindness I could, as also that I might have a full opportunity to observe the extraordinary circumstances of the

children and that I might be furnished with evidence and argument as a critical eye-witness to confute the Sadducism [i.e., skepticism] of this debauched age, I took the eldest of them home to my house. The young woman continued well at our house for divers days and applied herself to such actions not only of industry but of piety as she had been no stranger to. But on the twentieth of November in the forenoon she cried out, "Ah, *They* have found me out! I thought it would be so!" and immediately she fell into her fits again . . .

In her ludicrous fits, one while she would be for flying; and she would be carried hither and thither, though not long from the ground, yet so long as to exceed the ordinary power of nature in our opinion of it; another while she would be for diving and use the actions of it towards the floor, on which, if we had not held her, she would have thrown herself. Being at this exercise, she told us that *They* said she must go down to the bottom of our well, for there was plate there, and *They* said *They* would bring her safely up again. This did she tell us, though she had never heard of any plate there! and we ourselves, who had newly bought the house, hardly knew of any, but the former owner of the house, just then coming in, told us there had been plate for many years at the bottom of the well.

She had once a great mind to have eaten a roasted apple, but whenever she attempted to eat it, her teeth would be set, and sometimes, if she went to take it up, her arm would be made so stiff that she could not possibly bring her hand to her mouth; at last she said, "Now *They* say I shall eat it, if I eat it quickly," and she nimbly eat it all up . . .

While she was in her frolics, I was willing to try whether she could read or no; and I found, not only that if she went to read the Bible her eyes would be strangely twisted and blinded and her neck presently broken, but also that if anyone else did read the Bible in the room, though

it were wholly out of her sight and without the least voice or noise of it, she would be cast into very terrible agonies. . . . But when I showed her a Jest-book, as *The Oxford Jest*s or the *Cambridge Jest*s, she could read them without any disturbance and have witty descants upon them too. . . . When I read in the room the story of Ann Cole in my father's *Remarkable Providences* and came to the exclamation which the narrative says the daemons made upon her, "Ah, she runs to the rock!" it cast her into inexpressible agonies. . . . A Popish book also she could endure very well, but it would kill her to look into any book that (in my opinion) it might have been profitable and edifying for her to be reading of. . . . The good books that were found so mortal to her were chiefly such as lay ever at hand in the room. One was the *Guide to Heaven from the Word*, which I had given her. Another of them was Mr. Willard's little (but precious) *Treatise of Justification*. Divers books published by my father I also tried upon her, particularly his *Mystery of Christ*, and another small book of his about faith and repentance and the day of judgment.

Once being very merrily talking by a table that had this last book upon it, she just opened the book and was immediately struck backwards as dead upon the floor. I hope I have not spoiled the credit of the books by telling how much the devils hated them. I shall therefore add that my grandfather Cotton's catechism, called *Milk for Babes*, and *The Assembly's Catechism* would bring hideous convulsions on the child if she looked into them, though she had once learned them with all the love that could be . . .

There was another most unaccountable circumstance which now attended her; and until she came to our house, I think, she never had experience of it. Ever now and then an invisible horse would be brought unto her, by those whom she only called "them" and "her company," upon the approach of which her eyes would be still

closed up, for (said she) "They say I am a telltale and therefore they will not let me see them." Upon this would she give a spring as one mounting an horse and, settling herself in a riding posture, she would in her chair be agitated as one sometimes ambling, sometimes trotting, and sometimes galloping very furiously . . .

. . . Mr. Morton of Charlestown and Mr. Allen, Mr. Moody, Mr. Willard, and myself, of Boston, with some devout neighbors, kept another day of prayer at John Goodwin's house, and we had all the children present with us there. The children were miserably tortured while we labored in our prayers, but our good God was nigh unto us in what we called upon Him for. From this day the power of the enemy was broken, and the children, though assaults after this were made upon them, yet were not so cruelly handled as before. The liberty of the children increased daily more and more, and their vexation abated by degrees, till within a little while they arrived to perfect ease, which for some weeks or months they cheerfully enjoyed. Thus good it is for us to draw near to God.

Within a day or two after the Fast, the young woman had two remarkable attempts made upon her by her invisible adversaries. Once they were dragging her into the oven that was then heating while there was none in the room to help her. She clapped her hands on the mantletree to save herself, but they were beaten off, and she had been burned if at her outcries one had not come in from abroad for her relief. Another time they put an unseen rope with a cruel noose about her neck, whereby she was choked until she was black in the face, and, though it was taken off before it had killed her, yet there were the red marks of it and of a finger and a thumb near it, remaining to be seen for a while afterwards.

This was the last molestation that they gave her for a while, and she dwelt at my house the rest of the winter, having by an obliging and virtuous conversation made

herself enough welcome to the family. But within about a fortnight she was visited with two days of as extraordinary obsessions as any we had been the spectators of. I thought it convenient for me to entertain my congregation with a sermon upon the memorable providences which these children had been concerned in. When I had begun to study my sermon, her tormentors again seized upon her, and all Friday and Saturday did they manage her with a special design, as was plain, to disturb me in what I was about. In the worst of her extravagancies formerly, she was more dutiful to myself than I had reason to expect, but now her whole carriage to me was with a sauciness that I had not been used to be treated with. She would knock at my study door, affirming that some below would be glad to see me when there was none that asked for me. She would call to me with multiplied impertinencies and throw small things at me wherewith she could not give me any hurt. She'd hector me at a strange rate for the work I was at and threaten me with I know not what mischief for it. She got a history that I had written of this witchcraft, and, though she had before this read it over and over, yet now she could not read (I believe) one entire sentence of it, but she made of it the most ridiculous travesty in the world, with such a patness and excess of fancy to supply the sense that she put upon it as I was amazed at. And she particularly told me that I should quickly come to disgrace by that history . . .

BRATTLE'S CRITIQUE OF THE
SALEM JUSTICES
[1798 (written 1692)]

October 8, 1692.

Reverend Sir: Yours I received the other day and am very ready to serve you to my utmost. I should be very loath to bring myself into any snare by my freedom with you, and therefore hope that you will put the best construction on what I write

and secure me from such as would interpret my lines otherwise than they are designed. Obedience to lawful authority I evermore accounted a great duty and willingly I would not practice anything that might thwart and contradict such a principle. Too many are ready to despise dominions and speak evil of dignities, and I am sure the mischiefs which arise from a factious and rebellious spirit are very sad and notorious, insomuch that I would sooner bite my finger's ends than willingly cast dirt on authority or any way offer reproach to it. . . . But I shall no longer detain you with my preface, but pass to some things you look for, and whether you expect such freedom from me, yea or no, yet shall you find that I am very open to communicate my thoughts unto you and in plain terms to tell you what my opinion is of the Salem proceedings.

First, as to the method which the Salem Justices do take in their examinations, it is truly this: a warrant being issued out to apprehend the persons that are charged and complained of by the afflicted children (as they are called), said persons are brought before the Justices (the afflicted being present). The Justices ask the apprehended why they afflict those poor children, to which the apprehended answer they do not afflict them. The Justices order the apprehended to look upon the said children, which accordingly they do, and at the time of that look (I dare not say by that look, as the Salem Gentlemen do), the afflicted are cast into a fit. The apprehended are then blinded and ordered to touch the afflicted, and at that touch (though not by the touch, as above), the afflicted ordinarily do come out of their fits. The afflicted persons then declare and affirm that the apprehended have afflicted them, upon which the apprehended persons, though of never so good repute, are forthwith committed to prison on suspicion of witchcraft. . . .

I would fain know of these Salem Gentlemen, but as yet could never know, how it comes about that, if these apprehended

persons are witches, and, by a look of the eye, do cast the afflicted into their fits by poisoning them, how it comes about, I say, that, by a look of their eye, they do not cast others into fits and poison others by their looks, and, in particular, tender, fearful women who often are beheld by them and as likely as any in the whole world to receive an ill impression from them. This Salem philosophy some men may call the new philosophy; but I think it rather deserves the name of Salem superstition and sorcery, and it is not fit to be named in a land of such light as New-England is. I think the matter might be better solved another way, but I shall not make any attempt that way further than to say that these afflicted children, as they are called, do hold correspondence with the devil even in the esteem and account of the S [alem] G [entlemen], for when the black man, i.e., say these gentlemen, the devil, does appear to them, they ask him many questions and accordingly give information to the inquirer; and if this is not holding correspondence with the devil and something worse, I know not what is.

But furthermore, I would fain know of these Salem Justices what need there is of further proof and evidence to convict and condemn these apprehended persons than this look and touch, if so be they are so certain that this falling down and arising up, when there is a look and a touch, are natural effects of the said look and touch, and so a perfect demonstration and proof of witchcraft in those persons. What can the jury or judges desire more to convict any man of witchcraft than a plain demonstration that the said man is a witch? Now if this look and touch, circumstanced as before, be a plain demonstration, as their philosophy teaches, what need they seek for further evidences when, after all, it can be but a demonstration?

But let this pass with the S.G. for never so plain and natural a demonstration, yet certain it is that the reasonable part of the world, when acquainted herewith, will laugh at the demonstration and conclude

that the said S.G. are actually possessed, at least, with ignorance and folly.

I most admire that Mr. N[icholas] N[oyes], the Reverend Teacher at Salem, who was educated at the school of knowledge and is certainly a learned, a charitable, and a good man, though all the devils in Hell and all the possessed girls in Salem should say to the contrary; at him, I say, I do most admire that he should cry up the above-mentioned philosophy after the manner that he does. I can assure you that I can bring you more than two, or twice two (very credible persons), that will affirm that they have heard him vindicate the above-mentioned demonstration as very reasonable.

Secondly, with respect to the confessors, as they are improperly called, or such as confess themselves to be witches (the second thing you inquire into in your letter), there are now about fifty of them in prison, many of which I have again and again seen and heard; and I cannot but tell you that my faith is strong concerning them that they are deluded, imposed upon, and under the influence of some evil spirit, and therefore unfit to be evidences either against themselves or anyone else. . . .

The great cry of many of our neighbors now is, What, will you not believe the confessors? Will you not believe men and women who confess that they have signed to the devil's book? that they were baptized by the devil and that they were at the mock-sacrament once and again? What! will you not believe that this is witchcraft and that such and such men are witches, although the confessors do own and assert it?

Thus, I say, many of our good neighbors do argue, but methinks they might soon be convinced that there is nothing at all in all these their arguings, if they would but duly consider of the premises . . .

Now for the proof of the said sorcery and witchcraft, the prisoner at the bar pleading not guilty.

1. The afflicted persons are brought into court and, after much patience and pains

taken with them, do take their oaths that the prisoner at the bar did afflict them. And here I think it very observable that often, when the afflicted do mean and intend only the appearance and shape of such an one (say G. Proctor), yet they positively swear that G. Proctor did afflict them, and they have been allowed so to do; as though there was no real difference between G. Proctor and the shape of G. Proctor. This, methinks, may readily prove a stumbling block to the jury, lead them into a very fundamental error, and occasion innocent blood, yea the innocentest blood imaginable, to be in great danger. Whom it belongs unto to be eyes unto the blind and to remove such stumbling blocks, I know full well, and yet you and everyone else do know as well as I who do not.

2. The confessors do declare what they know of the said prisoner, and some of the confessors are allowed to give their oaths, a thing which I believe was never heard of in this world, that such as confess themselves to be witches, to have renounced God and Christ and all that is sacred, should yet be allowed and ordered to swear by the name of the great God! This indeed seemeth to me to be a gross taking of God's name in vain. I know the S.G. do say that there is hope that the said confessors have repented: I shall only say that, if they have repented, it is well for themselves; but if they have not, it is very ill for you know who. But then,

3. Whoever can be an evidence against the prisoner at the bar is ordered to come into the court, and here it scarce ever fails but that evidences of one nature and another are brought in, though, I think, all of them altogether alien to the matter of indictment; for they none of them do respect witchcraft upon the bodies of the afflicted, which is the alone matter of charge in the indictment.

4. They are searched by a jury; and as to some of them, the jury brought in that on such or such a place there was a preternatural excrecence. And I wonder what person there is, whether man or woman,

of whom it cannot be said but that, in some part of their body or other, there is a preternatural excrescence. The term is a very general and inclusive term.

Some of the S.G. are very forward to censure and condemn the poor prisoner at the bar because he sheds no tears, but such betray great ignorance in the nature of passion and as great heedlessness as to common passages of a man's life. Some there are who never shed tears, others there are that ordinarily shed tears upon light occasions, and yet for their lives cannot shed a tear when the deepest sorrow is upon their hearts; and who is there that knows not these things? Who knows not that an ecstacy of joy will sometimes fetch tears whenas the quite contrary passion will shut them close up? Why then should any be so silly and foolish as to take an argument from this appearance? But this is by the by. In short, the prisoner at the bar is indicted for sorcery and witchcraft acted upon the bodies of the afflicted. Now, for the proof of this, I reckon that the only pertinent evidences brought in are the evidences of the said afflicted . . .

I cannot but admire that the Justices, whom I think to be well-meaning men, should so far give ear to the devil as merely upon his authority to issue out their warrants and apprehend people. Liberty was evermore accounted the great privilege of an Englishman, but certainly, if the devil will be heard against us and his testimony taken, to the seizing and apprehending of us, our liberty vanishes, and we are fools if we boast of our liberty. Now that the Justices have thus far given ear to the devil I think may be mathematically demonstrated to any man of common sense: And for the demonstration and proof hereof, I desire only that these

two things may be duly considered, viz.,

1. That several persons have been apprehended purely upon the complaints of these afflicted, to whom the afflicted were perfect strangers and had not the least knowledge of imaginable, before they were apprehended.

2 That the afflicted do own and assert, and the Justices do grant, that the devil does inform and tell the afflicted the names of those persons that are thus unknown unto them. Now these two things being duly considered, I think it will appear evident to anyone that the devil's information is the fundamental testimony that is gone upon in the apprehending of the aforesaid people.

If I believe such or such an assertion as comes immediately from the minister of God in the pulpit, because it is the word of the ever-living God, I build my faith on God's testimony; and, if I practice upon it, this my practice is properly built on the word of God: even so in the case before us,

If I believe the afflicted persons as informed by the devil and act thereupon, thus my act may properly be said to be grounded upon the testimony or information of the devil. And now, if things are thus, I think it ought to be for a lamentation to you and me and all such as would be accounted good Christians . . .

What will be the issue of these troubles, God only knows; I am afraid that ages will not wear off that reproach and those stains which these things will leave behind them upon our land. I pray God pity us, humble us, forgive us, and appear mercifully for us in this our mount of distress: herewith I conclude and subscribe myself,

Reverend sir, your real friend and humble servant,

T.B.

1662 ~ *Sarah Kemble Knight* ~ 1727

DAUGHTER of a Boston merchant, Sarah Kemble Knight was left a widow by her shipmaster husband and had a family to support. She kept a school where Benjamin Franklin was probably at one time her pupil, acted as a minor public official, and attended to her own business affairs. She died in New Haven, where she removed after having spent most of her life in Boston.

On October 2, 1704, she left Boston on a business trip which eventually took her to New York. She rode on horseback with no other company than what she picked up on the way. She passed through Rhode Island and New Haven and came home by the same route, arriving in March, 1705. Her *Journal* of this trip, first published in 1825, is one of the sprightliest accounts in American colonial literature of the life of the Eastern seaboard settlements and the fortunes of the road.

[The following selection has been supplied with a title by the present editors. The text has been to some extent modernized, but not so as to destroy the flow of her distinctly "feminine prose," which suggests the stopless patter of Dickens' Flora Finch in *Little Dorrit* and James Joyce's Molly Bloom in *Ulysses*. Dorothy Richardson remarks in the introduction to her novel, *Pilgrimage*: "Feminine prose, as Charles Dickens and James Joyce have delightfully shown themselves to be aware, should properly be unpunctuated, moving from point to point without formal obstructions."]

NEW HAVEN TO NEW YORK
[1825 (written 1704-1705)]

DEC. 6TH. Being by this time well recruited and rested after my journey, my business lying unfinished by some concerns at New York depending thereupon, my kinsman, Mr. Thomas Trowbridge, of New Haven, must needs take a journey there before it could be accomplished. I resolved to go there in company with him and a man of the town which I engaged to wait on me there. Accordingly, Dec. 6th we set out from New Haven and about 11 same morning came to Stratford ferry; which crossing, about two miles on the other side baited our horses and would have eat a morsel ourselves, but the pumpkin and Indian mixed bread had such an aspect and the bare-legged punch so awkward

or rather awful a sound that we left both and proceeded forward and about seven at night came to Fairfield, where we met with good entertainment and lodged; and early next morning set forward to Norwalk, from its half-Indian name, Northwalk, when about 12 noon we arrived, and had a dinner of fried venison, very savory. Landlady wanting some pepper in the seasoning bid the gurl hand her the spice in the little gay cup on the shelf. From hence we hasted towards Rye, walking and leading our horses near a mile together up a prodigious high hill, and so riding till about nine at night, and there arrived and took up our lodgings at an ordinary which a French family kept. Here, being very hungry, I desired a fricasse, which the Frenchman undertaking managed so contrary to my notion of cookery that I hastened to bed supperless,

and being showed the way up a pair of stairs which had such a narrow passage that I had almost stopped by the bulk of my body, but arriving at my apartment found it to be a little lean-to chamber furnished amongst other rubbish with a high bed and a low one, a long table, a bench, and a bottomless chair. Little Miss went to scratch up my kennel, which rustled as if she'd been in the barn amongst the husks, and suppose such was the contents of the ticking; nevertheless, being exceedingly weary, down I laid my poor carcass (never more tired) and found my covering as scanty as my bed was hard. Anon I heard another rustling noise in the room—called to know the matter. Little Miss said she was making a bed for the men, who, when they were in bed, complained their legs lay out of it by reason of its shortness. My poor bones complained bitterly, not being used to such lodgings, and so did the man who was with us; and poor I made but one groan, which was from the time I went to bed to the time I riss [rose], which was about three in the morning, setting up by the fire till light; and having discharged our ordinary, which was as dear as if we had had far better fare, we took our leave of Monsieur, and about seven in the morn come to New Rochelle, a French town, where we had a good breakfast. And in the strength of that, about an hour before sunset got to New York. Here I applied myself to Mr. Burroughs, a merchant to whom I was recommended by my kinsman, Capt. Prout, and received great civilities from him and his spouse, who were now both deaf but very agreeable in their conversation, diverting me with pleasant stories of their knowledge of Britain, from whence they both come, one of which was above the rest very pleasant to me, viz., my Lord Darcy had a very extravagant brother who had mortgaged what estate he could not sell, and in good time died, leaving only one son. Him his lordship (having none of his own) took and made him heir of his whole estate, which he was to re-

ceive at the death of his aunt. He and his aunt in her widowhood held a right understanding and lived as become such relations, she being a discreet gentlewoman and he an ingenious young man. One day he fell into some company though far his inferiors, very freely told him of the ill circumstances his father's estate lay under, and the many debts he left unpaid to the wrong of poor people with whom he had dealt. The young gentleman was put out of countenance—no way he could think of to redress himself—his whole dependence being on the lady his aunt, and how to speak to her he knew not—he went home, sat down to dinner and as usual sometimes with her when the chaplain was absent, she desired him to say grace, which he did after this manner:

Pray God in mercy take my Lady Darcy

Unto his heavenly throne,

That little John may live like a man,

And pay every man his own.

The prudent lady took no present notice, but finished dinner, after which having sat and talked awhile (as customary), he riss, took his hat, and going out she desired him to give her leave to speak to him in her closet, where being come she desired to know why he prayed for her death in the manner aforesaid, and what part of her deportment towards him merited such desires. He replied, none at all, but he was under such disadvantages that nothing but that could do him service, and told her how he had been affronted as above, and what impressions it had made upon him. The lady made him a gentle reprimand that he had not informed her after another manner, bid him see what his father owed and he should have money to pay it to a penny, and always to let her know his wants and he should have a ready supply. The young gentleman, charmed with his aunt's discreet management, begged her pardon and accepted her kind offer and retrieved his father's estate, etc., and said he hoped his aunt would never die, for she had done better by him than he could have done for himself.—Mr. Burroughs went with me to

vendue,¹ where I bought about 100 ream of paper which was retaken in a flyboat from Holland and sold very reasonably here—some ten, some eight shillings per ream by the lot, which was ten ream in a lot. And at the vendue I made a great many acquaintances amongst the good women of the town, who courteously invited me to their houses and generously entertained me.

The city of New York is a pleasant, well-compacted place, situated on a commodious river which is a fine harbor for shipping. The buildings brick generally, very stately and high, though not altogether like ours in Boston. The bricks in some of the houses are of divers colors and laid in checkers, being glazed to look very agreeable. The inside of them are neat to admiration, the wooden work, for only the walls are plastered, and the sumers and gists² are planed and kept very white scoured, as so is all the partitions, if made of boards. The fire places have no jambs (as ours have), but the backs run flush with the walls, and the hearth is of tiles and is as far out into the room at the ends as before the fire, which is generally five foot in the lower rooms, and the piece over where the mantletree should be is made as ours with joiner's work, and, as I suppose, is fastened to iron rods inside. The house where the vendue was had chimney corners like ours, and they and the hearths were laid with the finest tile that I ever see, and the staircases laid all with white tile which is ever clean, and so are the walls of the kitchen, which had a brick floor. They were making great preparations to receive their governor, Lord Cornbury,³ from the Jerseys, and for that end raised the militia to guard him on shore to the fort.

They are generally of the Church of England and have a New England gentleman for their minister, and a very fine church set out with all customary requisites. There are also a Dutch and divers conventicles, as they call them, viz. Baptist, Quakers, etc. They are not strict in keeping

the sabbath as in Boston and other places where I had been, but seem to deal with great exactness as far as I see or deal with. They are sociable to one another and courteous and civil to strangers and fare well in their houses. The English go very fashionable in their dress. But the Dutch, especially the middling sort, differ from our women, in their habit go loose, wear French mouches which are like a cap and a head-band in one, leaving their ears bare, which are set out with jewels of a large size and many in number. And their fingers hooped with rings, some with large stones in them of many colors as were their pendants in their ears, which you should see very old women wear as well as young.

They have vendues very frequently and make their earnings very well by them, for they treat with good liquor liberally, and the customers drink as liberally and generally pay for't as well, by paying for that which they bid up briskly for, after the sack has gone plentifully about, though sometimes good penny worths are got there. Their diversions in the winter is riding sleighs about three or four miles out of town, where they have houses of entertainment at a place called the Bowery, and some go to friends' houses who handsomely treat them. Mr. Burroughs carried his spouse and daughter and myself out to one Madame Dowes', a gentlewoman that lived at a farm house, who gave us a handsome entertainment of five or six dishes and choice beer and metheglin,⁴ cider, etc., all which she said was the produce of her farm. I believe we met 50 or 60 sleighs that day—they fly with great swiftness and some are so furious that they'll turn out of the path for none except a loaden cart. Nor do they spare for any diversion the place affords, and sociable to a degree, their tables being as free to their neighbors as to themselves.

¹ A public sale or auction.

² Beams and joints.

³ Edward Hyde, Lord Cornbury, governor of New York, 1702-1708.

⁴ Fermented honey and water.

Having here transacted the affair I went upon and some other that fell in the way, after about a fortnight's stay there I left New York with no little regret, and Thursday, Dec. 21, set out for New Haven with my kinsman Trowbridge, and the man that waited on me about one afternoon, and

about three come to half-way house about ten miles out of town, where we baited and went forward, and about 5 come to Spiting Devil, else Kingsbridge,⁵ where they pay three pence for passing over with a horse, which the man that keeps the gate set up at the end of the bridge receives. . . .

1652 ~ Samuel Sewall ~ 1730

THE CAREER and personality of Samuel Sewall reflect New England Puritanism in transition from an era of stern piety to one of more canny and humane this-worldliness. His father first came to New England in 1634 but returned to England. Born in England in 1652, Samuel accompanied his family to New England in 1661. Graduated from Harvard in 1671, he was ready to enter the ministry, but marriage to the wealthy Hannah Hull caused him to pursue the more worldly "callings" of printing, politics, and the law. During the Salem witchcraft trials he was one of the judges who sentenced nineteen suspects to be hanged, for which error he was later man enough to do public penance in the Old South Church. His liberalism was also expressed in a pamphlet, *The Selling of Joseph*, 1700, the first antislavery tract published in America. He was chief justice of the Bay Colony from 1718 to 1728, two years before his death. Between December 3, 1673, and October 13, 1729, he kept a diary that is not only one of the most valuable sources for New England's history, but also has delightful moments of self-revelation that make Sewall comparable to Pepys, although he wrote considerably less in fifty-seven years than Pepys did in nine.

[The following selections from the *Diary* concern one of Judge Sewall's clients at a time when he was a somewhat restive widower. The text has been modernized and the title supplied by the present editors.]

A PROPOSITION TO MRS. DENISON [1878 (written 1718)]

MARCH 19. Col. Townsend, Mr. Leverett, Fitch, Oliver meet at my house to speak with the trespassers on Hopkinton. I write Mr. William Denison's will, being desired by a messenger from Roxbury . . .

March 22. Stormy day. Mr. Pierpont comes in and tells me that Mr. Denison of Roxbury was dead. I think March 21. Mr. John Eyre brings me a letter that came from Newbury.

March 23. Next Friday is agreed on for a church meeting to adjust matters relating to the ordination. Wednesday was mentioned, but Mr. Bromfield said he supposed Mr. Denison's funeral would be on that day. . . .

March 26. Mr. Simeon Stoddard carried me, Mr. Bromfield, and Anthony Stoddard esqr., in his coach to Mr. Denison's funeral. Mr. Walter prayed very well, said

⁵ Spuyten Duyvil Creek, near Kingsbridge.

Mr. Denison was a man of truth and of trust, a man of prayer, integrity, and piety. Bearers, Mr. Danforth of Dorchester, Mr. John White, Anthony Stoddard esqr., Col. William Dudley, Major Bowls, Mr. Ebenezer Thayer. Major Denison led the widow. Gov. Dudley and I went next the mourners. Went back to the house in a coach; at coming away, I prayed God to keep house with the widow. . . .

April 4. I had thoughts of going to Charlestown lecture, but was prevented by the great snow. In the evening I married Chasling Warriek and Esther Bate. Oh! that they and I might be married to CHRIST, and that our marriage might be known to ourselves and others! Now there is a great man. . . .

April 7. I prove Mr. William Denison's will. Her brother, Edmund [Weld], brought the widow to town and gave me notice before hand. I asked her how old Mr. Denison was. She told me he was born in September, was 53 years old last September. I gave her 10 shillings to give her sister Weld for her Indian Bible. Asked me whether 'twas necessary to bring in an inventory. Inclined to think she ought, but I would speak with her again. Mr. Door took occasion in her absence to say she was one of the most dutiful wives in the world. Her cousin, the widow Hayden, accidentally came in with her.

April 8. Mr. Boydell, when I was at his office and signed the papers, smiling said Mr. Denison's will looked as if it was written by me. I told him yes, but there was not a tittle of it mine but the form. . . .

[April] 17. Mr. Cooper preaches. Dr. Clark and his bride appear at lecture. Mrs. Denison comes to our house. I give her a widow's book bound, having writ her name in it. Mr. D. Oliver calls me to take Col. Byfield and Mrs. Sarah Leverett the acknowledgement of their deeds in order to marriage. And they were married presently after. . . .

[April] 24. I visit Dr. Clark and his new wife. They seem to take it kindly. . . .

June 3. Go to Roxbury in my son's calash and with him visit Gov. Dudley, Mr. Walter. Talk with him about Mrs. D——n. He advises me not to see her then, lest should surprise her undressed. Told him I came on purpose, yet finally submitted to his advice. He spake of her coming to town on Thursday.

June 5. Nobody came. I writ to Mr. Walter.

June 9. Mr. Corwin dies about 9. m. Col. Brown sent me word of it by Chapman. Note. Mrs. D——n came in the morning about 9 o'clock, and I took her up into my chamber and discoursed thoroughly with her. She desired me to provide another and better nurse. I gave her the two last news-letters—told her I intended to visit her at her own house next lecture day. She said, 'twould be talked of. I answered, in such cases persons must run the gantlet. Gave her Mr. Whiting's Oration for Abijah Walter, who brought her on horseback to town. I think little or no notice was taken of it. . . .

June 17. Went to Roxbury lecture, visited Mr. Walter. Mr. Webb preached. Visited Gov. Dudley, Mrs. Denison, gave her Dr. Mather's sermons very well bound, told her we were in it invited to a wedding. She gave me very good curds. . . .

July 7. I give Mrs. Denison her oath to the inventory, gave her a catalogue subscribed to her. Her brother brought her. Mr. Sheldon of Northampton dines with me. At night, when all were gone to bed, Cousin Moodey went with me into the new hall, read the history of Rebekah's courtship and prayed with me respecting my widowed condition. . . .

July 16. Went to Mr. Gee's to dinner. Dr. Cotton Mather and his lady, Deacon Barnard, Procter, Mr. Gee, wife, son sat down, Mr. Wadsworth, who returned thanks excellently, as Dr. Mather had craved a blessing. Viewed my lot at the north burying place. Went to Woodell's and rode in his coach to Meers's, from thence went and visited Mrs. Denison. Gave her K. George's effigies in copper and an English

crown of K. Charles II, 1677. Eat curds with her; I craved a blessing and returned thanks; came home after it. . . .

July 25. I go in the hackney coach to Roxbury. Call at Mr. Walter's, who is not at home, nor Gov. Dudley nor his lady. Visit Mrs. Denison: she invites me to eat. I give her two cases with a knife and fork in each; one turtle shell tackling; the other long, with ivory handles, squared, cost, 4 shillings, 6 pence; pound of raisins with proportionable almonds. Visited her brother and sister Weld. Came home by daylight in the coach, which stayed for me at the Gray-Hound. . . .

Aug. 1. Court rises; gave Mr. Appleton 20 shillings, who had prayed 4 times. This was the longest court that I remember at Cambridge. Rode home round with Stedmand, visit Mrs. Denison. Madam Rogers and Leverett much congratulated me upon my courting her.

Aug. 6. Visited Mrs. Denison, carried her, her sister Weld the widow, and Mrs. Weld to her brother, Mr. Samuel Weld, where we were courteously entertained. Brought Mr. Edmund Weld's wife home with me in the coach; she is in much darkness. Gave Mrs. Denison a psalm-book neatly bound in England with Turkey-leather. . . .

[Aug.] 15. I, with my son and daughter, J. Sewall, dine at Gov. Dudley's; Mr. Walter and his wife and son, son and daughter Sewall of Brooklin and their daughter there, and Col. Dudley: Mrs. Denison, I suppose, was the principal guest. I waited on her home . . .

[Aug.] 27. I ride and visit Mrs. Denison, leave my horse at the Gray-Hound. She mentions her discouragements by reason of discourses she heard. I prayed God to direct her and me.

[Aug.] 28. None in the fore-seat at lecture. Gov. I think was at Mr. Nelson's. Mr. Stephens and Capt. Burnap dine with us. Mr. Bromfield, J. Sewall and I go to the funeral of Mrs. Peck, Mr. Williams of Deerfield's mother. 4 ministers there: Mr. Walter, Danforth, Sewall, Thair, besides

young Mr. Walter. Mr. Walter in his prayer made a very honorable mention of her. Is about 82 years old, born at Roxbury. Called at Mrs. Denison's before the funeral. . . .

[Sept.] 4. Set out for Bristol with Scipio [his servant] after lecture and dinner. Called at Mrs. Denison's . . .

[Sept.] 26. A council is called, Capt. Moody's men dismissed. One that came from New York is taken with the small pox at his house in Charlestown. Visit Mrs. Denison, bring the widow Weld to town in the coach, in her way to her cousin Carter. . . .

Oct. 3 or 4. Visit Mrs. Denison . . .

Oct. 11 Visit Mrs. Denison. Bring Dr. Cotton Mather's youngest daughter home with me in the coach, at Mr. Walter's desire.

Oct. 15. Visit Mrs. Denison on horseback; present her with a pair of shoe-buckles, cost 5 shillings, 3 pence. . . .

[Oct.] 24. Brother Sewall visits me. While he was here, Mrs. Elisabeth Byles, Dr. Mather's daughter, tells me of Col. Thomas' death, whereby he is freed from his solicitude as to a judge of the supreme court at Salem next November. Mr. Dwight of Woodstock dines with us. Visit Mrs. Denison. The private meeting was at her house, which I was not aware of. I went to Mr. Walter's to condole him and, knocking at the door, was called to and told they were all gone to the meeting. I asked where. They said at Mrs. Denison's. I went thither and found Mr. Walter at prayer. Mr. Thomas Walter made a very good sermon from John, 17.7. Showing the duty of submitting to God's sovereignty, the great sin of doing contrarily. Prayed. Sung part of the 145 Psalm, which he set to Low Dutch very well. Prayed. The room was full. Gov. Dudley and his lady, widow Ruggles, etc., there. Rained hard. I supped with Mrs. Denison, got home about 8 at night. *Laus Deo*. . . .

Oct. 29. Mr. Thomas Walter was ordained. Dr. Cotton Mather prayed, Dr. Increase Mather preached from Hebr. 13.

18. Pray for us. Mr. Danforth of Dorchester prayed. Dr. Increase Mather ordained, Mr. Neh. Walter, Mr. Danforth and Dr. Cotton Mather laying on hands with him. Dr. Cotton Mather gave the right hand of fellowship after a considerable discourse . . . Mr. Thomas Walter gave the blessing. Entertainment was at Mr. Walter's and Major Bowls's. Supped with the Gov. Dudley, His Excellency Gov. Shute. Visited Mrs. Denison. Sam Hirst and Hall supped at her house. Went and came home in Mr. Stoddard's coach. . . .

[Nov.] 1. His Excellency comes not into council. My son from Brooklyn being here, I took his horse and visited Mrs. Denison. Sat in the chamber next Major Bowls. I told her 'twas time now to finish our business: asked her what I should allow her. She not speaking, I told her I was willing to give her two [hundred] and fifty pounds per annum during her life, if it should please God to take me out of the world before her. She answered she had better keep as she was than give a certainty for an uncertainty; she should pay dear for dwelling at Boston. I desired her to make proposals, but she made none. I had thoughts of publishment next Thursday the 6th. But I now seem to be far from it. May God, who has the pity of a father, direct and help me! . . .

[Nov.] 28. Having consulted with Mr. Walter after lecture, he advised me to go and speak with Mrs. Denison. I went this day in the coach, had a fire made in the chamber where I spake with her before, Nov. 1: I inquired how she had done these 3 or 4 weeks. Afterwards I told her our conversation had been such when I was with her last that it seemed to be a direction in providence not to proceed any further. She said it must be what I pleased, or to that purpose. Afterward she seemed to blame that I had not told her so Nov. 1. Because the man had been there several times to take the living and she knew not what answer to give. I said I knew not, but that intended to let the living although she lived single. I repeated her words of

Nov. 1. She seemed at first to start at the words of her paying dear, as if she had not spoken them. But she said she thought 'twas hard to part with all and have nothing to bestow on her kindred. I said, I did not intend anything of the movables, I intended all the personal estate to be to her. She said I seemed to be in a hurry on Saturday, Nov. 1, which was the reason she gave me no proposals. Whereas I had asked her long before to give me proposals in writing, and she upbraided me that I who had never written her a letter should ask her to write. She asked me if I would drink. I told her yes. She gave me cider, apples and a glass of wine, gathered together the little things I had given her, and offered them to me, but I would take none of them. Told her I wished her well, should be glad to hear of her welfare. She seemed to say she should not again take in hand a thing of this nature. Thanked me for what I had given her and desired my prayers. I gave Abijah Weld an Angel.¹ Mr. Stoddard and his wife came in their coach to see their sister, which broke off my visit. Upon their asking me, I dismissed my coach and went with them to see Mr. Danforth and came home by moonshine. Got home about 9 at night. *Laus Deo.*

My bowels yearn towards Mrs. Denison, but I think God directs me in his providence to desist. . . .

Nov. 30. Lord's-day. In the evening I sung the 120 Psalm in the family. About 7 o'clock Mrs. Dorothy Denison comes in, her cousin Weld coming first, saying she desired to speak with me in private. I had a fire in the new hall and was at prayer; was very much startled that she should come so far a-foot in that exceeding cold season; she entered into discourse of what passed between us at Roxbury last Friday; I seemed to be altered in my affection; asked pardon if she had affronted me. Seemed to incline the match should not break off, since I had kept her company so long. Said Mr. Denison spake to her after

¹ An English gold coin.

his signing the will that he would not make her put all out of her hand and power, but reserve somewhat to bestow on his friends that might want. I told her she might keep all. She excused, and said 'twas not such an all. I commended the estate. I could not observe that she made me any offer of any part all this while. She mentioned two glass bottles she had. I told her they were hers, and the other small things I had given her, only now they had not the same signification as before. I was much concerned for her being in the cold, would fetch her in a plate of something warm (for I had not supped). She refused.

However, I fetched a tankard of cider and drank to her. She desired that no body might know of her being here. I told her they should not . . . She went away in the bitter cold, no moon being up, to my great pain. I saluted her at parting . . .

Dec. 22. Mrs. Dorothy Denison brings an additional inventory. I give her her oath, asked her brother, Brewer, and her to dine with me. She said she needed not to eat. Caused her to sit by the fire and went with her to the door at her going away. She said nothing to me, nor her brother, Brewer.

1674 ~ William Byrd ~ 1744

BELONGING to the second generation of his family in Virginia, William Byrd was educated in England. A member of the Middle Temple and the Royal Society, he settled down in Virginia in 1705 at his estate of Westover and played a brilliant rôle in both politics and society. In 1706 he married Lucy Parke, who died in London in 1716. In 1724 Byrd married Maria Taylor. He built up at Westover one of the finest private libraries in the colonies and went far toward realizing his long-cherished desire to be a writer by producing three stylistically impressive manuscripts dealing with his experiences as a surveyor and traveler, *History of the Dividing Line Run in the Year 1728*, *A Progress to the Mines in the Year 1732*, and *A Journey to the Land of Eden in the Year 1733*, all published for the first time in 1841.

[The first of the following selections is taken from *The Secret Diary of William Byrd of Westover, 1709-1712*, ed. L. B. Wright and M. Tinling, Richmond, 1941, a transcription from a shorthand manuscript which Byrd kept for his own pleasure and which is unique among personal records in American colonial literature for its quaintly scabrous intimacies. The second selection is from *A Progress to the Mines*. Both selections reveal much of Byrd's unusual personality, so different from that of the New England diarist, Samuel Sewall, and at the same time convey vivid impressions of the life of 18th Century Virginia. Titles have been supplied by the present editors. For the second selection, the modernized text of 1841 has been followed with few changes.]

A WEEK AT WESTOVER IN JUNE
[1941 (written 1710)]

[JUNE] 15. I rose at 5 o'clock and read a chapter in Hebrew and some Greek in Thucydides I said my prayers and ate milk for breakfast The weather was very hot I wrote a letter to England. I ate some broiled pork for dinner. In the afternoon my gripes returned on me and continued till the evening with some violence. Hot things did it no good but in the evening I drank some warm milk from the cow which eased me immediately. It rained this afternoon very hard with a little wind and thunder. This hindered my walking anywhere but in the garden. I foretold by my cellar stinking that it would rain. I impute my gripes to cherry wine, or else pulling my coat off about noon. I said my prayers and had good thoughts, good humor, but indifferent good health, thank God Almighty.

16. I rose at 5 o'clock and drank some milk warm from the cow. I read a chapter in Hebrew and some Greek in Thucydides. I said my prayers and danced my dance.¹ About 10 o'clock Captain Drury Stith and his wife came to make us a visit, notwithstanding it was very hot. I was glad to see them because I think them excellent people. We played at billiards till dinner. I ate boiled pork. In the afternoon we passed away the time pleasantly till about 6 o'clock and then they went home. In the evening I took a walk with my wife. We made a little cider of the G-n-t-n² apples, which yielded but little juice. I was better of my gripes, thank God. I neglected to say my prayers but had good health, good thoughts, and good humor, thank God Almighty.

17. I rose at 5 o'clock and drank some milk hot from the cow. I read a chapter in Hebrew and some Greek in Thucydides. I said my prayers and danced my dance. About 8 o'clock Mr. Anderson came on his way over the river. He told me the quarrel was made up between Parson Slater and his vestry without coming to trial. He

stayed about half an hour. Colonel Hill sent his man with a basket of apricots, of which my wife ate twelve immediately and I ate eight which however did not make my gripes return I set my closet right. I ate tongue and chicken for dinner. In the afternoon I caused L-s-n to be whipped for beating his wife and Jenny was whipped for being his whore.³ In the evening the sloop came from Appomatox with tobacco. I took a walk about the plantation. I said my prayers and drank some new milk from the cow. I had good health, good thoughts, and good humor, thanks be to God Almighty.

18. I rose at 5 o'clock and drank some new milk from the cow. I read a chapter in Hebrew and some Greek in Thucydides. I said my prayers. It was extremely hot. I read a sermon in Dr. Tillotson about angels.⁴ I wrote a letter to Williamsburg to send by my sloop which I sent for rum, wine, and sugar from thence and that this might come safely I resolved to send Ban-nister with the sloop. I ate chicken for dinner but very little because I had no appetite. In the afternoon my wife told me a dream she had two nights. She thought she saw a scroll in the sky in form of a light cloud with writing on it. It ran extremely fast from west to east with great swiftness. The writing she could not read but there was a woman before her that told her there would be a great dearth because of want of rain and after that a pestilence for that the seasons were changed and time inverted. Mr. James Burwell and Charles Doyley came and in the evening I took a walk with them. Our nurse went away in the sloop. I said my prayers and had good health, good thoughts, and good humor, thanks be to God Almighty.

19. I rose at 5 o'clock and read a chapter

¹ Fond of dancing, Byrd kept himself limber by constant practice.

² Only these letters can be deciphered from Byrd's shorthand.

³ L-s-n was one of Byrd's servants and Jenny was the family maid.

⁴ Tillot-on was one of the great Anglican divines of Restoration England.

in Hebrew and some Greek in Thucydides. I drank some warm milk from the cow. I said my prayers and danced my dance. About 10 o'clock came Isham Randolph and Mr. Finney to see us. They told me Colonel Randolph was very ill and very melancholy. We played at billiards till dinner. I ate fish for dinner. In the afternoon Mr. Stith came over with my cousin Berkeley, who all stayed here till the evening and then they all went away but Mr. Finney. In the evening we took a walk. Mr. Finney is a sensible man and good natured. He told me that Major Allen died on Thursday last. In our walk we met Mr. C—s who came home with us. I neglected to say my prayers but had good health, good thoughts, and good humor, thank God Almighty.

20. I rose at 5 o'clock and drank milk from the cow. I read a chapter in Hebrew and some Greek in Thucydides. I said my prayers and danced my dance. Mr. Finney returned home without any breakfast but I gave him some strong water. Colonel Hill sent us another present of apricots. I wrote a letter to England. I ate five apricots which put my belly out of order. I ate roast mutton for dinner. In the afternoon my belly was griped. I played with my wife at piquet and then I ordered the boat to carry us to my cousin Harrison's where we found my cousin Berkeley and Jimmy Burwell. I was out of order in my belly. About 8 o'clock we returned home where we found all well, thank God. I said my prayers and had good health, good thoughts, and good humor, thanks be to God Almighty.

21. I rose at 5 o'clock and drank milk from the cow. I read a chapter in Hebrew and some Greek in Thucydides. I said my prayers and danced my dance. My wife was indisposed. I sent Tom to Appomattox to desire Mr. Mumford to go to the outcry⁵ of my uncle's estate. About five nights since I dreamed I saw a flaming star in the air at which I was much frightened and called some others to see it but when they came it disappeared. I fear this portends some judgment to this country or at least

to myself. I ate roast mutton for dinner. In the afternoon I settled the closet. About 5 o'clock I received an express from Mr. Clayton that the Governor, Colonel Spotswood, with two men-of-war arrived last night at Kiquotan with several other ships. I sent word of this to Mrs. Harrison and then prepared to go to Williamsburg tomorrow. In the evening I took a walk about the plantation. I said my prayers and had good thoughts, good humor, and good health, thank God Almighty. . . .

A VISIT TO NEIGHBORING GENTRY IN SEPTEMBER [1841 (1732)]

20TH. I continued the bark,⁶ and then tossed down my poached eggs, with as much ease as some good breeders slip children into the world. About nine I left the prudentest orders I could think of with my vizier, and then crossed the river to Shacco's. I made a running visit to three of my quarters, where, besides finding all the people well, I had the pleasure to see better crops than usual both of corn and tobacco. I parted there with my intendant, and pursued my journey to Mr. Randolph's, at Tuckahoe, without meeting any adventure by the way. Here I found Mrs. Fleming, who was packing up her baggage, with design to follow her husband the next day, who had gone to a new settlement in Goochland. Both he and she have been about seven years persuading themselves to remove to that retired part of the country, though they had the two strong arguments of health and interest for so doing. The widow smiled graciously upon me, and entertained me very handsomely. Here I learned all the tragical story of her daughter's humble marriage with her uncle's overseer. Besides the meanness of this mortal's aspect, the man has not one visible qualification, except impudence, to recommend him to a female's inclinations.

⁵ Public auction.

⁶ Medicine prescribed by Byrd's physician.

But there is sometimes such a charm in that Hibernian endowment, that frail woman cannot withstand it, though it stand alone without any other recommendation. Had she run away with a gentleman or a pretty fellow, there might have been some excuse for her, though he were of inferior fortune: but to stoop to a dirty plebeian, without any kind of merit, is the lowest prostitution. I found the family justly enraged at it, and though I had more good nature than to join in her condemnation, yet I could devise no excuse for so senseless a prank as this young gentlewoman had played. Here good drink was more scarce than good victuals, the family being reduced to the last bottle of wine, which was therefore husbanded very carefully. But the water was excellent. The heir of the family did not come home till late in the evening. He is a pretty young man, but had the misfortune to become his own master too soon. This puts young fellows upon wrong pursuits, before they have sense to judge rightly for themselves. Though at the same time they have a strange conceit of their own sufficiency, when they grow near twenty years old, especially if they happen to have a small smattering of learning. It is then they fancy themselves wiser than all their tutors and governors, which makes them headstrong to all advice, and above all reproof and admonition.

21st. I was sorry in the morning to find myself stopped in my career by bad weather brought upon us by a northeast wind. This drives a world of raw unkindly vapors upon us from Newfoundland, laden with blight, coughs, and pleurisies. However, I complained not, lest I might be suspected to be tired of the good company. Though Mrs. Fleming was not so much upon her guard, but mutimed strongly at the rain, that hindered her from pursuing her dear husband. I said what I could to comfort a gentlewoman under so sad a disappointment. I told her a husband, that stayed so much at home as hers did, could be no such violent rarity, as for a woman

to venture her precious health, to go daggling through the rain after him, or to be miserable if she happened to be prevented. That it was prudent for married people to fast sometimes from one another, that they might come together again with the better stomach. That the best things in this world, if constantly used, are apt to be cloying, which a little absence and fortitude would prevent. This was strange doctrine to a fond female, who fancies people should love with as little reason after marriage as before. In the afternoon Monsieur Marij, the minister of the parish, came to make me a visit. He had been a Romish priest, but found reasons, either spiritual or temporal, to quit that gay religion. The fault of this new convert is, that he looks for as much respect from his protestant flock, as is paid to the popish clergy, which our ill-bred Huguenots do not understand. Madam Marij had so much curiosity as to want to come too; but another horse was wanting, and she believed it would have too vulgar an air to ride behind her husband. This woman was of the true exchange breed, full of discourse, but void of discretion, and married a parson, with the idle hopes he might some time or other come to be his grace of Canterbury. The gray mare is the better horse in that family, and the poor man submits to her wild vagaries for peace sake. She has just enough of the fine lady to run in debt, and be of no signification in her household. And the only thing that can prevent her from undoing her loving husband will be, that nobody will trust them beyond the sixteen thousand,⁷ which is soon run out in a Goochland store. The way of dealing there is for some small merchant or peddler to buy a Scots pennyworth of goods, and clap one hundred and fifty per cent. upon that. At this rate the parson cannot be paid much more for his preaching than it is worth. No sooner was our visitor retired, but the facetious widow was so kind

⁷ The reference is to the salary of a minister, which was legally set at 16,000 pounds of tobacco.

as to let me into all this secret history, but was at the same time exceedingly sorry that the woman should be so indiscreet, and the man so tame as to be governed by an unprofitable and fantastical wife.

22d. We had another wet day, to try both Mrs. Fleming's patience and my good breeding. The northeast wind commonly sticks by us three or four days, filling the atmosphere with damps, injurious both to man and beast. The worst of it was, we had no good liquor to warm our blood, and fortify our spirits against so strong a malignity. However, I was cheerful under all these misfortunes, and expressed no concern but a decent fear lest my long visit might be troublesome. Since I was like to have thus much leisure, I endeavored to find out what subject a dull married man could introduce that might best bring the widow to the use of her tongue. At length I discovered she was a notable quack, and therefore paid that regard to her knowledge, as to put some questions to her about the bad distemper that raged then in the country. I mean the bloody flux, that was brought us in the negro-ship consigned to Col. Braxton. She told me she made use of very simple remedies in that case, with very good success. She did the business either with hartshorn drink, that had plantain leaves boiled in it, or else with a strong decoction of St. Andrew's cross, in new milk instead of water. I agreed with her that those remedies might be very good, but

would be more effectual after a dose or two of Indian physic. But for fear this conversation might be too grave for a widow, I turned the discourse, and began to talk of plays, and finding her taste lay most towards comedy, I offered my service to read one to her, which she kindly accepted. She produced the second part of *The Beggar's Opera*, which had diverted the town for forty nights successively, and gained four thousand pounds to the author. This was not owing altogether to the wit or humor that sparkled in it, but to some political reflections, that seemed to hit the ministry. But the great advantage was, that his interest was solicited by the Duchess of Queensbury, which no man could refuse who had but half an eye in his head, or half a guinea in his pocket. Her grace, like death, spared nobody, but even took my Lord Selkirk in for two guineas, to repair which extravagance he lived upon Scots herrings two months afterwards. But the best story was, she made a very smart officer in his majesty's guards give her a guinea, who swearing at the same time it was all he had in the world, she sent him fifty for it the next day, to reward his obedience. After having acquainted my company with the history of the play, I read three acts of it, and left Mrs. Fleming and Mr. Randolph to finish it, who read as well as most actors do at a rehearsal. Thus we killed the time, and triumphed over the bad weather. . . .

c. 1730 ~ *Jonathan Carver* ~ 1780

LITTLE is known for certain of the early life of Jonathan Carver. The probabilities are that he was born of a poor family in Canterbury, Connecticut, shortly after 1730. He married in 1746, had seven children, and was wounded in battle with the French in 1757 while a captain in a regiment of rangers. After the cessation of hostilities, he set out to explore the country west of what is now Michigan. How far his travels actually extended is a matter of some controversy, but at least he is granted to have explored northern Wisconsin.

Returning to Boston, he went to England to get further assistance in

Western exploration, received some money as a needy servant of the government, and enlisted the sympathy of Dr John Coakley Lettsom, who apparently helped him to write an account of his wanderings which was first published in London in 1778 under the title, *Travels Through the Interior Parts of North America in the Years 1766, 1767 and 1768*. Despite Carver's insistence on his unimpeachable veracity, the book was padded with Munchausen-like anecdotes of strange sights and encounters, with rhetorical descriptions highly colored by a facile imagination, and with unacknowledged pilferings from previous travel literature. None the less, it was enormously popular, helped stimulate interest on two continents in the exploration of the West, and now and then launched into far-flung speculations that time has proved strikingly prophetic.

Carver, however, never realized his ambitions to undertake further western exploration, and died in misery at the age of fifty. He may be called Dr. Lettsom's Trader Horn

[The titles for the following selections have been supplied by the present editors, the text has been modernized in punctuation and to some extent in spelling]

TRAVELS
[1778]

NORTHWEST PASSAGE

NO SOONER was the late war with France concluded and peace established by the Treaty of Versailles in the year 1763 than I began to consider (having rendered my country some services during the war) how I might continue still serviceable and contribute, as much as lay in my power, to make that vast acquisition of territory gained by Great Britain in North America advantageous to it. It appeared to me indispensably needful that government should be acquainted in the first place with the true state of the dominions they were now become possessed of. To this purpose, I determined, as the next proof of my zeal, to explore the most unknown parts of them and to spare no trouble or expense in acquiring a knowledge that promised to be so useful to my countrymen. I knew that many obstructions would arise to my scheme from the want of good maps and

charts, for the French, whilst they retained their power in North America, had taken every artful method to keep all other nations, particularly the English, in ignorance of the concerns of the interior parts of it: and to accomplish this design with the greater certainty, they had published inaccurate maps and false accounts, calling the different nations of the Indians by nicknames they had given them and not by those really appertaining to them. Whether the intention of the French in doing this was to prevent these nations from being discovered and traded with, or to conceal their discourse when they talked to each other of the Indian concerns in their presence, I will not determine; but whatsoever was the cause from which it arose, it tended to mislead.

As a proof that the English had been greatly deceived by these accounts and that their knowledge relative to Canada had usually been very confined, before the conquest of Crown Point in 1759, it had been esteemed an impregnable fortress; but no sooner was it taken than we were convinced that it had acquired its greatest

security from false reports given out by its possessors and might have been battered down with a few four pounders. Even its situation, which was represented to be so very advantageous, was found to owe its advantages to the same source. It cannot be denied but that some maps of these countries have been published by the French with an appearance of accuracy, but these are of so small a size and drawn on so minute a scale that they are nearly inexplicable. The sources of the Mississippi, I can assert from my own experience, are greatly misplaced; for, when I had explored them and compared their situation with the French charts, I found them very erroneously represented, and am satisfied that these were only copied from the rude sketches of the Indians.

Even so lately as their evacuation of Canada they continued their schemes to deceive, leaving no traces by which any knowledge might accrue to their conquerors; for though they were well acquainted with all the lakes, particularly with Lake Superior, having constantly a vessel of considerable burden thereon, yet their plans of them are very incorrect. I discovered many errors in the descriptions given therein of its islands and bays, during a progress of eleven hundred miles that I coasted it in canoes. They likewise, on giving up the possession of them, took care to leave the places they had occupied in the same uncultivated state they had found them, at the same time destroying all their naval force. I observed myself part of the hulk of a very large vessel, burnt to the water's edge, just at the opening from the Straits of St. Marie's into the lake.

These difficulties, however, were not sufficient to deter me from the undertaking, and I made preparations for setting out. What I chiefly had in view, after gaining a knowledge of the manners, customs, languages, soil, and natural productions of the different nations that inhabit the back of the Mississippi, was to ascertain the

breadth of that vast continent which extends from the Atlantic to the Pacific Ocean, in its broadest part between 43 and 46 degrees northern latitude. Had I been able to accomplish this, I intended to have proposed to government to establish a post in some of those parts about the Straits of Anman, which, having been first discovered by Sir Francis Drake, of course belong to the English. This, I am convinced, would greatly facilitate the discovery of a Northwest Passage or a communication between Hudson's Bay and the Pacific Ocean. An event so desirable, and which has been so often sought for, but without success. Besides this important end, a settlement on that extremity of America would answer many good purposes and repay every expense the establishment of it might occasion. For it would not only disclose new sources of trade and promote many useful discoveries, but would open a passage for conveying intelligence to China and the English settlements in the East Indies with greater expedition than a tedious voyage by the Cape of Good Hope or the Straits of Magellan will allow of.

How far the advantages arising from such an enterprise may extend can only be ascertained by the favorable concurrence of future events. But that the completion of the scheme I have had the honor of first planning and attempting will some time or other be effected, I make no doubt. From the unhappy divisions that at present subsist between Great Britain and America, it will probably be some years before the attempt is repeated; but, whenever it is and the execution of it carried on with propriety, those who are so fortunate as to succeed will reap, exclusive of the national advantages that must ensue, emoluments beyond their most sanguine expectations. And whilst their spirits are elated by their success, perhaps they may bestow some commendations and blessings on the person that first pointed out to them the way. These, though but a shadowy recompense for all my toil, I shall receive with pleasure.

To what power of authority this new world will become dependent, after it has arisen from its present uncultivated state, time alone can discover. But as the seat of empire from time immemorial has been gradually progressive towards the West, there is no doubt but that at some future period mighty kingdoms will emerge from these wildernesses, and stately palaces and solemn temples, with gilded spires reaching the skies, supplant the Indian huts, whose only decorations are the barbarous trophies of their vanquished enemies. . . .

A RUIN OF TIME

One day, having landed on the shore of the Mississippi some miles below Lake Pepin,¹ whilst my attendants were preparing my dinner, I walked out to take a view of the adjacent country. I had not proceeded far before I came to a fine, level, open plain, on which I perceived at a little distance a partial elevation that had the appearance of an entrenchment. On a nearer inspection I had greater reason to suppose that it had really been intended for this many centuries ago. Notwithstanding it was now covered with grass, I could plainly discern that it had once been a breastwork of about four feet in height, extending the best part of a mile and sufficiently capacious to cover five thousand men. Its form was somewhat circular, and its flanks reached to the river. Though much defaced by time, every angle was distinguishable and appeared as regular, and fashioned with as much military skill, as if planned by Vauban himself.² The ditch was not visible, but I thought on examining more curiously that I could perceive there certainly had been one. From its situation also I am convinced that it must have been designed for this purpose. It fronted the river, and the rear was covered by the river; nor was there any rising ground for a considerable way that commanded it; a few straggling oaks were alone to be seen near it. In many places small tracks were worn across it

by the feet of the elks and deer, and from the depth of the bed of earth by which it was covered, I was able to draw certain conclusions of its great antiquity. I examined all the angles and every part with great attention and have often blamed myself since for not encamping on the spot and drawing an exact plan of it. To show that this description is not the offspring of a heated imagination or the chimerical tale of a mistaken traveler, I find on inquiry since my return that Mon. St. Pierre³ and several traders have, at different times, taken notice of similar appearances, on which they have formed the same conjectures but without examining them so minutely as I did. How a work of this kind could exist in a country that has hitherto (according to the general received opinion) been the seat of war to untutored Indians alone, whose whole stock of military knowledge has only till within two centuries amounted to drawing the bow and whose only breastwork even at present is the thicket, I know not. I have given as exact an account as possible of this singular appearance and leave to future explorers of these distant regions to discover whether it is a production of nature or art. Perhaps the hints I have here given might lead to a more perfect investigation of it and give us very different ideas of the ancient state of realms that we at present believe to have been from the earliest period only the habitations of savages. . . .

¹ Extension of Mississippi in Wisconsin and Minnesota 24 miles long and from 2 to 4 miles wide.

² Marquis Sébastien le Prestre de Vauban, 1633-1707, was a French military engineer and marshal.

³ It is uncertain whether Carver refers to Jacques Legardeur, Sieur de Saint-Pierre, 1701-1755, commandant at Fort Beauharnois on Lake Pepin, or to the early Milwaukee fur trader, Mon. St. Pierre, active at the time of Carver's travels and mentioned in contemporary documents, for which cf. *Wisconsin Hist. Coll.*, XI, 210f and XVIII, 267f.

THE SHINING MOUNTAINS

That range of mountains of which the Shining Mountains are a part begin at Mexico, and, continuing northward on the back or to the east of California, separate the waters of those numerous rivers that fall either into the Gulf of Mexico or the Gulf of California. From thence, continuing their course still northward, between the sources of the Mississippi and the rivers that run into the South Sea, they appear to end in about forty-seven or forty-eight degrees of north latitude, where a number of rivers arise and empty themselves either into the South Sea, into Hudson's Bay, or into the waters that communicate between these two seas.

Among these mountains, those that lie to the west of the river St. Pierre are called the Shining Mountains, from an infinite number of crystal stones, of an amazing size, with which they are covered and which, when the sun shines full upon them, sparkle so as to be seen at a very great distance.

This extraordinary range of mountains

is calculated to be more than three thousand miles in length, without any very considerable intervals, which I believe surpasses anything of the kind in the other quarters of the globe. Probably in future ages they may be found to contain more riches in their bowels than those of Indostan and Malabar or that are produced on the golden coast of Guinea, nor will I except even the Peruvian mines. To the west of these mountains, when explored by future Columbuses or Raleighs, may be found other lakes, rivers, and countries, full fraught with all the necessaries or luxuries of life; and where future generations may find an asylum, whether driven from their country by the ravages of lawless tyrants, or by religious persecutions, or reluctantly leaving it to remedy the inconveniences arising from a superabundant increase of inhabitants; whether, I say, impelled by these or allured by hopes of commercial advantages, there is little doubt but their expectations will be fully gratified in these rich and unexhausted climes. . . .

Michel-Guillaume Jean de Crèvecoeur

1735 ~ 1813

CRÈVECOEUR, who assumed the name of "John Hector St. John" when he became a citizen of New York province in 1765, was born near Caen, in Normandy. After attending the Jesuit Collège du Mont in Caen, he completed his education in England, where he lived with relatives near Salisbury. In 1754 he migrated to Canada, where he served with the forces of Montcalm. In 1769, after working as an explorer and surveyor, he married Mehitable Tippet of Yonkers and purchased a large estate in Orange County, New York. Here he thought he had achieved one of the most enviable of human situations, when the Revolution broke.

Assuming toward either side the attitude of a half-cosmopolitan, half-frontier Mercutio—"A plague o' both your houses!"—he incurred his neighbors' suspicion and was imprisoned by the British. Upon his release, he had to sail to Europe without his family. His farmhouse was destroyed; his chil-

dren, after suffering captivity by the Indians, were scattered; his wife died. On his return to America after the war, Crèvecoeur became French consul at New York and busied himself with problems of scientific farming, botany, and transatlantic transportation. He returned to France in 1790, lived for some years in Munich, and died in his native Normandy in 1813. Some of his best writing is found in the work published from his manuscripts in 1925, *Sketches of Eighteenth Century America*.

[The following selections are from the final letter in his *Letters from an American Farmer*, first published in London in 1782, the first American edition appearing in Philadelphia, 1793. Unlike the earlier letters of this volume, which have so much to say of the serenity he had found in America, this letter, as the title indicates, sets forth his state of mind after all serenity had been shaken by the onset of the war. Although he never carried out the project he here describes, these selections from the letter—which is somewhat prolix in its entirety—reveal much of his character and thought and one phase at least of the frontier and pioneer spirit—the urge to solve impossibly complex dilemmas by courageous escape into some Shangri-la or Islandia beyond the horizon, over trackless wilds or difficult water.]

DISTRESSES OF A FRONTIER
MAN
[1782]

I

AS A member of a large society which extends to many parts of the world, my connection with it is too distant to be as strong as that which binds me to the inferior division in the midst of which I live. I am told that the great nation, of which we are a part, is just, wise, and free, beyond any other on earth, within its own insular boundaries; but not always so to its distant conquests: I shall not repeat all I have heard, because I cannot believe half of it. As a citizen of a smaller society, I find that any kind of opposition to its now prevailing sentiments, immediately begets hatred: how easily do men pass from loving, to hating and cursing one another! I am a lover of peace, what must I do? I am divided between the respect I feel for the ancient connection, and the fear of innovations, with the consequence of which I am not well acquaint-

ed; as they are embraced by my own countrymen. I am conscious that I was happy before this unfortunate Revolution. I feel that I am no longer so; therefore I regret the change. This is the only mode of reasoning adapted to persons in my situation. If I attach myself to the Mother Country, which is 3000 miles from me, I become what is called an enemy to my own region; if I follow the rest of my countrymen, I become opposed to our ancient masters: both extremes appear equally dangerous to a person of so little weight and consequence as I am, whose energy and example are of no avail. As to the argument on which the dispute is founded, I know little about it. Much has been said and written on both sides, but who has a judgment capacious and clear enough to decide? The great moving principles which actuate both parties are much hid from vulgar eyes, like mine; nothing but the plausible and the probable are offered to our contemplation. The innocent class are always the victim of the few; they are in all countries and at all times the inferior agents, on which the popular

phantom is erected; they clamour, and must toil, and bleed, and are always sure of meeting with oppression and rebuke. It is for the sake of the great leaders on both sides, that so much blood must be spilt, that of the people is counted as nothing. Great events are not achieved for us, though it is *by* us that they are principally accomplished, by the arms, the sweat, the lives of the people. Books tell me so much that they inform me of nothing. Sophistry, the bane of freemen, launches forth in all her deceiving attire! After all, most men reason from passions; and shall such an ignorant individual as I am decide, and say this side is right, that side is wrong? Sentiment and feeling are the only guides I know. Alas, how should I unravel an argument, in which reason herself hath given way to brutality and bloodshed! What then must I do? I ask the wisest lawyers, the ablest casuists, the warmest patriots; for I mean honestly. Great Source of wisdom! inspire me with light sufficient to guide my benighted steps out of this intricate maze! Shall I discard all my ancient principles, shall I renounce that name, that nation which I held once so respectable? I feel the powerful attraction; the sentiments they inspired grew with my earliest knowledge, and were grafted upon the first rudiments of my education. On the other hand, shall I arm myself against that country where I first drew breath, against the playmates of my youth, my bosom friends, my acquaintance?—the idea makes me shudder! Must I be called a parricide, a traitor, a villain, lose the esteem of all those whom I love, to preserve my own; be shunned like a rattlesnake, or be pointed at like a bear? I have neither heroism nor magnanimity enough to make so great a sacrifice. Here I am tied, I am fastened by numerous strings, nor do I repine at the pressure they cause; ignorant as I am, I can pervade the utmost extent of the calamities which have already overtaken our poor afflicted country. I can see the great and accumulated ruin yet extending itself as

far as the theatre of war has reached; I hear the groans of thousands of families now ruined and desolated by our aggressors. I cannot count the multitude of orphans this war has made, nor ascertain the immensity of blood we have lost. Some have asked, whether it was a crime to resist; to repel some parts of this evil. Others have asserted, that a resistance so general makes pardon unattainable, and repentance useless; and dividing the crime among so many, renders it imperceptible. What one party calls meritorious, the other denominates flagitious. These opinions vary, contract, or expand, like the events of the war on which they are founded. What can an insignificant man do in the midst of these jarring contradictory parties, equally hostile to persons situated as I am? And after all who will be the really guilty?—Those must certainly who fail of success. Our fate, the fate of thousands, is then necessarily involved in the dark wheel of fortune. . . .

II

. . . Self-preservation is above all political precepts and rules, and even superior to the dearest opinions of our minds, a reasonable accommodation of ourselves to the various exigencies of the time in which we live, is the most irresistible precept. To this great evil I must seek some sort of remedy adapted to remove or to palliate it; situated as I am, what steps should I take that will neither injure nor insult any of the parties, and at the same time save my family from that certain destruction which awaits it, if I remain here much longer? Could I insure them bread, safety, and subsistence, not the bread of idleness, but that earned by proper labour as heretofore; could this be accomplished by the sacrifice of my life, I would willingly give it up. I attest before heaven, that it is only for these I would wish to live and to toil: for these whom I have brought into this miserable existence. I resemble, methinks, one of

the stones of a ruined arch, still retaining that pristine form that anciently fitted the place I occupied, but the centre is tumbled down; I can be nothing until I am replaced, either in the former circle, or in some stronger one. I see one on a smaller scale, and at a considerable distance, but it is within my power to reach it: and since I have ceased to consider myself as a member of the ancient state now convulsed, I willingly descend into an inferior one. I will revert into a state approaching nearer to that of nature, unencumbered either with voluminous laws, or contradictory codes, often galling the very necks of those whom they protect; and at the same time sufficiently remote from the brutality of unconnected savage nature. Do you, my friend, perceive the path I have found out? it is that which leads to the tenants of the great ——— village of ———, where, far removed from the accursed neighbourhood of Europeans, its inhabitants live with more ease, decency, and peace, than you imagine: where, though governed by no laws, yet find in uncontaminated simple manners all that laws can afford. Their system is sufficiently complete to answer all the primary wants of man, and to constitute him a social being, such as he ought to be in the great forest of nature. There it is that I have resolved at any rate to transport myself and family: an eccentric thought, you may say, thus to cut asunder all former connections, and to form new ones with a people whom nature has stamped with such different characteristics! But as the happiness of my family is the only object of my wishes, I care very little where we be, or where we go, provided that we are safe, and all united together. Our new calamities being shared equally by all, will become lighter; our mutual affection for each other, will in this great transmutation become the strongest link of our new society, will afford us every joy we can receive on a foreign soil, and preserve us in unity, as the gravity and coherency of matter prevents the

world dissolution. Blame me not, it would be cruel in you, it would beside be entirely useless; for when you receive this we shall be on the wing . . .

III

. . . I will either die in the attempt or succeed, better perish all together in one fatal hour, than to suffer what we daily endure. I do not expect to enjoy in the village of ——— an uninterrupted happiness; it cannot be our lot, let us live where we will; I am not founding my future prosperity on golden dreams. Place mankind where you will, they must always have adverse circumstances to struggle with, from nature, accidents, constitution; from seasons, from that great combination of mischances which perpetually lead us to new diseases, to poverty, etc. Who knows but I may meet in this new situation, some accident from whence may spring up new sources of unexpected prosperity? Who can be presumptuous enough to predict all the good? Who can foresee all the evils, which strew the paths of our lives? But after all, I cannot but recollect what sacrifice I am going to make, what amputation I am going to suffer, what transition I am going to experience. Pardon my repetitions, my wild, my trifling reflections, they proceed from the agitations of my mind, and the fulness of my heart; the action of thus retracing them seems to lighten the burden, and to exhilarate my spirits; this is besides the last letter you will receive from me; I would fain tell you all, though I hardly know how. Oh! in the hours, in the moments of my greatest anguish, could I intuitively represent to you that variety of thought which crowds on my mind, you would have reason to be surprised, and to doubt of their possibility. Shall we ever meet again? If we should, where will it be? On the wild shores of ———. If it be my doom to end my days there, I will greatly improve them; and perhaps make room for a few more families, who will choose to retire from

the fury of a storm, the agitated billows of which will yet roar for many years on our extended shores. Perhaps I may repossess my house, if it be not burnt down; but how will my improvements look? why, half defaced, bearing the strong marks of abandonment, and of the ravages of war. However, at present I give everything over for lost; I will bid a long farewell to what I leave behind. If ever I repossess it, I shall receive it as a gift, as a reward for my conduct and fortitude. Do not imagine, however, that I am a stoic—by no means: I must, on the contrary, confess to you, that I feel the keenest regret, at abandoning an house which I have in some measure reared with my own hands. Yes, perhaps I may never revisit those fields which I have cleared, those trees which I have planted, those meadows which, in my youth, were a hideous wilderness, now converted by my industry into rich pastures and pleasant lawns. If in Europe it is praiseworthy to be attached to paternal inheritances, how much more natural, how much more powerful must the tie be with us, who, if I may be permitted the expression, are the founders, the creators of our own farms! When I see my table surrounded with my blooming offspring, all united in the bonds of the strongest affection, it kindles in my paternal heart a variety of tumultuous sentiments, which none but a father and a husband in my situation can feel or describe. Perhaps I may see my wife, my children, often distressed, involuntarily recalling to their minds the ease and abundance which they enjoyed under the paternal roof. Perhaps I may see them want that bread which I now leave behind; overtaken by diseases and penury, rendered more bitter by the recollection of former days of opulence and plenty. Perhaps I may be assailed on every side by unforeseen accidents, which I shall not be able to prevent or to alleviate. Can I contemplate such images without the most unutterable emotions? My fate is determined; but I have not determined it, you may assure yourself, with-

out having undergone the most painful conflicts of a variety of passions;—interest, love of ease, disappointed views, and pleasing expectations frustrated;—I shuddered at the review! Would to God I was master of the stoical tranquillity of that magnanimous sect; oh, that I were possessed of those sublime lessons which Apollonius of Chalcis gave to the Emperor Antoninus! I could then with much more propriety guide the helm of my little bark, which is soon to be freighted with all that I possess most dear on earth, through this stormy passage to a safe harbour; and when there, become to my fellow passengers, a surer guide, a brighter example, a pattern more worthy of imitation, throughout all the new scenes they must pass, and the new career they must traverse. I have observed notwithstanding, the means hitherto made use of, to arm the principal nations against our frontiers. Yet they have not, they will not take up the hatchet against a people who have done them no harm. The passions necessary to urge these people to war, cannot be roused, they cannot feel the stings of vengeance, the thirst of which alone can compel them to shed blood: far superior in their motives of action to the Europeans, who for sixpence a day, may be engaged to shed that of any people on earth. They know nothing of the nature of our disputes, they have no ideas of such revolutions as this: a civil division of a village or tribe, are events which have never been recorded in their traditions: many of them know very well that they have too long been the dupes and the victims of both parties; foolishly arming for our sakes, sometimes against each other, sometimes against our white enemies. They consider us as born on the same land, and, though they have no reasons to love us, yet they seem carefully to avoid entering into this quarrel, from whatever motives. I am speaking of those nations with which I am best acquainted, a few hundreds of the worst kind mixed with whites, worse than themselves, are now hired by Great Britain,

to perpetuate those dreadful incursions. In my youth I traded with the ———, under the conduct of my uncle, and always traded justly and equitably, some of them remember it to this day. Happily their village is far removed from the dangerous neighbourhood of the whites; I sent a man last spring to it, who understands the woods extremely well, and who speaks their language; he is just returned, after several weeks absence, and has brought me, as I had flattered myself, a string of thirty purple wampum, as a token that their honest chief will spare us half of his wigwam until we have time to erect one. He has sent me word that they have land in plenty, of which they are not so covetous as the whites; that we may plant for ourselves, and that in the meantime he will procure for us some corn and some meat; that fish is plenty in the waters of ———, and that the village to which he had laid open my proposals, have no objection to our becoming dwellers with them. I have not yet communicated these glad tidings to my wife, nor do I know how to do it; I tremble lest she refuse to follow me; lest the sudden idea of this removal rushing on her mind, might be too powerful. I flatter myself I shall be able to accomplish it, and to prevail on her; I fear nothing but the effects of her strong attachment to her relations. I will willingly let you know how I purpose to remove my family to so great a distance, but it would become unintelligible to you, because you are not acquainted with the geographical situation of this part of the country. Suffice it for you to know, that with about twenty-three miles land carriage, I am enabled to perform the rest by water; and when once afloat, I care not whether it be two or three hundred miles. I propose to send all our provisions, furniture, and clothes to my wife's father, who approves of the scheme, and to reserve nothing but a few necessary articles of covering; trusting to the furs of the chase for our future apparel. Were we imprudently to encumber ourselves too much

with baggage, we should never reach to the waters of ———, which is the most dangerous as well as the most difficult part of our journey; and yet but a trifle in point of distance. I intend to say to my negroes—In the name of God, be free, my honest lads, I thank you for your past services; go, from henceforth, and work for yourselves, look on me as your friend, and fellow labourer; be sober, frugal, and industrious, and you need not fear earning a comfortable subsistence.—Lest my countrymen should think that I am gone to join the incendiaries of our frontiers, I intend to write a letter to Mr. ———, to inform him of our retreat, and of the reasons that have urged me to it. The man whom I sent to ——— village, is to accompany us also, and a very useful companion he will be on every account.

You may therefore, by means of anticipation, behold me under the Wigwam; I am so well acquainted with the principal manners of these people, that I entertain not the least apprehension from them. I rely more securely on their strong hospitality, than on the witnessed compacts of many Europeans. As soon as possible after my arrival, I design to build myself a wigwam, after the same manner and size with the rest, in order to avoid being thought singular, or giving occasion for any raileries; though these people are seldom guilty of such European follies. I shall erect it hard by the lands which they propose to allot me, and will endeavour that my wife, my children, and myself may be adopted soon after our arrival. Thus becoming truly inhabitants of their village, we shall immediately occupy that rank within the pale of their society, which will afford us all the amends we can possibly expect for the loss we have met with by the convulsions of our own. According to their customs we shall likewise receive names from them, by which we shall always be known. My youngest children shall learn to swim, and to shoot with the bow, that they may acquire such talents as will necessarily raise them into some de-

gree of esteem among the Indian lads of their own age; the rest of us must hunt with the hunters. I have been for several years an expert marksman; but I dread lest the imperceptible charm of Indian education, may seize my younger children, and give them such a propensity to that mode of life, as may preclude their returning to the manners and customs of their parents. I have but one remedy to prevent this great evil; and that is, to employ them in the labour of the fields as much as I can; I am even resolved to make their daily subsistence depend altogether on it. As long as we keep ourselves busy in tilling the earth, there is no fear of any of us becoming wild; it is the chase and food it procures, that have this strange effect. Excuse a simile—those hogs which range in the woods, and to whom grain is given once a week, preserve their former degree of tameness; but if, on the contrary, they are reduced to live on ground nuts, and on what they can get, they soon become wild and fierce. For my part, I can plough, sow, and hunt, as occasion may require; but my wife, deprived of wool and flax, will have no room for industry; what is she then to do? Like the other squaws, she must cook for us the *nasaump*, the *ninchickè*, and such other preparations of corn as are customary among these people. She must learn to bake squashes and pumpkins under the ashes; to slice and smoke the meat of our own killing, in order to preserve it; she must cheerfully adopt the manners and customs of her neighbours, in their dress, deportment, conduct, and internal economy, in all respects. Surely if we can have fortitude enough to quit all we have, to remove so far, and to associate with people so different from us; these necessary compliances are but part of the scheme. The change of garments, when those they

carry with them are worn out, will not be the least of my wife's and daughter's concerns: though I am in hopes that self-love will invent some sort of reparation. Perhaps you would not believe that there are in the woods looking-glasses, and pant of every colour; and that the inhabitants take as much pains to adorn their faces and their bodies, to fix their bracelets of silver, and plait their hair, as our forefathers the *Picts* used to do in the time of the Romans. Not that I would wish to see either my wife or daughter adopt those savage customs; we can live in great peace and harmony with them without descending to every article; the interruption of trade hath, I hope, suspended this mode of dress. My wife understands inoculation perfectly well, she inoculated all our children one after another, and has successfully performed the operation on several scores of people, who, scattered here and there through our woods, were too far removed from all medical assistance. If we can persuade but one family to submit to it, and it succeeds, we shall then be as happy as our situation will admit of; it will raise her into some degree of consideration, for whoever is useful in any society will always be respected. If we are so fortunate as to carry one family through a disorder, which is the plague among these people, I trust to the force of example, we shall then become truly necessary, valued, and beloved; we indeed owe every kind office to a society of men who so readily offer to assist us into their social partnership, and to extend to my family the shelter of their village, the strength of their adoption, and even the dignity of their names. God grant us a prosperous beginning, we may then hope to be of more service to them than even missionaries who have been sent to preach to them a Gospel they cannot understand . . .

1752 ~ *Philip Freneau* ~ 1832

OF FRENCH Huguenot parentage, Philip Freneau was born in New York, January 2, 1752. When he was ten years old, his family moved to his grandfather's thousand-acre estate in New Jersey. Before his graduation at Princeton in 1771, he had already achieved distinction as a poet and with H. H. Brackenridge composed the commencement poem, "The Rising Glory of America." After teaching school for a while on Long Island, Freneau wrote voluminously as a propagandist for the Revolution and was at various times a sea-captain, a postal employee, a newspaper editor in New York and Philadelphia, and a translator in Jefferson's Department of State. Returning to the family's New Jersey estate in 1793, he devoted his time to writing for American periodicals. Between 1797 and 1798 he was editor of one of the most interesting literary magazines of the period, *The Time-Piece and Literary Companion*, published in New York. Because of poverty he had to return to work as a master of coast-line freight ships between 1803 and 1807. In 1815 his home burned and, without adequate resources, he moved to the adjacent town in Freehold, New Jersey. He was frozen to death December 18, 1832, in a snow-storm.

[During his lifetime, collections of his poetry were published in 1786, 1788, 1795, 1809, and 1815. For both of the following poems, the text of the 1809 edition has been used. See other poems by Freneau in Book I, Parts 1 and 2.]

DISCOVERY

[1786 (written 1772)]

SIX thousand years in these dull regions
pass'd
'Tis time, you'll say, we knew their bounds
at last,
Knew to what skies our setting suns retire,
And where the wintry suns expend their
fire;
What land to land protracts the varied
scene, 5
And what extended oceans roll between;
What worlds exist beneath *antarctic* skies,
And from *Pacific* waves what verdant
islands rise.
In vain did Nature shore from shore
divide:
Art formed a passage and her waves
defied: 10
When his bold plan the master pilot drew

Dissevered worlds stept forward at the
view,
And lessening still the intervening space,
Disclosed new millions of the human race.
Proud even of toil, succeeding ages
joined 15
New seas to vanquish, and new worlds to
find;
Age following age still farther from the
shore,
Found some new wonder that was hid
before,
'Till launched at length, with avarice
doubly bold,
Their hearts expanding as the world grew
old, 20
Some to be rich, and some to be renowned,
The earth they rifled, and explored it
round.
Ambitious Europe! polished in thy pride,
Thine was the art that toil to toil allied,

Thine was the gift, to trace each heavenly
 sphere, 25
 And seize its beams, to serve ambition
 here:
 Hence, fierce *Pizarro* stock'd a world with
 graves,
 Hence *Montezuma* left a race of slaves—
 Which project suited best with heaven's
 decree
 To force new doctrines, or to leave them
 free?— 30
 Religion only feigned to claim a share,
 Their riches, not their souls, employed
 your care—
 Alas! how few of all that daring train
 That seek new worlds embosomed in the
 main,
 How few have sailed on virtue's nobler
 plan, 35
 How few with motives worthy of a man!—
 While through the deep-sea waves we saw
 them go
 Where'er they found a *man* they made a
 foe;
 Superior only by superior art,
 Forgot the social virtues of the heart, 40
 Forgetting still, where'er they madly ran,
 That sacred friendship binds mankind to
 man,
 Fond of exerting power untimely shewn,
 The momentary triumph all their own!
 Met on the wrecks and ravages of time, 45
 They left no native master of their clime,
 His trees, his towns, with hardened front
 they claimed,
 Seized every region that a despot named
 And forced the oath that bound him to
 obey
 Some prince unknown, ten thousand miles
 away. 50
 Slaves to their passions, man's imperious
 race,
 Born for contention, find no resting place,
 And the vain mind, bewildered and per-
 plext,
 Makes this world wretched to enjoy the
 next.
 Tired of the scenes that Nature made
 their own, 55

They rove to conquer what remains un-
 known:
 Avarice, undaunted, claims whate'er she
 sees,
 Surmounts earth's circle, and foregoes all
 ease,
 Religion, bolder, sends some *sacred* chief
 To bend the nations to her own belief. 60
 To their vain standard Europe's sons
 invite,
 Who hold no other *world* can think aright.
 Behold their varied tribes, with self ap-
 plause,
First in religion, liberty, and laws,
 And while they bow to cruelty and blood, 65
 Condemn the Indian with his milder god—
 Ah, race to justice, truth, and honour blind,
 Are thy convictions to convert mankind—!
 Vain pride—convince them that your own
 are just,
 Or leave them happy, as you found them
 first. 70
 What charm is seen through Europe's
 realms of strife
 That adds new blessings to the savage
 life?—
 On them warm suns with equal splendour
 shine,
 Their each domestic pleasure equals thine,
 Their native groves as soft a bloom dis-
 play, 75
 As self-contented roll their lives away,
 And the gay soul, in fancy's visions blest,
 Leaves to the care of chance her heaven
 of rest.—
 What are the arts that rise on Europe's
 plan
 But arts destructive to the bliss of man? 80
 What are all wars, wher'er the marks you
 trace,
 But the sad records of our world's dis-
 grace?
 Reason degraded from her tottering throne,
 And precepts, called divine, observed by
 none.
 Blest in their distance from that bloody
 scene, 85
 Why spread the sail to pass the gulphs
 between?—

If winds can waft to ocean's utmost verge,
And there new islands and new worlds
emerge—

If wealth, or war, or science bid thee
roam,

Ah, leave religion and thy laws at home, 90
Leave the free native to enjoy his store,
Nor teach destructive arts, unknown be-
fore—

Woes of their own those new found worlds
invade,

There, too, fierce passions the weak soul
degrade,

Invention there has winged the unerring
dart, 95

There the swift arrow vibrates to the
heart,

Revenge and death contending bosoms
share,

And pining envy claims her subjects
there.—

Are these too few?—then see despotic
power

Spends on a throne of logs her busy
hour. 100

Hard by, and half ambitious to ascend,
Priests, interceding with the gods, attend—

Atoning victims at their shrines they lay,
Their crimson knives tremendous rites dis-
play,

Or the proud despot's gore remorseless
shed, 105

Through life detested, or adored when dead.
Born to be wretched, search this globe

around,
Dupes to a few the race of man is found!

Seek some new world in some new climate
plac'd,

Some gay *Ta-ia*¹ on the watery waste, 110
Though Nature clothes in all her bright

array,
Some proud tormentor steals her charms

away:
Howe'er she smiles beneath those milder

skies,
Though men decay the monarch never dies!

Howe'er the groves, howe'er the gardens
bloom, 115

A monarch and a priest is still their doom!

THE INDIAN BURYING GROUND [1788]

In spite of all the learned have said,
I still my old opinion keep;
The *posture*, that *we* give the dead,
Points out the soul's eternal sleep.

Not so the ancients of these lands— 5
The Indian, when from life released,
Again is seated with his friends,
And shares again the joyous feast.²

His imaged birds, and painted bowl,
And venison, for a journey dressed, 10
Bespeak the nature of the soul,
Activity, that knows no rest.

His bow, for action ready bent,
And arrows, with a head of stone,
Can only mean that life is spent, 15
And not the old ideas gone.

Thou, stranger, that shalt come this way,
No fraud upon the dead commit—
Observe the swelling turf, and say
They do not *lie*, but here they *sit*. 20

Here still a lofty rock remains,
On which the curious eye may trace
(Now wasted, half, by wearing rains)
The fancies of a ruder race.

Here still an aged elm aspires, 25
Beneath whose far-projecting shade
(And which the shepherd still admires)
The children of the forest played!

There oft a restless Indian queen
(Pale *Shebah*, with her braided hair) 30
And many a barbarous form is seen
To chide the man that lingers there.

¹ A reference to Otaheite, an island in the Southern Pacific.

² A reference to some Indians' custom of burying their dead in a sitting posture.

By midnight moons, o'er moistening dews,	And long shall timorous fancy see	
In habit for the chase arrayed,	The painted chief, and pointed spear,	
The hunter still the deer pursues,	And Reason's self shall bow the knee	35
The hunter and the deer, a shade'	To shadows and delusions here.	40

1739 ~ *William Bartram* ~ 1823

WILLIAM BARTRAM was a Philadelphia Quaker and the son of the botanist, John Bartram. Accompanying his father upon scientific explorations, he became intensely interested in all forms of natural history, traveled extensively on his own account, and kept a journal, which was first published in Philadelphia in 1791 under the title, *Travels through North and South Carolina, Georgia, East and West Florida*. This book had a wide European circulation, attracting the excited attention of Coleridge, Wordsworth, Lamb, Southey, and Chateaubriand. Among American travelers of the 18th Century, Bartram most strikingly combined the artist's interest in colorful descriptive detail, the humanitarian's love for all phases of God's creation, and the scientist's flair for factual accuracy and orderly classification in recording his impressions of plants, animals, Indians, and landscape.

[The title of the following selection has been supplied by the present editors.]

OF SNAKES
[1791]

BUT LET us again resume the subject of the rattle snake; a wonderful creature, when we consider his form, nature, and disposition. It is certain that he is capable by a puncture or scratch of one of his fangs, not only to kill the largest animal in America, and that in a few minutes time, but to turn the whole body into corruption; but such is the nature of this dreadful reptile, that he is never known to strike until he is first assaulted or fears himself in danger, and even then always gives the earliest warning by the rattles at the extremity of the tail. I have in the course of my travels in the Southern states (where they are the largest, most numerous and supposed to be the most venomous and vindictive) stepped unknowingly so close as almost to touch one of them with my

feet, and when I perceived him he was already drawn up in circular coils ready for a blow. But, however incredible it may appear, the generous, I may say magnanimous creature lay as still and motionless as if inanimate, his head crouched in, his eyes almost shut. I precipitately withdrew, unless when I have been so shocked with surprise and horror as to be in a manner riveted to the spot, for a short time not having strength to go away; when he often slowly extends himself and quietly moves off in a direct line, unless pursued, when he erects his tail as far as the rattles extend, and gives the warning alarm by intervals. But if you pursue and overtake him with a shew of enmity, he instantly throws himself into the spiral coil; his tail by the rapidity of its motion appears like a vapour, making a quick tremulous sound; his whole body swells through rage, continually rising and fall-

ing as a bellows; his beautiful parti-coloured skin becomes speckled and rough by dilatation; his head and neck are flattened, his cheeks swollen and his lips constricted, discovering his mortal fangs; his eyes red as burning coals, and his brandishing forked tongue of the colour of the hottest flame, continually menaces death and destruction, yet never strikes unless sure of his mark.

The rattle snake is the largest serpent yet known to exist in North America. I have heard of their having been seen formerly, at the first settling of Georgia, seven, eight, and even ten feet in length, and six or eight inches diameter, but there are none of that size now to be seen; yet I have seen them above six feet in length, and above six inches in thickness, or as large as a man's leg; but their general size is four, five, and six feet in length. They are supposed to have the power of fascination in an eminent degree, so as to inthral their prey. It is generally believed that they charm birds, rabbits, squirrels and other animals, and by steadfastly looking at them possess them with infatuation: be the cause what it may, the miserable creatures undoubtedly strive by every possible means to escape, but alas! their endeavours are in vain, they at last lose the power of resistance, and flutter or move slowly, but reluctantly, towards the yawning jaws of their devourers, and creep into their mouths, or lie down and suffer themselves to be taken and swallowed.

Since, within the circle of my acquaintance, I am known to be an advocate or vindicator of the benevolent and peaceable disposition of animal creation in general, not only towards mankind, whom they seem to venerate, but always towards one another, except where hunger or the rational and necessary provocations of the sensual appetite interfere, I shall mention a few instances, amongst many, which I have had an opportunity of remarking during my travels, particularly with regard to the animal I have been treating of. I shall strictly confine myself to facts.

When on the sea coast of Georgia, I consented, with a few friends, to make a party of amusement at fishing and fowling on the Sapello, one of the sea coast islands. We accordingly descended the Alatamaha, crossed the sound and landed on the North end of the island, near the inlet, fixing our encampment at a pleasant situation, under the shade of a grove of Live Oaks, and Laurels,¹ on the high banks of a creek which we ascended, winding through a salt marsh, which had its source from a swamp and savanna in the island: our situation elevated and open, commanded a comprehensive landscape; the great ocean, the foaming surf breaking on the sandy beach, the snowy breakers on the bar, the endless chain of islands, checkered sound and high continent all appearing before us. The diverting toils of the day were not fruitless, affording us opportunities of furnishing ourselves plentifully with a variety of game, fish and oysters for our supper.

About two hundred yards from our camp was a cool spring, amidst a grove of the odoriferous Myrica: the winding path to this salubrious fountain led through a grassy savanna. I visited the spring several times in the night, but little did I know, or any of my careless drowsy companions, that every time we visited the fountain we were in imminent danger, as I am going to relate. Early in the morning, excited by unconquerable thirst, I arose and went to the spring; and having, thoughtless of harm or danger, nearly half past the dewy vale, along the serpentine foot-path, my hasty steps were suddenly stopped by the sight of a hideous serpent, the formidable rattle snake, in a high spiral coil, forming a circular mound half the height of my knees, within six inches of the narrow path. As soon as I recovered my senses and strength from so sudden a surprise, I started back out of his reach, where I stood to view him: he lay quiet

¹ *Magnolia grandiflora*, called by the inhabitants the Laurel.—Bartram's note.

whilst I surveyed him, appearing no way surprised or disturbed, but kept his half-shut eyes fixed on me. My imagination and spirits were in a tumult, almost equally divided betwixt thanksgiving to the supreme Creator and Preserver, and the dignified nature of the generous though terrible creature, who had suffered us all to pass many times by him during the night, without injuring us in the least, although we must have touched him, or our steps guided therefrom by a supreme guardian spirit. I hastened back to acquaint my associates, but with a determination to protect the life of the generous serpent. I presently brought my companions to the place, who were, beyond expression, surprised and terrified at the sight of the animal, and in a moment acknowledged their escape from destruction to be miraculous; and I am proud to assert, that all of us, except one person, agreed to let him lie undisturbed, and that person was at length prevailed upon to suffer him to escape.

Again, when in my youth, attending my father on a journey to the Catskill Mountains, in the government of New-York; having nearly ascended the peak of Giliad, being youthful and vigorous in the pursuit of botanical and novel objects, I had gained the summit of a steep rocky precipice, ahead of our guide; when just entering a shady vale, I saw, at the root of a small shrub, a singular and beautiful appearance, which I remember to have instantly apprehended to be a large kind of Fungus which we call Jews ears, and was just drawing back my foot to kick it over; when at the instant, my father being near, cried out, "A rattle snake, my son!" and jerked me back, which probably saved my life. I had never before seen one. This was of the kind which our guide called a yellow one, it was very beautiful, speckled and clouded. My father pleaded for his life, but our guide was inexorable, saying he never spared the life of a rattle snake, and killed him; my father took his skin and fangs.

Some years after this, when again in company with my father on a journey into East Florida, on the banks of St. Juan, at Fort Picolata, attending the congress at a treaty between that government and the Creek Nation, for obtaining a territory from that people to annex to the new government; after the Indians and a detachment from the garrison of St. Augustine had arrived and encamped separately, near the fort, some days elapsed before the business of the treaty came on, waiting the arrival of a vessel from St. Augustine, on board of which were the presents for the Indians. My father employed this time of leisure in little excursions round about the fort; and one morning, being the day the treaty commenced, I attended him on a botanical excursion. Some time after we had been rambling in a swamp about a quarter of a mile from the camp, I being ahead a few paces, my father bid me observe the rattle snake before and just at my feet. I stopped and saw the monster formed in a high spiral coil, not half his length from my feet: another step forward would have put my life in his power, as I must have touched if not stumbled over him. The fright and perturbation of my spirits at once excited resentment; at that time I was entirely insensible to gratitude or mercy. I instantly cut off a little sapling, and soon dispatched him: this serpent was about six feet in length, and as thick as an ordinary man's leg. The encounter deterred us from proceeding on our researches for that day. So I cut off a long tough wither or vine, which fastening round the neck of the slain serpent, I dragged him after me, his scaly body sounding over the ground, and entering the camp with him in triumph, was soon surrounded by the amazed multitude, both Indians and my countrymen. The adventure soon reached the ears of the commander, who sent an officer to request that, if the snake had not bit himself, he might have him served up for his dinner. I readily delivered up the body of the snake to the cooks, and being that

day invited to dine at the governor's table, saw the snake served up in several dishes; governor Grant being fond of the flesh of the rattle snake. I tasted of it, but could not swallow it. I, however, was sorry after killing the serpent, when coolly recollecting every circumstance. He certainly had it in his power to kill me almost instantly, and I make no doubt but that he was conscious of it. I promised myself that I would never again be accessory to the death of a rattle snake, which promise I have invariably kept to. This dreaded animal is easily killed; a stick no thicker than a man's thumb is sufficient to kill the largest at one stroke, if well directed, either on the head or across the back; nor can they make their escape by running off, nor indeed do they attempt it when attacked.

The moccasin snake is a large and horrid serpent to all appearance, and there are very terrifying stories related of him by the inhabitants of the Southern states, where they greatly abound, particularly in East Florida; that their bite is always incurable, the flesh for a considerable space about the wound rotting to the bone, which then becomes carious and a general mortification ensues, which infallibly destroys the patient; the members of the body rotting and dying by piecemeal: and that there is no remedy to prevent a lingering miserable death but by immediately cutting away the flesh to the bone, for some distance around about the wound. In shape and proportion of parts they much resemble the rattle snake, and are marked or clouded much after the same manner, but the colours more dull and obscure; and in their disposition seem to agree with that dreadful reptile, being slow of progression, and throwing themselves in a spiral coil ready for a blow when attacked. They have one peculiar quality, which is this, when discovered, and observing their enemy to take notice of them, after throwing themselves in a coil, they gradually raise their upper mandible or jaw until it falls back nearly touching

their neck, at the same time slowly vibrating their long purple forked tongue, their crooked poisonous fangs directed right at you, which gives the creature a most terrifying appearance. They are from three to four and even five feet in length, and as thick as a man's leg; they are not numerous, yet too common, and a sufficient terror to the miserable naked slaves, who are compelled to labour in the swamps and low lands where only they abound.

I never could find any that knew an instance of any person's losing their life from the bite of them only by hearsay. Yet I am convinced it is highly prudent for every person to be on their guard against them. They appear to be of the viper tribe, from their swelling of their body, and flattening their neck when provoked, and from their large poisonous fangs: their head, mouth and eyes are remarkably large.

There is another snake in Carolina and Florida called the moccasin, very different from this; which is a very beautiful creature, and I believe not of a destructive or vindictive nature. These when grown to their greatest size are about five feet in length, and near as thick as a man's arm; their skin scaly but smooth and shining, of a pale grey and sky colour ground, uniformly marked with transverse undulatory ringlets or blotches of a deep nut brown, edged with red or bright Spanish brown. They appear innocent, very active and swift, endeavouring to escape from one; they have no poisonous fangs. These are seen in high forest lands, about rotten logs or decayed fallen limbs of trees, and they harbour about old log buildings. They seem to be a species, if not the very same snake, which in Pennsylvania and Virginia is called the wampum snake; but here in warmer Southern climes they grow to a much larger size, and from the same accident their colour may be more variable and deeper. They are by the inhabitants asserted to be dangerously venomous, their bite incurable, &c. But as I could never learn an instance of their bite being mortal,

or attended with any dangerous consequence, and have had frequent opportunities of observing their nature and disposition, I am inclined to pronounce them an innocent creature, with respect to mankind.

The bastard rattle snake, by some called ground rattle snake, is a dangerous little creature: their bite is certainly mortal if present medical relief is not administered: they seem to be much of the nature of the asp or adder of the old world.

This little viper is in form and colour much like the rattle snake, but not so bright and uniformly marked; their head is broader and shorter in proportion to the other parts of their body: their nose prominent and turned upwards: their tail becomes suddenly small from the vent to the extremity, which terminates with three minute articulations, resembling rattles: when irritated they turn up their tail, which vibrates so quick as to appear like a mist or vapour, but causes little or no sound or noise; yet it is the common report of the inhabitants, that they cause that remarkable vehement noise, so frequently observed in forests in the heat of summer and autumn, very terrifying to strangers, which is, probably, caused by a very sable small insect of the genus cicadae, or which are called locusts in America; yet it is possible I may be mistaken in this conjecture. This dangerous viper is from eight to ten inches in length, and of proportionable thickness. They are spiteful, snippish creatures; and throwing themselves into a little coil, they swell and flatten themselves, continually darting out their head; and they seem capable of springing beyond their length. They seem destitute of the pacific disposition and magnanimity of the rattle snake, and are unworthy of an alliance with him. No man ever saves their lives, yet they remain too numerous, even in the oldest settled parts of the country.

The green snake is a beautiful innocent creature: they are from two to three feet in length, but not so thick as a person's

little finger; of the finest green colour. They are very abundant, commonly seen on the limbs of trees and shrubs; they prey upon insects and reptiles, particularly the little green chameleon: and the forked tailed hawk or kite feeds on both of them, snatching them off the boughs of the trees.

The ribband snake is another very beautiful innocent serpent. they are eighteen inches in length, and about the thickness of a man's little finger, the head is very small; the ground colour of a full, clear vermilion, variegated with transverse bars or zones of a dark brown, which people fancy represents a ribband wound round the creature's body: they are altogether inoffensive to man, and are in a manner domestic, frequenting old wooden buildings, open grounds and plantations.

The chicken snake is a large, strong and swift serpent, six or seven feet in length, but scarcely so thick as a man's wrist; they are of a cinereous, earthy colour, and striped longitudinally with broad lines or lists, of a dusky or blackish colour. They are a domestic snake, haunting about houses and plantations; and would be useful to man if tamed and properly tutored, being great devourers of rats, but they are apt to disturb hen-roosts and prey upon chickens. They are as innocent as a worm with respect to venom, are easily tamed, and soon become very familiar.

The pine or bull snake is very large and inoffensive with respect to mankind, but devours squirrels, birds, rabbits, and every other creature it can take as food. They are the largest snake yet known in North America, except the rattle snake, and perhaps exceed him in length: they are pied black and white: they utter a terrible loud hissing noise, sounding very hollow and like distant thunder, when irritated, or at the time of incubation, when the males contend with each other for the desired female. These serpents are also called horn snakes, from their tail terminating with a hard, horny spur, which they vibrate very quick when disturbed, but they never attempt to strike with it: they have dens in the earth, whither

they retreat precipitately when apprehensive of danger.

There are many other species of snakes in the regions of Florida and Carolina;

as the water snake, black snake, garter snake, copper belly, ring neck, and two or three varieties of vipers, besides those already noticed in my journal.

1762 ~ Mrs. Susanna Haswell Rowson ~ 1824

WHEN the belletristic impulse manifested itself markedly in American writing, themes which had been recurrent in the earlier literature of exploration, settlement, and travel persisted in poetry, fiction, and drama, especially the theme of the relations between the colonists and the Indians. Mrs. Susanna Haswell Rowson's *Reuben and Rachel; or, Tales of Old Times*, Boston, 1798, which helped prepare the way for the vogue of historical romance in the time of Cooper, Simms, and John Neal, is a "novel" which sweeps through ten generations from the period of Columbus to the early 18th Century and displays a disregard for historical accuracy that outdoes that of the most fancy-free cloak-and-sword or cut-and-thrust romancers of a later day. Mrs. Rowson's right to be called an American novelist may be fairly disputed, but must ultimately be allowed.

She was born in Portsmouth, England, in 1762; accompanied her father, Lieutenant Haswell of the British Army, to Boston in 1769; lived for some time at Nantasket; after the Haswells were deported in 1777, returned to her native country, married William Rowson, and became a novelist and an actress. Her career as actress brought her to Philadelphia in 1793 and later to Boston, where, after retiring from the stage in 1798, she was mistress of a girls' school of high and reputable standing. She died in Boston in 1824.

Most of Mrs. Rowson's novels—both those written in England and those written in America—are of the school of sensibility, such as *Charlotte; a Tale of Truth*, London, 1791, later an American best seller under the title of *Charlotte Temple*; *Trials of the Human Heart*, Philadelphia, 1795; *Sarah; or, The Exemplary Wife*, first appearing under the title of *Sincerity* in the *Boston Weekly Magazine* during 1803-1804; and *Charlotte's Daughter; or, The Three Orphans*, Boston, 1828, a sequel to *Charlotte Temple*.

[The following selections from *Reuben and Rachel* are all from Vol. I and consist of a part of Chap. XVI, all of Chap. XVIII, and a part of Chap. XIX. The text has been modernized from that of the first edition; the title has been supplied by the present editors to suggest that these selections form a complete and unified short-story in themselves. The elder Dudley, father of the family that suffers a fate in some respects comparable to but far more romantic than that of the Rowlandsons during King Philip's War, is represented as a grandson

of the important historical figure, Sir Ferdinando Gorges, colonization promoter, who is elaborately characterized in an earlier chapter of the novel. These selections are particularly remarkable for their humanization of the Indian.]

THE WHITE SACHEM

[1798]

I

THE morning was fine. Cheerful had Arrabella arose, and, surrounded by her little family, joined with their father in their morning adorations to the Giver of all good. This indispensable duty performed, Dudley went to superintend his mowers; and his wife, calling her girls, to the number of five, together, began the usual task of instruction. But the little Rachel was not inclined to be quiet, she was more inclined for play than sitting still. She climbed up in her mother's lap, kissed her, and in childish sport threw the book on the floor.

"It is impossible to attend seriously to anything," said her mother, "whilst this little mad-cap is here. Do, William, take her into the garden." William obeyed, and from the garden strayed into an adjoining wood, where, intent on a book which his father had desired him to peruse with attention, he suffered the little prattler to play round, pluck flowers, and catch grasshoppers.

Arrabella was pursuing her employment, with all the delight a fond mother can feel, who marks the daily improvement of her children, and sees them eagerly striving who should foremost reach the goal of perfection, when an old servant, the only male then about the house, rushed into the apartment, exclaiming, with looks of horror, "The natives! The natives!" Starting from her seat with precipitation, she turned towards the window, and saw a band of savages crossing through a field of corn, not very far from the house. "Fly! fly! my children," she cried, taking the two youngest by the hand; and followed by the eldest, they rushed out of a door that led a con-

trary way to the road the savages were coming.

There was in the very wood where William had wandered with his infant sister a cavern formed by the cunning hand of nature, the recesses of which Arrabella had in days of happiness frequently explored. Her presence of mind in this terrifying exigence did not forsake her. With hasty, yet trembling steps, she led her children thither; nor was it till resting on the ground in its remotest winding, when she felt her five children hanging about her, that she recollected William and Rachel.

"Oh, my children, my children!" exclaimed she, suddenly starting up. "We are all here, mother," they answered with united voices.

"But where! Oh where!" cried she frantically, "is your brother William, and your sister Rachel?" "Oh! my poor brother, my dear, sweet little sister," said the children severally; "Let us go back, mother, let us go back and look for them."

"No, my darlings, no!" she replied, sinking again on the ground, and drawing them closer towards her; "that would indeed be to suffer you to run into the very claws of the destroyer. The great God of heaven and earth inspired me with the thought of bringing you here for safety, he will, I trust, protect us; and his power to protect and save, even from the jaws of death, is equal throughout this wide-extended universe. He can guard all your brothers, your sister, and your father too. Let us kneel, my children, and implore his mercy."

At the mention of their father, and the recollection of their brothers, Charles, James, and Christopher, who were in the field with him, the girls wept aloud. Arrabella poured forth her soul in fervent prayer, and the kneeling innocents, in broken accents, sobbed *amen*.

The female servants, terrified at the ap-

proach of the savages, in their eagerness to elude them ran directly into their power, and instantly became victims to their fury. They dispatched them with their tomahawks, and, stripping off their scalps, kept them as proofs of their endeavors to extirpate the English from amongst them. The man who had alarmed his mistress ran out of the house by the same way she had taken; but thinking it would be right to alarm his master, instead of following her, made the best of his way to the field where the mowers were at work.

The savages, having rifled the house of provisions, wearing apparel, and everything which they conceived would be any ways serviceable to themselves, set fire to it, and then departed, with horrid yells of exultation at having done all the mischief in their power to an English family. William was, at the moment the flames burst forth, just returning with his little sister. His father's house on fire, and a band of Indians in frantic rage hastening towards them, was a sight that filled with the most horrid presages the breast of William. He saw there would be no way to escape them; so, clasping the infant Rachel in his arms, he knelt on the ground, fear almost suspending every faculty.

One of the foremost of the savage troop had raised his tomahawk to dispatch the boy; but the child, with one arm clinging to her brother's neck, extended the other little innocent hand as if to ward off the blow, and screaming, cried, "Don'tee, don'tee." At that moment a squaw, who held a papoose at her breast, threw herself before the suppliant children, and said in their own language, "You shall not kill the infant."

The attempt seemed to have been the impulse of the moment, for it required but little persuasion to turn the Indian from his purpose; he dropped the instrument of death; William started from the ground, ran to the kind-hearted woman, kissed her hands, bathed them with his tears, and pointing to the sky, gave her to understand that the Power who dwelt above that

azure firmament would reward her. Her own infant being returned to her back (the mode in which the Indian women in general carry their children), she took Rachel in her arms, and William being made to assist in carrying their plunder, they proceeded on their march. a weary march it was to the poor little captives.

Otawee, for that was the name of their protectress, did all she could to make little Rachel easy, but she continued at intervals to cry for her mother, and William, his feet lacerated by the sharp flints and thorns he encountered in the rugged paths through which he was obliged to pass, his heart bleeding for what he thought must have been the fate of his beloved parents, brothers, and sisters, proceeded as well as he could till towards the evening of the second day, when, overcome with fatigue, grief, and long fasting (for he could not eat the food they offered him), he fell fainting to the earth. Fortunately they were now near the end of their march, or it is more than probable the unfortunate boy would have been left to perish in the woods. As it was, two young Indians bore him between them to the water-side, put him in a canoe, and Otawee sitting down beside him, threw water on his face, raised his head on her knee, and forcing him to swallow a little spirits, he by degrees recovered.

This party of plunderers were natives of Narhaganset. Two or three unprincipled and licentious Europeans having made incursions amongst them, plundering their little settlements, burning their wigwams, and practicing other enormities, as must certainly awaken a spirit of revenge in the bosom of persons better regulated than those of untutored savages, several families who had been particularly injured formed themselves into a party, and, embarking in their canoes, proceeded up Connecticut river, landing wherever they thought there was no fear of opposition to them, and wreaking their vengeance on the unguarded and innocent inhabitants.

Dudley had, from his first settlement,

been a man of *peace*; happy in his family, fully employed in cultivating and improving his little domain, he stepped not out of his own domestic concerns, except it was to assist a neighbor (for any European family, settled within twenty miles, was at that early period termed a neighbor) or to instruct a new settler in the best mode of clearing his lands. to which instructions he ever readily added any help his servants, horses, oxen, or even himself could give.

Such a man could hardly be supposed an object of enmity to any; but his habitation had been marked by an Indian who had strayed from his companions. Its lonely situation, its flourishing appearance, which promised plenty of plunder without fear of opposition, determined them to attack it; but when they had committed this outrage on a quiet, inoffensive family, they well knew it would not be long before they were pursued. They accordingly made all the haste they could to the place where they had left their canoes, and, embarking with the plunder they had obtained, proceeded immediately home. On their way thither, meeting with a party who came from the more eastern parts, and, fearful that the young captives they had, might, if seen, betray them to the English, they sold them, and William and Rachel were carried to a greater distance than it could hardly be believed possible for the Indians to proceed in their little birch canoes. When being landed on a very wild and totally uncultivated place, they were marched three days journey from the sea-shore, and presented to the squaw of their sachem for servants.

Otooganoo was a man naturally gentle, fond of peace, and eager in his endeavors to promote the welfare of his people. He had ever recommended to them to treat the strangers who were come to settle amongst them with hospitality; but it was not in his power to restrain the impetuosity of youth, or to curb the licentious hand of the rapacious. When the young captives were brought to his wigwam, he rebuked those who brought them, and bade William

to banish all his fears; for he would be a father to him, and, if ever opportunity offered, restore him to his natural parent. His wife was particularly pleased with little Rachel, and the kindness of these two good Indians rendered the lives of the brother and sister as comfortable as the nature of their situation would admit of . . .

II

In the year 1674 the war between the native Americans and the European settlers raged with uncommon fury. William Dudley, who had, with his little sister, been carried into captivity in 1661, had now become a personage of great consequence amongst them. Otooganoo, the sachem to whom he had been presented, possessing talents naturally good, and thirsting for knowledge, yet unable to attain it, soon learnt, from his conversations with William, that he could in some measure gratify this very laudable desire to be instructed. William, though young, had, by attention to the documents of his father and the milder instructions of his mother, obtained a very decent knowledge of reading, writing, arithmetic, geography, and history.

Otooganoo no sooner made this discovery than William became to him the most valuable thing he possessed. "I will certainly restore him to his European friends," said he, "but he shall first teach me all he knows. In the meantime, I will be kind to him, nor shall his little sister ever want a friend or protector; as soon as he has imparted to me his stock of knowledge, I will certainly send him to his friends."

Thus argued Otooganoo. But, alas! human nature will be human nature; and when the period arrived that he had gleaned all the knowledge poor William had to impart, his heart was so attached to him, his society had afforded him so many days, months, years of real felicity that he made to his own conscience daily fresh excuses for not sending him from him.

William himself, though he frequently

spoke of them, and expressed a wish to see his parents, no longer felt that ardent desire to return to them, which he experienced in the early days of his captivity. He had become insensibly attached to Otooganoo; and as, from the effects of his instructions, his protector had made rapid advances towards civilization, had entirely lost his natural ferocity, and attained such a degree of rational information as made him a pleasant companion, William felt that attachment daily increase.

Otooganoo had a daughter. Oberea was full five years younger than William; she was tall, straight, and finely formed. She was, at the time of his arrival amongst them, a lively girl of ten years old, wild as the reindeer, that with fleet steps bounds over the frozen plains of Lapland, and untutored as it is possible for a human being to be. Her looks, her words, her actions, were the genuine impulses of nature.

As the little Rachel increased in years, it was the employment of her brother's leisure hours to instruct her in the English language in the best manner possible. The book he had with him, on the morning of his capture, was of infinite assistance to him, as by looking at that, he was enabled to form a very tolerable alphabet upon bark, using some of their strong dye instead of ink; and this alphabet served alike Otooganoo, Rachel, and Oberea, who delighted in partaking their lessons and profited daily by his instructions.

Educated under the immediate eye of a woman like Arrabella, it may naturally be supposed William, though young, had imbibed very strong and just ideas of female delicacy and decorum, and these ideas he labored incessantly to impress on the mind of his sister. Oberea listened attentively and treasured every sentence he uttered in her heart. She had heard him tell his sister that his country-women were the most charming women in the world, and Oberea early formed the wish of being thought charming in the eyes of William. This wish was a powerful talisman to correct the bad ef-

fects of habit, and at the age of seventeen, she was so much superior in manner to her uncivilized associates, that William, without being aware of it, adored the lively statue his art had animated.

He was not sensible of the excess of his tenderness for the charming Indian, till an accident, by nearly depriving him of her, convinced him at once how necessary she was to his happiness. Some Indians, who dwelt in the town with them, having by traffic with the Europeans, who inhabited the sea-coasts, procured two or three muskets, one was brought and presented to Otooganoo, who, being mightily pleased with the present, loaded it, with a design of going out in pursuit of game; but not putting his design in immediate execution, it was left standing in one corner of the wigwam. A young savage, particularly attached to Oberea, took it up to examine it, and, not understanding how to handle it properly, touched the trigger. It went off, and the contents were lodged in the right side of Oberea.

William heard the report, and the instant cries of his sister; he flew to them, and, entering, saw both his sister and her he now found he loved equal with her, lying on the ground, which was covered with blood. The young man, frantic at what had happened, told what he had done, and that he feared he had killed both the girls; but Rachel's fall was the effect of sudden surprise, and it was soon discovered she was not in the least hurt. But Oberea wounded, to all appearance dying, was an object distracting to William. He raised her in his arms, called aloud for help, and, having assisted his sister and an old squaw to staunch the blood and bind up the wounds, which were chiefly in the fleshy part of the arm, and having seen her open her eyes and sign to him that she knew him, he walked backwards and forwards, watching her as she dozed, sometimes applying a feather to her mouth to be satisfied she still breathed, and often kneeling down to kiss her hand, which lay motionless on the outside of the bed.

Otooganoo, during the time she was

thought in danger, observed the extreme solicitude of William and, when she was perfectly recovered, thus addressed him: "You have been to me, young Englishman, a friend, a companion, an instructor, now above eight years. I love you with sincerity, and I believe you love me."

"Do you doubt?" asked William eagerly.

"No, I do not for a moment doubt your sincerity. But I have also discovered that you love my daughter. Your counsels and instructions have rendered her unfit to match with any of her own countrymen; you are now almost become one of us; take her, then, to wife; and when age, infirmity, or death shall occasion me to cease from the cares of life, supply my place, govern my people, direct them by your wisdom, teach them the real value of well-constructed laws, encourage them in studying the arts of war; yet lead them, by your example and forbearance, to cultivate a social and commercial intercourse, and to preserve peace with your countrymen, who are become their neighbors, as long as they can preserve it with honor."

William, weaned from his natural friends, tenderly attached to Oberea, perhaps not altogether insensible to the charms of power, and harboring a fond hope that by this union with the family of a sachem he might promote the interests of his countrymen in general, and be the cement to bind them in bonds of lasting amity, listened with delighted attention, plighted his vows of love and constancy to Otooganoo, and in a few days ratified those vows by binding himself, by the most sacred of all ties, to protect and love through life his charming Oberea.

Otooganoo lived to see his son-in-law equally beloved and respected with himself, to embrace a grandson whom William called Reuben: "For," said he, "I have been a bondman and a servant unto my wife's father, and this my first-born shall pay my ransom."

As the old sachem felt his hour approaching, he called his chiefs, and the oldest men of his tribe, about him; and,

taking the little Reuben in his arms, whilst Oberea, William, and Rachel stood on his right hand, thus addressed them:

"Warriors and chiefs, natives and undoubted lords of this vast country, listen to your departing father. I have ruled over you now above forty years; I have ever found you obedient to my commands, and affectionate to my family. But the great Spirit whose throne is on the loftiest mountain and whose breath, passing over the great lake, can make it rage even as the wild tiger, when, suddenly springing from his secret hiding place, he tears and mangles his defenceless prey, or, softly moving over its broad surface, renders it smooth, beautiful, and enticing as is the siren, who charms but to destroy—this wondrous, incomprehensible Spirit, who gave me life and motion, recalls the precious gift, and in a short time I shall be dust."

Otooganoo paused; his whole soul was filled with the sublimity of the Being of whom he had been speaking, and a moment was given to feelings beyond expression exquisite. Recovering the firmness of his voice, he thus proceeded:

"Friends, countrymen, children, had I a son, I well know your unanimous consent would nominate him my successor. Behold, then, the son of my choice, the friend of my soul, the husband of my daughter. He is brave, he is wise, he is humane! alike competent to prosecute war with vigor or preserve peace with honor. He is, you will say, a son of our invaders, of our common enemy. But consider them as enemies no longer. Bury the war-hatchet twenty feet under ground, and smoke the great pipe of peace, whose fragrance may ascend even to the heaven of heavens. Hail these Europeans as brethren, and follow henceforth their precept of doing as you would be done by."

"We will! we will!" they all exclaimed; when Otooganoo thus continued:

"Chiefs, elders, and brother warriors, in recommending to your choice this young man, I mean not to relinquish the affection you have ever shown my family. No. Be-

hold this child, the son of my daughter, in him you see your rightful sachem. But I am passing from this world to the land of spirits, and this infant is incompetent to supply my place. Who then so able, who so worthy as his father, to govern and direct you, and instruct the young sachem how to guard your liberties, and preserve your love inviolate?"

Otooganoo ceased, and an old warrior thus replied: "The offspring of Otooganoo, the son of Oberea, will ever be honored and respected. We are content to receive, during his childhood, the Englishman William, and to adopt the new faith thou hast lately taught and practiced. As the Europeans deal by us, so deal we by them, and the great Spirit judge us both."

Otooganoo survived this conference but a few days; he passed (to use his own expression) to the land of spirits, and William Dudley was chosen sachem in his stead, by the unanimous voice of the whole tribe.

"As the Europeans deal by us, so deal we by them, and the great Spirit judge us both." This was the oath they took, and most religiously did they keep it. But if the professors of Christianity practice not themselves what they would teach to others, who can blame the savage, who (in seeking his own gratification, or promoting his own interest, regards not the happiness or interest of a fellow creature) follows but the example set him?

The new settlers made daily encroachments on the native inhabitants, drove them from their lands, robbed them of their wives, and made their children prisoners. Was it in human nature to bear these injuries tamely? No; they resented them. And even William himself, though his heart bled at what must be the consequence, could not attempt to repel the spirit of just vengeance that actuated the minds of all. War was declared on both sides, and pursued with unremitting fury.

Amongst the young warriors that lived under the government of William was Yankoo. He was intrepid, bold, and daring. He hated the Europeans, yet, spite of that hate

which seemed inherent in his nature, his heart was susceptible of tenderness for one of the race. The beauty of Rachel had penetrated his soul. He loved, revealed his love, and found it was returned.

The war continuing to rage, it became necessary for the sachem in person to quit his home and head his warriors. The undaunted Oberea would follow her husband to the field, and Rachel, though naturally more timid, yet having her nerves newstrung by affection, accompanied her. They encamped near the sea-shore. By the morning's dawn they expected the enemy.

Yankoo passed a few hours the preceding evening in the wigwam of Oberea. "Oh! my friend," said Rachel, as she was parting from him, "be careful of your own life for my sake, and if at any time your tomahawk should be raised against an ancient Englishman, pause for a moment, and think, perhaps it may be the father of Rachel, and let the idea disarm your rage."

"It would do so," replied Yankoo, "did I not at the same time remember that every Englishman is the enemy of my country."

"Would you not spare my father then?" said Rachel.

"No! not even my own father in such a cause," answered the warrior, and broke from her embrace. Rachel retired to her bed and passed the night in tears.

III

The situation or feelings of William Dudley were at this period by no means enviable. Ruler over a nation of savages, who by their attachment and fidelity had conciliated his affection, his principles would by no means suffer him to desert their cause in the hour of danger; yet, remembering that his natural parents were Europeans, and the tenderness he once experienced for them not being extinct in his bosom, he felt his heart divided between two separate interests; and if at any time a skirmish took place, he would think that, perhaps, amongst the killed or wounded of

the enemy he might have to lament a father or a brother. And whilst he was publicly obliged to appear rejoiced at the success of the Indians, he would privately lament the defeat of his own countrymen.

The soul of Rachel was equally agitated. Alas! who can describe the feelings of a heart thus divided? She dared not pray, for to which party could she wish success? "Oh! save, protect, and support my father," she would cry, then in a moment recollecting, she would wring her hands and cry, "Oh! poor Yankoo." It is anguish only to be felt, it is impossible to convey the smallest idea of its excruciating tortures, to any who have not experienced the agonizing effects of divided affection.

The English had been driven to the very borders of the sea; the Indians had pursued them with unremitting fury, ravaging the habitations and giving the unoffending inmates a quick passport to eternal rest with their tomahawks, nor command nor entreaty could restrain their impetuosity.

William had followed a party led by Yankoo to a house situated in a deep wood. As they approached, a cry of terror issued from the dwelling. The heart of William throbbed with anxiety; he quickened his steps and arrived at the door just as Yankoo had dragged forth by his venerable locks a man whom he no sooner beheld than he recognized the features of his father. The arm was raised that was meant to destroy him.

"Hold, monster! barbarian!" exclaimed William, and, throwing himself on the body of his father, received the falling weapon on his own shoulder. It fell heavy, it sunk deep, and the blood issued in a torrent from the wound.

Yankoo recoiled with horror; he beheld his ruler, his friend, and more than those, the brother of Rachel, weltering in gore, wounded even unto death, and by his hand. He knelt upon the ground, he took his hand. "Oh! brave warrior," said he, "why did you throw yourself in my way?" William raised himself and, pointing to old Mr. Dudley, cried, "To save a father."

The old gentleman, in some measure relieved from his fright, endeavored to rise from the earth; but, hearing the expression of father from the lips of one whom he supposed an Indian chief, the truth began to dawn upon his mind. He knelt beside the dying sachem and, taking his hand, looked earnestly in his face, and cried, "Is it indeed possible? are you my son?"

"Your own son William," replied the bleeding warrior.

"But alas!" said the old man, "you are, I fear, mortally wounded."

"And if I am," replied the heroic William, "it is a glorious wound; for I give my life to preserve the life of him from whom I received it."

As he finished these words, he fell back and his eyes closed. The whole party were now assembled round their wounded chief; they raised him from the earth and bore him into his father's cottage, where, confined by infirmity, was the unfortunate, patient Arrabella. She had heard the exclamations of her husband; her heart had not yet become callous to misery. The beholding her long-lost son was double agony, since she but beheld his closing scene. He recovered a moment after they had laid him on the bed, gazed on the countenance of his mother, faintly articulated her name, and his last breath passed in imploring a blessing on her.

The news of their sachem's death, and by whom, soon reached the tribe William had governed, and they repaired to the place of his decease, vowing revenge on his murderer; for in that light they looked upon Yankoo. But when they rushed furiously into the house, intending to wreak their vengeance on him, the mute sorrow depicted on his face, as with his arms folded on his bosom he stood contemplating the mangled form of his departed friend, for a moment disarmed their rage. He saw them enter, and advancing intrepidly towards them,

"Friends, countrymen, and brother warriors," said he, with a firm voice, "that I have incurred your hatred, that your rage is justly excited, is a truth I pretend not to

evade or deny. I have deserved death at your hands, and behold, here I stand prepared to meet it. Strike; I will not flinch; or lead me forth and let me experience the most cruel tortures, I will not complain; nor sigh nor groan shall escape my lips. Alas! if torture could wring them from me, how loud would my lamentations now be! The chief whom we all loved, the man we all revered, is gone to the land of spirits; is gone to that Father, that great First Cause, of whom we have so often heard him speak. He is passed from us, and my hand gave the passport, signing it with his blood."

He paused, and his untamed spirit swelled even to his eyes; but he repelled the tokens of his sensibility, that were almost bursting from the glistening orbits, and struggling for a moment to recover the firmness of his voice, proceeded:

"Thou art gone, brave chief!" (turning as he spoke towards the body of his friend), "thou art gone; and where shall thy equal be found to supply thy place? Thou wert bold and daring as the young lion, and like him, generous and noble, exerted not thy power against the feeble and defenceless. Firm and unshaken in asserting the rights of innocence, as the mountain whose foundation is in the center of the earth and whose top reacheth unto the clouds; yet gentle as the southwest breeze on an evening in the blossom season, and complying as the willow, that inclines its head as the breeze passes. Thy voice was the voice of wisdom. Thy words taught lessons which thy example enforced. But thou art gone! and where shall thy equal be found to supply thy place? Thou wert glorious as the sun at his uprising, mild and beautiful as the beams of the moon, when it dances on the bosom of the lake which the wind gently agitates. In the chase, fleet as the young stag, and the arrow from thy bow never missed its aim. Thou didst speak, and none could refuse to believe; thou didst command, and none but were eager to obey. The bad loved, whilst they feared thee; the good adored, and endeavored to

imitate thee. Under thy wise government we rested in peace, on mats made of osiers; our wigwams were improved, our bows better strung, our corn was multiplied an hundredfold, and our skins dried with more care. In peace thou wert as the dew of the evening, refreshing and invigorating all who lived beneath thy influence; and in war terrible as the tempest that breaks the tall pine, roots up the stubborn oak, and makes the forest tremble, as it rushes with tremendous fury through it. Thy enemies beheld thee, and fear shook their souls; thou wert the father of thy people, Oh! valiant sachem! But thou art gone—by my hand gone! and where shall thy equal be found to supply thy place?"

The numerous affecting images he had called together, whilst speaking the eulogium of the deceased, had now awakened feelings too powerful to be repressed. The afflictions of his heart burst forth in loud lamentations. The rage of his countrymen was totally subdued. They dropped their tomahawks and joined him in piercing cries and groans, repeating at intervals, "Our chief, our warrior, our friend is gone, and who can supply his place?"

Arrabella had not lived so many years in the very bosom of America, at different times obliged to have some kind of intercourse with the natives, without attaining a considerable knowledge of their language. She listened whilst Yankoo was speaking, and, as he enumerated the virtues of her son, she felt that, amongst the tears of regret that fell for his death, were some of exultation that he had deserved such an eulogium, and her heart was consoled.

But who can paint the anguish, the distress of Rachel, or the distraction of Oberea? When they heard the fatal tidings, they sought the body of their husband, brother, chief. But here nor tears nor cries declared their sorrow. When the soul is too full, language is of little use. There are no words capable of expressing real affliction.

Oberea led her son Reuben (now nearly six years old) to the bed on which lay the corpse of his father, and, pointing to the

body, pronounced in a tone deeply mournful, "Behold!"

"My father!" said the boy, and, terrified at his ghastly appearance, clasped his arms round his mother and hid his face in her bosom. She seated herself on the side of the bed, folded her arms round her child, and, resting her head on his shoulder, appeared the mute image of despair.

The feelings of Rachel would have been equally poignant, had they not been directed to another channel. She had, as she entered the apartment, faintly articulated the word *brother*. Arrabella caught the sound, and, calling her daughter by name, Rachel was folded in a moment to her bosom, and in the embrace of a new-found mother felt a relief from her sorrows. Dudley kissed his daughter with tenderness, but the lively affection he had once experienced towards his children was now almost extinct. It had indeed for a moment revived when he heard the voice of William, but the icy finger of death had silenced that voice forever, and the heart of Dudley could no more vibrate with the exquisite delights springing from paternal love.

By the united efforts of Rachel and Arrabella, Oberea was at last aroused from that state of apparent insensibility into which she had fallen. Rachel released her arms from the neck of her child, and drew her gently towards her mother, who soothed, caressed, and called her her dear daughter, the relic of her beloved William.

At the name of William, she started. Arrabella perceived she had awakened her attention, and from her own son made a quick transition to the son of Oberea. She begged her to call forth her fortitude, to exert the faculties of her mind, and as she loved her husband, for his sake, live, to protect and instruct his son.

"I am his mother," said she; "have I not reason to lament the loss of a son so worthy? But that he was worthy is my comfort. Had he not a thousand virtues? and will you not strive to live, to teach his son to emulate his father, to be as good, as great, as wise as he was?"

Oberea cast her eyes on her child, then suddenly covering her face with part of her garments, she wept aloud. The desired end was now attained. Acute sensibility being relieved by the effusion, Arrabella was silent, and, leaving nature to its course, waited till the first rude shock was past before she attempted, by reasoning, to convince her of the inutility of grieving. Alas! it was a lesson (hard as it was) which Arrabella had long since learnt, but it is what the children of sorrow all learn. Repeated disappointment first blunts the keenness of our feelings; corroding sorrow, from overstraining, weakens the chords of sensibility, and at length age and infirmity, creeping by chilling yet almost imperceptible degrees through the whole system, totally relaxes every fibre, whilst the heart becomes cold and impenetrable as the ice on the highest summit of the Andes.

The Indians mourned with sincerity for their departed sachem. The chiefs and elders assembled, declared that Reuben, when of a proper age, should fill the seat of government, till when they entreated Dudley to take the charge of his education. In the meantime, they prepared to inter the remains of their chief, with every mark of respect and honor. But on the very day when the solemnity was to be performed, the Europeans made an unexpected sally on them, routed the main body, killed many, and took the remainder prisoners. Amongst those who fell was Yankoo. He fought, defending the house where lay the body of William, and died exhorting his companions to conquer or die.

Dudley, his wife and daughter, with Oberea and Reuben, were conducted to an English settlement, where the former sunk into a state of debility nearly approaching second childhood, and in a few months rested from all his sorrows. When this event took place, Arrabella determined to return to England, partly from the hope of her native air acting as a restorative to her health, and partly in the wish

of securing to Reuben the estates of his great-grandfather Sir Ferdinando Gorges; besides which, she knew that in Europe she could procure him to be properly educated, which the very imperfect state of literature in America, at that early period, would not allow her to hope, should she continue there. Rachel of consequence accompanied her mother, and Oberea, attached to them by every tender tie, would

not be left behind. "The mother and the son of my William," said she, "I will follow to the furthestmost part of the earth."

It was early in the spring of 1680 when the widow Arrabella Dudley, her daughter, daughter-in-law, and grandson arrived in England, from which she had been absent about thirty-four years. . . .

RELIGIOUS THOUGHT AND EXPERIENCE

1584 ~ *John Cotton* ~ 1652

SON of a prosperous barrister, John Cotton was born in 1584 in Derby, Derbyshire; received his B.A. in 1603 from Trinity College, Cambridge, and his M.A. from Emmanuel College in 1606, served as fellow and lecturer at the college; was ordained in 1610; became vicar of St. Botolph's in Boston, Lincolnshire, in 1612; and was made B.D. in 1613. During the following twenty years he was a leading Anglican churchman and won enviable repute both for the quality of his preaching and the profundity of his learning in "divinity." In 1633 he resigned under pressure because of his nonconformist views, came to New England, was chosen teacher of the Boston church, and was prominent thereafter in the councils of the colony.

One crucial moment in his New England career was the "Antinomian Crisis" of 1636-38, during which Anne Hutchinson claimed sanction for her religious "Enthusiasm" from his mystically-tinged expositions of the doctrine of grace. Another such moment was his controversy with Roger Williams over religious toleration in a series of publications between 1644 and 1648. At once flattered and embarrassed by Anne Hutchinson's discipleship, by turns tender-hearted toward her sincerity and intensity and apprehensive of her capacity for heresy, he teetered precariously between the opposing factions, but in the outcome proved adamant in his orthodoxy, denouncing her errors and acquiescing in her exile. He managed to hold his own with the redoubtable Williams in logical rigor, scriptural citation, and polemic rhetoric. Author of a small library of works expounding Puritan divinity and polity, he died in 1652.

As a theologian Cotton was most notable, as Anne Hutchinson discerned, for his emphasis on grace as one of the most essential of God's several "operations." It was the mysterious means by which God raised one from the category of the damned to that of the elect. To receive it, the individual must prepare himself carefully by taking advantage of all legitimate avenues to it, including meditation, the study of Scripture, church-attendance; whether one received it depended ultimately on God's incalculable will alone; reception of it was not sudden and complete, not an unheralded inspirational seizure by the Holy Ghost, but an elaborately gradual process, a mystical life's pilgrimage toward beatitude, a step-by-step immersion in the boundless, laving waters of supernal goodness.

[This view of grace is conveyed in part by the following selections, modernized from the first edition of his *The Way of Life*, a volume of sermons which Cotton most probably preached in England, where Anne Hutchinson first heard and doted on his eloquence. The titles have been supplied by the present editors. For further selections from Cotton's works, see Book I, Part 3.]

RECEIVING GRACE

[1641]

. . . NOW the spirit of grace which God bestows upon his people is partly a spirit of adoption and partly a spirit of regeneration, both one spirit, only having divers manner of workings. . . . We receive the adoption of sons by our redemption by the Lord Jesus, and then we receive the spirit of the Son into our hearts, whereby we are not only adopted, but regenerated and made the sons of God, and thereby come to cry Abba,¹ Father. . . .

But how shall I get a spirit of grace? First, if God be pleased to open thine eyes to see what a dry soul thou hast and art sensible of the dryness of thine own heart wanting sap and moisture and art therefore athirst for want of grace, then it is very hopeful God will give thee a spirit of grace, *Esau* [Isaiah] 44.3. To whom will God give the spirit of grace? To those that are dry and thirsty, that feel themselves athirst for want of grace. Though thou canst not yet call God Father, nor look at him as thy friend, yet if thou hast but a thirsty soul and longest for grace, under sense of thine own droughtiness, then God will not deny the Holy Ghost to them that ask him, *Luk.* 11.9, 13. And suppose God will not give you a spirit of grace for any love's sake you discern in God towards you and any neighborly and fatherly care he hath over you, yet if God give thee but an heart to feel thine own want and thirst after it, when you ask such bread for your souls, he will not give you a stone, but he will give you a spirit of grace.

Secondly, by a diligent hearing the Word of God, *Gal.* 3.2., implying that he doth usually breathe the spirit by the breath of his Word, he breathes indeed where he lists, *Joh.* 3.8. But yet as it is with material churches, if there be any wind anywhere, it will gather about them; so doth the spirit of grace most gather to the congregation of God's people; if there be any breath of the spirit stirring, usually it is there.

Thrdly, another means is that, *Prov.* 1. 22, 23, "How long will ye love scorning? turn ye at my reproof, and I will pour out my spirit upon you," implying that if God give a man but so much honesty of heart as to leave his folly and scorning and turn from his evil ways, then God will pour out his spirit upon him: implying, that which hinders the spirit from being poured out upon us is because we will not part with some or other beastly sin, as pride, hypocrisy, etc. The spirit of grace will not come but into an heart in some measure prepared, the spirit of grace will not come into a cage of unclean lusts; but if God give a man a heart to lend a patient ear to a reproof and lay down all scorning and turn from his loose and unprofitable courses, then the promise is evident, *I will pour out my spirit upon you.*

WADING IN GRACE

[1641]

For further encouragements hereunto, consider that place, *Ezech.* 47.3, 4, 5. It shows you the marvelous efficacy of the spirit of grace in the days of the Gospel. First a Christian wades in the rivers of God his grace up to the ankles with some good frame of spirit, yet but weakly, for a man hath strength in his ankle bones, *Acts* 3., and yet may have but feeble knees, *Heb.* 12. 12. So far as you walk in the waters, so far are you healed; why then in the next place he must wade till he come to the knees, go a thousand cubits, a mile further, and get more strength to pray and to walk on in your callings with more power and strength.

Secondly, but yet a man that wades but to the knees, his loins are not drenched, for nothing is healed but what is in the water. Now the affections of a man are placed in his loins, God tries the reins; a man may have many unruly affections, though he be

¹ Aramaic for father: used by Jesus and his contemporaries and by Greek-speaking Christian Jews to refer to the Deity.

paddling in the ways of grace; he may walk on in some evenness and yet have many distempered passions and may have just cause to complain of the rottenness of his heart in the sight of God, why then, thou hast waded but to the knees, and it is a mercy that thou art come so far; but yet the loins want healing, why, wade a mile further then; the grace of God yet comes too shallow in us, our passions are yet unmortified, so as we know not how to grieve in measure, our wrath is vehement and immoderate; you must therefore wade until the loins be girt with a golden girdle, wade an-end and think all is not well until you be so deep, and by this you may take a scantling what measure of grace is poured out upon you. And if thou hast gone so far that God hath in some measure

healed thy affections, that thou canst be angry and sin not, etc., it is well, and this we must attain to. But suppose the loins should be in a good measure healed, yet there is more goes to it than all this; and yet when a man is come thus far, he may laugh at all temptations and bless God in all changes. But yet go another thousand cubits, and then you shall swim, there is such a measure of grace in which a man may swim as fish in the water, with all readiness and dexterity, gliding an-end, as if he had water enough to swim in; such a Christian doth not creep or walk but he runs the ways of God's commandments; whatever he is to do or to suffer he is ready for all, so every way drenched in grace as let God turn him any way, he is never drawn dry.

c. 1590 ~ *Anne Hutchinson* ~ 1643

ANNE HUTCHINSON has been made the heroine of Theda Kenyon's epic poem, *Scarlet Anne*, New York, 1939, and of several earlier novelized biographies—one of which claims for her the distinction of having founded the first Woman's Club in America. She was born in England about 1590, a daughter of the Rev. Francis Marbury, who was imprisoned and unfrocked for his criticism of Anglican episcopacy, and a niece of such gentry as Sir Edward Marbury, of the manor of Girsby, and of Sir Erasmus Dryden, of Canons Ashby, ancestor of the great John Dryden. In 1612 she married young William Hutchinson, a rising draper of Alford, in Lincolnshire, and fell under the spell of John Cotton's preaching at St. Botolph's, near Alford. When Cotton left for New England, she and her family followed him in 1634.

Gaining popularity among the women of Boston because of her knowledge of midwifery, Anne held at her home weekly meetings, during which matters of doctrine raised in sermons were discussed with unwontedly frank and pointed criticism of specific ministers. These meetings and a debate between her and a group of ministers at the home of John Cotton brought down upon Anne the bitter disapprobation of the orthodox. Anne and her followers, her brother-in-law, the Rev. John Wheelwright, who came to Boston in 1636 and was given a church at Wollaston, and the new governor of the colony, the aristocratic young Harry Vane, constituted a group which, in the eyes of John Winthrop and his followers, were encouraging an heretical religious Enthusiasm as a means to bulwark themselves in political power. Winthrop succeeded in unseat-

ing Vane and in passing a kind of immigration law to keep out potential Hutchinsonians. After Vane was called back to England to attend to urgent family concerns, Wheelwright, previously arraigned for an allegedly seditious fast-day sermon, was excommunicated and banished.

Then the Winthrop faction instituted official proceedings to determine Anne's orthodoxy. Finally, as a result of her claim to special revelations from God in a speech in her own defense in 1637, she was denounced as a dangerous heretic and sent into sequestration while pregnant. When she persisted in denying the charges drawn up against her, and showed a disposition to recant her presumed recantations of error, she was formally exiled from the precincts of the Bay in March, 1638, in the last month of her pregnancy. Although she found sanctuary at Roger Williams' Providence, she suffered a miscarriage. After the death of her unswervingly loyal husband, she moved with her numerous family to a tract of land near Pelham Bay, in New Netherland. In 1643 the family was massacred by Indians whom the Dutch had not paid for the land. A daughter, Susan, taken captive by the Indians, survived; a son, Edward, was ancestor of Thomas Hutchinson, perhaps the greatest of the colonial historians of New England, and, ironically enough, the Tory governor of Massachusetts just before the outbreak of the Revolution.

[Although Anne was not a writer, her 1637 speech on her revelations was recorded, as a part of her trial testimony, by John Winthrop and Thomas Weld in their incontinently partisan and obviously self-justifying *A Short Story of the Rise, reign, and ruine of the Antinomians, Familists & Libertines, that infected the Churches of New England*, London, 1644. From the first edition of this work, Anne's speech is here reprinted in a modernized text. It reveals that her conception of grace was close to that of the early Quakers, with their "Inner Light." She thought of herself as coached and prompted by the voice of God, as having his intimate, privately vouchsafed warrant for her decisions, actions, feelings, and opinions. Since most orthodox Protestants in England regarded such a claim as evidence of traffic with Satan, it is little wonder that Winthrop and his followers looked on her as dangerous, for such traffic, if condoned, might bring down the wrath of God on the entire colony. Their conviction on this point was doubtless sincere, but was somewhat complicated by their other probable motives—fear of her as a threat to their political supremacy, apprehension that her demagogic appeal to her revelations might eventually undermine the institution of a learned ministry upon which public order rested.]

SPEECH ON THE REVELATIONS
[1644]

WHEN I was in Old England, I was much troubled at the constitution of the

churches there, so far as I was ready to have joined to the separation, whereupon I set apart a day for humiliation by myself, to seek direction from God, and then did God discover unto me the unfaithful-

ness of the churches and the danger of them, and that none of those ministers could preach the Lord Jesus aright, for he had brought to my mind that in the 1 *John* 4.3, every spirit that confesseth not that Jesus Christ is come in the flesh is the spirit of Anti-Christ, I marvelled what this should mean, for I knew that neither Protestants nor Papists did deny that Christ was come in the flesh, and are the Turks then the only Anti-Christ? Now I had none to open the Scripture to me but the Lord: he must be the prophet. Then he brought to my mind another Scripture, he that denies the Testament denies the death of the Testator, from whence the Lord did let me see that everyone that did not preach the new covenant denies the death of the Testator. Then it was revealed to me that the ministers of England were these Anti-Christ, but I knew not how to bear this. I did in my heart rise up against it; then I begged of the Lord that this Atheism might not be in my heart. After I had begged this light, a twelve-month together, at last he let me see how I did oppose Christ Jesus, and he revealed to me that place in *Esau* [Isaiah] 46. 12, 13, and from thence showed me the Atheism of my own heart, and how I did turn in upon a covenant of works, and did oppose Christ Jesus; from which time the Lord did discover to me all sorts of ministers and how they taught and to know which voice I heard, which was the voice of Moses, which of John Baptist, and which of Christ; the voice of my beloved from the voice of strangers; and thenceforth I was the more careful whom I heard, for after our teacher, Mr. Cotton, and my brother, Wheelwright, were put down, there was none in England that I durst hear. Then it pleased God to reveal himself to me in that of *Esau* 30. 20, though the Lord give thee the bread of adversity, etc., yet thine eyes shall see thy teachers.

After thus the Lord carrying Mr. Cotton to New England (at which I was much troubled), it was revealed to me that I must go thither also and that there I should be persecuted and suffer much trouble. I will give you another Scripture, *Jer.* 46, fear not, Jacob, my servant, for I am with thee, I will make a full end of all the nations, etc. Then the Lord did reveal himself to me sitting upon a throne of justice and all the world appearing before him, and, though I must come to New England, yet I must not fear nor be dismayed. The Lord brought another Scripture to me, *Esau* [Isaiah] 8.9 The Lord spake this to me with a strong hand and instructed me that I should not walk in the way of this people, etc. I will give you one place more which the Lord brought to me by immediate revelations, and that doth concern you all; it is in *Dan.* 6, when the presidents and princes could find nothing against him, because he was faithful, they sought matter against him concerning the law of his God to cast him into the lions' den; so it was revealed to me that they should plot against me, but the Lord bid me not to fear, for he that delivered Daniel and the three children, his hand was not shortened. And see this Scripture fulfilled this day in mine eyes; therefore take heed what you go about to do unto me, for you have no power over my body, neither can you do me any harm, for I am in the hands of the eternal Jehovah, my savior; I am at his appointment; the bounds of my habitation are cast in Heaven; no further do I esteem of any mortal man than creatures in his hand; I fear none but the great Jehovah, which hath foretold me of these things, and I do verily believe that he will deliver me out of our [your?] hands; therefore take heed how you proceed against me, for I know that for this you go about to do to me, God will ruin you and your posterity and this whole state.

c. 1612 ~ *Anne Bradstreet* ~ 1672

DAUGHTER of Thomas Dudley, who later became governor of the Massachusetts Bay Colony, Anne Bradstreet was born in England, probably in Northampton, in 1612-1613. At the age of sixteen, she married Simon Bradstreet, of Lincolnshire, who, as an adopted member of the family of the Earl of Lincoln, had been under the care of Dudley, the Earl's steward. Simon succeeded Dudley in this position and was also steward for the Countess of Warwick. The Bradstreets migrated to New England in 1630 and established a farm near the Merrimac River. Simon, still following in the footsteps of his father-in-law, also became governor of the colony.

Mother of a large family, Anne, in her spare moments, composed poetry, the manuscripts of which John Woodbridge, husband of her sister Mercy, took to England in 1647 and had published at London in 1650, without Anne's knowledge, under the title, *The Tenth Muse Lately sprung up in America, or Severall Poems, compiled with great variety of Wit and Learning, full of delight*. The Rev. Nathaniel Ward of Ipswich, one of Anne's ex-neighbors and author of *The Simple Cobler of Aggawam*, London, 1647, was apparently a party to the publishing conspiracy, for in the Bradstreet volume are his commendatory verses entitled "On Mrs. Bradstreet's Tenth Muse." There he refers to her as "a right *Du Bartas* Girle" and indulges in the following quippish couplet, characteristic of him, since in his own book—primarily a tract against religious toleration—he had taken time out to satirize women for their outlandish fashions in dress:

"It half revives my chil frost-bitten blood,
To see a Woman once, do ought that's good." . . .

His allusion to Du Bartas is apt, since one of Anne's inspirations was the work of the French Protestant poet, William de Salluste Du Bartas, whose *Semaines* had appeared in 1605-1606 in an English translation by Josuah Sylvester entitled *Divine Weekes and Workes*.

Until shortly before her death in 1672, Anne continued to write poetry as well as prose meditations and admonitions. The posthumous second edition of her poems, Boston, 1678, contains some of her finest, including "Contemplations," which one modern critic has cited as worthy of comparison and contrast with three later important philosophical poems by Americans—William Cullen Bryant's "Thanatopsis," Sidney Lanier's "The Marshes of Glynn," and Edna St. Vincent Millay's "Renascence." Anne's most ambitious compositions, "The Four Elements," "Of the Four Humours in Mans Constitution," "Of the four Ages of Man," "The four Seasons of the Year," and "The four Monarchyes,"

are versified summaries of Renaissance learning. After her death, a book written expressly for her children was found among her papers.

[The opening piece, known as "Religious Experiences," was a letter to her children. This letter in its entirety—save for its verse epigraph, which has been omitted—and the whole of "Contemplations" are here modernized from the texts in *The Works of Anne Bradstreet*, ed. J. H. Ellis, Charlestown, Mass., 1867, reprinted New York, 1932. Both selections show that Anne, in her religious experience and expression, represented what may be called the mystical strain in Puritan orthodoxy. The letter provides an interesting contrast with Anne Hutchinson's speech on her revelations; the poem is comparable in thought and feeling, although not in form, to some of the best of Edward Taylor.]

RELIGIOUS EXPERIENCES

[1867 (written c. 1672)]

MY dear Children: I, knowing by experience that the exhortations of parents take most effect when the speakers leave to speak, and those especially sink deepest which are spoke latest—and being ignorant whether on my death bed I shall have opportunity to speak to any of you, much less to all—thought it the best, whilst I was able to compose some short matters (for what else to call them I know not) and bequeath to you, that when I am no more with you, yet I may be in your remembrance—although that is the least in my aim in what I now do, but that you may gain some spiritual advantage by my experience. I have not studied in this you read to show my skill, but to declare the truth—not to set forth myself, but the glory of God. If I had minded the former, it had been perhaps better pleasing to you,—but, seeing the last is the best, let it be best pleasing to you.

The method I will observe shall be this—I will begin with God's dealing with me from my childhood to this day. In my young years, about 6 or 7 as I take it, I began to make conscience of my ways, and what I knew was sinful, as lying, disobedience to parents, etc., I avoided it. If at any time I was overtaken with the like evils, it was a great trouble. I could not be at rest till by prayer I had confessed it unto God. I was also troubled at the neglect of private

duties, though too often tardy that way. I also found much comfort in reading the Scriptures, especially those places I thought most concerned my condition, and, as I grew to have more understanding, so the more solace I took in them.

In a long fit of sickness which I had on my bed I often communed with my heart and made my supplication to the most High, who set me free from that affliction.

But as I grew up to be about 14 or 15 I found my heart more carnal, and sitting loose from God, vanity and the follies of youth take hold of me.

About 16, the Lord laid his hand sore upon me and smote me with the small pox. When I was in my affliction, I besought the Lord and confessed my pride and vanity and he was entreated of me and again restored me. But I rendered not to him according to the benefit received.

After a short time I changed my condition and was married, and came into this country, where I found a new world and new manners, at which my heart rose. But after I was convinced it was the way of God, I submitted to it and joined to the church at Boston.

After some time I fell into a lingering sickness like a consumption, together with a lameness, which correction I saw the Lord sent to humble and try me and do me good, and it was not altogether ineffectual.

It pleased God to keep me a long time without a child, which was a great grief to me and cost me many prayers and tears

before I obtained one, and after him gave me many more, of whom I now take the care, that as I have brought you into the world, and with great pains, weakness, cares, and fears brought you to this, I now travail in birth again of you till Christ be formed in you.

Among all my experiences of God's gracious dealings with me I have constantly observed this, that he hath never suffered me long to sit loose from him, but by one affliction or other hath made me look home and search what was amiss—so usually thus it hath been with me, that I have no sooner felt my heart out of order but I have expected correction for it, which most commonly hath been upon my own person, in sickness, weakness, pains, sometimes on my soul, in doubts and fears of God's displeasure, and my sincerity toward him; sometimes he hath smote a child with sickness, sometimes chastened by losses in estate,—and these times (through his great mercy) have been the times of my greatest getting and advantage; yea, I have found them the times when the Lord hath manifested the most love to me. Then have I gone to searching and have said with David, Lord search me and try me, see what ways of wickedness are in me, and lead me in the way everlasting; and seldom or never but I have found either some sin I lay under which God would have reformed or some duty neglected which he would have performed. And by his help I have laid vows and bonds upon my soul to perform his righteous commands.

If at any time you are chastened of God, take it as thankfully and joyfully as in greatest mercies, for, if ye be his, ye shall reap the greatest benefit by it. It hath been no small support to me in times of darkness when the Almighty hath hid his face from me that yet I have had abundance of sweetness and refreshment after affliction and more circumspection in my walking after I have been afflicted. I have been with God like an untoward child that no longer than the rod has been on my back (or at least in sight) but I have been apt to for-

get him and myself too. Before I was afflicted I went astray, but now I keep thy statutes.

I have had great experience of God's hearing my prayers and returning comfortable answers to me, either in granting the thing I prayed for or else in satisfying my mind without it, and I have been confident it hath been from him, because I have found my heart through his goodness enlarged in thankfulness to him.

I have often been perplexed that I have not found that constant joy in my pilgrimage and refreshing which I supposed most of the servants of God have; although he hath not left me altogether without the witness of his holy spirit, who hath oft given me his word and set to his seal that it shall be well with me. I have sometimes tasted of that hidden manna that the world knows not, and have set up my Ebenezer,¹ and have resolved with myself that against such a promise, such tastes of sweetness, the gates of Hell shall never prevail. Yet have I many times sinkings and droopings and not enjoyed that felicity that sometimes I have done. But when I have been in darkness and seen no light, yet have I desired to stay myself upon the Lord.

And, when I have been in sickness and pain, I have thought if the Lord would but lift up the light of his countenance upon me, although he ground me to powder, it would be but light to me, yea, oft have I thought were it hell itself and could there find the love of God toward me, it would be a heaven. And, could I have been in heaven without the love of God, it would have been a hell to me; for, in truth, it is the absence and presence of God that makes heaven or hell.

Many times hath Satan troubled me concerning the verity of the Scriptures, many times by Atheism how I could know whether there was a God; I never saw any miracles to confirm me, and those which I read of, how did I know but they were feigned?

¹ A memorial stone or any commemoration of divine assistance; also a house of worship; see 1 Sam. 7:12.

That there is a God my reason would soon tell me by the wondrous works that I see, the vast frame of the heaven and the earth, the order of all things, night and day, summer and winter, spring and autumn, the daily providing for this great household upon the earth, the preserving and directing of all to its proper end. The consideration of these things would with amazement certainly resolve me that there is an eternal being.

But how should I know he is such a God as I worship in trinity and such a savior as I rely upon?—though this hath thousands of times been suggested to me, yet God hath helped me over. I have urged thus with myself That there is a God I see. If ever this God hath revealed himself, it must be in his word, and this must be it or none. Have I not found that operation by it that no human invention can work upon the soul? hath not judgments befallen divers who have scorned and contemned it? hath it not been preserved through all ages maugre all the heathen tyrants and all of the enemies who have opposed it? Is there any story but that which shows the beginnings of times and how the world came to be as we see? Do we not know the prophecies in it fulfilled which could not have been so long foretold by any but God himself?

When I have got over this block, then have I another put in my way: that, admit this be the true God whom we worship and that be his word, yet why may not the Popish religion be the right? They have the same God, the same Christ, the same word: they only interpret it one way, we another.

This hath sometimes stuck with me, and more it would but the vain fooleries that are in their religion, together with their lying miracles and cruel persecutions of the saints, which admit were they as they term them, yet not so to be dealt withal.

The consideration of these things and many the like would soon turn me to my own religion again.

But some new troubles I have had since the world has been filled with blasphemy

and sectaries, and some who have been accounted sincere Christians have been carried away with them, that sometimes I have said, "Is there faith upon the earth?" and I have not known what to think. But then I have remembered the words of Christ that so it must be and that, if it were possible, the very elect should be deceived. Behold, saith our savior, I have told you before That hath stayed my heart, and I can now say, "Return, O my soul, to thy rest; upon this rock, Christ Jesus, will I build my faith; and, if I perish, I perish." But I know all the powers of hell shall never prevail against it. I know whom I have trusted and whom I have believed and that he is able to keep that I have committed to his charge.

Now to the King, immortal, eternal, and invisible, the only wise God, be honor and glory for ever and ever! Amen.

This was written in much sickness and weakness and is very weakly and imperfectly done, but, if you can pick any benefit out of it, it is the mark which I aimed at.

CONTEMPLATIONS

[1678]

1

Some time now past in the autumnal tide,
When Phoebus wanted but one hour to bed,
The trees all richly clad, yet void of pride,
Were gilded o'er by his rich golden head;
Their leaves and fruits seemed painted,
but was true,
Of green, of red, of yellow, mixèd hue;
Rapt were my senses at this delectable
view.

2

I wist not what to wish. Yet sure, thought I,
If so much excellence abide below,
How excellent is He that dwells on high?
Whose power and beauty by His works we
know!
Sure He is goodness, wisdom, glory, light,
That hath this under-world so richly dight.
More heaven than earth was here, no winter
and no night.

3

Then on a stately oak I cast mine eye,
 Whose ruffling top the clouds seemed to
 aspire;
 How long since thou wast in thine infancy?
 Thy strength and stature, more thy years
 admire.
 Hath hundred winters passed since thou
 wast born,
 Or thousand since thou brakest thy shell
 of horn?
 If so, all these as nought eternity doth
 scorn.

4

Then higher on the glistening sun I gazed,
 Whose beams was shaded by the leafy
 tree;
 The more I looked the more I grew amazed,
 And softly said, what glory's like to thee?
 Soul of this world, this universe's eye,
 No wonder some made thee a deity;
 Had I not better known, alas, the same
 had I.

5

Thou as a bridegroom from thy chamber
 rushes,
 And as a strong man joys to run a race,
 The morn doth usher thee, with smiles and
 blushes,
 The earth reflects her glances in thy face.
 Birds, insects, animals, with vegative,
 Thy heart from death and dulness doth re-
 vive,
 And in the darksome womb of fruitful na-
 ture dive.

6

Thy swift annual and diurnal course,
 Thy daily straight and yearly oblique path,
 Thy pleasing fervor and thy scorching
 force,
 All mortals here the feeling knowledge
 hath.

Thy presence makes it day, thy absence
 night,
 Quaternal seasons causèd by thy might.
 Hail, creature, full of sweetness, beauty,
 and delight!

7

Art thou so full of glory that no eye
 Hath strength thy shining rays once to
 behold?
 And is thy splendid throne erect so high
 As to approach it can no earthly mould?
 How full of glory then must thy Creator
 be,
 Who gave this bright light luster unto
 thee!
 Admired, adored forever be that majesty!

8

Silent, alone, where none or saw or heard,
 In pathless paths I led my wand'ring feet,
 My humble eyes to lofty skies I reared
 To sing some song my mazèd muse thought
 meet;
 My great Creator I would magnify
 That nature had thus deckèd liberally:
 But ah, and ah, again, my imbecility!

9

I heard the merry grasshopper then sing,
 The black-clad cricket bear a second part;
 They kept one tune and played on the same
 string,
 Seeming to glory in their little art.
 Shall creatures abject thus their voices
 raise,
 And in their kind resound their Maker's
 praise,
 Whilst I, as mute, can warble forth no
 higher lays?

10

When present times look back to ages past,
 And men in being fancy those are dead,
 It makes things gone perpetually to last
 And calls back months and years that long
 since fled;

It makes a man more agèd in conceit
Than was Methuselah or's grandsire great
While of their persons and their acts his
 mnd doth treat.

11

Sometimes in Eden fair he seems to be,
Sees glorious Adam there made lord of all,
Fancies the apple dangle on the tree
That turned his sovereign to a naked thrall,
Who like a miscreant's driven from that
 place

To get his bread with pain and sweat of
 face:

A penalty imposed on his backsliding race.

12

Here sits our grandame in retirèd place,
And in her lap her bloody Cain new-born;
The weeping imp oft looks her in the face,
Bewails his unknown hap, and fate for-
 lorn;

His mother sighs to think of paradise,
And how she lost her bliss to be more wise,
Believing him that was, and is, father of
 lies.

13

Here Cain and Abel come to sacrifice;
Fruits of the earth and fatlings each do
 bring;

On Abel's gift the fire descends from skies,
But no such sign on false Cain's offering;
With sullen hateful looks he goes his ways,
Hath thousand thoughts to end his brother's
 days,

Upon whose blood his future good he hopes
 to raise.

14

There Abel keeps his sheep, no ill he thinks;
His brother comes, then acts his fratricide;
The virgin earth of blood her first draught
 drinks,

But since that time she often hath been
 cloyed.

The wretch with ghastly face and dreadful
 mind

Thinks each he sees will serve him in his
 kind,

Though none on earth but kindred near
 then could he find.

15

Who fancies not his looks now at the bar,
His face like death, his heart with horror
 fraught?

Nor malefactor ever felt like war

When deep despair with wish of life hath
 fought.

Branded with guilt and crushed with treble
 woes,

A vagabond to land of Nod he goes;

A city builds that walls might him secure
 from foes.

16

Who thinks not oft upon the father's ages?
Their long descent, how nephews' sons they
 saw,¹

The starry observations of those sages,
And how their precepts to their sons were
 law,

How Adam sighed to see his progeny

Clothed all in his black sinful livery,

Who neither guilt nor yet the punishment
 could fly?

17

Our life compare we with their length of
 days,

Who to the tenth of theirs doth now ar-
 rive?

And though thus short, we shorten many
 ways,

Living so little while we are alive,

In eating, drinking, sleeping, vain delight.

So unawares comes on perpetual night,

And puts all pleasures vain unto eternal
 flight.

¹Nephew is here used in the obsolete
sense of grandson.

18

When I behold the heavens as in their
 prime,
 And then the earth, though old, still clad
 in green,
 The stones and trees, insensible of time,
 Nor age nor wrinkle on their front are
 seen;
 If winter come and greenness then do fade,
 A spring returns, and they more youthful
 made.
 But man grows old, lies down, remains
 where once he's laid.

19

By birth more noble than those creatures
 all,
 Yet seems by nature and by custom cursed,
 No sooner born but grief and care makes
 fall
 That state obliterate he had at first.
 No youth nor strength nor wisdom spring
 again,
 Nor habitations long their names retain,
 But in oblivion to the final day remain.

20

Shall I then praise the heavens, the trees,
 the earth
 Because their beauty and their strength
 last longer?
 Shall I wish there or never to had birth,
 Because they're bigger and their bodies
 stronger?
 Nay, they shall darken, perish, fade, and
 die,
 And when unmade so ever shall they lie,
 But man was made for endless immortality.

21

Under the cooling shadow of a stately elm
 Close sat I by a goodly river's side,
 Where gliding streams the rocks did over-
 whelm,
 A lonely place with pleasures dignified.

I once that loved the shady woods so well
 Now thought the rivers did the trees excel,
 And if the sun would ever shine, there
 would I dwell.

22

While on the stealing stream I fixed mine
 eye,
 Which to the long'd-for ocean held its
 course,
 I marked nor crooks nor rubs that there did
 lie
 Could hinder aught but still augment its
 force.
 O happy flood, quoth I, that holds thy
 race
 Till thou arrive at thy belovèd place,
 Nor is it rocks or shoals that can obstruct
 thy pace!

23

Nor is't enough that thou alone mayst slide,
 But hundred brooks in thy clear waves do
 meet,
 So hand in hand along with thee they
 glide
 To Thetis' house, where all embrace and
 greet.
 Thou emblem true of what I count the
 best,
 O could I lead my rivulets to rest!
 So may we press to that vast mansion ever
 blest.

24

Ye fish which in this liquid region bide,
 That for each season have your habitation,
 Now salt, now fresh, where you think best
 to glide,
 To unknown coasts to give a visitation,
 In lakes and ponds you leave your nu-
 merous fry;
 So nature taught, and yet you know not
 why,
 You wat'ry folk that know not your felic-
 ity.

25

Look how the wantons frisk to taste the
air,
Then to the colder bottom straight they
dive,
Eftsoon to Neptune's glassy hall repair
To see what trade they, great ones, there
do drive,
Who forage o'er the spacious sea-green field
And take the trembling prey before it
yield,
Whose armor is their scales, their spreading
fins their shield.

26

While musing thus with contemplation fed,
And thousand fancies buzzing in my brain,
The sweet-tongued Philomel perched o'er
my head
And chanted forth a most melodious strain,
Which rapt me so with wonder and delight,
I judged my hearing better than my sight,
And wished me wings with her awhile to
take my flight.

27

O merry bird, said I, that fears no snares,
That neither toils nor hoards up in thy
barn,
Feels no sad thoughts nor cruciating cares
To gain more good or shun what might thee
harm,
Thy clothes ne'er wear, thy meat is every-
where,
Thy bed a bough, thy drink the water
clear,
Reminds not what is past, nor what's to
come dost fear.

28

The dawning morn with songs thou dost
prevent,
Sets hundred notes unto thy feathered
crew,

So each one tunes his pretty instrument
And warbling out the old, begin anew.
And thus they pass their youth in summer
season,
Then follow thee into a better region,
Where winter's never felt by that sweet
airy legion.

29

Man at the best a creature frail and vain,
In knowledge ignorant, in strength but
weak,
Subject to sorrows, losses, sickness, pain,
Each storm his state, his mind, his body
break,
From some of these he never finds ces-
sation,
But day or night, within, without, vexa-
tion,
Troubles from toes, from friends, from
dearest, near'st relation.

30

And yet this sinful creature, frail and
vain,
This lump of wretchedness, of sin and sor-
row,
This weather-beaten vessel wracked with
pain,
Joys not in hope of an eternal morrow,
Nor all his losses, crosses, and vexation,
In weight, in frequency and long duration,
Can make him deeply groan for that divine
translation.

31

The mariner that on smooth waves doth
glide
Sings merrily and steers his bark with ease,
As if he had command of wind and tide,
And now become great master of the seas;
But suddenly a storm spoils all the sport
And makes him long for a more quiet port
Which 'gainst all adverse winds may serve
for fort.

32

So he that saileth in this world of pleasure,
Feeding on sweets, that never bit of th'
sour,
That's full of friends, of honor, and of
treasure,
Fond fool, he takes this earth ev'n for
heaven's bower.
But sad affliction comes and makes him
see
Here's neither honor, wealth, nor safety;
Only above is found all with security.

33

O time, the fatal wrack of mortal things,
That draws oblivion's curtains over kings!

Their sumptuous monuments, men know
them not,
Their names without a record are forgot,
Their parts, their ports, their pomp's all
laid in th' dust;
Nor wit nor gold nor buildings scape time's
rust.
But he whose name is graved in the white
stone²
Shall last and shine when all of these are
gone.

² A reference to *Rev.* 2:17: "He that hath an ear let him hear what the Spirit saith unto the churches; To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."

1631 ~ *Michael Wigglesworth* ~ 1705

MICHAEL WIGGLESWORTH, born in England, accompanied his parents, when he was seven years old, to Connecticut. A graduate of Harvard in 1651, he served as fellow and tutor from 1652 to 1654. Leaving this position because of poor health, he became a minister at Malden, Mass., but preached only on infrequent occasions.

The "Little Feeble Shadow of a Man," as Cotton Mather called him, became, to quote Paul Elmer More's characterization, the "doggerel Dante of the New England meeting-house" when he produced the macabre didactic ballad-epic of the last judgment, *The Day of Doom*, Cambridge, 1662. This strange poetic *tour de force* of a gnarled but powerful imagination dramatizes Calvinistic doctrine for both the young and the adult with some of the metrical effects and emotive overtones achieved later by Coleridge in "The Rime of the Ancient Mariner" and Oscar Wilde in "The Ballad of Reading Gaol." Becoming almost as much of a best seller in 17th Century America as Franklin's *The Way to Wealth* was in the America of the next century—a fact which one scholar has cited as replete with significance for the cultural historian—Wigglesworth's sing-song saga of damnation and reprieve ran through numerous editions in its author's lifetime and was apparently read with such tense excitement that no copy of its original edition has survived. As a curiosity of literature, it will probably be read, to paraphrase a remark of one of Wigglesworth's friends in 1705, until the coming of the day which it describes. It represents the dogmatic rather than the mystical side of Puritan orthodoxy, and few

other poems have ever succeeded in combining in such equalized doses the seemingly disparate aims—to teach, to delight, and to horrify. Joseph Morgan's *The History of the Kingdom of Basaruah*, Boston, 1715, ed. by Richard Schlatter, Harvard University Press, 1946, an attempt to expound Calvinistic doctrine in allegorical prose fiction, provides good parallel reading with *The Day of Doom*.

[The selections included here have been to some extent modernized in text, and the titles have been supplied by the present editors.]

From
THE DAY OF DOOM
[1662]

CHRIST COMES TO JUDGE

1

Still was the night, serene and bright, when
all men sleeping lay;
Calm was the season, and carnal reason
thought so 'twould last for ay.
Soul, take thine ease, let sorrow cease,
much good thou hast in store:
This was their song, their cups among, the
evening before.

2

Wallowing in all kind of sin, vile wretches
lay secure:
The best of men had scarcely then their
lamps kept in good ure.
Virgins unwise who through disguise
amongst the best were numbered,
Had closed their eyes; yea, and the wise
through sloth and frailty slumbered.

3

Like as of old, when men grow bold God's
threat'nings to contemn,
Who stopped their ear and would not hear
when Mercy warnèd them:
But took their course, without remorse, till
God began to pour
Destruction the world upon in a tem-
pestuous shower.

4

They put away the evil day and drowned
their care and fears,

Till drowned were they and swept away
by vengeance unawares;
So at the last, whilst men sleep fast in
their security,
Surprised they are in such a snare as
cometh suddenly.

5

For at midnight brake forth a light which
turned the night to day,
And speedily an hideous cry did all the
world dismay.
Sinners awake, their hearts do ache, trem-
bling their loins surpriseth;
• Amazed with fear by what they hear, each
one of them ariseth.

6

They rush from beds with giddy heads and
to their windows run,
Viewing this light which shines more
bright than doth the noon-day sun.
Straightway appears (they see't with tears)
the Son of God most dread,
Who with his train comes on amain to
judge both quick and dead.

7

Before his face the heav'ns gave place, and
skies are rent asunder,
With mighty voice and hideous noise more
terrible than thunder.
His brightness damps heav'n's glorious
lamps and makes them hide their
heads,
As if afraid and quite dismayed, they quit
their wonted steads.

8

Ye sons of men that durst condemn the
 threat'nings of God's word,
 How cheer you now? your hearts, I trow,
 are thrilled as with a sword.
 Now, atheist blind, whose brutish mind a
 God could never see,
 Dost thou perceive, dost now believe, that
 Christ thy judge shall be?

9

Stout courages (whose hardness could
 death and hell out-face),
 Are you as bold now you behold your judge
 draw near apace?
 They cry, "No, no: Alas! and wo' our
 courage all is gone,
 Our hardness, fool hardness, hath us un-
 done, undone."

10

No heart so bold but now grows cold and
 almost dead with fear,
 No eye so dry but now can cry and pour
 out many a tear,
 Earth's potentates and pow'rful states, cap-
 tains and men of might,
 Are quite abashed, their courage dashed,
 at this most dreadful sight.

11

Mean men lament, great men do rent their
 robes and tear their hair,
 They do not spare their flesh to tear
 through horrible despair.
 All kindreds wail, all hearts do fail, horror
 the world doth fill
 With weeping eyes and loud outcries, yet
 knows not how to kill.

12

Some hide themselves in caves and delves,
 in places underground,
 Some rashly leap into the deep to scape
 by being drowned;

Some to the rocks (O senseless blocks!)
 and woody mountains run,
 That there they might this fearful sight
 and dreaded presence shun.

13

In vain do they to mountains say, "Fall on
 us, and us hide
 From Judge's ire more hot than fire, for
 who may it abide?"
 No hiding place can from his face sinners
 at all conceal,
 Whose flaming eye hid things doth 'spy
 and darkest things reveal.

14

The Judge draws nigh, exalted high upon
 a lofty throne,
 Amidst the throng of angels strong, lo,
 Israel's Holy One!
 The excellence of whose presence and aw-
 ful majesty
 • Amazeth nature, and every creature doth
 more than terrify.

15

The mountains smoke, the hills are shook,
 the earth is rent and torn,
 As if she should be clean dissolved or from
 the center borne.
 The sea doth roar, forsakes the shore, and
 shrinks away for fear;
 The wild beasts flee into the sea as soon
 as he draws near.

16

Whose glory bright, whose wondrous might,
 whose power imperial,
 So far surpass whatever was in realms ter-
 restrial,
 That tongues of men nor angels' pen can-
 not the same express,
 And therefore I must pass it by, lest speak-
 ing should transgress.

17

Before his throne a trump is blown, pro-
claiming th' Day of Doom;
Forthwith he cries, "Ye dead, arise, and
unto judgment come!"
No sooner said but 'tis obeyed, sepulchres
opened are;
Dead bodies all rise at his call and's mighty
power declare.

18

Both sea and land, at his command, their
dead at once surrender,
The fire and air constrainèd are also their
dead to tender.
The mighty word of this great Lord links
body and soul together,
Both of the just and the unjust, to part no
more forever.

19

The same translates from mortal states to
immortality
All that survive and be alive i' th' twink-
ling of an eye,
That so they may abide for ay to endless
weal or woe;
Both the renate and reprobate are made to
die no more.

20

His wingèd hosts fly through all coasts to-
gether gathering
Both good and bad, both quick and dead,
and all to judgment bring.
Out of their holes those creeping moles
that hid themselves for fear,
By force they take and quickly make be-
fore the Judge appear.

21

Thus every one before the throne of Christ
the Judge is brought,
Both righteous and impious that good or
ill had wrought.

A separation and diff'ring station by Christ
appointed is
To sinners sad, 'twixt good and bad, 'twixt
heirs of woe and bliss.

22

At Christ's right hand the sheep do stand,
his holy martyrs who
For his dear name suffering shame, calamity
and woe,
Like champions stood and with their blood
their testimony sealed,
Whose innocence without offence to Christ
their Judge appealed.

23

Next unto whom there find a room all
Christ's afflicted ones,
Who, being chastised, neither despised nor
sank amidst their groans,
Who by the rod were turned to God and
lovèd him the more,
Not murmuring nor quarreling when they
were chastened sore.

24

Moreover, such as lovèd much, that had
not such a trial,
As might constrain to so great pain and
such deep self-denial,
Yet ready were the cross to bear when
Christ them called thereto,
And did rejoice to hear his voice—they're
counted sheep also.

25

Christ's flock of lambs there also stands,
whose faith was weak yet true,
All sound believers, Gospel-receivers, whose
grace was small, but grew:
And them among an infant throng of
babes for whom Christ died,
Whom for his own, by ways unknown to
men, he sanctified.

26

All stand before their Savior in long white robes y-clad,
 Their countenance full of pleasance, appearing wondrous glad.
 O glorious sight! Behold how bright dust heaps are made to shine,
 Conformèd so their Lord unto, whose glory is divine.

27

At Christ's left hand the goats do stand,
 all whining hypocrites,
 Who for self-ends did seem Christ's friends
 but fostered guileful sprites,
 Who sheep resembled, but they dissembled
 (their hearts were not sincere),
 Who once did throng Christ's lambs among,
 but now must not come near.

28

Apostatès and run-aways such as have
 Christ forsaken,
 Of whom the devil, with seven more evil
 hath fresh possession taken,
 Sinners in grain, reserved to pain and
 torments most severe,
 Because 'gainst light they sinned with spite,
 are also placèd here.

29

There also stand a num'rous band that no
 profession made
 Of godliness, nor to redress their ways at
 all essayed,
 Who better knew, but (sinful crew!)
 Gospel and law despised,
 Who all Christ's knocks withstood like
 blocks and would not be advised.

30

Moreover, there with them appear a number,
 numberless,
 Of great and small, vile wretches all, that
 did God's law transgress,

Idolaters, false worshippers, prophaners of
 God's name,
 Who not at all thereon did call or took
 in vain the same.

31

Blasphemers lewd and swearers shrewd,
 scoffers at purity,
 That hated God, contemned his rod, and
 loved security,
 Sabbath-polluters, saints' persecutors, pre-
 sumptuous men and proud,
 Who never loved those that reproved—all
 stand amongst this crowd.

32

Adulterers and whoremongers were there,
 with all unchaste,
 There covetous and ravenous that riches
 got too fast,
 Who used vile ways themselves to raise
 t' estates and worldly wealth,
 Oppression by, or knavery, by force, or
 fraud, or stealth.

33

Moreover, there together were children fla-
 gitious,
 And parents who did them undo by nurture
 vicious,
 False-witness-bearers and self-forswearers,
 murderers and men of blood
 Witches, enchanter, and ale-house-haun-
 ters, beyond account there stood.

34

Their place there find all heathen blind that
 nature's light abused,
 Although they had no tidings glad of Gos-
 pel-grace refused.
 There stands all nations and generations of
 Adam's progeny
 Whom Christ redeemed not, who Christ
 esteemed not, through infidelity.

35

Who no peace-maker, no undertaker, to
shroud them from God's ire
Ever obtained; they must be pained with
everlasting fire.
These num'rous bands, wringing their hands
and weeping, all stand there,
Filled with anguish, whose hearts do lan-
guish through self-tormenting fear.

36

Fast by them stand at Christ's left hand
the lion fierce and fell,
The dragon bold, that serpent old, that
hurried souls to Hell.
There also stand, under command, Legions
of sprites unclean,
And hellish fiends, that are no friends to
God nor unto men.

37

With dismal chains and strongest reins,
like prisoners of Hell,
They're held in place before Christ's face,
till he their doom shall tell.
These void of tears but filled with fears and
dreadful expectation
Of endless pains and scalding flames stand
waiting for damnation. . . .

CHRIST DEBATES WITH THE REPROBATE
INFANTS

166

Then to the bar all they drew near who
died in infancy
And never had or good or bad effected
pers'nally,
But from the womb unto the tomb were
straightway carried
(Or at the least ere they transgressed),
who thus began to plead:

167

"If for our own transgression, or diso-
bedience,
We here did stand at thy left-hand, just
were the recompence;
But Adam's guilt our souls hath spilt, his
fault is charged on us,
And that alone hath overthrown and ut-
terly undone us.

168

"Not we, but he, ate of the tree whose
fruit was interdicted,
Yet on us all, of his sad fall, the pun-
ishment's inflicted.
How could we sin that had not been, or
how is his sin our,
Without consent, which to prevent, we
never had a power?

169

"O great Creator, why was our nature de-
praved and forlorn?
Who so defiled and made so vild whilst we
were yet unborn?
If it be just, and needs we must transgres-
sors reckoned be,
Thy mercy, Lord, to us afford, which sin-
ners hath set free.

170

"Behold we see Adam set free and saved
from his trespass,
Whose sinful fall hath split us all and
brought us to this pass.
Canst thou deny us once to try, or grace
to us to tender,
When he finds grace before thy face, that
was the chief offender?"

171

Then answerèd the Judge most dread,
"God doth such doom forbid,
That men should die eternally for what they
never did.

But what you call old Adam's fall, and
 only his trespass,
 You call amiss to call it his, both his and
 yours it was.

172

"He was designed of all mankind to be a
 public head,
 A common root, whence all should shoot,
 and stood in all their stead.
 He stood and fell, did ill or well, not for
 himself alone,
 But for you all, who now his fall and
 trespass would disown.

173

"If he had stood, then all his brood had
 been establishèd
 In God's true love, never to move, nor
 once awry to tread;
 Then all his race my father's grace should
 have enjoyed forever,
 And wicked sprites by subtle sleights could
 them have harmèd never.

174

"Would you have grieved to have received
 through Adam so much good,
 As had been your forevermore, if he at
 first had stood?
 Would you have said, we ne'er obeyed,
 nor did thy laws regard;
 It ill befits with benefits us, Lord, so to
 reward?

175

"Since then to share in his welfare you
 could have been content,
 You may with reason share in his treason
 and in the punishment.
 Hence you were born in state forlorn with
 natures so depraved:
 Death was your due, because that you had
 thus yourselves behaved."

176

"You think, 'if we had been as he whom
 God did so betrust
 We to our cost would ne'er have lost all
 for a paltry Lust?'
 Had you been made in Adam's stead, you
 would like things have wrought,
 And so into the self-same woe yourselves
 and yours have brought.

177

"I may deny you once to try, or grace
 to you to tender,
 Though he finds grace before my face, who
 was the chief offender:
 Else should my grace cease to be grace,
 for it should not be free,
 If to release whom I should please, I have
 no liberty!

178

"If upon one what's due to none I frankly
 shall bestow,
 And on the rest shall not think best com-
 passion's skirt to throw,
 Whom injure I? will you envý and grudge
 at others' weal?
 Or me accuse, who do refuse yourselves to
 help and heal?

179

"Am I alone of what's my own, no master
 or no Lord?
 Or if I am, how can you claim what I to
 some afford?
 Will you demand grace at my hand, and
 challenge what is mine?
 Will you teach me whom to set free, and
 thus my grace confine?

180

"You sinners are, and such a share as
 sinners may expect,
 Such you shall have, for I do save none but
 mine own elect.

Yet to compare your sin with their who lived a longer time, I do confess yours is much less though every sin's a crime.	But unto you I shall allow the easiest room in Hell." The glorious King thus answering, they cease and plead no longer: Their consciences must needs confess his reasons are the stronger. . . .
--	---

181

"A crime it is, therefore in bliss you may
 not hope to dwell;

1645(?) ~ *Edward Taylor* ~ 1729

SUPREME among the poets of 17th Century American Puritanism stands Edward Taylor. He was born in or near Coventry, England, probably in 1645. Arriving at Boston in 1668, he entered Harvard, from which he was graduated in 1671. Both a minister and a physician, he lived at Westfield, Mass., for fifty-eight years, married twice, was the father of a large family, and collected one of the most unusual libraries in the colonies, especially strong in expensive editions of the best European scholarship in "divinity." In 1720 Harvard conferred upon him an honorary M.A. degree. Ezra Stiles, 18th Century worthy, was his grandson.

Of the abundant poetry which Taylor wrote, it has so far been found that only one poem was published during his lifetime. Like Emily Dickinson, he apparently regarded publication as "the auction of the mind of man." *The Poetical Works of Edward Taylor* was published for the first time in 1939, edited from his manuscripts by Thomas H. Johnson; the three poems included here have been taken from this volume, with some modernization of the texts.

A master of "metaphysical conceits," Taylor had, in Austin Warren's phrase, the "baroque sensibility" characteristic of such English poets as Donne and Crashaw and Herbert. So creative was this sensibility that it was able to seize and express the essence of both the dogmatic and mystical phases of Puritan orthodoxy. Dogmatic or doctrinal Puritanism permeates that sequence of his poems that bears the title "Gods Determinations," but the doctrine is transmuted beyond mere didacticism. From this sequence is taken the first of the following poems, its full title being "The Soule Bemoaning Sorrow rowling upon a resolution to Seek Advice of Gods people." Mysticism predominates in his "Sacramental Meditations," which are here represented by "The Experience" and "Meditation Eighty-Two."

[From the short "Diary of Edward Taylor," published in *Proceedings of the Massachusetts Historical Society*, XVIII (1881), 4-18, the following prose selection has been reprinted with some modernization of the text. His impres-

sions of his Atlantic voyage show a remarkable feeling for language and sensuous detail. The final incident of the "dove pigeon" entering the chamber window as Poe imagined that his raven did is one of the most memorable bits in any personal record of the colonial period. For to young Taylor the pigeon's visitation was obviously fraught with symbolic meaning. "It was ominous surely"—not only of God's grace bestowed, or in process of bestowal, but of something more—perhaps the "calling" of a sacred poet.]

From
DIARY

[1881 (written 1668)]

THURSDAY, June 18. Morning foggy and misty; the wind southeast, but low. Many whales were heard in the morning about three o'clock, but not seen for the fog. About eight, I being between decks at study against Lord's Day, was called to see one, for they heard one coming toward the ship, and when I got above deck I only heard his voice (which was a rough, hoarse noise, blothering in the water), but could not see him by reason of the misty fog. The fog being of continuance from Lord's Day, we could not well see any further than we went; but it pleased the Lord so far to answer our prayers as to clear the air in the afternoon, and to give us a fresh, gentle gale that made us slide on a great pace. We had a tide now again, which, when we came to it, they called a rippling, because the water by the running of the stream curled and rippled the top of the waves. . . .

Wednesday, July 1. Day dark and drizzly; wind fresh and northeasterly. We sailed west and northerly. There was a blue pigeon came and settled on the main-top-sail yard, which the boatswain shot, but as it fell it hit against the mainsail yard, and so was struck overboard. We saw a gannet, and after, some New England rockweed on the water, which was like yellow mareblobs.¹ The wind was very high toward night, insomuch that we took down all our sails and lay by, lest we should be drove upon the shore before we were aware, and so suffer damage. About sunset we

saw a fish rise, spouting water out and leaping out of the water, as big as a huge horse. Some took it for a young whale, some for a grampus; our master, a thrasher. . . .

Saturday, July 4. Wind east by south: the day thick with fogs. We saw our consort on the head of us, and spake with him in the afternoon. We sailed faintly on, because the day was so foggy. We sounded, and had some forty-five or forty fathoms water, and we saw many whale spouts. After the day clearing up, we saw land on both hands—Plymouth on the left, and Salem on the right—toward sunset. About five o'clock we saw the islands in our passage up to Boston. About eight I saw a flying creature like a spark of red fire (about the bigness of an humble-bee) fly by the side of the ship; and presently after, there flew another by. The men said they were fire-flies. About eleven or twelve o'clock I went to lie down to sleep on my cabin (for none went to bed because we were nigh our harbor, and waited to go ashore as soon as we cast anchor). But when I was dropped in a slumber there was a sad outcry made, insomuch that I was wakened with it in a fright, thinking the ship had been cast upon some rock; but the cause was this: there was a ketch at anchor, and coming to it, our men did so *hoe* the ship (for that is their word when they call to any in another ship), and there being a horse aboard, he leaped overboard into the sea. [It was] that they hooted at so. . . .

July 7. I delivered a letter from Mr.

¹ Marsh marigolds.

Clarke, and another from his brother, Meadwel, to their kinsman, Mr. Hull, who invited me to his house till I had despatched my business and was settled in the college, and also to bring my chest to his warehouse. This gentleman would not be said nay,—therefore I was with him, and received much kindness from him. I continued with him till I settled at Cambridge.

About July 14, I went to Cambridge to speak with the President, who gave me encouragement. At night it thundered and lightened very dreadfully, insomuch that I had little rest for the flashes of lightning. . . .

About July 22 I went to Cambridge and lay at the President's. At night it thundered, lightened, and rained very much; and as his son, Elnathan, and I were going to bed about ten or eleven o'clock in the night, as it rained there came a white peckled² dove pigeon, and flew against the casement of our chamber window, and there sat. I only being in bed, when I heard it was a pigeon got up, and so we opened the casement upon the dove so far as that we took him in, and when he was in, we would have caught him, and he ran from us and cooed and bristled at us. In the morning he was let out again. The President, when he heard it, said he would not (of any good) he should be hurt, for one should not hear of the like, it was ominous surely.

July 23. I was admitted into the college.

THE SOUL BEMOANING . . .

[1939]

Alas! my soul, product of breath divine
For to illuminate a lump of slime.
Sad providence! Must thou below thus tent
In such a cote as strangles with ill scent?
Or in such sensual organs make thy
 stay, 5
Which from thy noble end do make thee
 stray?
My nobler part, why dost thou lackey to
The carnal whinnings of my senses so?
What? thou become a page, a peasant!
 nay.

A slave unto a dirty clod of clay! 10
Why should the kernel bring such cankers
 forth
To please the shell as will devour them
 both?
Why didst thou thus thy milkwhite robes
 defile
With crimson spots of scarlet sins most
 vile?
My muddy tent, why hast thou done so
 ill 15
To court and kiss my soul, yet kissing
 kill?
Why didst thou, whining, egg her thus
 away,
Thy sensual appetite to satisfy?
Art thou so safe and firm a cabinet
As though thou soaking lie in nasty
 wet 20
And in all filthy puddles, yet the thin
Can ne'er drench through to stain the
 pearl therein?
It's no such thing! Thou'rt but a cawl-
 wrought case,
And when thou fallst, thou foulst its shin-
 ing face;
Or but her mudwalled lid which, wet by
 sin, 25
Diffuseth all in her that enters in.
One stain stains both, when both in one
 combine:
A musty cask doth mar rich Malmsey wine
Woe's me! my mouldering heart! What
 must I do?
When is my moulting time to shed my
 woe? 30
Oh! Woeful fall! what, fall from heavenly
 bliss
To th' bottom of the bottomless abyss?
Above, an angry God! Below, black-blue
Brimstony flames of hell where sinners rue!
Behind, a trail of sins! Before appear 35
An host of mercies that abusèd were!
Without, a raging devil! and within,
A wracking conscience galling home for
 sin!

² Old form for "speckled."

What! Canst not find one remedy, my soul,
On mercy's file for me? Oh, search the
roll. 40

What! Freeze to death under such melting
means

Of grace's golden, life-enliv'ning beams?

What? Not one hope? Alas! I hope there's
some,

Although I know not in what way it come.
Although there is no hope within my
mind, 45

I'll force hope's faculty till hope I find.

Some glimmerings of hope I hope to spy

In mercy's golden stacks, or remedy.

I therefore am resolved a search to make

And of the pious wise some counsel
take. 50

I'll then in pensiveness myself apply

To them in hope, but yet half hopelessly.

Perhaps these thoughts are blessed motions,
though

From whence they are, as yet I do not
know.

And if from Christ, oh, then, thrice
happy me! 55

If not, I'st not be worser than I be.

THE EXPERIENCE

[1939]

Oh! that I always breathed in such an air

As I sucked in, feeding on sweet content!

Dished up unto my soul ev'n in that prayer

Poured out to God over last sacrament.

What beam of light rapt up my sight
to find 5

Me nearer God than ere came in my
mind?

Most strange it was! But yet more strange
that shine

Which filled my soul then to the brim
to spy

My nature with thy nature all divine

Together joined in him that's thou
and I. 10

Flesh of my flesh, bone of my bone:
there's run

Thy godhead and my manhood in thy
son.

Oh! that that flame which thou didst on me
cast

Might me inflame and lighten ev'rywhere.

Then Heaven to me would be less at last,
So much of heaven I should have while
here. 15

Oh! Sweet though short! I'll not forget
the same.

My nearness, Lord, to thee did me in-
flame.

I'll claim my right: give place, ye angels
bright,

Ye further from the godhead stand
than I,

My nature is your Lord and doth unite 20
Better than yours unto the Deity.

God's throne is first and mine is next,
to you

Only the place of waiting-men is due.

Oh, that my heart thy golden harp might
be,

Well-tuned by glorious grace, that ev'ry
string 25

Screwed to the highest pitch might unto
thee

All praises wrapped in sweetest music
bring.

I praise thee, Lord, and better praise
thee would,

If what I had, my heart might ever hold.

MEDITATION EIGHTY-TWO

[1939]

My tattered fancy and my ragged rhymes
Teem laden metaphors, which yet might
serve

To hum a little touching terrene shines.

But spiritual life doth better fare
deserve.

This, thought on, sets my heart upon the
rack, 5

I fain would have this life but han't its
knack.

Reason stands for it, moving to pursue't
But flesh and blood are elemental things

That sink me down, dulling my spirit's fruit.	That sends out influences to maintain A little while, and then holds back the same.	30
Life animal a spiritual spark ne'er springs.		10
But if thy altar's coal enfire my heart, With this blessed life my soul will be thy spark.	But soul sweet bread is in God's bakehouse made On Heaven's high dresser-board and thoroughly baked, On Zion's gridiron sapped in'ts dripping trade, That all do live that on it do partake, It's flesh and blood even of the Deity;	35
I'm common matter: Lord, thine altar make me, Then sanctify thine altar with thy blood. I'll offer on't my heart to thee. Oh! take me	None that do eat and drink it ever die!	
And let thy fire calcine mine altar's wood, Then let thy spirit's breath, as bellows blow, That this new-kindled life may flame and glow.	Have I a vital spark even of this fire? How dull am I? Lord, let thy spirit blow Upon my coal until its heart is higher And I be quickened by the same, and glow.	40
Some life with spoon or trencher do main- tain Or suck its food through a small quill or straw,	Here's manna, angel food, to fatten them That I must eat or be a withered stem.	20
But make me, Lord, this life thou giv'st, sustain With thy sweet flesh and blood, by Gos- pel law. Feed it on Zion's pasty plate-delights, I'd suck it from her candlestick's sweet pipes.	Lord, make my faith thy golden quill where- through I vital spirits from thy blood may suck, Make faith my grinders, thy choice flesh to chew,	45
Need makes the oldwife trot; Necessity 25 Saith I must eat this flesh and drink this blood, If not, no life's in me that's worth a fly; This mortal life, while here, eats mortal food	My withered stock shall with frim ¹ fruits be stuck. My soul shall then in lively notes forth ring Upon her virginals ² praise for this thing.	

¹ Provincial phrase meaning "flourish-
ing."

² A 16th and 17th Century musical in-
strument.

1603(?) ~ Roger Williams ~ 1683

ON THE OCCASION of a boundary dispute between Connecticut and Rhode Island in 1670—in the course of which men from Connecticut invaded a Rhode Island town, and Rhode Island officially incarcerated some of them—Roger Williams wrote a letter,*dated Providence, June 22, 1670, to Major Mason, a Connecticut magistrate. The present selection from this letter is

reprinted in a modernized text from *Collections of the Massachusetts Historical Society*, I (1792), 279-280. Williams here implies that New England Puritanism, despite its doctrinal professions, was actually too much of this world in its acquisitive propensities. He reveals, furthermore, the nature of his own Puritanism, still colored by the intransigence of his "Seeker" days. It was not an Enthusiasm like that of Anne Hutchinson Nor was it, although a form of mysticism, the sort that found adequate expression for itself in the symbols of orthodoxy. Rather it was an uncompromising renunciant idealism, an extreme ascetic otherworldliness, surprising in a man of Williams' administrative abilities. Primitively Christian and neo-mediaeval was its radical and simplistic reduction of Christianity to the ethics of complete unselfishness and an attitude of total non-attachment toward any of the shadows on the wall of Plato's cave.

[For other selections from the writings of Roger Williams, see Book I, Parts 1 and 3.]

LETTER TO MAJOR MASON
[1792 (1670)]

HOWEVER you satisfy yourselves with the Pequot conquest; with the sealing of your charter some few weeks before ours; with the complaints of particular men to your colony, yet upon due and serious examination of [the] matter, in the sight of God, you will find the business at bottom to be . . . a depraved appetite after the great vanities, dreams, and shadows of this vanishing life, great portions of land, land in this wilderness, as if men were in as great necessity and danger for want of great portions of land, as poor, hungry, thirsty seamen have after a sick and stormy, a long and starving passage. This is one of the gods of New England which the living and most high eternal will destroy and famish. . . . Only this I must crave leave to say, that it looks like a prodigy or monster that countrymen among savages in a wilderness, that professors of God and one mediator, of an eternal life, and that this is like a dream, should not be content with those vast and large tracts which all the other colonies have (like platters and tables full of dainties) but pull and snatch away their poor neighbors' bit or crust: and a crust it is, and a dry hard one too, because of the natives' continual troubles, trials, and vexations.

Alas, Sir, in calm midnight thoughts, what are these leaves and flowers, and smoke, and shadows, and dreams of earthly nothings, about which we poor fools and children, as David saith, disquiet ourselves in vain? Alas, what is all the scuffling of this world for but, *come will you smoke it?* What are all the contentions and wars of this world about, generally, but for greater dishes and bowls of porridge, of which, if we believe God's spirit in scripture, Esau and Jacob were types? Esau will part with the heavenly birthright for his supping, after his hunting, for god belly: and Jacob will part with his porridge for an eternal inheritance: O Lord, give me to make Jacob's and Marie's choice, which shall never be taken from me.

How much sweeter is the counsel of the son of God, to mind first the matters of his kingdom: to take no care for tomorrow; to pluck out, cut off, and fling away right eyes, hands, and feet rather than to be cast whole into hell fire: to consider the ravens and the lilies whom an heavenly father so clothes and feeds: and the counsel of his servant Paul, to roll our cares, for this life also, upon the most high lord, steward of his people, the eternal God: to be content with food and raiment: to mind not our own but every man the things of another; yea and to suffer wrong and part

with what we judge is right, yea our lives, and, as poor women martyrs have said, as many as there be hairs upon our heads for the name of God and the son of God his sake. This is humanity, yea this is Christianity. The rest is but formality and picture, courteous idolatry and Jewish and Popish blasphemy against the Christian religion, the Father of spirits, and his son the Lord Jesus. Besides, Sir, the matter with

us is not about these children's toys of land, meadows, cattle, government, etc. But here, all over this colony, a great number of weak and distressed souls scattered are flying hither from Old and New England; the Most High and only wise hath in his infinite wisdom provided this country and this corner as a shelter for the poor and persecuted, according to their several persuasions. . . .

1639 ~ *Increase Mather* ~ 1723

IN MOST OF the kinds of writing done by American Puritans, one constantly encounters references to Divine Providence. No other concept played so important a rôle in their daily experience and in their religious musings. In factual narratives such as those of Bradford, Winthrop, and Mrs. Rowlandson, in the "witchcraft papers," in sermons, letters, and poetry, it crops up again and again to designate what to the Puritan was an omnipresent reality, both indispensable and indisputable. A heritage from European religious tradition, the concept of Providence, as it was interpreted in New England, embraced two different "operations" of God—one general, and the other particular or special. By his general providence, which was roughly synonymous with creation, God had brought into being the universe and all the agents—supernatural, natural, and human—by which its processes were kept going. He had also determined upon the covenant of Scripture and the sacrificial mediatory "passion" of his son as means by which his foreordained ends for mankind might eventually be realized. So complex, however, was the enterprise of his created cosmos that he had to supplement his general providence and original determinations by a more specific superintendence. And this superintendence demonstrated, more than any other of his "operations," his absolute sovereignty. By an act of special or particular providence, he might suspend the normal workings of things as carried on by his created agents, and interfere personally and miraculously to right some anomaly in human concerns or natural economy, or to hasten the occurrence of any event he desired, or to visit his wrath or grace or his forewarnings upon this or that individual. This special providence, which one American Puritan writer, Edward Johnson, preferred to call "wonder-working providence," was so emphasized by the Puritans that they may be said, as Moses Coit Tyler has suggested, to have reduced God's dealings with man to the category of the picayune and the microscopic.

Despite the interest of many Puritans in studying nature scientifically to

arrive at a better understanding of God's intentions in his works, their belief in "special providences" became ultimately an obstacle to the progress of science. It postulated suspension of natural cause and effect and supplied for certain phenomena a facile type of explanation which it was impious to bring into question or to inquire beyond. Long after intelligent New Englanders had greatly modified or even abandoned the concept of special providence, it flourished throughout America as one of the doctrinal "stand-bys" of evangelical sectarian Christianity. Of the numerous attempts made by American Puritans to expound Providence, Increase Mather's treatise, *The Doctrine of Divine Providence*, is one of the most comprehensive.

Born in Dorchester, Mass., Increase Mather, the father of Cotton Mather, was one of the most distinguished Puritan intellectuals of the second generation. Receiving his B. A. from Harvard in 1656 and his M. A. from Trinity College, Dublin, in 1658, he served as a minister in England, returned to Boston and married Maria Cotton, daughter of John Cotton, and thereafter entered on a career which, among its many honors, included a diplomatic mission to England, leadership in New England politics, and the presidency of Harvard College. A prolific writer, Increase published books on a wide variety of subjects. Although a considerable time before his death his power and influence as a pillar of orthodoxy had begun to decline, he had enough flexibility of character to meet, in part at least, the challenge of changing mores and new opinions.

[The following selections, which have been modernized in text, separated by Roman numerals, and arranged in the order of their appearance in different portions of the treatise, are taken from the original edition.]

From
THE DOCTRINE OF DIVINE
PROVIDENCE
[1684]

I

THE PROVIDENCE of God is extended to the least and most inconsiderable things that happen in the world. Heathen philosophers acknowledged that the God of heaven has an over-ruling providence in the great affairs and concernments of this lower world, but not in lesser matters. They could say, *Non vacat exiguis rebus adesse Jovi*, [i.e.], the great God had something else to do than to mind little matters, but they know not the Lord aught; he would not be God if the least thing in the

world should happen without him. The Scripture teacheth us to believe that the least as well as the greatest matters are ordered by him whose understanding is infinite. His wisdom does extend to fowls of the air, and to the grass of the field, *Mat.* 6. 26, 39; to the sparrows, and to every single sparrow; not one of them is killed without the ordering hand of divine providence. Yea, it reacheth to the very hair upon the heads of men, *Mat.* 10. 29, 30, which sheweth that there is not the least thing happening in the world without the knowledge and providence of the most High. . . .

II

For as the world could not give itself a being at first, so neither can it continue

itself in being. If the same hand which made all creatures should not preserve them, they would all presently return to their first nothing, *Heb.* 1. 3. Now that is Providence. Creation giveth *primo esse*, but providence giveth *porro esse*, as the schools express it.¹ The frame of nature would be dissolved the next moment, if there were not an hand of providence to uphold and govern all. To preserve and govern the world is too high a work for any mere creature to undertake. Inasmuch, then, as all creatures are preserved and kept in their order, it is because he that sitteth in heaven ruleth over all. A wheel must have a hand to guide it or it will presently turn out of the way and fall to the ground, so, if there were not a divine hand to manage the wheel of providence, all things would run into confusion, and the world would come to ruin in one day. . . .

III

Sometimes there is a seeming contradiction in divine providence. Hence, in *Ezek.* 11. 16, 'tis said *their appearance and their*

work was as it were a wheel in the middle of a wheel. The providences of God seem to interfere with one another sometimes. One providence seems to look this way, another providence seems to look that way, quite contrary one to another. Hence these works are marvelous. Yea, and that which adds to the wonderment is in that the works of God sometimes seem to run counter to his Word: so that there is dark and amazing intricacy in the ways of providence. There is a wheel within a wheel. Not only wise but good men have sometimes been put to a non-plus here. The God of Truth hath in his Word said it shall go well with the righteous and ill with the wicked, and yet he so orders things by his providence, as that the righteous see nothing but miserable days in this world and the vilest of men are at the same time in the highest prosperity, *Jer.* 12. 1. The penman of the seventy-third psalm was sadly puzzled and had like to have lost himself with amazement at this thing. . . .

¹ The distinction is between *original existence* and *continuing existence*.

1663 ~ Cotton Mather ~ 1728

INCREASE MATHER'S son, Cotton, born in Boston, was so precocious that at the age of twelve he could read, write, and speak Latin and had gone a good way toward mastering Greek and Hebrew. He overcame, like Demosthenes, a serious speech defect—stammering. With two degrees from Harvard, he was a minister at eighteen and soon rose to be his father's colleague at the Second Church in Boston, one of the largest in the colonies. He served its congregation until his death. He was thrice married, had numerous children, and wrote so many books, tracts, and pamphlets—some five hundred in all—that he has proved a major problem to the modern bibliographer. Taking all knowledge for his province, he corresponded with learned men in many parts of Europe. A *locus classicus* of Puritan literary criticism, "Of Poetry and Style," is to be found in his *Manuductio ad Ministerium*, a handbook for students of divinity, first printed in Boston in 1726 and reprinted in London in 1781 and 1789.

Family difficulties, including the insanity of his third wife and the

profligacy of a son, gave his later intellectual activity certain curious nuances, but did not materially inhibit its prodigiousness. Becoming a member of the Royal Society in 1713, he contributed scientific papers to its *Transactions*. Although his scientific interests helped launch the witchcraft mania of the early 1690's, they also led him to carry on a fight in 1721, with the help of his father, to promote smallpox inoculation.

The mind of Cotton Mather was an omnivorous, inexhaustible receptacle of heterogeneous erudition; hence many of his books have the motley, crochety, digressive, and encyclopedic quality that distinguishes the writing of such English polymaths as Robert Burton and Sir Thomas Browne.

[Two of his most remarkable productions are *Magnalia Christi Americana*, London, 1702, a vast ecclesiastical history of New England, and *The Christian Philosopher*, London, 1721, from which the following selections have been modernized in text by the present editors and supplied with a title indicative of Cotton's unpredictable range of discourse even in brief compass. These selections, which occur in Essay XXXII, "Of Man," illuminate the orthodox Puritans' concept of revelation. For evidences of God's will in creation, they looked not only to scripture, but also to nature and to human reason. In discussing the trinity, Cotton Mather becomes involved in a notion of correspondence between the planes of the human and the supernatural that anticipates one of the central doctrines of later Transcendentalism—the correspondence between man's inner life and the whole of nature]

OBSERVATIONS ON ATHEISM,
NATURE, REASON, AND THE
GOSPEL OF CHRIST
[1721]

ATHEISM is now for ever chased and hissed out of the world; everything in the world concurs to a sentence of banishment upon it. Fly, thou monster, and hide, and let not the darkest recesses of Africa itself be able to cherish thee; never dare to show thyself in a world where everything stands ready to overwhelm thee! A Being that must be superior to matter, even the creator and governor of all matter, is everywhere so conspicuous that there can be nothing more monstrous than to deny the God that is above. No system of Atheism has ever yet been offered among the children of men but what may presently be convinced of such inconsistencies that a man must ridiculously believe nothing certain before he can imagine them; it must be a system of

things which cannot stand together! A bundle of contradictions to themselves and to all common sense. I doubt it has been an inconsiderate thing to pay so much of a compliment to Atheism as to bestow solemn treatises full of learned arguments for the refutation of a delirious frenzy which ought rather to be put out of countenance with the most contemptuous indignation. And I fear such writers as have been at the pains to put the objections of Atheism into the most plausible terms, that they may have the honor of laying a devil when they have raised him, have therein done too unadvisedly. However, to so much notice of the raving Atheist we may condescend while we go along, as to tell him that for a man to question the Being of a God, who requires from us an homage of affection and wonderment and obedience to himself and a perpetual concern for the welfare of the human society for which he has in our formation evidently suited us, would be an

exalted folly, which undergoes especially two condemnations: it is first condemned by this, that every part of the universe is continually pouring in something for the confuting of it; there is not a corner of the whole world but what supplies a stone towards the infliction of such a death upon the blasphemy as justly belongs to it: and it has also this condemning of it, that men would soon become cannibals to one another by embracing it; men being utterly destitute of any principle to keep them honest in the dark, there would be no integrity left in the world, but they would be as the fishes of the sea to one another, and worse than the creeping things, that have no ruler over them. Indeed from everything in the world there is this voice more audible than the loudest thunder to us: *God hath spoken, and these two things have I heard! First, believe and adore a glorious God, who has made all these things, and know thou that he will bring thee into judgment! And then be careful to do nothing but what shall be for the good of the community which the glorious God has made thee a member of.* Were what God hath spoken duly regarded and were these two things duly complied with, the world would be soon revived into a desirable garden of God and mankind would be fetched up into very comfortable circumstances; till then the world continues in a wretched condition, full of doleful creatures, with wild beasts crying in its desolate houses, dragons in its most pleasant palaces. And now declare, O everything that is reasonable, declare and pronounce upon it whether it be possible that maxims absolutely necessary to the subsistence and happiness of mankind can be falsities! There is no possibility for this, that cheats and lies must be so necessary that the ends which alone are worthy of a glorious God cannot be attained without having them imposed upon us!

Having dispatched the Atheist with bestowing on him not many thoughts, yet more than could be deserved by such an idiot, I will proceed now to propose two general strokes of piety, which appear to a

Christian Philosopher as unexceptionable as any proposals that ever were made to him.

First, the works of the glorious God exhibited to our view, 'tis most certain they do bespeak, and they should excite our acknowledgment of, his glories appearing in them: the great God is infinitely gratified in beholding the displays of his own infinite power and wisdom and goodness in the works which he has made; but it is also a most acceptable gratification to him when such of his works as are the rational beholders of themselves and of the rest shall with devout minds acknowledge his perfections, which they see shining there. Never does one endued with Reason do anything more evidently reasonable than when he makes everything that occurs to him in the vast fabric of the world an incentive to some agreeable efforts and sallies of religion. . . .

And then, secondly, the Christ of God must not be forgotten, who is the Lord of all. I am not ashamed of the Gospel of Christ, of which I will affirm constantly, that if the philosopher do not call it in, he paganizes and leaves the finest and brightest part of his work unfinished. . . .

We will add one thing more: though the one God in his three subsistences be the governor as well as the creator of the world, and so the son of God ever had what we call the natural government of the world, yet upon the fall of mankind there is a mediatory kingdom that becomes expedient, that so guilty man and that which was lost may be brought to God; and the singular honor of this mediatory kingdom is more immediately and most agreeably assigned to the Son of God, who assumes the man Jesus into his own person and has all power in heaven and earth given to him; all things are now commanded and ordered by the Son of God in the man upon the throne and this to the glory of the Father, by whom the mediatory kingdom is erected and so conferred. This peculiar kingdom, thus managed by the Son of God in our Jesus, will cease when the illustrious ends

of it are all accomplished, and then the Son of God, no longer having such a distinct kingdom of his own, shall return to those eternal circumstances, wherein he shall reign with the Father and the Holy Spirit, one God, blessed for ever. In the mean time, what creatures can we behold without being obliged to some such doxology as this *O son of God, incarnate and enthroned in my Jesus, this is part of thy dominion! What a great king art thou, and what a name hast thou above every name, and how vastly extended is thy dominion! Dominion and fear is with thee, and there is no number of thine armies! All the inhabitants of the earth, and their most puissant emperors, are to be reputed as nothing before thee!*

I will finish with a speculation which my most valuable Dr Cheyne¹ has a little more largely prosecuted and cultivated.

All intelligent compound beings have their whole entertainment in these three principles, the *desire*, the *object*, and the *sensation* arising from the congruity between them, this analogy is preserved full and clear through the spiritual world, yea, and through the material also, so universal and perpetual an analogy can arise from nothing but its pattern and archetype in the infinite God or Maker, and could we carry it up to the source of it, we should find the trinity of persons in the eternal Godhead admirably exhibited to us. In the Godhead we may first apprehend a desire, an infinitely active, ardent, powerful thought, proposing of satisfaction, let this represent God the Father but it is not possible for any object but God Himself to satisfy Himself and fill His desire of happiness, therefore He Himself reflected in

upon himself, and contemplating His own infinite perfections, even the brightness of His glory and the express image of His person, must answer this glorious intention, and this may represent to us God the Son. Upon this contemplation, wherein God Himself does behold and possess and enjoy Himself, there cannot but arise a love, a joy, an acquiescence of God Himself within Himself and worthy of a God, this may shadow out to us the third and the last of the principles in this mysterious ternary, that is to say, the Holy Spirit. Though these three relations of the Godhead in itself, when derived analogically down to creatures, may appear but modifications of a real subsistence, yet in the supreme infinitude of the Divine Nature they must be infinitely real and living principles. Those which are but relations when transferred to created beings are glorious realities in the infinite God. And in this view of the Holy Trinity, low as it is, it is impossible the Son should be without the Father, or the Father without the Son, or both without the Holy Spirit, it is impossible the Son should not be necessarily and eternally begotten of the Father or that the Holy Spirit should not necessarily and eternally proceed both from Him and from the Son. Thus from what occurs throughout the whole creation, Reason forms an imperfect idea of this incomprehensible mystery.

But it is time to stop here, and indeed how can we go any further!

¹ Dr George Cheyne's *Philosophical Principles of Religion, Natural and Revealed* (London, 1715) is the source of this "speculation."

1703 ~ *Jonathan Edwards* ~ 1758

THREE OF the most complex and interesting minds among American men of letters before 1800 were those of Jonathan Edwards, Benjamin Franklin, and Thomas Paine, although they were minds of an entirely different cast. Son of the Rev Timothy Edwards and grandson of the Rev Solomon Stoddard, Edwards was born at East Windsor, Connecticut. His precocious interest in both science and philosophy was soon supplemented by a desire to excel in theology. After his graduation from Yale in 1720, he spent two more years mastering the intricacies of the latter study. In 1723, a convert to Calvinism, he was minister of a Presbyterian church in New York City, and in 1724 returned to Yale as a tutor. When his academic career was interrupted by illness, he became the colleague of his grandfather in the pastorate at Northampton, Mass. He married Sarah Pierrepont in July, 1727.

In the 1730's and the early 1740's Edwards' fervid and sometimes brimstone preaching was one of the stimuli to a revival of religion throughout New England known as "the Great Awakening" and destined to have its counterparts in other sections of the country as the century advanced. Thereafter his reputation as a theologian steadily increased, bulwarked by his series of publications. Dissension, however, eventually broke out in his pastorate over minutiae of doctrine and polity, and reached a climax when Edwards sought to curb among the young in his congregation the reading of allegedly indecent books dealing with the secrets of the midwife's art. Dismissed in 1750 from his Northampton church, Edwards became virtually an exile in the Western Massachusetts frontier settlement of Stockbridge, where he served as pastor of the church and missionary to the Indians. In 1757 he was chosen president of the College of New Jersey, now Princeton, to succeed his son-in-law, the Rev Aaron Burr, father of the Aaron Burr of later historical notoriety. Assuming his new duties in January, 1758, President Edwards died in March of that year after an inoculation against smallpox, leaving among the unwritten masterpieces of literature his projected *History of the Work of Redemption*, which he planned to be the crowning achievement of his career as theologian.

Without this unwritten all-embracing *Summa*, Edwards' published work remains of immense significance in the development of American religious thought. In seeking to reestablish the main doctrines of Calvinism on a philosophic basis that would make them acceptable to the 18th Century, he was perhaps most successful in his closely reasoned *A Careful and Strict Enquiry, into the Modern Prevailing Notions of that Freedom of Will which is supposed to be Essential to Moral Agency, Virtue and Vice, Reward and*

Punishment, Praise and Blame, Boston, 1754 Yet, in his hands, the tradition of Puritanism was subtly transformed

[For one thing, its mystical strain appealed strongly to his sensibility This is strikingly apparent in a brief tribute to his wife-to-be, Sarah Pierrepont, written in 1723 upon a blank leaf in a book and first printed in S E Dwight's *Life* in *Edwards' Works*, 1829, Vol I It is also apparent in his "Personal Narrative," written some time after January, 1739, and first printed in Samuel Hopkins' *Life and Character*, Boston, 1765 Of his numerous writings that grew out of his experience in "the Great Awakening," the most mature is *A Treatise Concerning Religious Affections*, Boston, 1746, here his mysticism leads him to exalt a religion of the heart above a mere religion of the head, as is shown by the third of the following selections, which is taken from this treatise and supplied with a title by the present editors Finally, Edwards' metaphysical bent caused him to conceive of God as a kind of supreme creative artist producing the universe out of that "obscure inner necessity" to express himself which, according to Joseph Conrad, is the source of all works of art This bizarre phase of Edwards' thinking emerges in his posthumous *Concerning the End for which God Created the World*, published with his *The Nature of True Virtue* under the title *Two Dissertations*, Boston, 1765 The last of the following selections is from this work, with a title supplied by the present editors]

SARAH PIERREPONT

[1829 (written 1723)]

THEY SAY there is a young lady in [New Haven] who is beloved of that Great Being, who made and rules the world, and that there are certain seasons in which this Great Being, in some way or other invisible, comes to her and fills her mind with exceeding sweet delight, and that she hardly cares for anything, except to meditate on him—that she expects after a while to be received up where he is, to be raised up out of the world and caught up into heaven, being assured that he loves her too well to let her remain at a distance from him always There she is to dwell with him, and to be ravished with his love and delight forever Therefore, if you present all the world before her, with the richest of its treasures, she disregards it and cares not for it, and is unmindful of any pain or affliction She has a strange sweetness in her mind, and singular purity in her af-

fections, is most just and conscientious in all her conduct, and you could not persuade her to do any thing wrong or sinful, if you would give her all the world, lest she should offend this Great Being She is of a wonderful sweetness, calmness and universal benevolence of mind, especially after this Great God has manifested himself to her mind She will sometimes go about from place to place, singing sweetly, and seems to be always full of joy and pleasure, and no one knows for what She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her

From

PERSONAL NARRATIVE

[1765]

I HAD a variety of concerns and exercises about my soul from my childhood, but had two more remarkable seasons of awakening, before I met with that change by which

I was brought to those new dispositions, and that new sense of things, that I have since had. The first time was when I was a boy, some years before I went to college, at a time of remarkable awakening in my father's congregation. I was then very much affected for many months, and concerned about the things of religion, and my soul's salvation, and was abundant in duties. I used to pray five times a day in secret, and to spend much time in religious talk with other boys, and used to meet with them to pray together. I experienced I know not what kind of delight in religion. My mind was much engaged in it, and had much self-righteous pleasure, and it was my delight to abound in religious duties. I with some of my school-mates joined together, and built a booth in a swamp, in a very retired spot, for a place of prayer. And besides, I had particular secret places of my own in the woods, where I used to retire by myself, and was from time to time much affected. My affections seemed to be lively and easily moved, and I seemed to be in my element when engaged in religious duties. And I am ready to think, many are deceived with such affections, and such a kind of delight as I then had in religion, and mistake it for grace.

But in process of time, my convictions and affections wore off, and I entirely lost all those affections and delights and left off secret prayer, at least as to any constant performance of it, and returned like a dog to his vomit, and went on in the ways of sin. Indeed I was at times very uneasy, especially towards the latter part of my time at college, when it pleased God, to seize me with the pleurisy, in which he brought me nigh to the grave, and shook me over the pit of hell. And yet, it was not long after my recovery, before I fell again into my old ways of sin. But God would not suffer me to go on with my quietness, I had great and violent inward struggles, till, after many conflicts, with wicked inclinations, repeated resolutions, and bonds that I laid myself under by a kind of vows to God, I was brought wholly to break

off all former wicked ways, and all ways of known outward sin, and to apply myself to seek salvation, and practice many religious duties, but without that kind of affection and delight which I had formerly experienced. My concern now wrought more by inward struggles and conflicts, and self-reflections. I made seeking my salvation the main business of my life. But yet, it seems to me, I sought after a miserable manner, which has made me sometimes since to question, whether ever it issued in that which was saving, being ready to doubt, whether such miserable seeking ever succeeded. I was indeed brought to seek salvation in a manner that I never was before, I felt a spirit to part with all things in the world, for an interest in Christ—My concern continued and prevailed, with many exercising thoughts and inward struggles, but yet it never seemed to be proper to express that concern by the name of terror.

From my childhood up, my mind had been full of objections against the doctrine of God's sovereignty, in choosing whom he would to eternal life, and rejecting whom he pleased, leaving them eternally to perish, and be everlastingly tormented in hell. It used to appear like a horrible doctrine to me. But I remember the time very well, when I seemed to be convinced, and fully satisfied, as to this sovereignty of God, and his justice in thus eternally disposing of men, according to his sovereign pleasure. But never could give an account, how, or by what means, I was thus convinced, not in the least imagining at the time, nor a long time after, that there was any extraordinary influence of God's Spirit in it, but only that now I saw further, and my reason apprehended the justice and reasonableness of it. However, my mind rested in it, and it put an end to all those cavils and objections. And there has been a wonderful alteration in my mind, with respect to the doctrine of God's sovereignty, from that day to this; so that I scarce ever have found so much as the rising of an objection against it, in the most absolute sense, in God's shewing mercy to whom he will.

show mercy, and hardening whom he will God's absolute sovereignty and justice, with respect to salvation and damnation, is what my mind seems to rest assured of, as much as of any thing that I see with my eyes, at least it is so at times. But I have often, since that first conviction, had quite another kind of sense of God's sovereignty than I had then. I have often since had not only a conviction, but a delightful conviction. The doctrine has very often appeared exceedingly pleasant, bright, and sweet.

Absolute sovereignty is what I love to ascribe to God. But my first conviction was not so.

The first instance that I remember of that sort of inward, sweet delight in God and divine things that I have lived much in since, was on reading those words, 1 Tim 1:17 *Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory forever and ever, Amen*. As I read the words, there came into my soul, and was as it were diffused through it, a sense of the glory of the Divine Being, a new sense, quite different from any thing I ever experienced before. Never any words of scripture seemed to me as these words did. I thought within myself, how excellent a being that was, and how happy I should be, if I might enjoy that God, and be wrapt up in heaven, and be as it were swallowed up in him forever! I kept saying, and as it were singing over these words of scripture to myself, and went to pray to God that I might enjoy him, and prayed in a manner quite different from what I used to do, with a new sort of affection. But it never came into my thought, that there was any thing spiritual, or of a saving nature in this.

From about that time, I began to have a new kind of apprehensions and ideas of Christ, and the work of redemption, and the glorious way of salvation by him. An inward, sweet sense of these things, at times, came into my heart, and my soul was led away in pleasant views and contemplations of them. And my mind was greatly engaged to spend my time in read-

ing and meditating on Christ, on the beauty and excellency of his person, and the lovely way of salvation by free grace in him. I found no books so delightful to me, as those that treated of these subjects. Those words, Cant 1:1, used to be abundantly with me, *I am the Rose of Sharon, and the Lily of the valleys*. The words seemed to me, sweetly to represent the loveliness and beauty of Jesus Christ. The whole book of Canticles used to be pleasant to me, and I used to be much in reading it, about that time, and found, from time to time, an inward sweetness, that would carry me away, in my contemplations. This I know not how to express otherwise, than by a calm, sweet abstraction of soul from all the concerns of this world, and sometimes a kind of vision, or fixed ideas and imaginations, of being alone in the mountains, or some solitary wilderness, far from all mankind, sweetly conversing with Christ, and wrapt and swallowed up in God. The sense I had of divine things, would often of a sudden kindle up, as it were, sweet burning in my heart, an ardor of soul, that I know not how to express.

Not long after I began to experience these things, I gave an account to my father of some things that had passed in my mind. I was pretty much affected by the discourse we had together, and when the discourse was ended, I walked abroad alone, in a solitary place in my father's pasture for contemplation. And as I was walking there and looking up on the sky and clouds, there came into my mind so sweet a sense of the glorious *majesty* and *grace* of God, that I know not how to express. I seemed to see them both in a sweet conjunction, *majesty* and *meekness* joined together, it was a gentle, and holy *majesty*, and also a majestic *meekness*, a high, great, and holy gentleness.

After this my sense of divine things gradually increased, and became more and more lively, and had more of that inward sweetness. The appearance of every thing was altered, there seemed to be, as it were, a calm, sweet cast, or appearance of divine

glory, in almost every thing God's excellency, his wisdom, his purity and love, seemed to appear in every thing, in the sun, moon, and stars, in the clouds, and blue sky, in the grass, flowers, trees, in the water, and all nature, which used greatly to fix my mind I often used to sit and view the moon for continuance, and in the day, spent much time in viewing the clouds and sky, to behold the sweet glory of God in these things, in the mean time, singing forth, with a low voice, my contemplations of the Creator and Redeemer And scarce any thing, among all the works of nature, was so delightful to me as thunder and lightning, formerly, nothing had been so terrible to me Before, I used to be uncommonly terrified with thunder, and to be struck with terror when I saw a thunder storm rising, but now, on the contrary, it rejoiced me I felt God, so to speak, at the first appearance of a thunder storm, and used to take the opportunity, at such times, to fix myself in order to view the clouds, and see the lightnings play, and hear the majestic and awful voice of God's thunder, which oftentimes was exceedingly entertaining, leading me to sweet contemplations of my great and glorious God While thus engaged, it always seemed natural to me to sing, or chant for my meditations, or, to speak my thoughts in soliloquies with a singing voice

I felt then great satisfaction, as to my good state, but that did not content me I had vehement longings of soul after God and Christ, and after more holiness, where-with my heart seemed to be full, and ready to break, which often brought to my mind the words of the Psalmist, Psal cxix 28 *My soul breaketh for the longing it hath* I often felt a mourning and lamenting in my heart, that I had not turned to God sooner, that I might have had more time to grow in grace My mind was greatly fixed on divine things, almost perpetually in the contemplation of them I spent most of my time in thinking of divine things, year after year, often walking alone in the woods, and solitary places, for meditation, solilo-

quy, and prayer, and converse with God, and it was always my manner, at such times, to sing forth my contemplations I was almost constantly in ejaculatory prayer wherever I was Prayer seemed to be natural to me, as the breath by which the inward burnings of my heart had vent The delights which I now felt in the things of religion, were of an exceedingly different kind from those before mentioned, that I had when a boy, and what I then had no more notion of, than one born blind has of pleasant and beautiful colors They were of a more inward, pure, soul-animating and refreshing nature Those former delights never reached the heart, and did not arise from any sight of the divine excellency of the things of God, or any taste of the soul-satisfying and life-giving good there is in them

My sense of divine things seemed gradually to increase, until I went to preach at New York, which was about a year and a half after they began, and while I was there, I felt them, very sensibly, in a higher degree than I had done before My longings after God and holiness, were much increased Pure and humble, holy and heavenly Christianity, appeared exceedingly amiable to me I felt a burning desire to be in every thing a complete Christian, and conform to the blessed image of Christ, and that I might live, in all things, according to the pure and blessed rules of the gospel I had an eager thirsting after progress in these things, which put me upon pursuing and pressing after them It was my continual strife day and night, and constant inquiry, how I should *be* more holy, and *live* more holily, and more becoming a child of God, and a disciple of Christ I now sought an increase of grace and holiness, and a holy life, with much more earnestness, than ever I sought grace before I had it I used to be continually examining myself, and studying and contriving for likely ways and means, how I should live holily, with far greater diligence and earnestness, than ever I pursued any thing in my life, but yet with too great a depend-

once on my own strength, which afterwards proved a great damage to me. My experience had not then taught me, as it has done since, my extreme feebleness and impotence, every manner of way, and the bottomless depths of secret corruption and deceit there was in my heart. However, I went on with my eager pursuit after more holiness, and conformity to Christ.

The heaven I desired was a heaven of holiness, to be with God, and to spend my eternity in divine love, and holy communion with Christ. My mind was very much taken up with contemplations on heaven, and the enjoyments there, and living there in perfect holiness, humility and love. And it used at that time to appear a great part of the happiness of heaven, that there the saints could express their love to Christ. It appeared to me a great clog and burden, that what I felt within, I could not express as I desired. The inward ardor of my soul, seemed to be hindered and pent up, and could not freely flame out as it would. I used often to think, how in heaven this principle should freely and fully vent and express itself. Heaven appeared exceedingly delightful, as a world of love, and that all happiness consisted in living in pure, humble, heavenly, divine love.

I remember the thoughts I used then to have of holiness, and said sometimes to myself, "I do certainly know that I love holiness, such as the gospel prescribes." It appeared to me, that there was nothing in it but what was ravishingly lovely, the highest beauty and amiableness—a *divine* beauty, far purer than any thing here upon earth, and that every thing else was like mire and defilement, in comparison of it.

Holiness, as I then wrote down some of my contemplations on it, appeared to me to be of a sweet, pleasant, charming, serene, calm nature, which brought an inexpressible purity, brightness, peacefulness and ravishment to the soul. In other words, that it made the soul like a field or garden of God, with all manner of pleasant flowers, all pleasant, delightful, and undisturbed, enjoying a sweet calm, and the gently

vivifying beams of the sun. The soul of a true Christian, as I then wrote my meditations, appeared like such a little white flower as we see in the spring of the year, low and humble on the ground, opening its bosom to receive the pleasant beams of the sun's glory, rejoicing as it were in a calm rapture, diffusing around a sweet fragrancv, standing peacefully and lovingly, in the midst of other flowers round about, all in like manner opening their bosoms, to drink in the light of the sun. There was no part of creature holiness, that I had so great a sense of its loveliness, as humility, brokenness of heart and poverty of spirit, and there was nothing that I so earnestly longed for. My heart panted after this, to lie low before God, as in the dust, that I might be nothing, and that God might be ALL, that I might become as a little child.

While at New York, I was sometimes much affected with reflections on my past life, considering how late it was before I began to be truly religious, and how wickedly I had lived till then, and once so as to weep abundantly, and for a considerable time together.

On *January 12, 1723*, I made a solemn dedication of myself to God, and wrote it down, giving up myself, and all that I had to God, to be for the future in no respect my own, to act as one that had no right to himself, in any respect. And solemnly vowed to take God for my whole portion and felicity, looking on nothing else as any part of my happiness, nor acting as if it were, and his law for the constant rule of my obedience, engaging to fight with all my might, against the world, the flesh and the devil, to the end of my life. But I have reason to be infinitely humbled, when I consider how much I have failed of answering my obligation.

I had then abundance of sweet religious conversation in the family where I lived, with Mr. John Smith and his pious mother. My heart was knit in affection to those in whom were appearances of true piety, and I could bear the thoughts of no other com-

panions, but such as were holy, and the disciples of the blessed Jesus I had great longings for the advancement of Christ's kingdom in the world, and my secret prayer used to be, in great part, taken up in praying for it. If I heard the least hint of any thing that happened, in any part of the world, that appeared, in some respect or other, to have a favorable aspect on the interest of Christ's kingdom, my soul eagerly caught at it, and it would much animate and refresh me. I used to be eager to read public news letters, mainly for that end, to see if I could not find some news favorable to the interest of religion in the world.

I very frequently used to retire into a solitary place, on the banks of Hudson's river, at some distance from the city, for contemplation on divine things, and secret converse with God, and had many sweet hours there. Sometimes Mr. Smith and I walked there together, to converse on the things of God, and our conversation used to turn much on the advancement of Christ's kingdom in the world, and the glorious things that God would accomplish for his church in the latter days. I had then, and at other times the greatest delight in the holy scriptures, of any book whatsoever. Oftentimes in reading it, every word seemed to touch my heart. I felt a harmony between something in my heart, and those sweet and powerful words. I seemed often to see so much light exhibited by every sentence, and such a refreshing food communicated, that I could not get along in reading, often dwelling long on one sentence, to see the wonders contained in it, and yet almost every sentence seemed to be full of wonders.

I came away from New York in the month of April, 1723, and had a most bitter parting with Madam Smith and her son. My heart seemed to sink within me at leaving the family and city, where I had enjoyed so many sweet and pleasant days. I went from New York to Weathersfield, by water, and as I sailed away, I kept sight of the city as long as I could.

However, that night, after this sorrowful parting, I was greatly comforted in God at Westchester, where we went ashore to lodge, and had a pleasant time of it all the voyage to Saybrook. It was sweet to me to think of meeting dear Christians in heaven, where we should never part more. At Saybrook we went ashore to lodge, on Saturday, and there kept the Sabbath, where I had a sweet and refreshing season, walking alone in the fields.

After I came home to Windsor, I remained much in a like frame of mind, as when at New York, only sometimes I felt my heart ready to sink with the thoughts of my friends at New York. My support was in contemplations on the heavenly state, as I find in my Diary of May 1, 1723. It was a comfort to think of that state, where there is fulness of joy, where reigns heavenly, calm, and delightful love, without alloy, where there are continually the dearest expressions of this love, where is the enjoyment of the persons loved, without ever parting, where those persons who appear so lovely in this world, will really be inexpressibly more lovely, and full of love to us. And how sweetly will the mutual lovers join together to sing the praises of God and the Lamb! How will it fill us with joy to think, that this enjoyment, these sweet exercises will never cease, but will last to all eternity! I continued much in the same frame, in the general, as when at New York, till I went to New Haven as tutor to the college, particularly once at Bolton, on a journey from Boston, while walking out alone in the fields. After I went to New Haven I sunk in religion, my mind being diverted from my eager pursuits after holiness, by some affairs that greatly perplexed and distracted my thoughts.

In September, 1725, I was taken ill at New Haven, and while endeavoring to go home to Windsor, was so ill at the North Village, that I could go no further, where I lay sick for about a quarter of a year. In this sickness God was pleased to visit me again with the sweet influences of his

Spirit My mind was greatly engaged there in divine, pleasant contemplations, and longings of soul I observed that those who watched with me, would often be looking out wishfully for the morning, which brought to my mind those words of the Psalmist, and which my soul with delight made its own language, *My soul waiteth for the Lord, more than they that watch for the morning, I say, more than they that watch for the morning*, and when the light of day came in at the windows, it refreshed my soul from one morning to another It seemed to be some image of the light of God's glory

I remember, about that time, I used greatly to long for the conversion of some that I was concerned with, I could gladly honor them, and with delight be a servant to them, and lie at their feet, if they were but truly holy But, some time after this, I was again greatly diverted in my mind with some temporal concerns that exceedingly took up my thoughts, greatly to the wounding of my soul, and went on through various exercises, that it would be tedious to relate, which gave me much more experience of my own heart, than ever I had before

Since I came to this town, I have often had sweet complacency in God, in views of his glorious perfections and the excellency of Jesus Christ God has appeared to me a glorious and lovely being, chiefly on the account of his holiness The holiness of God has always appeared to me the most lovely of all his attributes The doctrines of God's absolute sovereignty, and free grace, in shewing mercy to whom he would shew mercy, and man's absolute dependence on the operations of God's Holy Spirit, have very often appeared to me as sweet and glorious doctrines

Once as I rode out into the woods for my health, in 1737, having alighted from my horse in a retired place, as my manner commonly has been, to walk for divine contemplation and prayer, I had a view that for me was extraordinary, of the glory of the Son of God, as Mediator between

God and man, and his wonderful, great, full, pure and sweet grace and love, and meek and gentle condescension This grace that appeared so calm and sweet, appeared also great above the heavens The person of Christ appeared ineffably excellent with an excellency great enough to swallow up all thought and conception—which continued as near as I can judge, about an hour, which kept me the greater part of the time in a flood of tears, and weeping aloud I felt an ardency of soul to be, what I know not otherwise how to express, emptied and annihilated, to lie in the dust, and to be full of Christ alone, to love him with a holy and pure love, to trust in him, to live upon him, to serve and follow him, and to be perfectly sanctified and made pure, with a divine and heavenly purity I have, several other times, had views very much of the same nature, and which have had the same effects

I have many times had a sense of the glory of the third person in the Trinity, in his office of Sanctifier, in his holy operations, communicating divine light and life to the soul God, in the communications of his Holy Spirit, has appeared as an infinite fountain of divine glory and sweetness, being full, and sufficient to fill and satisfy the soul, pouring forth itself in sweet communications, like the sun in its glory, sweetly and pleasantly diffusing light and life And I have sometimes had an affecting sense of the excellency of the word of God, as a word of life, as the light of life; a sweet, excellent, life-giving word, accompanied with a thirsting after that word, that it might dwell richly in my heart

Often, since I lived in this town, I have had very affecting views of my own sinfulness and vileness, very frequently to such a degree as to hold me in a kind of loud weeping, sometimes for a considerable time together, so that I have often been forced to shut myself up I have had a vastly greater sense of my own wickedness, and the badness of my own heart,

than ever I had before my conversion. It has often appeared to me, that if God should mark iniquity against me, I should appear the very worst of all mankind, of all that have been, since the beginning of the world to this time, and that I should have by far the lowest place in hell. When others, that have come to talk with me about their soul concerns, have expressed the sense they have had of their own wickedness, by saying that it seemed to them, that they were as bad as the devil himself, I thought their expression seemed exceedingly faint and feeble, to represent my wickedness.

My wickedness, as I am in myself, has long appeared to me perfectly ineffable, and swallowing up all thought and imagination, like an infinite deluge, or mountains over my head. I know not how to express better what my sins appear to me to be, than by heaping infinite upon infinite, and multiplying infinite by infinite. Very often, for these many years, these expressions are in my mind, and in my mouth, "Infinite upon infinite—Infinite upon infinite." When I look into my heart, and take a view of my wickedness, it looks like an abyss infinitely deeper than hell. And it appears to me, that were it not for free grace, exalted and raised up to the infinite height of all the fulness and glory of the great Jehovah, and the arm of his power and grace stretched forth in all the majesty of his power, and in all the glory of his sovereignty, I should appear sunk down in my sins below hell itself, far beyond the sight of every thing, but the eye of sovereign grace, that can pierce even down to such a depth. And yet, it seems to me, that my conviction of sin is exceedingly small, and faint, it is enough to amaze me, that I have no more sense of my sin. I know certainly, that I have very little sense of my sinfulness. When I have had turns of weeping and crying for my sins, I thought I knew at the time, that my repentance was nothing to my sin.

I have greatly longed of late, for a broken heart, and to lie low before God,

and, when I ask for humility, I cannot bear the thoughts of being no more humble than other Christians. It seems to me, that though their degrees of humility may be suitable for them, yet it would be a vile self-exaltation to me, not to be the lowest in humility of all mankind. Others speak of their longing to be "humbled to the dust", that may be a proper expression for them, but I always think of myself, that I ought, and it is an expression that has long been natural for me to use in prayer, "to lie infinitely low before God." And it is affecting to think, how ignorant I was, when a young Christian, of the bottomless, infinite depths of wickedness, pride, hypocrisy and deceit, left in my heart.

I have a much greater sense of my universal, exceeding dependence on God's grace and strength, and mere good pleasure, of late, than I used formerly to have, and have experienced more of an abhorrence of my own righteousness. The very thought of any joy arising in me, on any consideration of my own amiableness, performances, or experiences, or any goodness of heart or life, is nauseous and detestable to me. And yet I am greatly afflicted with a proud and self-righteous spirit, much more sensibly than I used to be formerly. I see that serpent rising and putting forth its head continually, every where, all around me.

Though it seems to me, that, in some respects, I was a far better Christian, for two or three years after my first conversion, than I am now, and lived in a more constant delight and pleasure, yet, of late years, I have had a more full and constant sense of the absolute sovereignty of God, and a delight in that sovereignty, and have had more of a sense of the glory of Christ, as a Mediator revealed in the gospel. On one Saturday night, in particular, I had such a discovery of the excellency of the gospel above all other doctrines, that I could not but say to myself, "This is my chosen light, my chosen doctrine", and of Christ, "This is my chosen Proph-

et" It appeared sweet, beyond all expression, to follow Christ, and to be taught, and enlightened, and instructed by him, to learn of him, and live to him. Another Saturday night, (*January*, 1739) I had such a sense, how sweet and blessed a thing it was to walk in the way of duty, to do that which was right and meet to be done, and agreeable to the holy mind of God, that it caused me to break forth into a kind of loud weeping, which held me some time, so that I was forced to shut myself up, and fasten the doors. I could not but, as it were, cry out, "How happy are they which do that which is right in the sight of God! They are blessed indeed, they are the happy ones!" I had, at the same time, a very affecting sense, how meet and suitable it was that God should govern the world, and order all things according to his own pleasure, and I rejoiced in it, that God reigned, and that his will was done.

AFFECTIVE VERSUS MERELY DOCTRINAL RELIGION [1746]

THE AFFECTIONS and passions are frequently spoken of as the same, and yet in the more common use of speech, there is in some respect a difference, and affection is a word that in its ordinary signification seems to be something more extensive than passion, being used for all vigorous lively actings of the will or inclination, but passion for those that are more sudden and whose effects on the animal spirits are more violent, and the mind more overpowered, and less in its own command.

As all the exercises of the inclination and will are either in approving and liking, or disapproving and rejecting, so the affections are of two sorts: they are those by which the soul is carried out to what is in view, cleaving to it, or seeking it; or those by which it is averse from it, and opposes it.

Of the former sort are love, desire, hope, joy, gratitude, complacence. Of the latter kind are hatred, fear, anger, grief, and such like, which it is needless now to stand particularly to define.

The Author of the human nature has not only given affections to men, but has made them very much the spring of men's actions. As the affections do not only necessarily belong to the human nature, but are a very great part of it, so (inasmuch as by regeneration persons are renewed in the whole man and sanctified throughout) holy affections do not only necessarily belong to true religion, but are a very great part of it. And as true religion is of a practical nature, and God hath so constituted the human nature that the affections are very much the spring of men's actions, this also shows that true religion must consist very much in the affections.

Such is man's nature that he is very inactive any otherwise than he is influenced by some affection, either love or hatred, desire, hope, fear, or some other. These affections we see to be the springs that set men a-going, in all the affairs of life, and engage them in all their pursuits: these are the things that put men forward, and carry them along, in all their worldly business, and especially are men excited and animated by these, in all affairs wherein they are earnestly engaged, and which they pursue with vigor. We see the world of mankind to be exceeding busy and active, and the affections of men are the springs of the motion: take away all love and hatred, all hope and fear, all anger, zeal, and affectionate desire, and the world would be in a great measure motionless and dead, there would be no such thing as activity amongst mankind or any earnest pursuit whatsoever. It is affection that engages the covetous man, and him that is greedy of worldly profits, in his pursuits, and it is by the affections that the ambitious man is put forward in his pursuit of worldly glory, and it is the affections also that actuate the voluptuous man in his pursuit of pleasure and sensual delights.

the world continues, from age to age, in a continual commotion and agitation in a pursuit of these things, but take away all affection, and the spring of all this motion would be gone, and the motion itself would cease. And as in worldly things worldly affections are very much the spring of men's motion and action, so in religious matters the spring of their actions is very much religious affection. He that has doctrinal knowledge and speculation only, without affection, never is engaged in the business of religion.

Nothing is more manifest, in fact, than that the things of religion take hold of men's souls no further than they affect them. There are multitudes that often hear the word of God, and therein hear of those things that are infinitely great and important, and that most nearly concern them, and all that is heard seems to be wholly ineffectual upon them, and to make no alteration in their disposition or behavior, and the reason is, they are not affected with what they hear. There are many that often hear of the glorious perfections of God, his almighty power and boundless wisdom, his infinite majesty, and that holiness of God by which he is of purer eyes than to behold evil, and cannot look on iniquity, and the heavens are not pure in his sight, and of God's infinite goodness and mercy, and hear of the great works of God's wisdom, power, and goodness, wherein there appear the admirable manifestations of these perfections, they hear particularly of the unspeakable love of God and Christ, and of the great things that Christ has done and suffered, and of the great things of another world, of eternal misery in hearing the fierceness and wrath of Almighty God, and of endless blessedness and glory in the presence of God, and the enjoyment of his dear love, they also hear the peremptory commands of God, and his gracious counsels and warnings, and the sweet invitations of the gospel, I say they often hear these things and yet remain as they were before, with no sensible alteration in them, either in

heart or practice, because they are not affected with what they hear, and ever will be so till they are affected—I am bold to assert that there never was any considerable change wrought in the mind or conversation of any person by anything of a religious nature that ever he read, heard, or saw, that had not his affections moved. Never was a natural man engaged earnestly to seek his salvation, never were any such brought to cry after wisdom, and lift up their voice for understanding, and to wrestle with God in prayer for mercy, and never was one humbled and brought to the foot of God from anything that ever he heard or imagined of his own unworthiness and deserving of God's displeasure, nor was ever one induced to fly for refuge unto Christ, while his heart remained unaffected. Nor was there ever a saint awakened out of a cold, lifeless frame, or recovered from a declining state in religion, and brought back from a lamentable departure from God, without having his heart affected. And in a word, there never was anything considerable brought to pass in the heart or life of any man living, by the things of religion, that had not his heart deeply affected by those things.

THE AESTHETICS OF PLENITUDE [1765]

IT SEEMS a thing in itself proper and desirable that the glorious attributes of God, which consist in a *sufficiency* to certain acts and effects, should be *exerted* in the production of such effects as might manifest his infinite power, wisdom, righteousness, goodness, etc. If the world had not been created, these attributes never would have had any *exercise*. The *power* of God, which is a sufficiency in him to produce great effects, must forever have been dormant and useless as to any effect. The divine *wisdom* and prudence would have had no *exercise* in any wise contrivance, any prudent proceeding of disposal of things, for there would have been no

objects of contrivance or disposal. The same might be observed of God's *justice*, *goodness*, and *truth*. Indeed God might have *known* as perfectly that he possessed these attributes, if they never had been exerted or expressed in any effect. But then, if the attributes which consist in a *sufficiency* for correspondent effects are in themselves excellent, the *exercises* of them must likewise be excellent. If it be an excellent thing that there should be a sufficiency for a certain kind of action or operation, the excellency of such a sufficiency must consist in its *relation* to this kind of operation or effect, but that could not be unless the *operation itself* were excellent. A sufficiency for any work is no farther valuable than the work itself is valuable. As God therefore esteems these attributes *themselves* valuable and delights in them, so it is natural to suppose that he delights in their proper *exercise* and expression. For the same reason that he esteems his own sufficiency wisely to *contrive* and dispose effects, he also will esteem the wise *contrivance* and disposition itself. And for the same reason, as he delights in his own disposition to do justly and to dispose of things according to truth and just proportion, so he must delight in such a righteous disposal itself.

It seems to be a thing in itself fit and desirable that the glorious perfections of God should be *known*, and the operations and expressions of them *seen*, by *other beings* besides himself. If it be fit that God's power and wisdom, etc., should be exercised and *expressed* in some effects, and not be eternally dormant, then it seems proper that these exercises should *appear*, and not be totally hidden and unknown. For if they are, it will be just the same, as to the above purpose, as if they were not. God as perfectly knew himself and his perfections, had as perfect an idea of the exercises and effects they were sufficient for, *antecedently* to any such actual operations of them, and since. If therefore it be nevertheless a thing in itself valuable and worthy to be desired that these glorious

perfections be actually *exhibited* in their correspondent effects, then it seems also that the *knowledge* of these perfections and discoveries is valuable in itself absolutely considered, and that it is *desirable* that this knowledge should exist. It is a thing infinitely good in itself that God's glory should be *known* by a glorious society of created beings. And that there should be in them an *increasing* knowledge of God to all eternity is worthy to be regarded by him, to whom it belongs to order what is fittest and best. If *existence* is more worthy than defect and nonentity, and if any *created* existence is in itself worthy to be, then *knowledge* is, and if any knowledge, then the most *excellent sort* of knowledge, *viz* that of God and his glory. This knowledge is one of the highest, most real, and substantial parts of all created existence, most remote from nonentity and defect.

As it is desirable in itself that God's glory should be known, so when known it seems equally reasonable it should be esteemed and delighted in, answerably to its dignity. There is no more reason to esteem it a suitable thing that there should be an idea in the *understanding* corresponding unto the glorious object than that there should be a corresponding *affection* in the will. If the perfection itself be excellent, the knowledge of it is excellent, and so is the esteem and love of it excellent. And as it is fit that God should love and esteem his own *excellence*, it is also fit that he should value and esteem the love of his excellency. And if it becomes a being highly to *value* himself, it is fit that he should love to have himself *valued* and esteemed. If the idea of God's perfection in the understanding be valuable, then the love of the heart seems to be more especially valuable, as moral beauty especially consists in the disposition and affection of the heart.

As there is an infinite fulness of all possible good in God—a fulness of every perfection, of all excellency and beauty, and of infinite happiness—and as this fulness is capable of communication, or emanation *ad extra*, so it seems a thing amiable

and valuable in *itself* that this infinite fountain of good should send forth abundant streams And as this is in itself excellent, so a *disposition* to this in the divine being must be looked upon as an *excellent* disposition Such an emanation of good is, in some sense, a *multiplication* of it So far as the stream may be looked upon as anything besides the fountain, so far it may be looked on as an *increase* of good And if the fulness of good that is in the fountain is in itself excellent, then the emanation, which is as it were an increase, repetition, or multiplication of it, is excellent Thus it is fit, since there is an infinite fountain of light and knowledge, that this light should shine forth in beams of communicated knowledge and understanding, and as there is an infinite fountain of holiness, moral excellence and beauty, that so it should flow out in communicated holiness And that, as there is an infinite fulness of joy and happiness, so these should have an emanation, and become a fountain flowing out in abundant streams, as beams from the sun

Thus it appears reasonable to suppose that it was God's last end that there might be a glorious and abundant emanation of his infinite fulness of good *ad extra*, or without himself, and that the disposition to communicate himself, or diffuse his own FULNESS,¹ was what moved him to create the world But here I observe that there would be some impropriety in saying that

a disposition in God to communicate himself *to the creature* moved him to create the world For an inclination in God to communicate himself to an *object* seems to presuppose the *existence* of the object, at least in idea But the diffusive disposition that excited God to give creatures existence was rather a communicative *disposition* in general, or a disposition in the fulness of the divinity to flow out and diffuse itself Thus the disposition there is in the root and stock of a tree to diffuse sap and life is doubtless the reason of their communication to its buds, leaves, and fruits, *after* these exist But a disposition to communicate of its life and sap to its *fruits* is not so properly the cause of its *producing* those fruits as is its disposition to diffuse its sap and life in general Therefore, to speak strictly according to truth, we may suppose *that a disposition in God, as an original property of his nature, to an emanation of his own infinite fulness, was what excited him to create the world, and so, that the emanation itself was aimed at by him as a last end of the creation*

¹ I shall often use the phrase *God's fulness* as signifying and comprehending all the good which is in God natural and moral, either excellence or happiness, partly because I know of no better phrase to be used in this general meaning, and partly because I am led hereto by some of the inspired writers, particularly the apostle Paul, who often useth the phrase in this sense—Edwards' note

1706 ~ Benjamin Franklin ~ 1790

IN HIS many-sided life and writings, Benjamin Franklin sums up the American 18th Century Born at Boston, he learned printing and embarked in journalism at an early age He moved to Philadelphia in 1723, spent eighteen months in England, and returned to Philadelphia to become a prosperous printer and newspaper editor, a leading man of affairs, and a devoted student of science He was instrumental in founding the American Philosophical Society, the Philadelphia Academy—which became the University of Pennsylvania—and the Philadelphia City Hospital In 1741 he issued one of the two earliest colonial magazines, *The General Magazine and Historical Chronicle* He won

several honorary degrees, including one from Oxford

After holding various posts as a colonial statesman, he served as agent for the Pennsylvania Assembly in England from 1757 to 1762 and moved in the most cultivated circles. After a brief visit to America, he returned to England in 1764, represented not only Pennsylvania, but several other colonies, and traveled extensively. Returning to America in 1775 as he saw that the Revolution was inevitable, he was a member of many history-making committees, including that which drafted the Declaration of Independence. In 1776 he went to France as one of three American emissaries entrusted with the delicate mission of effecting an alliance. His personal popularity in France as a representative American intellectual was immense, the mission was crowned with success in 1778, in 1779 he became a minister plenipotentiary to the French court. After a distinguished diplomatic career, he returned to Philadelphia in 1785, continued to take part in Pennsylvania affairs, and carried on an extensive correspondence as a member of scientific, philosophical, and literary societies. In 1787 he became president of the Pennsylvania Society for the Abolition of Slavery and sat as delegate from Pennsylvania in the Constitutional Convention. He died at Philadelphia in 1790.

Although Franklin's contributions to science, to educational, economic, and political theory, and to the development of belles-lettres in America must be regarded as more substantial than his contribution to religious thought, his interest in the latter developed early and is discoverable in his writings to the very end of his career. What he has to say on the subject reveals both the liberalism and the moderation of the age of the Enlightenment. Attracted to Deism, always something of a skeptic, he was yet fully aware of the importance of more orthodox belief as a beneficent social force. To him the essence of religion lay not in mystical piety or doctrinal subtleties, but in philanthropic moralism. The rapport which religion might effect in the relations of men with men took precedence in his thinking over the rapport which each individual should establish with his God or with the dogma of his church.

[The first of the selections reprinted here is from a credo which Franklin drew up for his own use in 1728 and which he apparently adhered to throughout his life, the second is from his *Autobiography*, which he began writing in 1771 and which was first published in a French translation appearing in Paris in 1791, the third is from a letter to the great Methodist missionary to America, George Whitefield, with whom his friendship began in 1739, the fourth reproduces the complete text of a letter which some scholars think was written to Thomas Paine, the fifth is from a letter to the Rev. Ezra Stiles, president of Yale from 1778 to 1795. In each case, the text has been modernized by the present editors. For the original texts, consult *The Writings of Benjamin Franklin*, ed. with a Life and Introduction by Albert Henry Smyth, 10 volumes, 1905-1907. For other selections from Franklin, see Book I, Part 3.]

From
ARTICLES OF BELIEF AND ACTS
OF RELIGION
[1818 (written 1728)]

I BELIEVE that there is one supreme, most perfect Being, author and father of the Gods themselves. For I believe that man is not the most perfect being but one, rather that as there are many degrees of beings his inferiors, so there are many degrees of beings superior to him.

Also, when I stretch my imagination through and beyond our system of planets, beyond the visible fixed stars themselves, into that space that is every way infinite, and conceive it filled with suns like ours, each with a chorus of worlds forever moving round him, then this little ball on which we move seems, even in my narrow imagination, to be almost nothing, and myself less than nothing, and of no sort of consequence.

When I think thus, I imagine it great vanity in me to suppose that the *Supremely Perfect* does in the least regard such an inconsiderable nothing as man. More especially, since it is impossible for me to have any positive clear idea of that which is infinite and incomprehensible, I cannot conceive otherwise than that he, *the Infinite Father*, expects or requires no worship or praise from us, but that he is even infinitely above it.

But, since there is in all men something like a natural principle, which inclines them to devotion, or the worship of some unseen power,

And since men are endued with reason superior to all other animals that we are in our world acquainted with,

Therefore I think it seems required of me, and my duty as a man, to pay divine regards to Something.

I conceive, then, that the Infinite has created many beings or Gods, vastly superior to man, who can better conceive his perfections than we, and return him a more rational and glorious praise.

As, among men, the praise of the ig-

norant or of children is not regarded by the ingenious painter or architect, who is rather honored and pleased with the approbation of wise men and artists.

It may be that these created Gods are immortal, or it may be that after many ages, they are changed, and others supply their places.

Howbeit, I conceive that each of these is exceeding wise and good, and very powerful, and that each has made for himself one glorious sun, attended with a beautiful and admirable system of planets.

It is that particular wise and good God, who is the author and owner of our system, that I propose for the object of my praise and adoration.

For I conceive that he has in himself some of those passions he has planted in us, and that, since he has given us reason whereby we are capable of observing his wisdom in the creation, he is not above caring for us, being pleased with our praise and offended when we slight him or neglect his glory.

I conceive for many reasons that he is a *good Being*, and as I should be happy to have so wise, good, and powerful a Being my friend, let me consider in what manner I shall make myself most acceptable to him.

Next to the praise resulting from and due to his wisdom, I believe he is pleased and delights in the happiness of those he has created, and since without virtue man can have no happiness in this world, I firmly believe he delights to see me virtuous, because he is pleased when he sees me happy.

And since he has created many things which seem purely designed for the delight of man, I believe he is not offended when he sees his children solace themselves in any manner of pleasant exercises and innocent delights, and I think no pleasure innocent that is to man hurtful.

I *love* him therefore for his goodness, and I *adore* him for his wisdom.

Let me then not fail to praise my God continually, for it is his due, and it is

all I can return for his many favors and great goodness to me, and let me resolve to be virtuous, that I may be happy, that I may please him, who is delighted to see me happy Amen!

From
AUTOBIOGRAPHY
[1791 (written 1771)]

BEFORE I enter upon my public appearance in business, it may be well to let you know the then state of my mind with regard to my principles and morals, that you may see how far those influenced the future events of my life. My parents had early given me religious impressions and brought me through my childhood piously in the Dissenting way. But I was scarce 15 when, after doubting by turns of several points as I found them disputed in the different books I read, I began to doubt of revelation itself. Some books against Deism fell into my hands, they were said to be the substance of sermons preached at Boyle's Lectures.¹ It happened that they wrought an effect on me quite contrary to what was intended by them. For the arguments of the Deists which were quoted to be refuted, appeared to me much stronger than the refutations. In short I soon became a thorough Deist.² My arguments perverted some others, particularly Collins and Ralph, but each of them having afterwards wronged me greatly without the least compunction and recollecting Keith's conduct toward me (who was another Free-thinker) and my own towards Vernon and Miss Read,³ which at times gave me great trouble, I began to suspect that this doctrine, though it might be true, was not very useful. My London pamphlet, which had for its motto these lines of Dryden—

Whatever is, is right Tho' purblind man
Sees but a part of the chain, the nearest
link,
His eyes not carrying to the equal beam,
That poises all, above.—

and from the attributes of God, his infinite wisdom, goodness, and power, concluded that nothing could possibly be wrong in the world, and that vice and virtue were empty distinctions, no such things existing—appeared now not so clever a performance as I once thought it, and I doubted whether some error had not insinuated itself unperceived into my argument, so as to infect all that followed, as is common in metaphysical reasonings.⁴ I grew convinced that *truth*, *sincerity*, and *integrity* in dealings between man and man were of the utmost importance to the felicity of life, and I formed written resolutions (which still remain in my Journal Book) to practice them ever while I lived.

¹ Robert Boyle, 1627-1691, one of the leading members of the Royal Society, whose lectures were first published in 1660 under the title, *New Experiments Physico-Mechanical*, and who wrote voluminously thereafter on scientific and philosophical subjects.

² Between 1718-1723, Franklin was reading the works of Anthony Collins, Shaftesbury, Locke, Addison and Steele, Cotton Mather, Bunyan, Defoe, etc.

³ John Collins, a boyhood friend of Franklin, accompanied him to New York and Philadelphia and parted company with him after a quarrel. James Ralph, another friend whom Franklin met in New York, accompanied him to London, where they went under the unreliable patronage of Sir William Keith, Governor of Pennsylvania, became stranded, and broke off their friendship. Vernon was a friend of Franklin's brother, John, after collecting money owed Vernon, Franklin and Collins borrowed from it, and the debt haunted Franklin until he was able to pay it off in 1732. Although Franklin met Deborah Read shortly after his arrival in Philadelphia in 1723 and courted her in the summer of 1724, he did not marry her until 1730, after she had been Mrs. Rogers.

⁴ The "London pamphlet" to which Franklin refers is *A Dissertation on Liberty and Necessity, Pleasure and Pain* (London, 1725). Based on his thinking about Wollaston's *The Religion of Nature Delimited*, it was dedicated to his friend, James Ralph, and had as its motto a misquotation from Dryden and Lee's *Oedipus*.

Revelation had indeed no weight with me as such, but I entertained an opinion that, though certain actions might not be bad *because* they were forbidden by it, or good *because* it commanded them, yet probably those actions might be forbidden *because* they were bad for us, or commanded *because* they were beneficial to us, in their own natures, all the circumstances of things considered. And this persuasion, with the kind hand of Providence, or some guardian angel, or accidental favorable circumstances and situations, or all together, preserved me (through this dangerous time of youth and the hazardous situations I was sometimes in among strangers, remote from the eye and advice of my father) without any *wilful* gross immorality or injustice that might have been expected from my want of religion. I say *wilful*, because the instances I have mentioned had something of *necessity* in them, from my youth, inexperience, and the knavery of others. I had therefore a tolerable character to begin the world with, I valued it properly, and determined to preserve it.

I had been religiously educated as a Presbyterian, and though some of the dogmas of that persuasion, such as *the eternal decrees of God, election, reprobation, etc.*, appeared to me unintelligible, others doubtful, and I early absented myself from the public assemblies of the sect, Sunday being my studying day, I never was without some religious principles. I never doubted, for instance, the existence of the Deity, that he made the world and governed it by his Providence, that the most acceptable service of God was the doing good to man, that our souls are immortal, and that all crime will be punished, and virtue rewarded, either here or hereafter. These I esteemed the essentials of every religion, and, being to be found in all the religions we had in our country, I respected them all, though with different degrees of respect, as I found them more or less mixed with other articles, which, without any tendency to inspire, promote, or confirm morality, served principally to divide us and make us un-

friendly to one another. This respect to all, with the opinion that the worst had some good effects, induced me to avoid all discourse that might tend to lessen the good opinion another might have of his own religion, and as our province increased in people, and new places of worship were continually wanted, and generally erected by voluntary contribution, my mite for such purpose, whatever might be the sect, was never refused.

Though I seldom attended any public worship, I had still an opinion of its propriety, and of its utility when rightly conducted, and I regularly paid my annual subscription for the support of the only Presbyterian minister or meeting house we had in Philadelphia. He used to visit me sometimes as a friend, and admonish me to attend his administrations, and I was now and then prevailed on to do so, once for five Sundays successively. Had he been in my opinion a good preacher, perhaps I might have continued, notwithstanding the occasion I had for the Sunday's leisure in my course of study, but his discourses were chiefly either polemic arguments, or explications of the peculiar doctrines of our sect, and were all to me very dry, uninteresting, and unedifying, since not a single moral principle was inculcated or enforced, their aim seeming to be rather to make us Presbyterians than good citizens.

At length he took for his text that verse of the fourth chapter of Philippians, "*Finally, brethren, whatsoever things are true, honest, just, pure, lovely, or of good report, if there be any virtue, or any praise, think on these things*." And I imagined, in a sermon on such a text, we could not miss of having some morality. But he confined himself to five points only, as meant by the apostle, viz. 1. Keeping holy the Sabbath day. 2. Being diligent in reading the holy Scriptures. 3. Attending duly the public worship. 4. Partaking of the Sacrament. 5. Paying a due respect to God's ministers. These might be all good things, but, as they were not the kind of good things that I expected from that text, I

despaired of ever meeting with them from any other, was disgusted, and attended his preaching no more. I had some years before composed a little liturgy, or form of prayer, for my own private use (viz, in 1728), entitled *Articles of Belief and Acts of Religion*. I returned to the use of this, and went no more to the public assemblies. My conduct might be blameable, but I leave it, without attempting further to excuse it, my present purpose being to relate facts, and not to make apologies for them.

From

A LETTER TO GEORGE WHITEFIELD
[1887]

Philadelphia, July 6, 1749

DEAR SIR—Since your being in England, I have received two of your favors and a box of books to be disposed of. It gives me great pleasure to hear of your welfare and that you purpose soon to return to America.

I am glad to hear that you have frequent opportunities of preaching among the great. If you can gain them to a good and exemplary life, wonderful changes will follow in the manners of the lower ranks, for *ad exemplum regis*, etc. On this principle, Confucius, the famous Eastern reformer, proceeded. When he saw his country sunk in vice, and wickedness of all kinds triumphant, he applied himself first to the *grande*s, and having, by his doctrine, won *them* to the cause of virtue, the commons followed in multitudes. The mode has a wonderful influence on mankind, and there are numbers who, perhaps, fear less the being in hell, than out of the fashion. Our most western reformatations began with the ignorant mob; and when numbers of them were gained, interest and party views drew in the wise and great. Where both methods can be used, reformatations are likely to be more speedy. O that some method could be found to make them lasting! He who discovers that will, in my

opinion, deserve more, ten thousand times, than the inventor of the longitude.

LETTER TO AN UNNAMED
CORRESPONDENT
[1817]

Philadelphia, July 3, 1786 [?]

DEAR SIR—I have read your manuscript with some attention. By the argument it contains against the doctrines of a particular providence, though you allow a general providence, you strike at the foundation of all religion. For without the belief of a providence, that takes cognizance of, guards, and guides, and may favor particular persons, there is no motive to worship a deity, to fear its displeasure, or to pray for its protection. I will not enter into any discussion of your principles, though you seem to desire it. At present I shall only give you my opinion, that, though your reasonings are subtle, and may prevail with some readers, you will not succeed so as to change the general sentiments of mankind on that subject, and the consequence of printing this piece will be, a great deal of odium drawn upon yourself, mischief to you, and no benefit to others. He that spits against the wind spits in his own face.

But, were you to succeed, do you imagine any good would be done by it? You yourself may find it easy to live a virtuous life, without the assistance afforded by religion, you having a clear perception of the advantages of virtue, and the disadvantages of vice, and possessing a strength of resolution sufficient to enable you to resist common temptations. But think how great a proportion of mankind consists of weak and ignorant men and women, and of inexperienced and inconsiderate youth of both sexes, who have need of the motives of religion to restrain them from vice, to support their virtue, and retain them in the practice of it till it becomes *habitual*, which is the great point for its security. And perhaps you are indebted to her originally,

that is, to your religious education, for the habits of virtue upon which you now justly value yourself. You might easily display your excellent talents of reasoning upon a less hazardous subject, and thereby obtain a rank with our most distinguished authors. For among us it is not necessary, as among the Hottentots, that a youth, to be received into the company of men, should prove his manhood by beating his mother.

I would advise you, therefore, not to attempt unchaining the tiger, but to burn this piece before it is seen by any other person, whereby you will save yourself a great deal of mortification from the enemies it may raise against you, and perhaps a good deal of regret and repentance. If men are so wicked as we now see them *with religion*, what would they be *if without it*? I intend this letter itself as a *proof* of my friendship, and therefore add no *professions* to it, but subscribe simply yours,

B F

From

A LETTER TO EZRA STILES

[1840]

Philadelphia, March 9, 1790

REVEREND and Dear Sir—I received your kind letter of Jan'y 28, and am glad you have at length received the portrait of Gov'r Yale from his family, and deposited it in the College Library. He was a great and good man, and had the merit of doing infinite service to your country by his munificence to that institution. The honor you propose doing me by placing mine in the same room with his is much too great for my deserts, but you always had a partiality for me, and to that it must be ascribed. I am however too much obliged to Yale College, the first learned society that took notice of me and adorned me with its honors, to refuse a request that comes from it through so esteemed a friend. But I do not think any one of the portraits you mention, as in my possession, worthy of the place and company you propose to place it in.

You have an excellent artist lately arrived. If he will undertake to make one for you, I shall cheerfully pay the expense, but he must not delay setting about it, or I may slip through his fingers, for I am now in my eighty-fifth year, and very infirm.

I send with this a very learned work, as it seems to me, on the ancient Samaritan coins, lately printed in Spain, and at least curious for the beauty of the impression. Please to accept it for your College Library. I have subscribed for the Encyclopaedia now printing here, with the intention of presenting it to the College. I shall probably depart before the work is finished, but shall leave directions for its continuance to the end. With this you will receive some of the first numbers.

You desire to know something of my religion. It is the first time I have been questioned upon it. But I cannot take your curiosity amiss, and shall endeavor in a few words to gratify it. Here is my creed. I believe in one God, creator of the universe. That he governs it by his Providence. That he ought to be worshipped. That the most acceptable service we render to him is doing good to his other children. That the soul of man is immortal, and will be treated with justice in another life respecting its conduct in this. These I take to be the fundamental principles of all sound religion, and I regard them as you do in whatever sect I meet with them.

As to Jesus of Nazareth, my opinion of whom you particularly desire, I think the system of morals and his religion, as he left them to us, the best the world ever saw or is likely to see, but I apprehend it has received various corrupting changes, and I have, with most of the present Dissenters in England, some doubts as to his divinity, though it is a question I do not dogmatize upon, having never studied it, and think it needless to busy myself with it now, when I expect soon an opportunity of knowing the truth with less trouble. I see no harm, however, in its being believed, if that belief has the good consequence, as probably it has, of making his doctrines more re-

spected and better observed, especially as I do not perceive that the Supreme takes it amiss by distinguishing the unbelievers in his government of the world with any peculiar marks of his displeasure

I shall only add, respecting myself,

that, having experienced the goodness of that Being in conducting me prosperously through a long life, I have no doubt of its continuance in the next, though without the smallest concert of meriting such goodness

1705 ~ *Charles Chauncy* ~ 1787

GREAT-GRANDSON of an earlier Charles Chauncy, 1592-1672, who was the second president of Harvard, and son of a Boston merchant who was also named Charles, the most distinguished of the Charles Chauncys was born in 1705. Receiving two degrees from Harvard in 1721 and 1724, he was ordained minister of the First Church in Boston in 1727 and spent sixty years in its service. He was thrice married. Next to Jonathan Edwards and Jonathan Mayhew, he was one of the most influential clergymen in the colonies during the 18th Century. A close friend of Mayhew, he supported him in opposing the establishment of an Anglican episcopate in America and wrote a series of brilliant controversial discourses on this subject between 1762 and 1771.

During the first "Great Awakening" that was stimulated by Edwards and given its main impetus by Whitefield, Chauncy proved its most powerfully equipped theological critic, comparing its "Enthusiasm" to that of the Antinomian followers of Anne Hutchinson in the previous century in his *Seasonable Thoughts on the State of Religion in New-England*, Boston, 1743.

[Of his several writings against all forms of revivalistic religion, his sermon, *Enthusiasm Described and Caution'd Against*, from which the following selection has been printed in a modernized text, best reveals his rationalism, his refusal to identify true grace with the kind of inspiration or special revelations claimed by Quakers and Methodists, and his reverence for the authority of Scripture as interpreted by a learned ministry. He played an important rôle as critic of Calvinist doctrines preached by some of Edwards' successors.]

From
ENTHUSIASM DESCRIBED AND
CAUTION'D AGAINST
[1742]

THE WORD, from its etymology, carries in it a good meaning, as signifying *inspiration from God* in which sense the prophets under the old testament, and the apostles

under the new, might properly be called *Enthusiasts*. For they were under a divine influence, spoke as moved by the Holy Ghost, and did such things as can be accounted for in no way but by recurring to an immediate power, present with him.

But the word is more commonly used in a bad sense, as intending an *imaginary*, not a *real* inspiration according to which

sense, the Enthusiast is one who has a conceit of himself as a person favored with the extraordinary presence of the Deity. He mistakes the workings of his own passions for divine communications, and fancies himself immediately inspired by the Spirit of God when all the while he is under no other influence than that of an over-heated imagination.

The cause of this Enthusiasm is a bad temperament of the blood and spirits, 'tis properly a disease, a sort of madness, and there are few, perhaps none at all, but are subject to it, though none are so much in danger of it as those in whom *melancholy* is the prevailing ingredient in their constitution. In these it often reigns, and sometimes to so great a degree that they are really beside themselves, acting as truly by the blind impetus of a wild fancy as though they had neither reason nor understanding.

And various are the ways in which their Enthusiasm discovers itself.

Sometimes it may be seen in their countenance. A certain wildness is discernible in their general look and air, especially when their imaginations are moved and stirred.

Sometimes it strangely loosens their tongues and gives them such an energy, as well as fluency and volubility in speaking, as they themselves, by their utmost efforts, can't so much as imitate when they are not under the Enthusiastic influence.

Sometimes it affects their bodies, throws them into convulsions and distortions, into quakings and tremblings. This was formerly common among the people called Quakers. I was myself, when a lad, an eye-witness to such violent agitations and foamings, in a boisterous female speaker, as I could not behold but with surprise and wonder.

Sometimes it will unaccountably mix itself with their conduct and give it such a tincture of that which is freakish or furious as none can have an idea of but those who have seen the behavior of a person in a frenzy.

Sometimes it appears in their imaginary peculiar intimacy with heaven. They are, in their own opinion, the special favorites of God, have more familiar converse with him than other good men, and receive immediate, extraordinary communications from him. The thoughts which suddenly rise up in their minds they take for suggestions of the Spirit, their very fancies are divine illuminations, nor are they strongly inclined to anything but 'tis an impulse from God, a plain revelation of his will.

And what extravagances, in this temper of mind, are they not capable of, and under the specious pretext too of paying obedience to the authority of God! Many have fancied themselves acting by immediate warrant from heaven while they have been committing the most undoubted wickedness. There is indeed scarce anything so wild, either in speculation or practice, but they have given in to it. They have, in many instances, been blasphemers of God and open disturbers of the peace of the world.

But in nothing does the Enthusiasm of these persons discover itself more than in the disregard they express to the dictates of reason. They are above the force of argument, beyond conviction from a calm and sober address to their understanding. As for them, they are distinguished persons, God himself speaks inwardly and immediately to their souls. And in vain will you endeavor to convince such persons of any mistakes they are fallen into. They are certainly in the right and know themselves to be so. They have the Spirit opening their understandings and revealing the truth to them. They believe only as he has taught them, and to suspect they are in the wrong is to do dishonor to the Spirit, 'tis to oppose his dictates, to set up their own wisdom in opposition to his, and shut their eyes against that light with which he has shined into their souls. They are not therefore capable of being argued with, you had as good reason with the wind.

And as the natural consequence of their being thus sure of everything, they are not only infinitely stiff and tenacious, but impatient of contradiction, censorious, and uncharitable they encourage a good opinion of none but such as are in their way of thinking and speaking Those, to be sure, who venture to debate with them about their errors and mistakes, their weaknesses and indiscretions, run the risk of being stigmatized by them as poor unconverted wretches, without the Spirit, under the government of carnal reason, enemies to God and religion, and in the broad way to hell

They are likewise positive and dogmatical, vainly fond of their own imaginations, and invincibly set upon propagating them and in the doing of this, their powers being awakened and put as it were upon the stretch from the strong impressions they are under that they are authorized by the immediate command of God himself, they sometimes exert themselves with a sort of *ecstatic* violence And 'tis this that gives them the advantage, among the less knowing and judicious, of those who are modest, suspicious of themselves, and not too assuming in matters of conscience and salvation The extraordinary fervor of their minds, accompanied with uncommon bodily motions and an excessive confidence and assurance, gains them great reputation among the populace, who speak of them as *men of God* in distinction from all others, and too commonly harken to and revere their dictates, as though they really were, as they pretend, immediately communicated to them from the Divine Spirit

This is the nature of Enthusiasm, and thus its operation, in a less or greater degree, in all who are under the influence of it. 'Tis a kind of religious frenzy and evidently discovers itself to be so whenever it rises to any great height

And much to be pitied are the persons who are seized with it Our compassion commonly works towards those who, while under distraction, fondly imagine themselves to be Kings and Emperors and the

like pity is really due to those who, under the power of Enthusiasm, fancy themselves to be *prophets, inspired of God, and immediately called and commissioned by him to deliver his messages to the world* And though they should run into disorders, and act in a manner that cannot but be condemned, they should notwithstanding be treated with tenderness and lenity, and the rather because they don't commonly act so much under the influence of a *bad mind* as a *deluded imagination* And who more worthy of Christian pity than those who, under the notion of serving God and the interest of religion, are filled with zeal and exert themselves to the utmost, while all the while they are hurting and wounding the very cause they take so much pains to advance? 'Tis really a pitiable case and though the honesty of their intentions won't legitimate their bad actions, yet it very much alleviates their guilt We should think as favorably of them as may be, and be disposed to judge with mercy, as we would hope to obtain mercy

'Tis true it won't certainly follow that a man pretending to be a *prophet, or spiritual*, really is so if he owns the Bible and receives the truths therein revealed as the mind of God But the conclusion, on the other hand, is clear and certain if he pretends to be conducted by the Spirit, and disregards the scripture, pays no due reverence to the things there delivered as the *commandments of God*, he is a mere pretender, be his pretences ever so bold and confident or made with ever so much seeming seriousness, gravity, or solemnity

And the reason of this is obvious, viz, that the things contained in the scripture were wrote by holy men as they were moved by the Holy Ghost they were received from God and committed to writing under his immediate, extraordinary influence and guidance And the divine, ever-blessed Spirit is consistent with himself He cannot be supposed to be the author of any *private* revelations that are contradictory to the *public standing* ones which he has preserved in the world to this day. This would

be to set the Spirit of Truth at variance with himself, than which a greater reproach can't be cast upon him 'Tis therefore as true that those are Enthusiastical who pretend to the Spirit, and at the same time express a disregard to the scripture, as that the Spirit is a great revealer of the things therein declared to us

Get a true understanding of the *proper work of the Spirit* and don't place it in those things wherein the gospel does not make it consist The work of the Spirit is

different now from what it was in the first days of Christianity Men were then favored with the extraordinary presence of the Spirit He came upon them in miraculous gifts and powers, as a spirit of prophecy, of knowledge, of revelation, of tongues, of miracles But the Spirit is not now to be expected in these ways His great business lies in preparing men's minds for the grace of God thus he does by the *word* and *prayer* .

1720 ~ *John Woolman* ~ 1772

BELIEVING in the divine guide of the "Inner Light," the Quakers were regarded as "Enthusiasts" by more orthodox Protestant groups and suffered much persecution and martyrdom both in England and America, especially in the 17th Century In the 18th Century, Quakerism was a more respectable heresy, well-established in several of the American colonies

John Woolman, born at Northampton, New Jersey, was one of the most distinguished of American Quaker missionaries He chose tailoring as a career, married Sarah Ellis in 1749, and became a prosperous shopkeeper at Mount Holly His first journey to spread the gospel of the Friends was made to East Jersey in 1743, and from that time on he traveled extensively—to Virginia, North Carolina, and Maryland, in New England, to Philadelphia and Long Island, and among the Indians In 1772 he made a voyage to England as a delegate from the Friends of Pennsylvania and died of smallpox in York

His *Essay on Some Considerations on the Treatment of Negroes*, one of the important documents in the early literature of anti-slavery agitation, was issued in two parts, the first in 1753 or 1754 and the second in 1762 His *Journal*, begun in 1756 and first published in 1774, is a classic among Quaker personal records

[The first of the following selections, which has been given a title by the present editors, is modernized from the *Journal*, the best text of which is found in *The Journal and Essays of John Woolman*, ed. A. M. Gummere, New York, 1922 The other selections, also modernized and supplied with appropriate titles, are from short essays which Woolman wrote in 1772 during his mission to England and which were published in London in 1773 by the Quaker publisher, Mary Hinde They provide insight into the Quakers' humanitarianism and their conception of the "Inner Light"]

PORTRAIT OF THE QUAKER AS A
YOUNG MAN
[1774]

I HAVE often felt a motion of love to leave some hints of my experience of the goodness of God, and pursuant thereto, in the thirty-sixth year of my age, I begin this work

I was born in Northampton, in Burlington county, in West Jersey, in the year of our Lord 1720, and before I was seven years old I began to be acquainted with the operations of Divine love Through the care of my parents, I was taught to read near as soon as I was capable of it, and as I went from school one seventh-day, I remember, while my companions went to play by the way, I went forward out of sight, and sitting down, I read the twenty-second chapter of the Revelation "He showed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the lamb," etc , and in the reading of it, my mind was drawn to seek after that pure habitation, which, I then believed, God had prepared for his servants The place where I sat, and the sweetness that attended my mind, remain fresh in my memory

This, and the like gracious visitations, had that effect upon me, that when boys used ill language, it troubled me, and through the continued mercies of God, I was preserved from it The pious instructions of my parents were often fresh in my mind when I happened to be among wicked children, and were of use to me

My parents having a large family of children, used frequently, on first-days after meeting, to put us to read in the Holy Scriptures, or some religious books, one after another, the rest sitting by without much conversation, which I have since often thought was a good practice From what I had read and heard, I believed there had been, in past ages, people who walked in uprightness before God, in a degree exceeding any that I knew or heard of, now living, and the apprehension of there being

less steadiness and firmness amongst people in this age than in past ages, often troubled me while I was still young

I had a dream about the ninth year of my age as follows I saw the moon rise near the west, and run a regular course eastward, so swift that in about a quarter of an hour she reached our meridian, when there descended from her a small cloud on a direct line to the earth, which lighted on a pleasant green about twenty yards from the door of my father's house (in which I thought I stood) and was immediately turned into a beautiful green tree The moon appeared to run on with equal swiftness, and soon set in the east, at which time the sun arose at the place where it commonly doth in the summer, and shining with full radiance in a serene air, it appeared as pleasant a morning as ever I saw

All this time I stood still in the door, in an awful frame of mind, and observed that as heat increased by the rising sun, it wrought so powerfully on the little green tree, that the leaves gradually withered, and before noon it appeared dry and dead There then appeared a being, small of size, moving swift from the north southward, called a "*Sun Worm*" Though I was a child, this dream was instructive to me

Another thing remarkable in my childhood was, that once, as I went to a neighbor's house, I saw, on the way, a robin sitting on her nest, and as I came near she went off, but having young ones, flew about, and with many cries expressed her concern for them I stood and threw stones at her, till one striking her, she fell down dead At first I was pleased with the exploit, but after a few minutes was seized with horror, as having, in a sportive way, killed an innocent creature while she was careful for her young I beheld her lying dead, and thought those young ones, for which she was so careful, must now perish for want of their dam to nourish them, and after some painful considerations on the subject, I climbed up the tree, took all the young birds; and killed them—supposing

that better than to leave them to pine away and die miserably, and believed, in this case, that Scripture proverb was fulfilled, "The tender mercies of the wicked are cruel." I then went on my errand, but, for some hours, could think of little else but the cruelties I had committed, and was much troubled. Thus He, whose tender mercies are over all his works, hath placed that in the human mind, which incites to exercise goodness towards every living creature, and this being singly attended to, people become tender-hearted and sympathizing, but being frequently and totally rejected, the mind shuts itself up in a contrary disposition.

About the twelfth year of my age, my father being abroad, my mother reproved me for some misconduct, to which I made an undutiful reply, and the next first-day, as I was with my father returning from meeting, he told me he understood I had behaved amiss to my mother, and advised me to be more careful in future. I knew myself blamable, and in shame and confusion remained silent. Being thus awakened to a sense of my wickedness, I felt remorse in my mind, and getting home, I retired and prayed to the Lord to forgive me, and do not remember that I ever, after that, spoke unhandsonely to either of my parents, however foolish in some other things.

Having attained the age of sixteen, I began to love wanton company, and though I was preserved from profane language or scandalous conduct, still I perceived a plant in me which produced much wild grapes. Yet my merciful Father forsook me not utterly, but at times, through his grace, I was brought seriously to consider my ways, and the sight of my backsliding affected me with sorrow, but for want of rightly attending to the reproofs of instruction, vanity was added to vanity, and repentance. Upon the whole, my mind was more and more alienated from the Truth, and I hastened towards destruction. While I meditate on the gulf towards which I travelled, and reflect on my youthful disobedience, my heart is affected with sorrow.

Advancing in age, the number of my ac-

quaintance increased, and thereby my way grew more difficult. Though I had heretofore found comfort in reading the Holy Scriptures, and thinking on heavenly things, I was now estranged therefrom. I knew I was going from the flock of Christ, and had no resolution to return, hence serious reflections were uneasy to me, and youthful vanities and diversions my greatest pleasure. Running in this road I found many like myself, and we associated in that which is reverse to true friendship. But in this swift race it pleased God to visit me with sickness, so that I doubted of recovering, and then did darkness, horror, and amazement, with full force seize me, even when my pain and distress of body was very great. I thought it would have been better for me never to have had a being, than to see the day which I now saw. I was filled with confusion, and in great affliction, both of mind and body, I lay and bewailed myself. I had not confidence to lift up my cries to God, whom I had thus offended, but in a deep sense of my great folly, I was humbled before him. And at length, that Word which is as a fire and a hammer, broke and dissolved my rebellious heart, and then my cries were put up in contrition, and in the multitude of his mercies I found inward relief, and felt a close engagement, that if he was pleased to restore my health, I might walk humbly before him.

After my recovery, this exercise remained with me a considerable time, but by degrees, giving way to youthful vanities, they gained strength, and getting with wanton young people I lost ground. The Lord had been very gracious, and spoke peace to me in the time of my distress, and I now most ungratefully turned again to folly, on which account, at times, I felt sharp reproof, but did not get low enough to cry for help. I was not so hardy as to commit things scandalous, but to exceed in vanity and promote mirth, was my chief study. Still I retained a love and esteem for pious people, and their company brought an awe upon me. My dear parents several

times admonished me in the fear of the Lord, and their admonition entered into my heart, and had a good effect for a season, but not getting deep enough to pray rightly, the tempter, when he came, found entrance. I remember once, having spent a part of a day in wantonness, as I went to bed at night, there lay in a window near my bed a Bible, which I opened, and first cast my eye on the text, "we lie down in our shame, and our confusion covers us", this I knew to be my case, and meeting with so unexpected a reproof, I was somewhat affected with it, and went to bed under remorse of conscience, which I soon cast off again.

Thus time passed on my heart was replenished with mirth and wantonness, while pleasing scenes of vanity were presented to my imagination, till I attained the age of eighteen years, near which time I felt the judgments of God in my soul like a consuming fire, and looking over my past life, the prospect was moving. I was often sad, and longed to be delivered from those vanities, then, again, my heart was strongly inclined to them, and there was in me a sore conflict. At times I turned to folly, and then again, sorrow and confusion took hold of me. In a while, I resolved totally to leave off some of my vanities, but there was a secret reserve in my heart, of the more refined part of them, and I was not low enough to find true peace. Thus for some months, I had great troubles and disquiet, there remaining in me an unsubjected will, which rendered my labors fruitless, till at length, through the merciful continuance of heavenly visitations, I was made to bow down in spirit before the Lord. I remember one evening I had spent some time in reading a pious author, and walking out alone, I humbly prayed to the Lord for his help, that I might be delivered from those vanities which so ensnared me. Thus, being brought low, he helped me, and as I learned to bear the Cross, I felt refreshment to come from his presence, but not keeping in that strength which gave victory, I lost ground again, the sense of which

greatly afflicted me, and I sought deserts and lonely places, and there with tears did confess my sins to God, and humbly craved help of him. And I may say with reverence, he was near to me in my troubles, and in those times of humiliation opened my ear to discipline. I was now led to look seriously at the means by which I was drawn from the pure truth, and learned this, that if I would live in the life which the faithful servants of God lived in, I must not go into company as heretofore, in my own will, but all the cravings of sense must be governed by a Divine principle. In times of sorrow and abasement, these instructions were sealed upon me, and I felt the power of Christ prevail over all selfish desires, so that I was preserved in a good degree of steadiness, and being young, and believing, at that time, that a single life was best for me, I was strengthened to keep from such company as had often been a snare to me.

I kept steady to meetings, spent first-days in the afternoon chiefly in reading the Scriptures, and other good books, and was early convinced in my mind that true religion consisted in an inward life, wherein the heart doth love and reverence God the Creator, and learn to exercise true justice and goodness, not only toward all men, but also toward the brute creatures. That as the mind was moved by an inward principle to love God as an invisible, incomprehensible Being, by the same principle it was moved to love him in all his manifestations in the visible world. That, as by his breath the flame of life was kindled in all animal and sensible creatures, to say we love God as unseen, and, at the same time, exercise cruelty toward the least creature moving by his life, or by life derived from him, was a contradiction in itself.

I found no narrowness respecting sects and opinions, but believed that sincere, upright-hearted people, in every society, who truly love God, were accepted of him.

As I lived under the cross, and simply followed the openings of Truth, my mind, from day to day, was more enlightened; my

former acquaintance were left to judge of me as they would, for I found it safest for me to live in private, and to keep these things sealed up in my own breast. While I silently ponder on that change which was wrought in me, I find no language equal to it, nor any means to convey to another a clear idea of it. I looked upon the works of God in this visible creation, and an awfulness covered me, my heart was tender, and often contrite, and a universal love to my fellow-creatures increased in me. This will be understood by such who have trodden in the same path.

Some glances of real beauty is perceivable in their faces who dwell in true meekness, some tincture of true harmony in the sound of that voice to which divine love gives utterance, and some appearance of right order in their temper and conduct whose passions are fully regulated, yet all these do not fully show forth that inward life to such who have not felt it, but this white stone and new name is known rightly to such only who have it.

THE SLAVE TRADE

[1773]

MANY are the vanities and luxuries of the present age, and in laboring to support a way of living conformable to the present world, the departure from that wisdom that is pure and peaceable hath been great.

Under the sense of a deep revolt and an overflowing stream of unrighteousness, my life has been often a life of mourning, and tender desires are raised in me that the nature of this practice may be laid to heart.

I have read some books wrote by people who were acquainted with the manner of getting slaves in Africa.

I have had verbal relations of this nature from several Negroes brought from Africa who have learned to talk English.

I have sundry times heard Englishmen speak on this subject, who have been at Africa on this business, and from all these

accounts it appears evident that great violence is committed and much blood shed in Africa in getting slaves.

When three or four hundred slaves are put in the hold of a vessel in a hot climate, their breathing soon affects the air. Were that number of free people to go passengers with all things proper for their voyage, there would inconvenience arise from their number, but slaves are taken by violence, and frequently endeavor to kill the white people that they may return to their native land. Hence they are frequently kept under some sort of confinement by means of which a scent ariseth in the hold of a ship and distempers often break out amongst them, of which many die. Of this tainted air in the hold of ships freighted with slaves I have had several accounts, some in print, and some verbal, and all agree that the scent is grievous. When these people are sold in America and in the Islands, they are made to labor in a manner more servile and constant than that which they were used to at home, that with grief, with different diet from what has been common with them, and with hard labor, some thousands are computed to die every year in what is called the "seasoning."

Thus it appears evident that great numbers of these people are brought every year to an untimely end, many of them being such who never injured us.

When the innocent suffer under hard-hearted men even unto death and the channels of equity are so obstructed that the cause of the sufferers is not judged in righteousness, *the land is polluted with blood* Numb xxxv 33.

When blood hath been shed unrighteously and remains unatoned for, the cry thereof is very piercing.

Under the humbling dispensations of divine providence, this cry hath deeply affected my heart, and I feel a concern to open, as I may be enabled, that which lieth heavy on my mind.

Now in a revolt so deep as this, when much blood has been shed unrighteously in

carrying on the slave trade and in supporting the practice of keeping slaves, which at this day is unatoned for, and crieth from the earth, and from the seas against the oppressor!—while this practice is continued, and under a great load of guilt there is more unrighteousness committed, the state of things is very moving!

There is a love which stands in nature, and a parent beholding his child in misery hath a feeling of the affliction, but in divine love the heart is enlarged towards mankind universally and prepared to sympathize with strangers, though in the lowest station of life

THE POOR

[1773]

THERE is a proportion between labor and the necessities of life, and in true brotherly love the mind is open to feel after the necessities of the poor

Amongst the poor there are some that are weak through age, and others of a weakly nature, who pass through straights in very private life without asking relief from the public

Such who are strong and healthy may do that business which to the weakly may be oppressive, and in performing that in a day which is esteemed a day's labor by weakly persons in the field and in the shops and by weakly women who spin and knit in the manufactories, they often pass through weariness, and many sighs I believe are uttered in secret, unheard by some who might ease their burdens

Labor in the right medium is healthy, but in too much of it there is a painful weariness, and the hardships of the poor are sometimes increased through want of a

more agreeable nourishment, more plentiful fuel for the fire, and warmer clothing in the winter than their wages will answer

When I have beheld plenty in some houses to a degree of luxury, the condition of poor children brought up without learning and the condition of the weakly and aged who strive to live by their labor have often revived in my mind as cases of which some who live in fulness need to be put in remembrance

SILENT WORSHIP

[1773]

AS I have traveled at times where those of other societies have attended our meetings and have perceived how little some of them knew of the nature of silent worship, I have felt tender desires in my heart that we who often sit silent in our meetings may live answerable to the nature of an inward fellowship with God that no stumbling-block through us may be laid in their way

Such is the load of unnecessary expense which lieth on that which is called divine service in many places, and so much are the minds of many people employed in outward forms and ceremonies, that the opening of an inward silent worship in this nation to me hath appeared to be a precious opening

In real silent worship the soul feeds on that which is divine, but we cannot partake of the table of the Lord and that table which is prepared by the god of this world

If Christ is our shepherd and feedeth us and we are faithful in following him, our lives will have an inviting language, and the table of the Lord will not be polluted

1738 ~ *Thomas Rankin* ~ 1810

THOMAS RANKIN was born in England. As a young man, he disregarded the religious precepts which he had been taught as a child and led a somewhat dissipated life. He began to think seriously about religion when he attended Methodist meetings held by a troop of converted dragoons quartered at his home town of Dunbar, in Haddingtonshire. He was further drawn toward Methodism by hearing the great George Whitefield preach. After a several months' stay in South Carolina as agent for a firm of Edinburgh merchants, he returned to England, began to preach himself at Methodist gatherings, and was soon a regular on the Sussex circuit and one held in high esteem by John Wesley, who addressed him in letters as "My dear Tommy." Rankin left England as Wesley's special missionary to America to breathe new life into the Methodist movement. It was Rankin who called the first conference of American Methodist societies in Philadelphia on July 4, 1773. One of his most successful tours while in America was in Virginia and North Carolina. The Virginian Episcopal clergyman, Devereux Jarratt, 1733-1801, welcomed to his parish such Methodist evangelists as Rankin and the much more eloquent George Shadford. Because of the feeling against Englishmen after the outbreak of the Revolution, Rankin returned permanently to his native land in 1777 and died in London.

[The following selection from a letter Rankin wrote to John Wesley concerning his Virginia tour is modernized from Devereux Jarratt's *A brief narrative of the revival of religion in Virginia*, London, 1778. In brief compass, this selection conveys vividly the impact of the Methodist movement in the Southern colonies and the conception of religion cherished by a Methodist leader who may be regarded as an American for the period of his colonial mission.]

LETTER TO JOHN WESLEY
[1778 (written 1776)]

MONDAY, June 24. I left Leesburg in company with Wright Brickell (a truly devout man, who now rests from his labors) and came to Petersburg on Saturday the 29th, where I preached about three in the afternoon, and then rode on to Mr. Bosheua's about ten miles further. A little company was waiting for me, and God was with them of a truth.

Sunday, 30. I was comforted by the sight of my dear Brother Shadford. But I was weak in body through riding so far in extreme heat and much exercised in mind and did not know how I should be able to go through the labor of the day. We went to the Chapel at ten, where I had liberty of mind and strength of body beyond my expectation. After preaching I met the Society and was more relieved both in body and mind. At four in the afternoon I preached again, from *I set before thee an open door, and none can*

shut it I had gone through about two-thirds of my discourse and was bringing the words home to the present Now when such power descended that hundreds fell to the ground and the house seemed to shake with the presence of God The Chapel was full of white and black, and many were without that could not get in Look wherever we would, we saw nothing but streaming eyes and faces bathed in tears, and heard nothing but groans and strong cries after God and the Lord Jesus Christ My voice was drowned amidst the groans and prayers of the congregation I then sat down in the pulpit, and both Mr Shadford and I were so filled with the divine presence that we could only say, "This is none other than the house of God! This is the gate of Heaven!" Husbands were inviting their wives to go to Heaven, wives their husbands, parents their children and children their parents, brothers their sisters and sisters their brothers In short, those who were happy in God themselves were for bringing all their friends to him in their arms This mighty effusion of the spirit continued for above an hour, in which time many were awakened, some found peace with God and others his pure love We attempted to speak or sing again and again, but no sooner we began than our voices were drowned It was with much difficulty that we at last persuaded the people, as night drew on, to retire to their own homes

Tuesday, July 2 I rode with Mr Shadford to Mr Jarratt's, who with Mrs Jarratt received us with open arms I preached the next day not far from his house to a deeply attentive congregation Many were much affected at the preaching, but far more at the meeting at the Society Mr Jarratt himself was constrained to praise God aloud for his great love to him and to his people

Sunday, 7 I preached at White's Chapel, about twenty miles from Mr Jarratt's I intended to preach near the house under the shade of some large trees But the rain made it impracticable The house was greatly crowded, and four or five hundred

stood at the doors and windows and listened with unabated attention I preached from Ezekiel's vision of the dry bones *And there was a great shaking* I was obliged to stop again and again and beg of the people to compose themselves But they could not some on their knees and some on their faces were crying mightily to God all the time I was preaching Hundreds of Negroes were among them, with the tears streaming down their black faces The same power we found in meeting the Society, and many were enabled to rejoice with joy unspeakable In the cool of the evening I preached out of doors, and many found an uncommon blessing

Every day in the ensuing week I preached to large and attentive congregations Indeed, the weather was violently hot, and the fatigue of riding and preaching so often was great But God made up all this to me by his comfortable presence Thursday, 11, I preached to a large congregation at the preaching-house near Mr Jarratt's After preaching at several places on Friday and Saturday, on Sunday, 14, I came to Mr Bosheua's, where I preached and met the Society The congregation was, as before, abundantly larger than the Chapel could contain And we had almost such a day as fourteen days ago only attended with a more deep and solemn work What a work is God working in this corner of Mr Jarratt's parish! It seemed as if all the country, for nine or ten miles round, were ready to turn to God

In the evening I rode to Mr Smith's and found a whole family fearing and loving God Mr Smith, a sensible and judicious man, had been for many years a Justice of the Peace By hearing the truth as it is in Jesus, he and his wife first, and then all his children, had attained that peace that passeth all understanding He observed, "How amazing the change was which had been lately wrought in the place where he lived! That before the Methodists came into these parts, when he was called by his office to attend the court, there was nothing but drunkenness, cursing, swearing,

and fighting most of the time the court sat whereas now nothing is heard but prayer and praise and conversing about God and the things of God"

Monday, 15 I rode towards North Carolina In every place the congregations were large and received the word with all readiness of mind I know not that I have spent such a week since I came to America I saw everywhere such a simplicity in the people, with such a vehement thirst after the word of God, that I frequently preached and continued in prayer till I was hardly able to stand Indeed, there was no getting away from them while I was able to speak one sentence for God

Sunday, 21 I preached at Ronoaky Chapel to more than double of what the house would contain In general, the white people were within the Chapel and the black people without The windows being all open, every one could hear, and hundreds felt the word of God Many were bathed in tears and others rejoicing with joy unspeakable When the Society met, many could not refrain from praising God aloud I preached to a large company in the afternoon and concluded the day with prayer and thanksgiving

Tuesday, 23 I crossed the Ronoaky River and preached at a Chapel in North Caro-

lina And I preached every day to very large and deeply attentive congregations, although not without much labor and pain, through the extreme heat of the weather

On Tuesday, 30, was our Quarterly Meeting I scarce ever remember such a season No Chapel or preaching-house in Virginia would have contained one-third of the congregation Our friends, knowing this, had contrived to shade with boughs of trees a space that would contain two or three thousand persons Under this, wholly screened from the rays of the sun, we held our general love-feast It began between eight and nine on Wednesday morning and continued till noon Many testified that they had redemption in the blood of Jesus, even the forgiveness of sins And many were enabled to declare that it had cleansed them from all sin So clear, so full, so strong was their testimony that while some were speaking their experience, hundreds were in tears and others vehemently crying to God for pardon or holiness

About eight our watch-night began Mr Jarratt preached an excellent sermon, the rest of the preachers exhorted and prayed with divine energy Surely, for the work wrought on these two days, many will praise God to all eternity!

1738 ~ *Ethan Allen* ~ 1789

DEISM, the religion of nature and reason, which had interested the young Benjamin Franklin, was opposed to all forms of Christian orthodoxy and to any variety of evangelical "Enthusiasm" The history of Deism in 17th and 18th Century England and in the France of the Enlightenment is a long and interesting one, in America before, during, and for several decades after the Revolution, Deism had the status of a "Republican religion," a creed for those who abjured every type of tyranny

Dr Thomas Young, an M D from Yale practising at Salisbury, Conn, and possessing a well-stocked philosophical library, struck up a friendship in

the 1760's with Ethan Allen, a hulking, brawling, picturesquely profane, and tavern-haunting young backwoodsman, loaned him books, and converted him to Deism. An ancestor of the Allens had followed the great Puritan clergyman, Thomas Hooker, from Massachusetts into Connecticut, in the period of religious ferment provoked by the "Great Awakening." Ethan's father had turned to Arianism, Ethan, himself, born in 1738 in Litchfield, Conn., had a restless native originality of mind that was fruitful soil for a vigorous anti-clericalism. After enlisting as a soldier but missing any action in the French and Indian War, Ethan organized his fellow settlers of the New-Hampshire Grants—now Vermont—into a kind of outlaw militia known as the Green Mountain Boys to resist any attempt on the part of New York to confiscate their lands. At the outbreak of the Revolution he led his liberty-loving hellions in a surprise foray upon Fort Ticonderoga, a strategical British post on Lake Champlain, and took possession of it and all its supplies, including the Captain's ninety gallons of rum, "in the name of the Great Jehovah and the Continental Congress," although there is some controversy as to whether these were his exact words. It was the first successful American offensive of the war. Captured by the British in a reckless attempt to surprise Montreal, Allen was held prisoner for two years.

In 1779, the year following his exchange, he published at Boston *A Narrative of Colonel Ethan Allen's Captivity*, which became very popular. Later, as a general of the local militia and as a trouble-making and intriguing politician, he helped shape the destinies of the future State of Vermont. Keeping in touch with his old friend, Dr. Young, Allen had long planned to write a book on Deism in collaboration with him. After Dr. Young's death, Allen acquired, on a visit to Philadelphia, a sheaf of notes among the doctor's papers, and, using them as a basis and with the assistance of an amanuensis, completed at his Sunderland home early in July of 1782 the manuscript of *Reason the Only Oracle of Man, or a Compendious System of Natural Religion*, which was published at Bennington, Vt., in 1784. Shortly before the publication of this work, Allen, on a visit to New York, made the acquaintance of Hector St. John de Crèvecoeur, then serving as French consul, and the two became firm friends. Happy with his second wife and enjoying the stir produced throughout New England by his book on Deism, Allen showed signs of mellowing when he refused to aid Daniel Shays in his rebellion. After too much carousing with old cronies at a party given by his cousin Ebenezer, the retired "Green Mountain Boy" died at his home in Burlington.

[The following selections from *Reason the Only Oracle of Man*, a neglected classic of the American Enlightenment, are from Section V of Chapter I and Section III of Chapter XIV. The original title of the first of these sections has been retained in full, but that of the other section has been shortened. The text has been modernized.]

THE CAUSE OF IDOLATRY AND THE
REMEDY OF IT
[1784]

INASMUCH as God is not corporeal and consequently does not and cannot come within the notice of our bodily sensations, we are therefore obliged to deduce inferences from his providence and particularly from our own rational nature in order to form our conceptions of the divine character, which through inattention, want of learning, or through the natural imbecility of mankind, or through the artifice of designing men, or all together, they have been greatly divided and subdivided in their notions of a God. Many have so groped in the dark as wholly to mistake the proper object of divine worship and, not distinguishing the creator from his creation, have paid adoration to "four-footed beasts and creeping things." And some have ascribed divine honors to the sun, moon, or stars, while others have been infatuated to worship dumb, senseless, and unintelligent idols, which derived their existence as Gods partly from mechanics, who gave them their figure, proportion, and beauty, and partly from their priests, who gave them their attributes, whose believers, it appears, were so wrought upon that they cried out in the ecstasy of their deluded zeal, "Great is Diana!" Whatever delusions have taken place in the world relative to the object of divine worship or respecting the indecencies or immoralities of the respective superstitions themselves, or by what means soever introduced or perpetuated, whether by designing men whose interest it has always been to impose on the weakness of the great mass of the vulgar or, as it is probable that part of those delusions took place in consequence of the weakness of uncultivated reason, in deducing a visible instead of an invisible God from the works of nature—be that as it will, mankind are generally possessed of an idea that there is a God, however they may have been mistaken or misled as to the object. This notion of a God, as

has been before observed, must have originated from a universal sense of dependence which mankind have on something that is more wise, powerful, and beneficent than themselves, or they could have had no apprehensions of any superintending principle in the universe, and consequently would never have sought after a God, or have had any conceptions of his existence, nor could designing men have imposed on their credulity by obtruding false Gods upon them, but, taking advantage of the common belief that there is a God, they artfully deceive their adherents with regard to the object to be adored. There are other sorts of idols which have no existence but in the mere imagination of the human mind, and these are vastly the most numerous, and universally (either in a greater or lesser degree) interspersed over the world, the wisest of mankind are not and cannot be wholly exempt from them, inasmuch as every wrong conception of God is (as far as the error takes place in the mind) idolatrous. To give a sample, an idea of a jealous God is of this sort. Jealousy is the offspring of finite minds, proceeding from the want of knowledge which in dubious matters makes us suspicious and distrustful, but in matters which we clearly understand there can be no jealousy, for knowledge excludes it, so that to ascribe it to God is a manifest infringement of his omniscience.

The idea of a revengeful God is likewise one of that sort, but this idea of divinity, being borrowed from a savage nature, needs no further consideration. The representation of a God who (as we are told by certain divines) from all eternity elected an inconsiderable part of mankind to eternal life and reprobated the rest to eternal damnation, merely from his own sovereignty, adds another to the number. This representation of the Deity undoubtedly took its rise from that which we discover in great, powerful, and wicked tyrants among men, however tradition may since have contributed to its support, though I am apprehensive that a belief in those who adhere to

that doctrine that they themselves constitute that blessed elect number has been a greater inducement to them to close with it than all other motives added together. It is a selfish and inferior notion of a God void of justice, goodness, and truth, and has a natural tendency to impede the cause of true religion and morality in the world, and diametrically repugnant to the truth of the divine character, and which, if admitted to be true, overturns all religion, wholly precluding the agency of mankind in either their salvation or damnation, resolving the whole into the sovereign disposal of a tyrannical and unjust being, which is offensive to reason and common sense and subversive of moral rectitude in general. But as it was not my design so much to confute the multiplicity of false representations of a God, as to represent just and consistent ideas of the true God, I shall therefore omit any further observations on them in this place with this remark, that all unjust representations or ideas of God are so many detractions from his character among mankind. To remedy these idolatrous notions of a God, it is requisite to form right and consistent ideas in their stead.

The discovery of truth necessarily excludes error from the mind, which nothing else can possibly do, for some sort of God or other will crowd itself into the conceptions of dependent creatures, and if they are not so happy as to form just ones, they will substitute erroneous and delusive ones in their stead, so that it serves no valuable purpose to mankind to confute their idolatrous opinions concerning God without communicating to them just notions concerning the true one, for if this is not effected, nothing is done to purpose. For, as has been before observed, mankind will form to themselves, or receive from others, an idea of Divinity either right or wrong: this is the universal voice of intelligent nature, from whence a weighty and conclusive argument may be drawn of the reality of a God, however inconsistent most of their conceptions of him may be. The

fact is, mankind readily perceive that there is a God by feeling their dependence on him, and as they explore his works, and observe his providence, which is too sublime for finite capacities to understand but in part, they have been more or less confounded in their discoveries of a just idea of a God, and of his moral government. Therefore we should exercise great application and care, whenever we assay to speculate upon the Divine character, accompanied with a sincere desire after truth, and not ascribe anything to his perfections or government which is inconsistent with reason or the best information which we are able to apprehend of moral rectitude, and be at least wise enough not to charge God with injustice and contradictions which we should scorn to be charged with ourselves.

OF THE IMPORTANCE OF THE EXERCISE OF REASON [1784]

THE PERIOD of life is very uncertain, and at the longest is but short: a few years bring us from infancy to manhood, a few more to a dissolution, pain, sickness, and death are the necessary consequences of animal life. Through life we struggle with physical evils, which eventually are certain to destroy our earthly composition, and well would it be for us did evils end here, but alas! moral evil has been more or less predominant in our agency, and though natural evil is unavoidable, yet moral evil may be prevented or remedied by the exercise of virtue. Morality is therefore of more importance to us than any or all other attainments, as it is a habit of mind which, from a retrospective consciousness of our agency in this life, we should carry with us into our succeeding state of existence, as an acquired appendage of our rational nature and as the necessary means of our mental happiness. Virtue and vice are the only things in this world which, with our souls, are capa-

ble of surviving death, the former is the rational and only procuring cause of all intellectual happiness, and the latter of conscious guilt and misery, and therefore, our indispensable duty and ultimate interest is to love, cultivate, and improve the one, as the means of our greatest good, and to hate and abstain from the other, as productive of our greatest evil. And in order thereto, we should so far divest ourselves of the incumbrances of this world (which are too apt to engross our attention) as to enquire a consistent system of the knowledge of religious duty and make it our constant endeavor in life to act conformably to it. The knowledge of the being, perfections, creation and providence of God, and of the immortality of our souls, is the foundation of religion.

And as the Pagan, Jewish, Christian, and Mahometan countries of the world have been overwhelmed with a multiplicity of revelations diverse from each other, and which, by their respective promulgators, are said to have been immediately inspired into their souls by the spirit of God, or immediately communicated to them by the intervening agency of angels (as in the instance of the invisible Gabriel to Mahomet) and as those revelations have been received and credited by far the greater part of the inhabitants of the several countries of the world (on whom they have been obtruded) as supernaturally revealed by God or Angels, and which, in doctrine and discipline, are in most respects repugnant to each other, it fully evinces their imposture, and authorizes us, without a lengthy course of arguing, to determine with certainty that not more than one, if any one of them, had their original from God, as they clash with each other, which is ground of high probability against the authenticity of each of them.

A revelation that may be supposed to be really of the institution of God must also be supposed to be perfectly consistent or uniform and to be able to stand the test of truth: therefore such pretended revelations, as are tendered to us as the

contrivance of heaven, which do not bear that test, we may be morally certain was [were] either originally a deception, or has [have] since, by adulteration, become spurious. Furthermore, should we admit, that among the numerous revelations on which the respective priests have given the stamp of divinity, some one of them was in reality of divine authority, yet we could not otherwise, as rational beings, distinguish it from others, but by reason.

Reason therefore must be the standard by which we determine the respective claims of revelation, for otherwise we may as well subscribe to the divinity of the one as of the other, or to the whole of them, or to none at all. So likewise on this thesis, if reason rejects the whole of those revelations, we ought to return to the religion of nature and reason.

Undoubtedly it is our duty, and for our best good, that we occupy and improve the faculties with which our Creator has endowed us, but so far as prejudice, or prepossession of opinion, prevails over our minds, in the same proportion reason is excluded from our theory or practice. Therefore, if we would acquire useful knowledge, we must first divest ourselves of those impediments, and sincerely endeavor to search out the truth, and draw our conclusions from reason and just argument, which will never conform to our inclination, interest, or fancy, but we must conform to that if we would judge rightly. As certain as we determine contrary to reason, we make a wrong conclusion, therefore, our wisdom is to conform to the nature and reason of things, as well in religious matters as in other sciences. Preposterously absurd would it be to negative the exercise of reason in religious concerns, and yet be actuated by it in all other and less occurrences of life. All our knowledge of things is derived from God, in and by the order of nature, out of which we cannot perceive, reflect, or understand anything whatsoever, our external senses are natural and so are our souls, by the instrumentality of the for-

mer we perceive the objects of sense, and with the latter we reflect on them. And those objects are also natural, so that ourselves, and all things about us, and our knowledge collected therefrom, is natural, and not supernatural.

We may and often do connect or arrange our ideas together in a wrong or improper manner, for the want of skill or judgment, or through mistake or the want of application, or through the influence of prejudice, but in all such cases the error does not originate from the ideas themselves, but from the composer, for a system or an arrangement of ideas justly composed always contain the truth, but an unjust composition never fails to contain

error and falsehood. Therefore an unjust connection of ideas is not derived from nature, but from the imperfect composition of man. Misconnection of ideas is the same as misjudging, and has no positive existence, being merely a creature of the imagination, but nature and truth are real and uniform, and the rational mind by reasoning discerns the uniformity and is thereby enabled to make a just composition of ideas, which will stand the test of truth. But the fantastical illuminations of the credulous and superstitious part of mankind proceed from weakness, and as far as they take place in the world, subvert the religion of REASON and TRUTH.

1737 ~ *Thomas Paine* ~ 1809

ALTHOUGH Ethan Allen and Elihu Palmer, 1764-1806, did pioneer work in spreading the gospel of Deism in America, the most widely read and discussed exposition of Deism by an American was Thomas Paine's *The Age of Reason*. Born at Thetford, England, Paine was trained in his father's creed of Quakerism and in his father's trade of stay-making. After going to sea on a privateer, he returned to London to become a journeyman stay-maker. While living there, he attended scientific lectures at the Royal Society and developed his interest in astronomy. In 1759, while a master stay-maker in Sandwich, Kent, he married Mary Lambert, a serving-girl, who died in 1760. During the next ten years Paine supported himself in one job after another. From stay-making he turned to collecting taxes as an excise officer, next he became a teacher of English at an academy in London, and then he was an excise officer again. While teaching, he occasionally served as a Methodist lay-preacher in the open fields about London. In 1771, after his second appointment to the excise, he married Elizabeth Ollive, of Lewes, Sussex, the daughter of a tobacconist. On the death of her father, he succeeded to the business. His first extended piece of writing, *The Case of the Officers of the Excise*, done in 1772 as an appeal to Parliament, was distinguished for its vigorous social protest against the ill effects of poverty on the honesty and efficiency of the typical excise collector.

Two years later, bankrupt, separated from his wife, and dismissed from the excise, Paine, at the suggestion of his friend, Benjamin Franklin, became

an emigrant to Philadelphia. Here, on the eve of the Revolution, he edited *The Pennsylvania Magazine or American Museum* and contributed to the *Pennsylvania Journal*. When the Revolutionary crisis broke, his brilliant pamphlet, *Common Sense*, published early in 1776, convinced Americans that their struggle must be a war of independence. Serving as an aide-de-camp to General Greene, Paine wrote the first number of his *The American Crisis*, the successive installments of which were hard-hitting, sure-fire propaganda for the American cause.

After devoting himself to this cause in numerous capacities, Paine became, between 1787 and 1802, a true "citizen of the world," pursuing scientific invention and championing political innovation in both England and France. He perfected models for an iron bridge, obtained a patent for it from the British government, had his bridge built and set up in a field in the village of Paddington, near London. He sought to combat English conservative reaction to the French Revolution by replying, in his *The Rights of Man*, 1791 and 1792, to Edmund Burke's *Reflections on the Late Revolution in France*, 1790. Elected to a seat in the French National Convention, appointed to the committee on drafting a constitution, and outlawed from England, he was yet too moderate in his views on regime to please the more radical French revolutionaries. When the Girondin party was overthrown, Paine was arrested and imprisoned in the Luxembourg.

It was here, in 1793, that he wrote the first part of *The Age of Reason* to combat the tendency of the extreme radicals to go too far in nihilism and atheism. Paine regarded this work, published early in 1794, as "exceedingly necessary, lest in the general wreck of superstition, of false systems of government, and false theology, we lose sight of morality, of humanity, and of the theology that is true." Ironically enough, America did not receive *The Age of Reason* in the spirit in which Paine wrote it. Released from prison in 1794 through the help of James Monroe, Paine, after a period of convalescence with the Monroe family in 1795, the year in which the second part of *The Age of Reason* was published, remained for some time in France and continued writing in support of a sane French democracy, although he lived in virtual retirement.

Urged by Jefferson to return to America, Paine finally accepted the invitation, landed at Baltimore in 1802, and went on to Washington, where he was for a while the President's honored guest. But he was soon to find that post-Revolutionary America, despite the ascendancy of Jefferson's democratic Republicanism, was not the America of his dreams, and his old age was anything but happy. Living in Bordentown, New York City, and New Rochelle, he was anathema to orthodox Christians of all creeds and doubly so if they happened to be Federalists. At New Rochelle an attempt was made to assassinate him and he was denied the right to vote on the ground that he was not technically a citizen. Despite ill health, poverty, and ostracism, he kept writ-

ing in behalf of just government and the advancement of science and against both political and religious reaction

Although religious opposition to Paine's Deism has long tended to obscure his reputation, he has exerted a profound influence on free-thought in America through such disciples as Robert G. Ingersoll, and within recent years has steadily gained recognition as a major writer and as a germinal *ideologue* of American democracy

[The first of the following selections is from Part I of *The Age of Reason*, the second is the conclusion of Part II. They have been modernized and supplied with titles by the editors. For other selections from Paine's work, see Book I, Part 3.]

PERSONAL NARRATIVE
[1794]

MY FATHER being of the Quaker profession, it was my good fortune to have an exceedingly good moral education and a tolerable stock of useful learning. Though I went to the grammar school, I did not learn Latin, not only because I had no inclination to learn languages, but because of the objection the Quakers have against the books in which the language is taught. But this did not prevent me from being acquainted with the subject of all the Latin books used in the school.

The natural bent of my mind was to science. I had some turn, and I believe some talent, for poetry, but this I rather repressed than encouraged, as leading too much into the field of imagination. As soon as I was able I purchased a pair of globes, and attended the philosophical lectures of Martin and Ferguson, and became afterward acquainted with Dr. Bevis, of the society called the Royal Society, then living in the Temple, and an excellent astronomer.

I had no disposition for what is called politics. It presented to my mind no other idea than as contained in the word Jockeyship. When, therefore, I turned my thoughts toward matters of government, I had to form a system for myself that accorded with the moral and philosophic principles in which I have been educated. I saw, or at least I thought I saw, a vast

scene opening itself to the world in the affairs of America, and it appeared to me that unless the Americans changed the plan they were pursuing with respect to the government of England, and declared themselves independent, they would not only involve themselves in a multiplicity of new difficulties, but shut out the prospect that was then offering itself to mankind through their means. It was from these motives that I published the work known by the name of "Common Sense," which was the first work I ever did publish, and so far as I can judge of myself, I believe I should never have been known in the world as an author, on any subject whatever, had it not been for the affairs of America. I wrote "Common Sense" the latter end of the year 1775, and published it the first of January, 1776. Independence was declared the fourth of July following.

Any person who has made observations on the state and progress of the human mind, by observing his own, cannot but have observed that there are two distinct classes of what are called thoughts—those that we produce in ourselves by reflection and the act of thinking, and those that bolt into the mind of their own accord. I have always made it a rule to treat these voluntary visitors with civility, taking care to examine, as well as I was able, if they were worth entertaining, and it is from them I have acquired almost all the knowledge that I have. As to the learning that any person gains from school education, it

seives only, like a small capital, to put him in a way of beginning learning for himself afterward

Every person of learning is finally his own teacher, the reason of which is that principles, being a distinct quality to circumstances, cannot be impressed upon the memory, then place of mental residence is the understanding and they are never so lasting as when they begin by conception. Thus much for the introductory part

From the time I was capable of conceiving an idea and acting upon it by reflection, I either doubted the truth of the Christian system or thought it to be a strange affair, I scarcely knew which it was, but I well remember, when about seven or eight years of age, hearing a sermon read by a relation of mine, who was a great devotee of the Church, upon the subject of what is called *redemption by the death of the Son of God*

After the sermon was ended, I went into the garden, and as I was going down the garden steps (for I perfectly recollect the spot) I revolted at the recollection of what I had heard, and thought to myself that it was making God Almighty act like a passionate man, that killed His son when He could not revenge Himself in any other way, and as I was sure a man would be hanged that did such a thing, I could not see for what purpose they preached such sermons

This was not one of that kind of thoughts that had anything in it of childish levity, it was to me a serious reflection, arising from the idea I had that God was too good to do such an action, and also too almighty to be under any necessity of doing it. I believe in the same manner at this moment, and I moreover believe that any system of religion that has anything in it that shocks the mind of a child cannot be a true system

It seems as if parents of the Christian profession were ashamed to tell their children anything about the principles of their religion. They sometimes instruct them in

morals, and talk to them of the goodness of what they call Providence, for the Christian mythology has five deities—there is God the Father, God the Son, God the Holy Ghost, the God Providence, and the Goddess Nature. But the Christian story of God the Father putting His son to death, or employing people to do it (for that is the plain language of the story) cannot be told by a parent to a child, and to tell him that it was done to make mankind happier and better is making the story still worse—as if mankind could be improved by the example of murder, and to tell him that all this is a mystery is only making an excuse for the incredibility of it.

How different is this to the pure and simple profession of Deism! The true Deist has but one Deity, and his religion consists in contemplating the power, wisdom, and benignity of the Deity in His works, and in endeavoring to imitate Him in everything moral, scientific and mechanical

The religion that approaches the nearest of all others to true Deism, in the moral and benign part thereof, is that professed by the Quakers, but they have contracted themselves too much, by leaving the works of God out of their system. Though I reverence their philanthropy, I cannot help smiling at the conceit that if the taste of a Quaker could have been consulted at the creation, what a silent and drab-colored creation it would have been! Not a flower would have blossomed its gayeties, nor a bird been permitted to sing .

DEISM AND SCIENCE

[1795]

IF WE consider the nature of our condition here, we must see there is no occasion for such a thing as *revealed religion*. What is it we want to know? Does not the creation, the universe we behold, preach to us the existence of an Almighty Power that governs and regulates the whole? And is not the evidence that this creation holds

out to our senses infinitely stronger than anything we can read in a book that any impostor might make and call the Word of God? As for morality, the knowledge of it exists in every man's conscience

Here we are The existence of an Almighty Power is sufficiently demonstrated to us, though we cannot conceive, as it is impossible we should, the nature and manner of its existence We cannot conceive how we came here ourselves, and yet we know for a fact that we are here

We must know also that the Power that called us into being, can, if He pleases, and when He pleases, call us to account for the manner in which we have lived here, and, therefore, without seeking any other motive for the belief, it is rational to believe that He will, for we know beforehand that He can The probability or even possibility of the thing is all that we ought to know, for if we knew it as a fact, we should be the mere slaves of terror, our belief would have no merit, and our best actions no virtue

Deism, then, teaches us, without the possibility of being deceived, all that is necessary or proper to be known The creation is the Bible of the Deist He there reads, in the handwriting of the Creator himself, the certainty of His existence and the immutability of His power, and all other Bibles and Testaments are to him forgeries

The probability that we may be called to account hereafter will, to a reflecting mind, have the influence of belief, for it is not our belief or disbelief that can make or unmake the fact As this is the state we are in, and which it is proper we should be in, as free agents, it is the fool only, and not the philosopher, or even the prudent man, that would live as if there were no God

But the belief of a God is so weakened by being mixed with the strange fable of the Christian creed, and with the wild adventures related in the Bible, and with the obscurity and obscene nonsense of the Testament, that the mind of man is bewildered

as in a fog Viewing all these things in a confused mass, he confounds fact with fable, and as he cannot believe all, he feels a disposition to reject all

But the belief of a God is a belief distinct from all other things, and ought not to be confounded with any The notion of a Trinity of Gods has enfeebled the belief of one God A multiplication of beliefs acts as a division of belief, and in proportion as anything is divided it is weakened

Religion, by such means, becomes a thing of form, instead of fact—of notion, instead of principles, morality is banished to make room for an imaginary thing called faith, and this faith has its origin in a supposed debauchery, a man is preached instead of God, an execution is an object for gratitude, the preachers daub themselves with blood, like a troop of assassins, and pretend to admire the brilliancy it gives them, they preach a humdrum sermon on the merits of the execution, then praise Jesus Christ for being executed, and condemn the Jews for doing it A man, by hearing all this nonsense lumped and preached together, confounds the God of the Creation with the imagined God of the Christians, and lives as if there were none

Of all the systems of religion that ever were invented, there is none more derogatory to the Almighty, more unedifying to man, more repugnant to reason, and more contradictory in itself, than this thing called Christianity Too absurd for belief, too impossible to convince, and too inconsistent for practice, it renders the heart torpid, or produces only atheists and fanatics As an engine of power, it serves the purpose of despotism, and as a means of wealth, the advance of priests, but so far as respects the good of man in general, it leads to nothing here or hereafter

The only religion that has not been invented, and that has in it every evidence of divine originality, is pure and simple Deism It must have been the first, and will probably be the last, that man be-

heves But pure and simple Deism does not answer the purpose of despotic governments They cannot lay hold of religion as an engine, but by mixing it with human inventions, and making their own authority a part, neither does it answer the avance of priests, but by incorporating themselves and their functions with it, and becoming, like the government, a party in the system It is this that forms the otherwise mysterious connection of Church and State, the Church humane, and the State tyrannic

Were man impressed as fully and as strongly as he ought to be with the belief of a God, his moral life would be regulated by the force of that belief, he would stand in awe of God and of himself, and would not do the thing that could not be concealed from either To give this belief the full opportunity of force, it is necessary that it acts alone This is Deism But when, according to the Christian Trinitarian scheme, one part of God is represented by a dying man, and another part called the Holy Ghost, by a flying pigeon,¹ it is impossible that belief can attach itself to such wild conceits

It has been the scheme of the Christian Church, and of all the other invented systems of religion, to hold man in ignorance of the Creator, as it is of Government to hold man in ignorance of his rights The systems of the one are as false as those of the other, and are calculated for mutual support

The study of theology, as it stands in Christian churches, is the study of nothing, it is founded on nothing, it rests on no principles, it proceeds by no authorities, it has no data, it can demonstrate nothing, and it admits of no conclusion Not any thing can be studied as a science, without our being in possession of the principles upon which it is founded, and as this is not the case with Christian theology, it is therefore the study of nothing

Instead, then, of studying theology, as is now done, out of the Bible and Testa-

ment, the meanings of which books are always contraverted and the authenticity of which is disproved, it is necessary that we refer to the Bible of the Creation The principles we discover there are eternal and of divine origin, they are the foundation of all the science that exists in the world, and must be the foundation of theology

We can know God only through His works We cannot have a conception of any one attribute but by following some principle that leads to it We have only a confused idea of His power, if we have not the means of comprehending something of its immensity We can have no idea of His wisdom, but by knowing the order and manner in which it acts The principles of science lead to this knowledge, for the Creator of man is the Creator of science, and it is through that medium that man can see God, as it were, face to face

Could a man be placed in a situation, and endowed with the power of vision, to behold at one view, and to contemplate deliberately, the structure of the universe, to mark the movements of the several planets, the cause of their varying appearances, the unerring order in which they revolve, even to the remotest comet, their connection and dependence on each other, and to know the system of laws established by the Creator, that governs and regulates the whole, he would then conceive, far beyond what any church theology can teach him, the power, the wisdom, the vastness, the munificence of the Creator, he would then see, that all the knowledge man has

¹ The book called the book of Matthew says, chap iii, verse 16, that *the Holy Ghost descended in the shape of a dove* It might as well have said a goose, the creatures are equally harmless, and the one is as much of a nonsensical lie as the other The second of Acts, ver 2, 3, says that it descended in a mighty *rustling wind*, in the shape of *cloven tongues*, perhaps it was cloven feet Such absurd stuff is only fit for tales of witches and wizards—
Paane's note

of science, and that all mechanical arts by which he renders his situation comfortable here, are derived from that source, his mind, exalted by the scene, and convinced by the fact, would increase in gratitude as it increased in knowledge, his religion or his worship would become united with his improvement as a man, any employment he followed, that had any connection with the principles of the creation, as everything of agriculture, of science and of the mechanical arts has, would teach him more of God, and of the gratitude he owes to Him, than any theological Christian sermon he now hears.

Great objects inspire great thoughts, great munificence excites great gratitude, but the groveling tales and doctrines of the Bible and the Testament are fit only to excite contempt.

Though man cannot arrive, at least in this life, at the actual scene I have described, he can demonstrate it, because he has a knowledge of the principles upon which the creation is constructed.² We know that the greatest works can be represented in model and that the universe can be represented by the same means.

The same principles by which we measure an inch, or an acre of ground, will measure to millions in extent. A circle of an inch diameter has the same geometrical properties as a circle that would circumscribe the universe.

The same properties of a triangle that will demonstrate upon paper the course of a ship will do it on the ocean, and when applied to what are called the heavenly bodies, will ascertain to a minute the time of an eclipse, though these bodies are millions of miles from us. This knowledge is of divine origin, and it is from the Bible of the creation that man has learned it, and not from the stupid Bible of the Church, that teacheth man nothing.

All the knowledge man has of science and of machinery, by the aid of which his existence is rendered comfortable upon earth, and without which he would be scarcely distinguishable in appearance and

condition from a common animal, comes from the great machine and structure of the universe.

The constant and unwearied observations of our ancestors upon the movements and revolutions of the heavenly bodies, in what are supposed to have been the early ages of the world, have brought this knowledge upon earth. It is not Moses and the prophets, nor Jesus Christ, nor his apostles, that have done it. The Almighty is the great mechanic of the creation, the first philosopher and original teacher of all science. Let us, then, learn to reverence our master, and let us not forget the labors of our ancestors.

Had we, at this day, no knowledge of machinery, and were it possible that man could have a view, as I have before described, of the structure and machinery of the universe, he would soon conceive the idea of constructing some at least of the mechanical works we now have, and the idea so conceived would progressively

² The Bible-makers have undertaken to give us, in the first chapter of Genesis, an account of the Creation, and in doing this, they have demonstrated nothing but their ignorance. They make there to have been three days and three nights, evenings and mornings, before there was a sun, when it is the presence or absence of the sun that is the cause of day and night, and what is called his rising and setting that of morning and evening. Besides, it is a puerile and pitiful idea to suppose the Almighty to say, Let there be light. It is the imperative manner of speaking that a conjuror uses when he says to his cups and balls, Presto, begone, and most probably has been taken from it, as Moses and his rod are a conjuror and his wand. Longinus calls this expression the sublime, and, by the same rule, the conjuror is sublime, for the manner of speaking is expressively and grammatically the same. When authors and critics talk of the sublime, they see not how nearly it borders on the ridiculous. The sublime of the critics, like some parts of Edmund Burke's "Sublime and Beautiful," is like a wind-mill just visible in a fog, which imagination might distort into a flying mountain, or an archangel, or a flock of wild geese.—Paine's note.

advance in practice Or could a model of the universe, such as is called an orrery, be presented before him and put in motion, his mind would arrive at the same idea

Such an object and such a subject would, while it improved him in knowledge useful to himself as a man and a member of society, as well as entertaining, afford far better matter for impressing him with a knowledge of, and a belief in, the Creator, and of the reverence and gratitude that man owes to Him, than the stupid texts of the Bible and of the Testament, from which, be the talents of the preacher what they may, only stupid sermons can be preached

If man must preach, let him preach something that is edifying, and from texts that are known to be true

The Bible of the Creation is inexhaustible in texts Every part of science, whether connected with the geometry of the universe, with the systems of animal and vegetable life, or with the properties of inanimate matter, is a text as well for devotion as for philosophy—for gratitude as for human improvement It will perhaps be said, that if such a revolution in the system of religion takes place, every preacher ought to be a philosopher *Most certainly*, and every house of devotion a school of science

It has been by wandering from the im-

mutable laws of science, and the right use of reason, and setting up an invented thing called revealed religion, that so many wild and blasphemous conceits have been formed of the Almighty

The Jews have made Him the assassin of the human species to make room for the religion of the Jews The Christians have made Him the murderer of Himself and the founder of a new religion to supersede and expel the Jewish religion And to find pretense and admission for these things, they must have supposed His power or His wisdom imperfect, or His will changeable, and the changeableness of the will is imperfection of the judgment

The philosopher knows that the laws of the Creator have never changed with respect either to the principles of science, or the properties of matter Why, then, is it supposed they have changed with respect to man?

I here close the subject I have shown in all the foregoing parts of this work, that the Bible and Testament are impositions and forgeries, and I leave the evidence I have produced in proof of it, to be refuted, if any one can do it, and I leave the ideas that are suggested in the conclusion of the work, to rest on the mind of the reader, certain as I am, that when opinions are free, either in matters of government or religion, truth will finally and powerfully prevail

1771 ~ *Charles Brockden Brown* ~ 1810

OF A PROMINENT Quaker family, Charles Brockden Brown was born in Philadelphia He attended the select Quaker school kept by Robert Proud Frail in health, bookish in habit, and morbidly introspective in temperament, young Brown aspired to be an epic poet and became passionately interested in the more radical ideologies of his generation, including Deism Yielding to the wishes of his family, he studied law with the Philadelphia barrister, Alexander Wilcox, and was an active member of a legal students' club Literature,

however, proved more attractive to him than the law, he became leader of the Belles Lettres Club and in August, 1789, a series of his literary essays began to appear in the *Columbian Magazine* under the title, "The Rhapsodist." He gave up the law altogether when he was ready to enter upon its practice. When Elihu Hubbard Smith, of Litchfield, Conn., was studying medicine in Philadelphia, Brown found him a congenial friend because of his literary interests. Smith took up the practice of his profession near Yale and later in New York. Brown visited him at both places and met his literary friends, among whom, at New York, was William Dunlap, the dramatist.

Brown became a member of the Friendly Club, the city's most active intellectual circle, began to write prolifically for magazine publication, and edited *The Monthly Magazine and American Review*. When this magazine failed late in 1800, Brown returned to Philadelphia, where he continued to do magazine work, starting in 1803 the *Literary Magazine and American Register*. In 1804 he married the brilliant Elizabeth Linn, of New York, sister of the poet, John Blair Linn, and proved an exemplary husband and father. Having won an international reputation as a novelist with such productions as *Wieland*, 1798, *Ormond*, 1799, *Arthur Merwyn*, 1799-1800, *Edgar Huntly*, 1799, *Jane Talbot*, 1801, and *Clara Howard*, 1801, Brown preoccupied himself, in his last years, with historical surveys and political tracts. He died of tuberculosis.

Brown's fiction reflects all the tendencies which had been developed for several decades in the short stories published in 18th Century American magazines. He provided his readers with Gothic thrills in native settings, themes and characters that had become the stock in trade of both English and American "sentimental" fiction. Play an important rôle in his stories, on occasion, he was capable of a graphic, Defoe-like realism based on his own experiences and observations during plague years in both Philadelphia and New York, above all, he was a novelist of ideas, a kind of Aldous Huxley of his time, dramatizing post-revolutionary conflicts in American thought, creating characters memorable as spokesmen or representatives of this or that current attitude in religion or politics. *Wieland*, for example, although replete with Gothic thrills, is also a psychological study of religious Enthusiasm.

[The following selection from this novel includes most of Chapter I and all of Chapter II and has been modernized in text and given a title by the present editors. These chapters tell the story of Wieland's father, whose religious Enthusiasm was transmitted to his son. It should be noted that Brown does not attempt to clear up entirely the mystery of the elder Wieland's death, but leaves the reader to choose between two quite different explanations, one of which is calculated to appeal to the deistically inclined with their belief in natural causes and the other of which is for those who retain faith in a special providence. The selection thus illustrates the impact of contemporary religious discussion upon early American *belles lettres*.]

THE FATE OF WIELAND'S FATHER
[1798]

(As narrated by his daughter, Clara, the sister of the hero, Wieland)

I

MY FATHER'S ancestry was noble on the paternal side, but his mother was the daughter of a merchant. My grandfather was a younger brother, and a native of Saxony. He was placed, when he had reached the suitable age, at a German college. During the vacations, he employed himself in traversing the neighboring territory. On one occasion it was his fortune to visit Hamburg. He formed an acquaintance with Leonard Weise, a merchant of that city, and was a frequent guest at his house. The merchant had an only daughter, for whom his guest speedily contracted an affection, and, in spite of parental menaces and prohibitions, he, in due season, became her husband.

By this act he mortally offended his relations. Thenceforward he was entirely disowned and rejected by them. They refused to contribute anything to his support. All intercourse ceased, and he received from them merely that treatment to which an absolute stranger, or detested enemy, would be entitled.

He found an asylum in the house of his new father, whose temper was kind, and whose pride was flattered by this alliance. The nobility of his birth was put in the balance against his poverty. Weise conceived himself, on the whole, to have acted with the highest discretion in thus disposing of his child. My grandfather found it incumbent on him to search out some mode of independent subsistence. His youth had been eagerly devoted to literature and music. These had hitherto been cultivated merely as sources of amusement. They were now converted into the means of gain. At this period there were few works of taste in the Saxon dialect. My ancestor may be considered as the founder of the

German Theater. The modern poet of the same name is sprung from the same family, and, perhaps, surpasses but little, in the fruitfulness of his invention, or the soundness of his taste, the elder Wieland.¹ His life was spent in the composition of sonatas and dramatic pieces. They were not unpopular, but merely afforded him a scanty subsistence. He died in the bloom of his life, and was quickly followed to the grave by his wife. Their only child was taken under the protection of the merchant. At an early age he was apprenticed to a London trader, and passed seven years of mercantile servitude.

My father was not fortunate in the character of him under whose care he was now placed. He was treated with rigor, and full employment was provided for every hour of his time. His duties were laborious and mechanical. He had been educated with a view to this profession, and, therefore, was not tormented with unsatisfied desires. He did not hold his present occupations in abhorrence, because they withheld him from paths more flowery and more smooth, but he found in unintermitted labor, and in the sternness of his master, sufficient occasions for discontent. No opportunities of recreation were allowed him. He spent all his time pent up in a gloomy apartment, or traversing narrow and crowded streets. His food was coarse, and his lodging humble.

His heart gradually contracted a habit of morose and gloomy reflection. He could not accurately define what was wanting to his happiness. He was not tortured by comparisons drawn between his own situation and that of others. His state was such as suited his age and his views as to fortune. He did not imagine himself treated with extraordinary or unjustifiable rigor. In this respect he supposed the condition of others, bound like himself to mercantile service, to resemble his own, yet every

¹ The reference is to the German classical poet, Christoph Martin Wieland, 1733-1813.

engagement was irksome, and every hour tedious in its lapse

In this state of mind he chanced to light upon a book written by one of the teachers of the Albigenses, or French Protestants. He entertained no relish for books, and was wholly unconscious of any power they possessed to delight or instruct. The volume had lain for years in a corner of his garret, half buried in dust and rubbish. He had marked it as it lay, had thrown it, as his occasions required, from one spot to another, but had felt no inclination to examine its contents, or even to inquire what was the subject of which it treated.

One Sunday afternoon, being induced to retire for a few minutes to his garret, his eye was attracted by a page of this book, which, by some accident, had been opened and placed full in his view. He was seated on the edge of his bed, and was employed in repairing a rent in some part of his clothes. His eyes were not confined to his work, but occasionally wandering, lighted at length upon the page. The words "Seek and ye shall find" were those that first offered themselves to his notice. His curiosity was roused by these so far as to prompt him to proceed. As soon as he finished his work, he took up the book and turned to the first page. The further he read, the more inducement he found to continue, and he regretted the decline of the light which obliged him for the present to close it.

The book contained an exposition of the doctrine of the sect of Camissards,² and an historical account of its origin. His mind was in a state peculiarly fitted for the reception of devotional sentiments. The craving which had haunted him was now supplied with an object. His mind was at no loss for a theme of meditation. On days of business, he rose at the dawn, and retired to his chamber not till late at night. He now supplied himself with candles, and employed his nocturnal and Sunday hours in studying this book. It, of course, abounded with allusions to the Bible. All its conclusions were deduced from the

sacred text. This was the fountain, beyond which it was unnecessary to trace the stream of religious truth, but it was his duty to trace it thus far.

A Bible was easily procured, and he ardently entered on the study of it. His understanding had received a particular direction. All his reveries were fashioned in the same mould. His progress toward the formation of his creed was rapid. Every fact and sentiment in this book were viewed through a medium which the writings of the Camissard apostle had suggested. His constructions of the text were hasty, and formed on a narrow scale. Everything was viewed in a disconnected position. One action and one precept were not employed to illustrate and restrict the meaning of another. Hence arose a thousand scruples to which he had hitherto been a stranger. He was alternately agitated by fear and by ecstasy. He imagined himself beset by the snares of a spiritual foe, and that his security lay in ceaseless watchfulness and prayer.

His morals, which had never been loose, were now modelled by a stricter standard. The empire of religious duty extended itself to his looks, gestures, and phrases. All levities of speech, and negligences of behavior, were proscribed. His air was mournful and contemplative. He labored to keep alive a sentiment of fear, and a belief of the awe-creating presence of the Deity. Ideas foreign to this were sedulously excluded. To suffer their intrusion was a crime against the Divine Majesty inexpressible but by days and weeks of the keenest agonies.

No material variation had occurred in the lapse of two years. Every day confirmed him in his present modes of thinking and acting. It was to be expected that the tide of his emotions would sometimes recede, that intervals of despondency and doubt would occur, but these gradually were more rare, and of shorter duration,

² An early 18th Century French Huguenot sect

and he, at last, arrived at a state considerably uniform in this respect

His apprenticeship was now almost expired. On his arrival of age he became entitled, by the will of my grandfather, to a small sum. This sum would hardly suffice to set him afloat as a trader in his present situation, and he had nothing to expect from the generosity of his master. Residence in England had, besides, become almost impossible, on account of his religious tenets. In addition to these motives for seeking a new habitation, there was another of the most imperious and irresistible necessity. He had imbibed an opinion that it was his duty to disseminate the truths of the gospel among the unbelieving nations. He was terrified at first by the perils and hardships to which the life of a missionary is exposed. This cowardice made him diligent in the invention of objections and excuses, but he found it impossible wholly to shake off the belief that such was the injunction of his duty. The belief, after every new conflict with his passions, acquired new strength, and, at length, he formed a resolution of complying with what he deemed the will of heaven.

The North American Indians naturally presented themselves as the first objects for this species of benevolence. As soon as his servitude expired, he converted his little fortune into money, and embarked for Philadelphia. Here his fears were revived, and a nearer survey of savage manners once more shook his resolution. For a while he relinquished his purpose, and, purchasing a farm on the Schuylkill, within a few miles of the city, set himself down to the cultivation of it. The cheapness of land, and the service of African slaves, which were then in general use, gave him who was poor in Europe all the advantages of wealth. He passed fourteen years in a thrifty and laborious manner. In this time new objects, new employments, and new associates appeared to have nearly obliterated the devout impressions of his youth. He now became acquainted with a woman of a meek and quiet disposition, and of

slender acquirements like himself. He proffered his hand and was accepted.

His previous industry had now enabled him to dispense with personal labor, and direct attention to his own concerns. He enjoyed leisure, and was visited afresh by devotional contemplation. The reading of the scriptures, and other religious books, became once more his favorite employment. His ancient belief relative to the conversion of the savage tribes was revived with uncommon energy. To the former obstacles were now added the pleadings of parental and conjugal love. The struggle was long and vehement, but his sense of duty would not be stifled or enfeebled, and finally triumphed over every impediment.

His efforts were attended with no permanent success. His exhortations had sometimes a temporary power, but more frequently were repelled with insult and derision. In pursuit of this object he encountered the most imminent perils, and underwent incredible fatigues, hunger, sickness, and solitude. The license of savage passion, and the artifices of his depraved countrymen, all opposed themselves to his progress. His courage did not forsake him till there appeared no reasonable ground to hope for success. He desisted not till his heart was relieved from the supposed obligation to persevere. With his constitution somewhat decayed, he at length returned to his family. An interval of tranquillity succeeded. He was frugal, regular, and strict in the performance of domestic duties. He allied himself with no sect, because he perfectly agreed with none. Social worship is that by which they are all distinguished, but this article found no place in his creed. He rigidly interpreted that precept which enjoins us, when we worship, to retire into solitude, and shut out every species of society. According to him, devotion was not only a silent office, but must be performed alone. An hour at noon, and an hour at midnight were thus appropriated.

At the distance of three hundred yards

from his house, on the top of a rock whose sides were steep, rugged, and encumbered with dwarf cedars and stony asperities, he built what to a common eye would have seemed a summer-house. The eastern verge of this precipice was sixty feet above the river which flowed at its foot. The view before it consisted of a transparent current, fluctuating and rippling in a rocky channel, and bounded by a rising scene of corn-fields and orchards. The edifice was slight and airy. It was no more than a circular area, twelve feet in diameter, whose flooring was the rock, cleared of moss and shrubs, and exactly levelled, edged by twelve Tuscan columns, and covered by an undulating dome. My father furnished the dimensions and outlines, but allowed the artist whom he employed to complete the structure on his own plan. It was without seat, table, or ornament of any kind.

This was the temple of his Deity. Twice in twenty-four hours he repaired hither, unaccompanied by any human being. Nothing but physical inability to move was allowed to obstruct or postpone this visit. He did not exact from his family compliance with his example. Few men, equally sincere in their faith, were as sparing in their censures and restrictions, with respect to the conduct of others, as my father. The character of my mother was no less devout, but education had habituated her to a different mode of worship. The loneliness of their dwelling prevented her from joining any established congregation, but she was punctual in the offices of prayer, and in the performance of hymns to her Saviour, after the manner of the disciples of Zinzendorf.³ My father refused to interfere in her arrangements. His own system was embraced not, accurately speaking, because it was the best, but because it had been expressly prescribed to him. Other modes, if practiced by other persons, might be equally acceptable.

His deportment to others was full of charity and mildness. A sadness perpetually overspread his features, but was un-

mingled with sternness or discontent. The tones of his voice, his gestures, his steps, were all in tranquil unison. His conduct was characterized by a certain forbearance and humility, which secured the esteem of those to whom his tenets were most obnoxious. They might call him a fanatic and a dreamer, but they could not deny their veneration to his invincible candor and invariable integrity. His own belief of rectitude was the foundation of his happiness. This, however, was destined to find an end.

Suddenly the sadness that constantly attended him was deepened. Sighs, and even tears, sometimes escaped him. To the expostulations of his wife he seldom answered anything. When he designed to be communicative, he hinted that his peace of mind was flown, in consequence of deviation from his duty. A command had been laid upon him, which he had delayed to perform. He felt as if a certain period of hesitation and reluctance had been allowed him, but that this period was passed. He was no longer permitted to obey. The duty assigned to him was transferred in consequence of his disobedience, to another, and all that remained was to endure the penalty.

He did not describe this penalty. It appeared to be nothing more for some time than a sense of wrong. This was sufficiently acute, and was aggravated by the belief that his offence was incapable of expiation. No one could contemplate the agonies which he seemed to suffer, without the deepest compassion. Time, instead of lengthening the burden, appeared to add to it. At length he hinted to his wife that his end was near. His imagination did not prefigure the mode or the time of his decease, but was fraught with an incurable persuasion that his death was at hand. He was likewise haunted by the belief that the kind of death that awaited him was strange and

³ Count von Zinzendorf, 1700-1760, founded the reorganized Moravian Church or United Brethren, an "Enthusiastic" sect

terrible His anticipations were thus far vague and indefinite, but they sufficed to poison every moment of his being, and devote him to ceaseless anguish

II

Early in the morning of a sultry day in August, he left Mettingen, to go to the city He had seldom passed a day from home since his return from the shores of the Ohio Some urgent engagements at this time existed, which would not admit of further delay He returned in the evening, but appeared to be greatly oppressed with fatigue His silence and dejection were likewise in more than ordinary degree conspicuous My mother's brother, whose profession was that of a surgeon, chanced to spend this night at our house It was from him that I have frequently received an exact account of the mournful catastrophe that followed

As the evening advanced, my father's inquietudes increased He sat with his family as usual, but took no part in their conversation He appeared fully engrossed by his own reflections Occasionally his countenance exhibited tokens of alarm, he gazed steadfastly and wildly at the ceiling, and the exertions of his companions were scarcely sufficient to interrupt his reverie On recovering from these fits he expressed no surprise, but pressing his hand to his head, complained, in a tremulous and terrified tone, that his brain was scorched to cinders He would then betray marks of insupportable anxiety.

My uncle perceived, by his pulse, that he was indisposed, but in no alarming degree, and ascribed appearances chiefly to the workings of his mind He exhorted him to recollection and composure, but in vain At the hour of repose he readily retired to his chamber At the persuasion of mother he even undressed and went to bed Nothing could abate his restlessness He checked her tender expostulations with some sternness "Be silent," said he, "For that which I feel there is but one cure, and that will

shortly come You can help me nothing Look to your own condition and pray to God to strengthen you under the calamities that await you" "What am I to fear?" she answered, "What terrible disaster is it that you think of?" "Peace—as yet I know it not myself, but come it will, and shortly" She repeated her inquiries and doubts, but he suddenly put an end to the discourse, by a stern command to be silent

She had never before known him in this mood Hitherto all was benign in his deportment Her heart was pierced with sorrow at the contemplation of his change She was utterly unable to account for it, or to figure to herself the species of disaster that was menaced

Contrary to custom, the lamp, instead of being placed on the hearth, was left upon the table Over it against the wall there hung a small clock, so contrived as to strike a very hard stroke at the end of every sixth hour That which was now approaching was the signal for retiring to the fane at which he addressed his devotions Long habit had occasioned him to be always awake at this hour, and the toll was instantly obeyed

Now frequent and anxious glances were cast at the clock Not a single movement of the index appeared to escape his notice As the hour verged toward twelve his anxiety visibly augmented The trepidations of my mother kept pace with those of her husband, but she was intimidated into silence All that was left to her was to watch every change of his features, and give vent to her sympathy in tears

At length the hour was spent, and the clock tolled The sound appeared to communicate a shock to every part of my father's frame He rose immediately, and threw over himself a loose gown Even this office was performed with difficulty, for his joints trembled, and his teeth chattered with dismay At this hour his duty called him to the rock, and my mother naturally concluded that it was thither he intended to repair Yet these incidents were so uncommon, as to fill her with astonishment

and foreboding She saw him leave the room, and heard his steps as they hastily descended the stairs She half resolved to rise and pursue him, but the wildness of the scheme quickly suggested itself He was going to a place whither no power on earth could induce him to suffer an attendant

The window of her chamber looked toward the rock The atmosphere was clear and calm, but the edifice could not be discovered at that distance through the dusk My mother's anxiety would not allow her to remain where she was She rose, and seated herself at the window She strained her sight to get a view of the dome, and of the path that led to it The first painted itself with sufficient distinctness on her fancy, but was undistinguishable by the eye from the rocky mass on which it was erected The second could be imperfectly seen, but her husband had already passed, or had taken a different direction

What was it she feared? Some disaster impended over her husband or herself He had predicted evils, but professed himself ignorant of what nature they were When were they to come? Was this night, or this hour, to witness the accomplishment? She was tortured with impatience, and uncertainty All her fears were at present linked to his person, and she gazed at the clock, with nearly as much eagerness as my father had done, in expectation of the next hour

An half hour passed away in this state of suspense Her eyes were fixed upon the rock, suddenly it was illuminated A light proceeding from the edifice made every part of the scene visible A gleam diffused itself over the intermediate space, and instantly a loud report, like the explosion of a mine, followed She uttered an involuntary shriek, but the new sounds that greeted her ear, quickly conquered her surprise They were piercing shrieks, and uttered without intermission The gleams which had diffused themselves far and wide were in a moment withdrawn, but the interior of the edifice was filled with rays

The first suggestion was that a pistol was discharged, and that the structure was on fire She did not allow herself time to meditate a second thought, but rushed into the entry and knocked loudly at the door of her brother's chamber My uncle had been previously roused by the noise, and instantly flew to the window He also imagined what he saw to be fire The loud and vehement shrieks which succeeded the first explosion, seemed to be an invocation of succor The incident was inexplicable, but he could not fail to perceive the propriety of hastening to the spot He was unbolting the door, when his sister's voice was heard on the outside conjuring him to come forth

He obeyed the summons with all the speed in his power He stopped not to question her, but hurried down stairs and across the meadow which lay between the house and the rock The shrieks were no longer to be heard, but a blazing light was clearly discernible between the columns of the temple Irregular steps, hewn in the stone, led him to the summit On three sides, this edifice touched the very verge of the cliff On the fourth side, which might be regarded as the front, there was an area of small extent, to which the rude staircase conducted you My uncle speedily gained this spot His strength was for a moment exhausted by his haste He paused to rest himself Meanwhile he bent the most vigilant attention toward the object before him

Within the columns he beheld what he could not better describe than by saying that it resembled a cloud impregnated with light It had the brightness of flame, but was without its upward motion It did not occupy the whole area, and rose but a few feet above the floor No part of the building was on fire This appearance was astonishing He approached the temple As he went forward the light retired, and, when he put his feet within the apartment, utterly vanished The suddenness of this transition increased the darkness that succeeded in a tenfold degree Fear and wonder rendered him powerless An occurrence

like this, in a place assigned to devotion, was adapted to intimidate the stoutest heart

His wandering thoughts were recalled by the groans of one near him. His sight gradually recovered its power, and he was able to discern my father stretched on the floor. At that moment, my mother and servants arrived with a lanthorn, and enabled my uncle to examine more closely this scene. My father, when he left the house, besides a loose upper vest and slippers, wore a shirt and drawers. Now he was naked, his skin throughout the greater part of his body was scorched and bruised. His right arm exhibited marks as of having been struck by some heavy body. His clothes had been removed, and it was not immediately perceived that they were reduced to ashes. His slippers and his hair were untouched.

He was removed to his chamber, and the requisite attention paid to his wounds, which gradually became more painful. A mortification speedily showed itself in the arm, which had been most hurt. Soon after, the other wounded parts exhibited the like appearance.

Immediately subsequent to this disaster, my father seemed nearly in a state of insensibility. He was passive under every operation. He scarcely opened his eyes, and was with difficulty prevailed upon to answer the questions that were put to him. By his imperfect account it appeared that, while engaged in silent orisons, with thoughts full of confusion and anxiety, a faint gleam suddenly shot athwart the apartment. His fancy immediately pictured to itself a person bearing a lamp. It seemed to come from behind. He was in the act of turning to examine the visitant, when his right arm received a blow from a heavy club. At the same instant, a very bright spark was seen to light upon his clothes. In a moment, the whole was reduced to ashes. This was the sum of the information which he chose to give. There was somewhat in his manner that indicated an imperfect tale. My uncle was inclined

to believe that half the truth had been suppressed.

Meanwhile, the disease thus wonderfully generated betrayed more terrible symptoms. Fever and delirium terminated in lethargic slumber, which, in the course of two hours, gave place to death. Yet not till insupportable exhalations and crawling putrefaction had driven from his chamber and the house everyone whom their duty did not detain.

Such was the end of my father. None surely was ever more mysterious. When we recollect his gloomy anticipations and unconquerable anxiety, the security from human malice which his character, the place, and the condition of the times might be supposed to confer, the purity and cloudlessness of the atmosphere, which rendered it impossible that lightning was the cause, what are the conclusions that we must form?

The prelude gleam, the blow upon his arm, the fatal spark, the explosion heard so far, the fiery cloud that environed him, without detriment to the structure, though composed of combustible materials, the sudden vanishing of this cloud at my uncle's approach—what is the inference to be drawn from these facts? Their truth cannot be doubted. My uncle's testimony is peculiarly worthy of credit, because no man's temper is more skeptical, and his belief is unalterably attached to natural causes.⁴

I was at this time a child of six years of age. The impressions that were then made upon me can never be effaced. I was ill qualified to judge respecting what was then passing, but as I advanced in age, and became more fully acquainted with these facts, they oftener became the subject of my thoughts. Their resemblance to

⁴ A case, in its symptoms exactly parallel to this, is published in one of the Journals of Florence. See, likewise, similar cases reported by Messrs. Merrill and Mureure, in the "Journal de Médecine" for February and May, 1783. The researches of Maffei and Fontana have thrown some light upon this subject.—Brown's note.

recent events revived them with new force in my memory, and made me more anxious to explain them.⁵ Was this the penalty of disobedience? this the stroke of a vindictive and invisible hand? Is it a fresh proof that the Divine Ruler interferes in human affairs, meditates an end, selects and commissions his agents, and enforces,

by unequivocal sanctions, submission to his will? Or, was it merely the irregular expansion of the fluid that imparts warmth to our heart and our blood, caused by the fatigue of the preceding day, or flowing, by established laws, from the condition of his thoughts?⁶

1752 ~ *Philip Freneau* ~ 1832

DEISM was such a militantly rationalistic religion that it did not provide so effective a basis for moving poetry as had been provided by earlier Puritanism. This may be seen by comparing the following deistic poems written by Philip Freneau with Anne Bradstreet's "Contemplations" or the selections from the poetry of Edward Taylor

[See other selections from the poetry of Freneau in Book I, Parts 1 and 3]

REFLECTIONS ON THE CONSTITUTION OR FRAME OF NATURE [1809]

From what high source of being came
This system, Nature's awful frame,
This sun, that motion gives to all,
The planets, and this earthly ball

This sun, who life and heat conveys, 5
And comforts with his cheering rays,
This image of the God, whose beam
Enlivens like the GREAT SUPREME,

We see, with most exact design,
The WORLD revolve, the planets shine, 10
The nicest order all things meet,
A structure in ITSELF complete

Beyond our proper solar sphere
Unnumbered orbs again appear,
Which, sunk into the depths of space, 15
Unvarying keep their destined place

Great Frame! what wonders we survey,
In part alone, from day to day!
And hence the reasoning, human soul
Infers an author of the whole 20

A power, that every blessing gives,
Who through eternal ages lives,
All space inhabits, space his throne,
Spreads through all worlds, confin'd to
none,

Infers, through skies, o'er seas, o'er 25
lands
A power throughout the whole commands,
In all extent its dwelling place,
Whose mansion is unbounded space

⁵ Clara refers to mysterious events in the story of her brother, to which the rest of *Wieland* is devoted

⁶ Brown's note, previously cited, refers to cases of "spontaneous combustion" in human beings, a possibility in which medical science at one time believed, especially in the case of alcoholics. Characters are disposed of by "spontaneous combustion" in Dickens' *Bleak House*, Marryat's *Jacob Faithful*, and Melville's *Redburn*. Was the fate of *Wieland's* father the result of supernatural intervention by a special providence or "spontaneous combustion" caused by religious Enthusiasm? The unsolved mystery establishes the "atmosphere" for the portrayal of religious Enthusiasm and its effects in the case of the hero, Clara's brother.

Where ends this world, or when began
 This spheric point displayed to man?— 30
 No limit has the work divine,
 Nor owns a circumscribing line

From efforts and attempts, like these,
 Virtue is gained by slow degrees,
 And science, which from truth she draws,
 Stands firm on Reason and her cause

Beyond what mind or thought conceives,
 Our efforts it in darkness leaves,
 Existing in the eternal scheme, 35
 Vast, undivided, and supreme

However small, its use we find 25
 To tame and civilize mankind,
 To throw the brutal instinct by,
 To honour Reason, ere we die

Here beauty, order, power behold
 Exact, all perfect, uncontrolled,
 All in its proper place arranged,
 Immortal, endless, and unchanged 40

The lovely philanthropic scheme
 (Great image of the power supreme), 30
 On growth of science must depend,
 With this all human duties end

Its powers, still active, never rest,
 From motions, by THAT GOD impressed,
 Who life through all creation spread,
 Nor left the meanest atom dead

ON THE
 UNIFORMITY AND PERFECTION
 OF NATURE
 [1815]

SCIENCE, FAVOURABLE TO
 VIRTUE
 [1809]

On one fix'd point all nature moves,
 Nor deviates from the track she loves,
 Her system, drawn from reason's source,
 She scorns to change her wonted course

This mind, in this uncertain state,
 Is anxious to investigate
 All knowledge through creation sown,
 And would no atom leave unknown

Could she descend from that great plan 5
 To work unusual things for man,
 To suit the insect of an hour—
 This would betray a want of power,

So warm, so ardent in research, 5
 To wisdom's *source* she fain would march,
 And find by study, toil, and care
 The secrets of all nature *there*

Unsettled in its first design
 And erring, when it did combine 10
 The parts that form the vast machine,
 The figures sketch'd on nature's scene

Vain wish, to fathom all we see,
 For nature is all mystery, 10
 The mind, though perch'd on eagle's wings,
 With pain surmounts the scum of things

Perfections of the great first cause
 Submit to no contracted laws,
 But all-sufficient, all-supreme, 15
 Include no trivial views in them

Her knowledge on the surface floats,
 Of things supreme she dreams or dotes,
 Fluttering awhile, she soon descends, 15
 And all in disappointment ends

Who looks through nature with an eye
 That would the scheme of heaven descry,
 Observes her constant, still the same,
 In all her laws, through all her frame 20

And yet this proud, this strong desire,
 Such ardent longings to aspire,
 Prove that this weakness in the mind
 For some wise purpose was designed 20

No imperfection can be found
 In all that is, above, around,—
 All, nature made, in reason's sight
 Is order all, and *all is right*

ON THE RELIGION OF NATURE
[1815]

The power, that gives with liberal hand
The blessings man enjoys, while here,
And scatters through a smiling land
Abundant products of the year,
That power of nature, ever bless'd, 5
Bestow'd religion with the rest

Born with ourselves, her early sway
Inclines the tender mind to take
The path of right, fair virtue's way
Its own felicity to make 10
This universally extends
And leads to no mysterious ends

Religion, such as nature taught,
With all divine perfection suits,

Had all mankind this system sought 15
Sophists would cease their vain dis-
putes,
And from this source would nations
know
All that can make their heaven below

This deals not curses on mankind,
Or dooms them to perpetual grief, 20
If from its aid no joys they find,
It damns them not for unbelief,
Upon a more exalted plan
Creatress nature dealt with man—

Joy to the day, when all agree 25
On such grand systems to proceed,
From fraud, design, and error free,
And which to truth and goodness lead
Then persecution will retreat
And man's religion be complete 30

THE ISSUES OF DEMOCRACY

1588 ~ *John Winthrop* ~ 1649

THE GENERAL Court of the Massachusetts Bay Colony was in session during May and July, 1645, to consider charges that John Winthrop, then deputy governor, and other magistrates had exceeded their authority in refusing to approve as captain of militia for the town of Hingham a Mr Allen chosen by a majority of the townspeople to replace their previous choice, a Mr Emes. By threats of an appeal to a ministerial board of arbitration, the magistrates persuaded the General Court to vote an acquittal for Winthrop and a fine for those who had petitioned against his exercise of authority.

At the conclusion of these proceedings, on July 3, Winthrop requested and was permitted to deliver "a little speech," in which he distinguished between two kinds of liberty—that which he deemed possible only when authority was respected and that which led to disrespect for any authority that ran counter to the demands of the mob. This speech is a good statement of the premises that lay behind the attempt of Puritan leadership in New England to restrain the development of the democratic spirit by imposing rigorous checks upon majority rule.

[A portion of Winthrop's speech, with title supplied by the present editors, is here reprinted from his *Journal*. A convenient edition is that of J. K. Hosmer, New York, 1908. The most authoritative version of the original text of the *Journal* is that in the *Winthrop Papers*, Vol. II, Massachusetts Historical Society, 1931. The last published volume, Vol. IV, 1944, carries the *Journal* through 1644. Other selections from the *Journal* will be found in Book I, Part 1.]

TWO KINDS OF LIBERTY

[1790 (written 1645)]

THERE is a twofold liberty, natural (I mean as our nature is now corrupt) and civil or federal. The first is common to man with beasts and other creatures. By this, man, as he stands in relation to man simply, hath liberty to do what he lists, it is a liberty to evil as well as to good. This liberty is incompatible and inconsistent with authority and cannot endure the least restraint of the most just authority. The exercise and maintaining of this liberty makes men grow more evil, and in time to be worse than brute beasts. This is that great enemy of truth and

peace, that wild beast, which all the ordinances of God are bent against, to restrain and subdue it. The other kind of liberty I call civil or federal, it may also be termed moral, in reference to the covenant between God and man, in the moral law, and the politic covenants and constitutions, amongst men themselves. This liberty is the proper end and object of authority, and cannot subsist without it, and it is a liberty to that only which is good, just, and honest. This liberty you are to stand for, with the hazard (not only of your goods, but) of your lives, if need be. Whatsoever crosseth this, is not authority, but a distemper thereof. This liberty is maintained and exercised in a way of subjection to

authority, it is of the same kind of liberty wherewith Christ hath made us free. The woman's own choice makes such a man her husband, yet being so chosen, he is her lord, and she is to be subject to him, yet in a way of liberty, not of bondage, and a true wife accounts her subjection her honor and freedom, and would not think her condition safe and free, but in her subjection to her husband's authority. Such is the liberty of the church under the authority of Christ, her king and husband, his yoke is so easy and sweet to her as a bride's ornaments, and if through frowardness or wantonness, etc., she shake it off, at any time, she is at no rest in her spirit, until she take it up again, and whether her lord smiles upon her, and embraceth her in his arms, or whether he frowns, or rebukes, or smites her, she apprehends the sweetness of his love in all, and is refreshed, supported, and instructed by every such dispensation of his authority

over her. On the other side, ye know who they are that complain of this yoke and say, let us break their bands, etc., we will not have this man to rule over us. Even so, brethren, it will be between you and your magistrates. If you stand for your natural corrupt liberties, and will do what is good in your own eyes, you will not endure the least weight of authority, but will murmur, and oppose, and be always striving to shake off that yoke, but if you will be satisfied to enjoy such civil and lawful liberties, such as Christ allows you, then will you quietly and cheerfully submit unto that authority which is set over you, in all the administrations of it, for your good. Wherein, if we fail at any time, we hope we shall be willing (by God's assistance) to hearken to good advice from any of you, or in any other way of God, so shall your liberties be preserved, in upholding the honor and power of authority amongst you.

1584 ~ *John Cotton* ~ 1652

A GROUP of English Puritan nobles, under the leadership of Lord Say and Seale, contemplated migration to New England, but first desired assurance that the government there was ordered according to their liking. To this end they sent an emissary to the Bay Colony with a series of formal demands defining their conception of the principles that should prevail in a commonwealth acceptable to them as a place of refuge. To make clear to his lordship what the nobles should expect if they chose to come to New England and to allay his lordship's own doubts about the theocratic tendencies in the government of the Bay Colony, John Cotton wrote a personal letter to him dated 1636. Along with this letter went a document drawn up at a special meeting of the Bay Colony leaders. This document contained formal answers to each of the nobles' demands or proposals. Neither Cotton's letter nor the document containing the formal answers satisfied Lord Say and Seale and his followers.

[Cotton's personal letter is here reprinted in its entirety. The text has been modernized from Thomas Hutchinson's *History of the Colony of Massachusetts-Bay*, London, 1760, I, 496-501. See other selections from Cotton's writings in Book I, Part 2.]

LETTER TO LORD SAY AND SEALE

[1760 (written 1636)]

RIGHT honorable What your Lordship writeth of Dr Twisse his works—*de scientia media* and of the sabbath—it did refresh me to read that his labors of such arguments were like to come to light¹, and it would refresh me much more to see them here though (for my own particular) till I get some release from some constant labors here (which the church is desirous to procure) I can get little or no opportunity to read anything, or attend to anything, but the daily occurrences which press in upon me continually, much beyond my strength either of body or mind Your Lordship's advertisement touching the civil state of this colony, as they do breathe forth your singular wisdom and faithfulness and tender care of the peace, so we have no reason to misinterpret or undervalue your Lordship's either directions or intentions therein I know no man under heaven (I speak in God's fear without flattery) whose counsel I should rather depend upon for the wise administration of a civil state according to God than upon your Lordship, and such confidence have I (not in you) but in the Lord's presence in Christ with you that I should never fear to betrust a greater commonwealth than this (as much as in us lieth) under such a *perpetua dictatura* as your Lordship should prescribe For I nothing doubt that either your Lordship would prescribe all things according to the rule or be willing to examine again and again all things according to it I am very apt to believe what Mr Perkins hath, in one of his prefatory pages to his *Golden Chain*,² that the word and scriptures of God do contain a short *upoluposis* or platform, not only of theology, but also of other sacred sciences (as he calleth them), attendants and handmaids thereunto, which he maketh ethics, economics, politics, church-government, prophecy, academy. It is very suitable to God's all-sufficient wisdom and

to the fulness and perfection of Holy Scriptures, not only to prescribe perfect rules for the right ordering of a private man's soul to everlasting blessedness with himself, but also for the right ordering of a man's family, yea, of the commonwealth too, so far as both of them are subordinate to spiritual ends, and yet avoid both the church's usurpation upon civil jurisdiction, *in ordine ad spiritualia*,³ and the commonwealth's invasion upon ecclesiastical administrations, *in ordine* to civil peace and conformity to the civil state God's institutions (such as the government of church and of commonwealth be) may be close and compact and coordinate one to another and yet not confounded God hath so framed the state of church government and ordinances that they may be compatible to any commonwealth, though never so much disordered in his frame But yet when a commonwealth hath liberty to mold his own frame (*scripturae plenitudinem adoro*)⁴ I conceive the scripture hath given full direction for the right ordering of the same and that in such sort as may best maintain the *eueria*⁵ of the church Mr Hooker⁶ doth often quote a saying of our Mr Cartwright⁷ (though I have not

¹ The *Dissertatio de scientia media tribus libris absoluta* of Dr William Twisse, Puritan theologian of England, was published at Arnheim, 1639

² *Armilla Aurea*, 1590, by one of the leaders of English Puritanism, William Perkins, was published in English as *A Golden Chain*, 1600, and went through numerous editions both in Latin and English

³ In order towards things spiritual

⁴ I speak with reverence for the plentitude of scripture

⁵ Vigor

⁶ Thomas Hooker, 1586-1647, was pastor of Newtown, founder of Connecticut, and author of *Survey of the Summe of Church Discipline*, 1648, the best formulation of the New England Congregational church polity

⁷ Thomas Cartwright, 1535-1603, was one of the foremost spokesmen of Elizabethan Puritanism

read it in him) that no man fashioneth his house to his hangings, but his hangings to his house. It is better that the commonwealth be fashioned to the setting forth of God's house, which is his church, than to accommodate the church frame to the civil state. Democracy I do not conceive that ever God did ordaine as a fit government either for church or commonwealth. If the people be governors, who shall be governed? As for monarchy and aristocracy, they are both of them clearly approved and directed in scripture, yet so as referreth the sovereignty to himself and setteth up theocracy in both as the best form of government in the commonwealth as well as in the church.

The law which your Lordship instanceth in (that none shall be chosen to magistracy among us but a church member) was made and enacted before I came into the country, but I have hitherto wanted sufficient light to plead against it. 1st The rule that directeth the choice of supreme governors is of like equity and weight in all magistrates, that one of their brethren (not a stranger) should be set over them, *Deut* 17 15, and Jethro's counsel to Moses was approved of God, that the judges and officers to be set over the people should be men fearing God, *Exod* 18 21, and Solomon maketh it the joy of a commonwealth when the righteous are in authority and their mourning when the wicked rule, *Prov* 29 21, *Job* 34 30. Your Lordship's fear that this will bring in papal excommunication is just and pious, but let your Lordship be pleased again to consider whether the consequence is necessary. *Turpis ejicitur quam non admittitur* non-membership may be a just cause of non-admission to the place of magistracy, but yet ejection out of his membership will not be a just cause of ejecting him out of his magistracy. A godly woman, being to make choice of an husband, may justly refuse a man that is either cast out of church fellowship, or is not yet received into it, but yet, when she is once given to him, she may not reject him then for such

defect. Mr. Humfrey was chosen for an assistant (as I hear) before the colony came over hither, and, though he be not as yet joined into church fellowship (by reason of the unsettledness of the congregation where he liveth) yet the commonwealth do still continue his magistracy to him as knowing he waiteth for opportunity of enjoying church fellowship shortly.

When your Lordship doubteth, that this course will draw all things under the determination of the church, *in ordine ad spiritualia* (seeing the church is to determine who shall be members, and none but a member may have to do in the government of a commonwealth) be pleased (I pray you) to conceive that magistrates are neither chosen to office in the church nor do govern by directions from the church, but by civil laws, and those enacted in general courts and executed in courts of justice by the governors and assistants. In all which the church (as the church) hath nothing to do, only, it preparerth fit instruments both to rule and to choose rulers, which is no ambition in the church nor dishonor to the commonwealth, the apostle, on the contrary, thought it a great dishonor and reproach to the Church of Christ if it were not able to yield able judges to hear and determine all causes amongst their brethren, *I Cor* 6 1 to 5, which place alone seemeth to me fully to decide this question, for it plainly holdeth forth this argument: it is a shame to the church to want able judges of civil matters (as v 5) and an audacious act in any church member voluntarily to go for judgment otherwise than before the saints (as v 1), then it will be no arrogance nor folly in church members nor prejudice to the commonwealth if voluntarily they never choose any civil judges but from amongst the saints, such as church members are called to be. But the former is clear and how then can the latter be avoided? If this therefore be (as your Lordship rightly conceiveth one of the main objections, if not the only one) which hindereth this commonwealth from the entertainment of

the propositions of those worthy gentlemen, we entreat them, in the name of the Lord Jesus, to consider, in meekness of wisdom, it is not any conceit or will of ours, but the holy counsel and will of the Lord Jesus (whom they seek to serve as well as we) that overruleth us in this case and we trust will overrule them also, that the Lord only may be exalted amongst all his servants. What pity and grief were it that the observance of the will of Christ should hinder good things from us!

But your Lordship doubteth, that if such a rule were necessary, then the church estate and the best ordered commonwealth in the world were not compatible. But let not your Lordship so conceive. For the church submitteth itself to all the laws and ordinances of men, in what commonwealth soever they come to dwell. But it is one thing to submit unto what they have no calling to reform another thing, voluntarily to ordain a form of government which to the best discerning of many of us (for I speak not of myself) is expressly contrary to rule. Nor need your Lordship fear (which yet I speak with submission to your Lordship's better judgment) that this course will lay such a foundation as nothing but a mere democracy can be built upon it. Bodin⁸ confesseth that, though it be *status popularis* where a people choose their own governors, yet the government is not a democracy if it be administered, not by the people, but by the governors, whether one (for then it is a monarchy, though elective) or by many, for then (as you know) it is aristocracy. In which respect it is that church government is justly denied (even by Mr Robinson)⁹ to be democratical, though the people choose their own officers and rulers.

Nor need we fear that this course will in time cast the commonwealth into distractions and popular confusions. For (under correction) these three things do not undermine, but do mutually and strongly maintain one another (even those three which we principally aim at)—authority in magistrates, liberty in people, purity

in the church. Purity, preserved in the church, will preserve well-ordered liberty in the people, and both of them establish well-balanced authority in the magistrates. God is the author of all these three, and neither is himself the God of confusion, nor are his ways the ways of confusion, but of peace.

What our brethren (magistrates or ministers, or leading freeholders) will answer to the rest of the propositions, I shall better understand before the gentleman's return from Connecticut who brought them over. Meanwhile, two of the principal of them the general court hath already condescended unto. 1 In establishing a standing council, who, during their lives, should assist the governor in managing the chiefest affairs of this little estate. They have chosen for the present only two (Mr Winthrop and Mr Dudley), not willing to choose more till they see what further better choice the Lord will send over to them that so they may keep an open door for such desirable gentlemen as your Lordship mentioneth. 2 They have granted the governor and assistants a negative voice and reserved to the freemen the like liberty also. Touching other things, I hope to give your Lordship further account when the gentleman returneth.

He being now returned, I have delivered to him an answer to the rest of your demands, according to the minds of such leading men amongst us as I thought meet to consult withal, concealing your name from any except 2 or 3 who alike do concur in a joint desire of yielding to any such propositions as your Lordship demandeth, so far as with allowance from the word they may, beyond which I know your Lordship would not require anything.

Now the Lord Jesus Christ (the prince of peace) keep and bless your Lordship and dispose of all your times and talents to

⁸ Jean Bodin, 1530-1596, French political philosopher

⁹ John Robinson, pastor of the Scrooby congregation, members of which founded "Plymouth Plantation"

his best advantage and let the covenant of
his grace and peace rest upon your hono-
rable family and posterity throughout all
generations

Thus, humbly craving pardon for my
boldness and length, I take leave and rest,
Yours Honours to serve in Christ Jesus
J C

1578 ~ *Nathaniel Ward* ~ 1652

THE CONTROVERSY over religious toleration in early New England was merely a minor reflection of the controversy that agitated England in the period of conservative Puritan dominance from 1640 to 1648 and that was to continue to agitate it during the period of sectarian dominance from 1648 to 1660. The New England Puritans were not only opposed to sectarian diversity of creeds within the confines of the Bay, but also feared that toleration of sects would cause the English Puritan revolution to degenerate into chaos. Roger Williams, in his advocacy of liberty of conscience, was writing not only against the attitude of the Bay leaders but also in behalf of the movement for toleration in England. John Cotton, in answering him, had the English situation and an English audience in mind.

This may likewise be said of Nathaniel Ward when he wrote *The Simple Cobbler of Aggawam* in Massachusetts in 1645 and had it published in London in 1647. Combining a tirade against religious toleration with ridicule of women's fondness for newfangledness in dress and written in a picturesque rhetoric reminiscent of Elizabethan and early Jacobean prose satire, Ward's pamphlet is one of the curiosities of early New England literature. His resort to unorthodox wit to bolster orthodoxy is not unlike the strategy of C. S. Lewis in our own day in such works as *The Screwtape Letters* and *Miracles*.

Ward spent only a slight part of his long career in New England. Born in Essex, he took his B. A. at Cambridge in 1596 and his M. A. in 1603. He then prepared himself for the law, practiced it for a while, traveled extensively on the continent, and returned to England to become a curate. He helped form the Massachusetts Bay Colony and came to New England in 1634 after having been silenced by Laud. Until 1636 he was minister at Ipswich, the Indian name of which was Aggawam. He was prominent in New England affairs until 1646, when he went back to England. There he preached a sermon before the House of Commons and in 1648 returned to his native Essex to become a minister. As a spokesman for New England's opposition to religious toleration he surpasses John Cotton in verbal, although not in logical, power.

[The following selection from *The Simple Cobbler* has been modernized by the present editors and supplied with an appropriate title.]

THE FOLLY OF RELIGIOUS
TOLERATION

[1647]

SATAN is now in his passions, he feels his passion approaching, he loves to fish in roiled waters. Though that Dragon cannot sting the vitals of the elect mortally, yet that Beelzebub can fly-blow their intellectuals miserably. The finer religion grows, the finer he spins his cobwebs, he will hold pace with Christ so long as his wits will serve him. He sees himself beaten out of gross idolatries, heresies, ceremonies, where the light breaks forth with power, he will therefore bestir him to prevaricate evangelical truths and ordinances.

Nor shall he need to stretch his strength overmuch in this work. too many men, having not laid their foundation sure nor ballasted their spirits deep with humility and fear, are pressed enough of themselves to evaporate their own apprehensions. Those that are acquainted with story know it hath ever been so in new editions of churches such as are least able are most busy to putter in the rubbish and raise dust in the eyes of more steady repairers. Civil commotions make room for uncivil practices, religious mutations, for irreligious opinions, change of air discovers corrupt bodies, reformation of religion, unsound minds. He that hath any well-faced fancy in his crown and doth not vent it now fears the pride of his own heart will dub him dunce forever. Such a one will trouble the whole Israel of God with his most untimely births, though he makes the bones of his vanity stick up to the view and grief of all that are godly wise. The devil desires no better sport than to see light heads handle their heels and fetch their careers in a time when the roof of liberty stands open.

The next perplexed question with pious and ponderous men will be what should be done for the healing of these comfortless ulcerations? I am the unablest adviser of a thousand, the unworthiest of ten thou-

sand, yet I hope I may presume to assert what follows without just offence.

First, such as have given or taken any unfriendly reports of us New-English should do well to recollect themselves. We have been reputed a colluvies¹ of wild opinionists swarmed into a remote wilderness to find elbow-room for our fanatic doctrines and practices. I trust our diligence past and constant sedulity² against such persons and courses will plead better things for us. I dare take upon me to be the herald of New England so far as to proclaim to the world in the name of our colony that all Familists, Antinomians, Anabaptists, and other Enthusiasts shall have free liberty to keep away from us, and such as will come to be gone as fast as they can, the sooner the better.

Secondly, I dare aver that God doth nowhere in his word tolerate Christian states to give tolerations to such adversaries of his truth if they have power in their hands to suppress them.

If the devil might have his free option, I believe he would ask nothing else but liberty to enfranchise all other religions and to embondage the true, nor should he need it is to be feared that lax tolerations upon state pretences and planting necessities will be the next subtle stratagem he will spread to disstate the truth of God and supplant the peace of the churches. Tolerations in things tolerable, exquisitely drawn out by the lines of the Scripture and pencil of the spirit, are the sacred favors of truth, the due latitudes of love, the fair compartments of Christian fraternity, but irregular dispensations, dealt forth by the facilities of men, are the frontiers of error, the redoubts of schism, the perilous irritants of carnal enmity.

My heart hath naturally detested four things: the standing of the Apocrypha in the Bible, foreigners dwelling in my country to crowd out native subjects into the corners of the earth, alchemized coins,

¹ Collection or gathering

² Sedulousness or zealous care

tolerations of divers religions or of one religion in segregant shapes he that willingly assents to the last, if he examines his heart by daylight, his conscience will tell him he is either an atheist or an heretic or an hypocrite or at best a captive to some lust palchpiety³ is the greatest impiety in the world

Not to tolerate things merely indifferent to weak consciences argues a conscience too strong, pressed conformity in these causes much disunity To tolerate more than indifference is not to deal indifferently with God, he that doth it takes His sceptre out of His hand and bids Him stand by The power of all religion and ordinances lies in their purity their purity in their simplicity then are mixtures pernicious I lived in a city where a Papist preached in one church, a Lutheran in another, a Calvinist in a third, a Lutheran one part of the day, a Calvinist the other, in the same pulpit the religion of that place was but motley and meager, their affections leopard-like

If the whole creature should conspire to do the creator a mischief or offer him an insolency, it would be in nothing more than in erecting untruths against his truth or by sophisticating his truths with human medleys the removing of some one iota in Scripture may draw out all the life and traverse⁴ all the truth of the whole Bible but to authorize an untruth by a toleration of state is to build a sconece against the walls of heaven, to batter God out of his chair To tell a practical he is a great sin but yet transient, but to set up a theoretical⁵ untruth is to warrant every he that lies from its root to the top of every branch it hath

I would willingly hope that no member of the Parliament hath skillfully ingratiated himself into the hearts of the House that he might watch a time to midwife out some ungracious toleration for his own

turn and, for the sake of that, some others I would also hope that a word of general caution should not be particularly misapplied Yet, good gentlemen, look well about you and remember how Tiberius played the fox with the senate of Rome and how Fabius Maximus cropped his ears for his cunning

That state is wise that will improve all pains and patience rather to compose than tolerate differences in religion There is no divine truth but hath much celestial fire in it from the spirit of truth nor no irreligious untruth without its proportion of anti-fire from the spirit of error to contradict it the zeal of the one, the virulency of the other, must necessarily kindle combustions Fiery diseases seated in the spirit embroil the whole frame of the body, others more external and cool are less dangerous They which divide in religion divide in God, they who divide in him divide beyond *Genus Generalissimum*,⁶ where there is no reconciliation without atonement, that is, without uniting in Him, who is One, and in his truth, which is also one

Wise are those men who will be persuaded rather to live within the pale of truth where they may be quiet than in the pulchus where they are sure to be hunted ever and anon, do authority what it can Every singular opinion hath a singular opinion of itself, and he that holds it a singular opinion of himself and a simple opinion of all contra-sentients he that confutes them must confute all three at once or else he does nothing, which will not be done without more star than the peace of the state or church can endure

³ Palchpiety or a religious belief of shreds and patches Palch means mended or patched, an English dialect word

⁴ Thwart or subvert

⁵ Theoretical

⁶ The most generic genus

1603(?) ~ *Roger Williams* ~ 1683

ROGER WILLIAMS was the foremost American advocate in the 17th Century of democratic ideas held widely by sectarian Puritans in England. Some of the works in which he most ably set forth these ideas to embarrass the Bay Colony conservatives who had forced him to become the founder of Rhode Island were written under the direct stimulus of the struggle going on in England between the right and left wings of the Puritan revolution.

The first two of the following selections are modernized from *The Bloudy Tenent of Persecution, for cause of Conscience, discussed in a Conference between Truth and Peace*, London, 1644. This work is a lengthy expository dialogue, with the allegorical figures of Truth and Peace as its mouthpieces. It was written in England, where Williams went as agent for Rhode Island in 1643. It was during this visit that he became a friend of John Milton. Parliament ordered *The Bloudy Tenent* burned by the common hangman, and John Cotton replied to it with *The Bloudy Tenent, washed, And made white in the blood of the Lambe*, London, 1647. When Williams was again in England in 1651 he published a reply to Cotton's reply entitled *The Bloody Tenent yet More Bloody by Mr Cottons endeavour to wash it white in the Blood of the Lambe*. The third of the following selections is modernized from this work, which also employs Truth and Peace as mouthpieces.

When Williams came home from England in 1654, he found his beloved Providence in a turmoil and immediately took steps to quell the trouble-makers. When a paper was circulated arguing that it was against Scripture to use the power of a state to force individuals to conform to its laws, Williams wrote a letter to the town, dated 1655, to make clear that his democratic views on church and state, on the sources of civil authority, and on the infamy of religious persecution, as expressed in his published writings, should not be construed to mean that he sanctioned a lawless liberty on the part of members of a commonwealth.

[This letter is here reprinted in its entirety as the fourth selection. The text may be found in *Publications of the Narragansett Club*, Vol. VI, Providence, 1874, pp. 278-279. Titles for all the following selections have been supplied by the editors. See other selections from Williams' works in Book I, Parts 1 and 2.]

CHURCH AND STATE

[1644]

THE CHURCH, or company of worshippers, whether true or false, is like

unto a body or college of physicians in a city, like unto a corporation, society, or company of East India or Turkey merchants, or any other society or company in London, which companies may hold their courts, keep their records, hold dis-

putations, and in matters concerning their society may dissent, divide, break into schisms and factions, sue and implead each other at the law, yea, wholly break up and dissolve into pieces and nothing, and yet the peace of the city not be in the least measure impaired or disturbed, because the essence or being of the city, and so the well-being and peace thereof, is essentially distinct from those particular societies, the city courts, city laws, city punishments, distinct from theirs. The city was before them, and stands absolute and entire when such a corporation or society is taken down.

THE SOURCES OF CIVIL AUTHORITY

[1644]

... AS IT is most true that magistracy in general is of God, *Rom* 13, for the preservation of mankind in civil order and peace—the world otherwise would be like the sea wherein men, like fishes, would hunt and devour each other, and the greater devour the less—so also it is true that magistracy in special, for the several kinds of it, is of man, *1 Pet* 2 13. Now what kind of magistrate soever the people shall agree to set up, whether he receive Christianity before he be set in office, or whether he receive Christianity after, he receives no more power of magistracy than a magistrate that hath received no Christianity. For neither of them both can receive more than the commonweal, the body of people and civil state, as men, communicate unto them and betrust with them. All lawful magistrates in the world, both before the coming of Christ Jesus and since, excepting those unparalleled typical magistrates of the church of Israel, are but derivatives and agents, immediately derived and employed as eyes and hands, serving for the good of the whole. Hence they have and can have no more power than fundamentally lies in the bodies or

fountains themselves, which power, might or authority is not religious, Christian, etc., but natural, human, and civil.

THE INFAMY OF RELIGIOUS PERSECUTION

[1651]

TRUTH and for myself I must proclaim before the Most Holy God, angels, and men that whatever other white and heavenly tenents Mr. Cotton holds, yet this is a foul, a black, and a bloody tenent.

A tenent of high blasphemy against the God of Peace, the God of Order, who hath of one blood made all mankind, to dwell upon the face of the earth, now all confounded and destroyed in their civil beings and subsistences by mutual flames of war from their several respective religions and consciences.

A tenent warring against the Prince of Peace, Christ Jesus, denying his appearance and coming in the flesh to put an end to and abolish the shadows of that ceremonial and typical land of Canaan.

A tenent fighting against the sweet end of his coming, which was not to destroy men's lives for their religions, but to save them by the meek and peaceable invitations and persuasions of his peaceable wisdom's maidens.

A tenent foully charging his wisdom, faithfulness, and love, in so poorly providing such magistrates and civil powers all the world over as might effect so great a charge pretended to be committed to them.

A tenent lamentably guilty of his most precious blood, shed in the blood of so many hundred thousand of his poor servants by the civil powers of the world, pretending to suppress blasphemies, heresies, idolatries, superstition, etc.

A tenent fighting with the spirit of love, holiness, and meekness, by kindling fiery spirits of false zeal and fury, when yet such spirits know not of what spirit they are.

A tenent fighting with those mighty angels who stand up for the peace of the saints against Persia, Greece, etc., and so consequently all other nations who, fighting for their several religions and against the truth, leave no room for such as fear and love the Lord on the earth

A tenent against which the blessed souls under the altar cry aloud for vengeance, this tenent having cut their throats, torn out their hearts, and poured forth their blood in all ages, as the only heretics and blasphemers in the world

A tenent which no uncleanness, no adultery, incest, sodomy, or bestiality can equal, this ravishing and forcing (explicitly or implicitly) the very souls and consciences of all the nations and inhabitants of the world

A tenent that puts out the very eye of all true faith, which cannot but be as free and voluntary as any virgin in the world, in refusing or embracing any spiritual offer or object

A tenent loathsome and ugly (in the eyes of the God of Heaven, and serious sons of men) I say, loathsome with the palpable filths of gross dissimulation and hypocrisy, thousands of peoples and whole nations compelled by this tenent to put on the foul vizard of religious hypocrisy for fear of laws, losses, and punishments, and for the keeping and hoping for of favor, liberty, worldly commodity, etc

A tenent woefully guilty of hardening all false and deluded consciences (of whatsoever sect, faction, heresy, or idolatry, though never so horrid and blasphemous) by cruelties and violences practiced against them, all false teachers and their followers (ordinarily) contracting a brawny and steely hardness from their sufferings for their consciences

A tenent that shuts and bars out the gracious prophecies and promises and discoveries of the most glorious Sun of Righteousness, Christ Jesus, that burns up the Holy Scriptures, and forbids them, upon the point, to be read in English, or that any trial or search or truly free disquisi-

tion be made by them, when the most able, diligent, and conscionable readers must pluck forth their own eyes and be forced to read by the (whichsoever predominant) clergy's spectacles

A tenent that seals up the spiritual graces of all men, Jews and Gentiles, and consequently stands guilty of the damnation of all men, since no preachers nor trumpets of Christ himself may call them out but such as the several and respective nations of the world themselves allow of

A tenent that fights against the common principles of all civility, and in the very civil being and combinations of men in nations, cities, etc., by commingling (explicitly or implicitly) a spiritual and civil state together, and so confounding and overthrowing the purity and strength of both

A tenent that kindles the devouring flames of combustions and wars in most nations of the world, and (if God were not infinitely gracious) had almost ruined the English, French, and Scotch and Irish, and many other nations, German, Polish, Hungarian, Bohemian, etc

A tenent that bows down the backs and necks of all civil states and magistrates, kings and emperors, under the proud feet of that man and monster of sin and pride, the pope, and all popish and proud clergymen, rendering such laics and seculars (as they call them) but slavish executioners (upon the point) of their most imperious synodical decrees and sentences

A tenent that renders the highest civil magistrates and ministers of justice (the fathers and gods of their countries) either odious or lamentably grievous unto the very best subjects by either clapping or keeping on the iron yokes of cruelest oppression. No yoke or bondage comparably so grievous as that upon the soul's neck of men's religion and consciences

A tenent all besprinkled with the bloody murders, stabs, poisonings, pistolings, powder-plots, etc., against many famous kings, princes, and states, either actually performed or attempted, in France, England,

Scotland, Low Countries, and other nations

A tenent all red and bloody with those most barbarous and tiger-like massacres of so many thousand and ten thousands formerly in France and other parts, and so lately and so horribly in Ireland, of which, whatever causes be assigned, this chiefly will be found the true, and while this continues (to wit, violence against conscience), this bloody issue sooner or later must break forth again (except God wonderfully stop it) in Ireland and other places too

A tenent that stunts the growth and flourishing of the most likely and hopefulest commonweals and countries, while consciences the best and the best-deserving subjects are forced to fly (by enforced or voluntary banishment) from their native countries, the lamentable proof whereof England hath felt in the flight of so many worthy English into the Low Countries and New England, and from New England into Old again and other foreign parts

A tenent whose gross partiality denies the principles of common justice, while men weigh out to the consciences of all others that which they judge not fit nor right to be weighed out to their own, since the persecutor's rule is to take and persecute all consciences, only himself must not be touched

A tenent that is but Machiavellism, and makes a religion but a cloak or stalking-horse to policy and private ends of Jeo-boam's crown,¹ and the priest's benefice, etc

A tenent that corrupts and spoils the very civil honesty and natural conscience of a nation, since conscience to God, violated, proves (without repentance) ever after a very jade, a drug, loose and unconscionable in all converse with men

Lastly, a tenent in England most unreasonable, as pouring oil upon those flames which the high wisdom of the Parliament (by easing the yokes on men's consciences) had begun to quench

In the sad consideration of all which, dear Peace, let heaven and earth judge of

the washing and color of this tenent For thee, sweet heavenly guest, go lodge thee in the breasts of the peaceable and humble witnesses of Jesus, that love the truth in peace! Hide thee from the world's tumults and combustions, in the breasts of thy truly noble children, who profess and endeavor to break the irony and insupportable yokes upon the souls and consciences of any of the sons of men

Peace Methinks, dear Truth, if any of the least of these deep charges be found against this tenent, you do not wrong it when you style it bloody, but since, in the woeful proof of all ages past since Nimrod (the hunter or persecutor before the Lord), these and more are lamentably evident and undeniable, it gives me wonder that so many and so excellent eyes of God's servants should not espie so foul a monster, especially considering the universal opposition this tenent makes against God's glory, and the good of all mankind

THE LIMITS OF LIBERTY

[1655]

THAT ever I should speak or write a title that tends to such an infinite liberty of conscience is a mistake, and which I have ever disclaimed and abhorred To prevent such mistakes, I shall at present only propose this case there goes many a ship to sea, with many hundred souls in one ship, whose weal and woe is common, and is a true picture of a commonwealth or a human combination or society It hath fallen out sometimes that both Papists and Protestants, Jews and Turks may be embarked in one ship, upon which supposal I affirm that all the liberty of conscience that ever I pleaded for turns upon these two hinges—that none of the Papists, Protestants, Jews, or Turks be forced to come to the ship's prayers or worship, nor compelled from their own particular prayers and

¹ A reference to the first King of Israel in 1 *Kings* 12-14

worship, if they practice any I further add that I never denied that, notwithstanding this liberty, the commander of this ship ought to command the ship's course, yea, and also command that justice, peace, and sobriety be kept and practiced, both among the seamen and all the passengers If any of the seamen refuse to perform their services, or passengers to pay their freight, if any refuse to help, in person or purse, towards the common charges or defence, if any refuse to obey the common laws and orders of the ship concerning their common peace or preservation, if any shall mutiny and rise up against their commanders and officers, if

any should preach or write that there ought to be no commanders or officers, because all are equal in Christ, therefore no masters nor officers, no laws nor orders, nor corrections nor punishments—I say, I never denied but in such cases, whatever is pretended, the commander or commanders may judge, resist, compel, and punish such transgressors, according to their deserts and merits Thus, if seriously and honestly minded, may, if it so please the Father of Lights, let in some light to such as willingly shut not their eyes

I remain studious of your common peace and liberty

Documents of Bacon's Rebellion

THE DEMOCRATIC spirit that was eventually to flare forth in the American Revolution was kindled in early popular insurrections against colonial governors In 1676, Nathaniel Bacon, a young Englishman who had lived in Virginia for two years and had been a member of the council of the governor, Sir William Berkeley, undertook to correct the governor's lax defense policy against Indian outrages by organizing a militia of his own Declared a rebel, Bacon led his followers against Berkeley's anti-insurrection forces, routed them, took charge of the government, and made ready to resist any royal troops that might be sent to the governor's aid When Bacon died of a fever, his leaderless army, now containing escaped servants and slaves who engaged in plundering the rich, was easily overcome by Berkeley's better organized supporters, and numerous hangings followed Berkeley got into disputes with commissioners of Charles II sent to quell the revolt and make an official report. As a consequence he was relieved of his governorship and recalled to England, where he died in 1677 in disgrace Extant documents that tell the story of Bacon's rebellion either exalt him as a hero battling for the rights of the people of Virginia against tyranny and incompetence or deride him as an ambitious demagogue seeking to gain power by manipulation of the "rascal many's" passions and credulity

The first of the following selections is a characterization of Bacon from *A True Narrative of the Late Rebellion in Virginia, By the Royal Commissioners*, drawn up in 1677 after two of the commissioners, Captain Sir John Berry and Francis Moryson, had returned to England, leaving their colleague, Colonel

Herbert Jeffieys, in Virginia as Berkeley's successor. The second selection, taken from the same source, is Bacon's speech to his followers before leading them against Berkeley's anti-insurrection forces. The third selection, also from the commissioners' *True Narrative*, is the oath which Bacon is said to have imposed upon the people in various parts of Virginia after he had routed Berkeley's army and captured and burned Jamestown.

The last two selections are from *The History of Bacon's and Ingram's Rebellion*, a work apparently composed by a Virginian contemporary of Bacon. The original manuscript is now among the Burwell Papers in the custody of the Virginia Historical Society. "Bacon's Epitaph, made by his Man" and "Upon the Death of G B," quoted in the *History*, are anonymous poems, the latter apparently written in answer to the former. The historian refers to them as "a relish taken from both appetites." In other words, they reflect, respectively, the two extreme attitudes taken by Bacon's contemporaries toward his character and exploits—one the attitude of democratic myth-making and the other that of aristocratic debunking.

[All the selections have been modernized. Complete texts are contained in *Narratives of the Insurrections 1675-1690*, ed. C. M. Andrews, New York, 1915, one of the volumes in the series, *Original Narratives of Early American History*. Titles of the first three selections have been supplied by the present editors.]

ONE VIEW OF THE CHARACTER OF BACON

[1677]

HE WAS a person whose erratic fortune had carried and shown him many foreign parts, and of no obscure family. Upon his first coming into Virginia, he was made one of the Council, the reason of that advancement (all on a sudden) being best known to the Governor, which honor made him the more considerable in the eye of the vulgar and gave some advantage to his pernicious designs. He was said to be about four or five and thirty years of age, indifferent tall but slender, black-haired, and of an ominous, pensive, melancholy aspect, of a pestilent and prevalent logical discourse tending to atheism in most companies, not given to much talk, or to make sudden replies, of a most imperious and dangerous hidden pride of heart, despising the wisest of his neighbors for their ignorance, and very ambitious

and arrogant. But all these things lay hid in him till after he was a councillor, and until he became powerful and popular.

Now this man being in company with one Crews, Isham, and Bird, who, growing to a height of drinking and making the sadness of the times their discourse, and the fear they all lived in, because of the Susquahanocks who had settled a little above the falls of James River and committed many murders upon them, among whom Bacon's overseer happened to be one, Crews and the rest persuaded Mr. Bacon to go over and see the soldiers on the other side James River and to take a quantity of rum with them to give the men to drink, which they did, and (as Crews, etc., had before laid the plot with the soldiers) they all at once in field shouted and cried out, "A Bacon! A Bacon! A Bacon!" which, taking fire with his ambition and spirit of faction and popularity, easily prevailed on him to resolve to head them, his friends endeavoring to fix him the faster to his resolves by telling

him that they would also go along with him to take revenge upon the Indians and drink damnation to their souls to be true to him, and if he could not obtain a commission, they would assist him as well and as much as if he had one, to which Bacon agreed

This forwardness of Bacon's greatly cheered and animated the people, who looked upon him as the only patron of the country and preserver of their lives and fortunes

For he pretended and boasted what great service he would do for the country in destroying the common enemy, securing their lives and estates, liberties, and such like fair frauds he subtly and secretly insinuated by his own instruments over all the country, which he seduced the vulgar and most ignorant people to believe (two thirds of each county being of that sort) so that their whole hearts and hopes were set now upon Bacon. Next he charges the Governor as negligent and wicked, treacherous and incapable, the laws and taxes as unjust and oppressive, and cries up absolute necessity of redress

Thus Bacon encouraged the tumult, and, as the unquiet crowd follow and adhere to him, he listeth them as they come in upon a large paper, writing their name circularwise, that their ring-leaders might not be found out

Having conjured them into this circle, given them brandy to wind up the charm, and enjoined them by an oath to stick fast together and to him, and the oath being administered, he went and infected New Kent County ripe for rebellion

Bacon having got about 300 men together in arms prepared to go out against the Indians, the Governor and his friends endeavor to divert his designs, but cannot

He proclaims Bacon and his followers rebels and mutineers for going forth against the Indians without a commission, and (getting a company of gentlemen together) the Governor marcheth up to the falls of James River to pursue and take Bacon or to seize him at his return

A SPEECH OF BACON'S TO HIS FOLLOWERS

[1677]

GENTLEMEN and Fellow Soldiers The news just now brought me may not a little startle you as well as myself. But seeing it is not altogether unexpected, we may the better bear it and provide our remedies. The Governor is now in Gloster County endeavoring to raise forces against us, having declared us rebels and traitors if true, crimes indeed too great for pardon, our consciences herein are our best witnesses, and theirs so conscious as like cowards therefore they will not have the courage to face us. It is revenge that hurries them on without regard to the people's safety, and had rather we should be murdered and our ghosts sent to our slaughtered countrymen by their actings than we live to hinder them of their interest with the heathen, and preserve the remaining part of our fellow subjects from their cruelties. Now then we must be forced to our own defence, or expose ourselves to their mercies, or fortune of the woods, whilst His Majesty's country here lies in blood, and wasting (like a candle) at both ends. How incapable we may be made (if we should proceed) through sickness, want of provisions, slaughter, wounds less or more, none of us is void of the sense hereof

Therefore, while we are sound at heart, unweaned, and not receiving damage by the fate of war, let us descend to know the reasons why such proceedings are used against us, that those whom they have raised for their defence to preserve them against the fury of the heathen they should thus seek to destroy, and to betray our lives whom they raised to preserve theirs, if ever such treachery was heard of, such wickedness and inhumanity (and call all the former ages to witness), and if any, that they suffered in like nature as we are like by the sword and ruins of war

But they are all damned cowards, and you shall see they will not dare to meet us in

the field to try the justness of our cause, and so we will down to them, etc

ONE OF THE OATHS ADMINISTERED
BY BACON TO HIS FOLLOWERS
[1677]

WHEREAS Sir William Berkeley, Knight, late Governor of Virginia, hath in a most barbarous and abominable manner exposed and betrayed our lives, and for greediness of sordid gain did defer our just defence and hinder all the loyal endeavors of His Majesty's faithful subjects, and, further, when the country did raise a sufficient force for the effectual proceeding against the Indian enemy, he did, contrary to all equity and justice and the tenors of his commission, endeavor to oppose the said forces by himself and the Assembly set forth of which attempts being several times defeated by the people's abhorrence of so bloody design he left the country in a small vessel, it being unknown to all people to what parts of the world he did repair, and whereas as our army upon his departure betaking themselves to the care of the frontiers did march out against the Indians and obtain so great a victory, as hath in a manner finished all the disaster and almost resettled the country in a happy peace, yet notwithstanding Sir Wm Berkeley, with forces raised in Accomac, did invade the country with acts of hostility, with all intentions to persecute the said army with these aforesaid reasons, as also having betrayed his trust to the king by flying from his seat of judicature, and acting wholly contrary to his commission, we protest against him unanimously as a traitor and most pernicious enemy to the public, and further we swear that in all places of His Majesty's Colony of Virginia we will oppose and prosecute him with all our endeavors by all acts of hostility as occasion shall present, and further whereas plotting and wishing in his heart a total ruin and destruction of this poor colony he hath endeavored to set the heart of our sovereign against us by false

information and lies, requesting forces of His Majesty wherewith to compel and subdue us, hindering, intercepting, and preventing all our remonstrances for peace, which might have gone home in our justification, as also hindering of our sending home of agents in the people's behalf, which was the most humble and earnest request of the people at first, we do further declare and swear that we think it absolutely consisting with our allegiance and loyalty to treat with and discourse with the said forces and commissioners with all submission to His Majesty But otherwise, if it shall so prove that notwithstanding all entreaties and offers we shall make, they shall offer to land by force, in our own defence to fly together as in a common calamity and jointly with the present army now under the command of General Bacon, to stand or fall in the defense of him and the country in so just a cause, and in all places to oppose their proceedings (only until such time as His Majesty by our agents shall fully understand the miserable case of the country, and the justice of our proceedings) which most just request if they shall refuse and by force endeavor to enter the country, we are resolved to uphold the country as long as we can and never to absent and join with any such army whatever, and lastly in case of utmost extremity rather than submit to any so miserable a slavery (when none can longer defend ourselves, our lives and liberties) to acquit the colony rather than submit to so unheard of injustice, and this we all swear in the presence of Almighty God as unfeignedly and freely as ever we desire of him for happiness to come

By the General

BACON'S EPITAPH, MADE BY
HIS MAN

[1814 (Written c 1677)]

Death, why so cruel? What! No other way
To manifest thy spleen, but thus to slay
Our hopes of safety, liberty, our all,

Which, through thy tyranny, with him must
 fall
 To its late chaos? Had thy rigid force 5
 Been dealt by retail, and not thus in gross,
 Grief had been silent Now we must com-
 plain,
 Since thou, in him, hast more than thou-
 sand slain,
 Whose lives and safeties did so much
 depend
 On him their life, with him their lives
 must end 10
 If't be a sin to think Death bribed can
 be,
 We must be guilty, say it was bribery
 Guided the fatal shaft, Virginia's foes,
 To whom for secret crimes just vengeance
 owes
 Deservèd plagues, dreading their just de-
 sert, 15
 Corrupted death by Paracelsian art,
 Him to destroy, whose well tried courage
 such,
 Their heartless hearts, nor arms nor
 strength could touch
 Who now must heal those wounds or stop
 that blood
 The Heathen made, and drew into a
 flood? 20
 Who is it must plead our cause? Nor
 trump nor drum
 Nor deputations, these, alas! are dumb
 And cannot speak Our arms (though ne'er
 so strong)
 Will want the aid of his commanding
 tongue,
 Which conquered more than Caesar He
 o'erthrew 25
 Only the outward frame, this could sub-
 due
 The rugged works of nature Souls re-
 plete
 With dull chill cold, he'd animate with
 heat
 Drawn forth of reason's limbeck In a word,
 Mars and Minerva both in him con-
 curred 30
 For arts, for arms, whose pen and sword
 alike
 As Cato's did, may admiration strike

Into his foes, while they confess withal
 It was their guilt styled him a criminal
 Only this difference does from truth pro-
 ceed 35
 They in the guilt, he in the name must
 bleed
 While none shall dare his obsequies to
 sing
 In deserved measures until time shall bring
 Truth crowned with freedom, and from
 danger free
 To sound his praises to posterity 40
 Here let him rest, while we this truth
 report
 He's gone from hence unto a higher court
 To plead his cause, where he by this doth
 know
 Whether to Caesar he was friend, or foe

UPON THE DEATH OF G[ENERAL]
 B[ACON]

[1814 (written c. 1677)]

Whether to Caesar he was friend or
 foe?
 Pox take such ignorance, do you not know?
 Can he be friend to Caesar that shall bring
 The arms of Hell to fight against the King?
 (Treason, Rebellion)—Then what reason
 have 5
 We for to wait upon him to his grave,
 There to express our passions? Wilt not be
 Worse than his crimes, to sing his elegy
 In well-tuned numbers, where each Ella
 bears
 (To his flagitious name) a flood of tears? 10
 A name that hath more souls with sorrow
 fed
 Than wretched Niobe single tears ere shed,
 A name that filled all hearts, all ears, with
 pain,
 Until blest Fate proclaimed, Death had
 him slain
 Then how can it be counted for a sin, 15
 Though Death (nay, though myself) had
 bribed been
 To guide the fatal shaft? We honor all

That lends a hand unto a traitor's fall	Hearing those named their city put in
What though the well-paid rocket ¹ soundly	flames
ply	And country ruined, it we thus lament 35
And box the pulpit in to flattery,	It is against our present joy's consent
20 Urging his rhetoric and strained eloquence,	For if the rule in physic true doth prove,
T'adorn incoffined filth and excrements,	Remove the cause, th'effects will after
Though the defunct (like ours) ne'er	move,
tried	We have outlived our sorrows, since we
A well-intended deed until he died?	see
'Twill be nor sin, nor shame, for us to	The causes shitting, of our misery 40
say	Nor is't a single cause that's shipped
25 A two-fold passion checker-works this	away,
day—	That made us warble out a well-a-day
Of joy and sorrow, yet the last doth move	The brains to plot, the hands to execute
On foot impotent, waiting strength to	Projected ill, Death jointly did non-suit
prove	At his black bar And what no bail could
(Nor can the art of logic yield relief)	save 45
How joy should be surmounted by our	He hath committed prisoner to the grave,
grief	30 From whence there's no reprieve Death
Yet that we grieve it cannot be denied,	keep him close!
But 'tis because he was, not 'cause he died	We have too many devils still go loose
So wept the poor distressed Illum dames,	

¹ An obsolete word meaning "bishop"

Documents of the Andros Administration

AFTER the restoration of the Stuarts in 1660, there were numerous signs that the British government desired to bring its American colonies under a more centralized administration in accordance with its traditional mercantilist policy. A royal commission sifted complaints against Massachusetts' violation of imperial laws and disregard for the provisions of her charter. The Revenue Act of 1673 and the creation of the Lords of Trade in 1675 were other straws in the wind. In 1684 Charles II revoked Massachusetts' charter. Finally, in 1686, James I sent over Sir Edmund Andros, 1637-1714, as governor of the Dominion of New England. Arriving in Massachusetts December, 1686, Andros assumed autocratic powers. The colonial legislatures were abolished, a colonial council appointed by the king was to assist the governor, all New England, including Connecticut and Rhode Island, which alone retained their charters, submitted to this rule, as well as the middle colonies, New Jersey and New York.

The Andros administration lasted only three years. Its collapse was due to three main causes. First, Andros was too conscientious an aristocratic absolutist; he went so far as to try to establish the Anglican Church in Puritan Boston; he did his best to enforce the Navigation Acts against New England

trade, he acted on his authorization to investigate existing land grants, impose quit-rents to validate titles, and levy taxes. Secondly, the spirit of independence from Britain was so strong in New England that the opposition against Andros became too ominous for the British government to ignore. Finally, the "Glorious Revolution" of 1688 removed Andros' sponsor, James II, from the throne and precipitated an uprising against Andros in Boston, as a result of which he was imprisoned in Boston harbor and later sent back to England. The destruction of his rule did not bring any immediate change in British mercantilist policy, but did lead to important modifications in the Dominion government.

[The first of the following selections is taken from the report which Andros made in 1690 to the Lords of Trade after his return home. On the basis of this report, he was acquitted of all guilt. The second selection is from an account drawn up in Boston in 1690 by five members of his council who were critical of the manner in which he executed the duties of his office. These were William Stoughton, Thomas Hinckley, Wait Winthrop, Bartholomew Gedney, and Samuel Shrimpton. Their account was printed in 1691. Both selections have been modernized. Complete texts may be found in *Narratives of the Insurrections 1675-1690*, New York, 1915.]

From
ANDROS' REPORT OF HIS
ADMINISTRATION
[1690]

ON THE 18th of April, 1689, several of His Majesty's council in New England having combined and conspired together with those who were magistrates and officers in the late charter government annually chosen by the people, and several other persons, to subvert and overthrow the government, and in stead thereof to introduce their former commonwealth, and having by their false reports and aspersions got to their assistance the greatest part of the people, whereof appeared in arms at Boston under the command of those who were officers in the said former popular government, to the number of about two thousand horse and foot, which strange and sudden appearance being wholly a surprise to Sir Edmund Andros, as knowing no cause or occasion for the same, but understanding that several of the council were at the council chamber where (it being the ordinary council day) they were

to meet, and some particularly by him sent from distant parts also there, he and those with him went thither. And though (as he passed) the streets were full of armed men, yet none offered him or those that were with him the least rudeness or meivility, but on the contrary usual respect, but when he came to the council chamber, he found several of the said former popular magistrates and other chief persons then present, with those of the council, who had no suitable regard to him, nor the peace and quiet of the country, but instead of giving any assistance to support the government, made him a prisoner and also imprisoned some members of the council and other officers, who in pursuance of their respective duties and stations attended on him, and kept them for the space of ten months under severe and close confinement until by His Majesty's command they were sent for England to answer what might be objected them, where, after summons given to the pretended agents of New England and their twice appearance at the council board, nothing being objected by them or others, they

were discharged In the time of his confinement being denied the liberty of discourse or conversation with any person, his own servants to attend him, or any communication or correspondence with any by letters, he hath no particular knowledge of their further proceedings, but hath heard and understand

That soon after the confinement of his person, the confederates took the fort and castle from the officers that had the command of them, whom they also imprisoned

By the encouragement and persuasion of the Massachusetts, the several other provinces and colonies in New England as far as New York have disunited themselves, and set up their former separate charter, or popular governments without charter, and by that means the whole revenue of the crown continued and settled in the several parts for the support of the government is lost and destroyed

The usual time for election of new magistrates at Boston coming on in the beginning of May, 1689, great controversy arose about the settling of civil government, some being for a new election, and others that the magistrates chosen and sworn in 1686 before the alteration should reassume, the latter of which was concluded on by them and the pretended representatives of the several towns of the Massachusetts, and assumed by the said magistrates accordingly, and thereupon the old charter government, though vacated in Westminster Hall, was reassumed without any regard to the crown of England, and they revived and confirmed their former laws contrary and repugnant to the laws and statutes of England, settled their courts of judicature, and appointed new officers, and have presumed to try and judge all cases civil and criminal, and to pass sentence of death on several of Their Majesties' subjects, some of whom they have caused to be executed

Since this insurrection and alteration in New England, they do tolerate an unlimited irregular trade, contrary to the several

acts of plantations, trade, and navigation, now as little regarded as in the time of their former charter government, they esteeming no laws to be binding on them but what are made by themselves, nor admit English laws to be pleaded there, or appeals to His Majesty And many ships and vessels have since arrived from Scotland, Holland, Newfoundland, and other places prohibited, they having imprisoned his Majesty's collector, surveyor and searcher, and displaced other customhouse officers

From

A NARRATIVE OF THE PROCEEDINGS OF SIR EDMOND ANDROSSE AND HIS COMPLICES
[1691]

HAVING received from Mr Addington,¹ by order of the council and representatives of the Massachusetts colony, a signification of their desire, that whereas we were members of the late council in the time of Sir Edmund Andros' government, we would give some information of the grievances and maladministrations under the same, upon consideration had thereof and in answer thereunto, we cannot but own and declare that not only ourselves but many others in the same station (not now present to join with us) were of a long time much dissatisfied and discouraged with very many of the proceedings and administrations in the said government, and had little reason to wonder that so great a number of the people were so too It might well have been expected that the Governor, not so successful heretofore, notwithstanding the extraordinariness (to say no more) of many clauses and powers in his commission, yea, the rather and the more because thereof, would have cautioned and moderated the execution of the same But to our great trouble we found it very much otherwise Many were the things that were accounted irregular and grievous therein, far from

¹ Isaac Addington, secretary of the colony

conducting to the public weal of the territory, and not a little to the disservice of the crown, as tending rather to the disturbing and disaffecting of the subjects here, than to the furtherance of that cheerful obedience, loyalty, love, and duty in them which ought by all means to have been nourished and promoted. And of all this unhappiness, we must reckon the first step and in-let to be that the Governor did so quickly neglect the great number of the council, and chiefly adhere unto and govern by the advice only of a few others, the principal of them strangers to the country, without estates or interest therein to oblige them, persons of known and declared prejudices against us, and that had plainly laid their chiefest designs and hopes to make unreasonable profit of this poor people. Innumerable were the evil effects that from hence were continually growing up amongst us. The debates in council were not so free as ought to have been, but too much over-ruled, and a great deal of harshness continually expressed against persons and opinions that did not please. The greatest rigor and severity was too often used towards the soberest sort of people, when anything could be found or pretended against them, their humble submissions were little regarded, and inexorable persecutions ordered against them, whilst in

the mean time the notorious viciousness and profaneness of others met not with the like discountenance, but persons of such a character were put into places of business and trust. The long-settled maintenance of the public ministry, even from those that applied themselves to no other way of worship, but continued ordinary hearers, could not be upheld by any act of authority providing for the same, and schools of learning, so well taken care of formerly, were in most places fallen to decay, and many more such like might be reckoned up.

These are the chief matters which upon this occasion (without any undue prejudice against any man, or design to justify the defects of ourselves in the performance of our own shares of duty, but in answer to the desire signified to us as above) we have to set forth, professing truly that by such a state of things as we had the experience and feeling of, the places that we held were rendered exceeding uneasy to us, and that out of a sincere respect to the prosperity of Their Majesties' plantations, we could not but be very desirous that, through the favor of God and our superiors, all due redress might in a good happy season be obtained, and the way of governing English subjects in Their Majesties' dominions without an assembly of the people's representatives banished out of a world forever.

1652 ~ *John Wise* ~ 1725

JOHN WISE had a background that predetermined him to become one of the first colonial spokesman of truly democratic ideas. He was the son of an indentured servant, became a Congregational minister at Ipswich in 1680, seven years after his graduation from Harvard, owned a farm of ten acres, and was jailed and fined by Sir Edmund Andros for speaking to his fellow Ipswichians against the governor's tax policies. He continued to be a "come-outer" of liberal views, as is shown by his signing of a petition in 1703 to clear those condemned for witchcraft and by his advocacy in his last years of both inoculation and paper money. His *Vindication of the Government of New-England Churches* is a defense of the Congregational church polity. He wrote

it after several years of thought and study. In 1705 a group of Boston and Cambridge ministers had issued a proposal suggesting that the autonomy of the individual minister had been carried too far. Wise assailed them in his pamphlet, *The Churches Quarrel Espoused*, in 1710, which led him to undertake the more sober and systematic *Vindication*.

In expounding the basis of Congregational church polity, Wise sets forth some of the fundamental principles of democracy, drawing heavily on *De Jure Nature et Gentium*, a treatise by Samuel von Pufendorf, 1632-1694, the German philosopher and theologian. This treatise had been translated into English in 1703 and became one of the main sources for conceptions of natural law advanced by 18th Century philosophers.

[The present selections have been modernized and provided with titles by the editors.]

THE NATURAL AND THE CIVIL
STATES
[1717]

I SHALL disclose several principles of natural knowledge, plainly discovering the law of nature, or the true sentiments of natural reason, with respect to man's being and government. And in this essay, I shall peculiarly confine the discourse to two heads, viz,

1 Of the natural (in distinction to the civil) and then,

2 Of the civil being of man. And I shall principally take Baron Pufendorf as my chief guide and spokesman.

1 I shall consider man in a state of natural being, as a free-born subject under the crown of heaven and owing homage to none but God himself. It is certain civil government in general is a very admirable result of providence and an incomparable benefit to mankind, yet must needs be acknowledged to be the effect of human free compacts and not of divine institution; it is the produce of man's reason, of human and rational combinations, and not from any direct orders of infinite wisdom, in any positive law wherein is drawn up this or that scheme of civil government. Government (says the Lord Warrington) ¹ is necessary—in that no society of men can

subsist without it, and that particular form of government is necessary which best suits the temper and inclination of a people. Nothing can be God's ordinance but what he has particularly declared to be such, there is no particular form of civil government described in God's word, neither does nature prompt it.

1 The prime immunity in man's state is that he is most properly the subject of the law of nature. He is the favorite animal on earth in that this part of God's image, viz, reason, is congenate with his nature, wherein by a law immutable, instamped upon his frame, God has provided a rule for men in all their actions, obliging each one to the performance of that which is right, not only as to justice, but likewise as to all other moral virtues, the which is nothing but the dictate of right reason founded in the soul of man.

(2) The second great immunity of man is an original liberty instamped upon his rational nature. He that intrudes upon this liberty violates the law of nature. In this discourse I shall waive the consideration of man's moral turpitude, but shall view him physically as a creature which God has made and furnished essentially with many ennobling immunities, which render him

¹ Archibald Johnson, Lord Warrington, Scottish judge, may be referred to here.

the most august animal in the world, and still, whatever has happened since his creation, he remains at the upper-end of nature, and as such is a creature of a very noble character

(3) The third capital immunity belonging to man's nature is an equality amongst men, which is not to be denied by the law of nature till man has resigned himself with all his rights for the sake of a civil state, and then his personal liberty and equality is to be cherished, and preserved to the highest degree, as will consist with all just distinctions amongst men of honor, and shall be agreeable with the public good And thus we come,

2 To consider man in a civil state of being, wherein we shall observe the great difference between a natural and political state, for in the latter state many great disproportions appear, or at least many obvious distinctions are soon made amongst men, which doctrine is to be laid open under a few heads

(1) Every man considered in a natural state must be allowed to be free, and at his own dispose, yet to suit man's inclinations to society, and in a peculiar manner to gratify the necessity he is in of public rule and order, he is impelled to enter into a civil community, and divests himself of his natural freedom, and puts himself under government, which, amongst other things, comprehends the power of life and death over him, together with authority to enjoin him some things to which he has an utter aversion and to prohibit him other things for which he may have as strong an inclination, so that he may be often under this authority obliged to sacrifice his private for the public good So that though man is inclined to society, yet he is driven to a combination by great necessity For that the true and leading cause of forming governments, and yielding up natural liberty, and throwing man's equality into a common pile to be new cast by the rules of fellowship, was really and truly to guard themselves against the injuries men were liable to interchangeably; for none so good

to man as man, and yet none a greater enemy So that,

(2) The first human subject and original of civil power is the people For as they have a power every man over himself in a natural state, so upon a combination they can and do bequeath this power unto others, and settle it according as their united discretion shall determine For that this is very plain, that when the subject of sovereign power is quite extinct, that power returns to the people again And when they are free, they may set up what species of government they please, or if they rather incline to it, they may subside into a state of natural being, if it be plainly for the best

(3) The formal reason of government is the will of a community, yielded up and surrendered to some other subject, either of one particular person, or more, conveyed in the following manner

Let us conceive in our mind a multitude of men, all naturally free and equal, going about voluntarily to erect themselves into a new commonwealth Now their condition being such, to bring themselves into a politic body they must needs enter into divers covenants

1 They must interchangeably each man covenant to join in one lasting society, that they may be capable to concern the measures of their safety, by a public vote

2 A vote or decree must then nextly pass to set up some particular species of government over them And if they are joined in their first compact upon absolute terms to stand to the decision of the first vote concerning the species of government, then all are bound by the majority to acquiesce in that particular form thereby settled, though their own private opinion incline them to some other model

3 After a decree has specified the particular form of government, then there will be need of a new covenant, whereby those on whom sovereignty is conferred engage to take care of the common peace and welfare, and the subjects on the other hand to yield them faithful obedience In

which covenant is included that submission and union of wills by which a state may be conceived to be but one person. So that the most proper definition of a civil state is this, viz, a civil state is a compound moral person whose will (united by those covenants before passed) is the will of all, to the end it may use and apply the strength and riches of private persons toward maintaining the common peace, security, and well-being of all. Which may be conceived as though the whole state was now become but one man, in which the aforesaid covenants may be supposed under God's providence to be the divine fiat, pronounced by God, let us make man

THE NATURE OF A DEMOCRACY [1717]

A DEMOCRACY is then erected when a number of free persons do assemble together in order to enter into a covenant for uniting themselves in a body and such a preparative assembly hath some appearance already of a democracy, it is a democracy in embryo properly in this respect, that every man hath the privilege freely to deliver his opinion concerning the common affairs. Yet he who dissents from the vote of the majority is not in the least obliged by what they determine till by a second covenant a popular form be actually established, for not before then can we call it a democratical government, viz, till the right of determining all matters relating to the public safety is actually placed in a general assembly of the whole people, or, by their own compact and mutual agreement, determine themselves the proper subject for the exercise of sovereign power. And to complete this state and render it capable to exert its power to answer the end of a civil state, these conditions are necessary

1. That a certain time and place be assigned for assembling.

2. That when the assembly be orderly met, as to time and place, that then the

vote of the majority must pass for the vote of the whole body

3. That magistrates be appointed to exercise the authority of the whole for the better dispatch of business, of every day's occurrence, who also may with more mature diligence search into more important affairs, and if in case anything happens of greater consequence may report it to the assembly, and be peculiarly serviceable in putting all public decrees into execution. Because a large body of people is almost useless in respect of the last service, and of many others, as to the more particular application and exercise of power, therefore it is most agreeable with the law of nature that they institute their officers to act in their name and stead

This [a democracy] is a form of government which the light of nature does highly value and often directs to as most agreeable to the just and natural prerogatives of human beings. This was of great account in the early times of the world. And not only so, but upon the experience of several thousand years, after the world had been tumbled and tossed from one species of government to another, at a great expense of blood and treasure, many of the wise nations of the world have sheltered themselves under it again, or at least have blinched and balanced their governments with it

It is certainly a great truth, *scil*, that man's original liberty after it is resigned (yet under due restrictions) ought to be cherished in all wise governments, or otherwise a man, in making himself a subject, he alters himself from a freeman into a slave, which to do is repugnant to the law of nature. Also the natural equality of men amongst men must be duly favored, in that government was never established by God or nature to give one man a prerogative to insult over another, therefore in a civil, as well as in a natural state of being, a just equality is to be indulged so far as that every man is bound to honor every man, which is agreeable both with nature and religion, *1 Pet 2 17 Honour all men.*—

The end of all good government is to cultivate humanity, and promote the happiness of all, and the good of every man in all his rights, his life, liberty, estate, honor, etc, without injury or abuse done to any. Then certainly it cannot easily be thought that a company of men that shall enter into a voluntary compact to hold all power in their own hands, thereby to use and improve their united force, wisdom, riches, and strength for the common and particular good of every member, as is the nature of a democracy—I say, it cannot be that this sort of constitution will so readily furnish those in government with an appetite or disposition to prey upon each other or embezzle the common stock, as some particular persons may be apt to do when set off and entrusted with the same power. And moreover this appears very natural, that when the aforesaid government or power, settled in all, when they have elected certain capable persons to minister in their affairs, and the said ministers remain accountable to the assembly, these officers must needs be under the influence of many wise cautions from their own thoughts (as well as under confinement by their commission) in their whole administration and from thence it must needs follow that they will be more apt and inclined to steer right for the main

point, viz, the peculiar good and benefit of the whole, and every particular member fairly and sincerely. And why may not these stand for very rational pleas in church order?

For certainly, if Christ has settled any form of power in his church, he has done it for his church's safety, and for the benefit of every member. Then he must needs be presumed to have made choice of that government as should least expose his people to hazard, either from the fraud or arbitrary measures of particular men. And it is as plain as daylight there is no species of government like a democracy to attain this end. There is but about two steps from an aristocracy to a monarchy, and from thence but one to a tyranny, an able standing force and an ill-nature, *ipso facto*, turns an absolute monarch into a tyrant, this is obvious among the Roman Caesars and through the world. And all these direful transformations are easier in church affairs (from the different qualities of things) than in civil states. For what is it that cunning and learned men can't make the world swallow as an article of their creed, if they are once invested with an uncontrollable power, and are to be the standing orators to mankind in matters of faith and obedience?

1656 ~ Andrew Hamilton ~ 1741

ONE EPISODE in the struggle between colonial liberalism and the conservatism of royal governors was the case of John Peter Zenger, a German printer of New York City. In 1733 Zenger's *The New York Weekly Journal* carried a series of articles in defense of Lewis Morris, deposed chief justice of the province. These articles attacked William Cosby, the royal governor. On a charge of libel, Zenger was arrested, held in prison, and brought finally to trial in 1735. In Zenger's defense, the Morris faction retained one of the greatest of American lawyers, Andrew Hamilton, of Philadelphia, then nearing his eightieth year.

Born in Scotland in 1656, Hamilton had been Attorney General of Penn-

sylvania between 1717 and 1726 and Recorder of Philadelphia in 1727. He served as Vice Admiralty Judge in 1737 and was Speaker of the Assembly from 1729 to 1739. Although suffering from gout at the time of his retention for the Zenger trial, he delivered so powerful a defense that the jury decided the articles in Zenger's paper were not libelous. The trial was an important victory for freedom of the press in America.

[*A brief Narrative of the Case and Trial of John Peter Zenger*, containing Hamilton's defense, was first printed in 1736. That it was widely read both in the colonies and in England is shown by a number of reprintings between 1737 and 1799. The following selection from Hamilton's defense has been modernized by the editors.]

SPEECH AT THE TRIAL OF JOHN
PETER ZENGER
[1736]

I BEG leave to insist that the right of complaining or remonstrating is natural, and the restraint upon this natural right is the law only, and that those restraints can only extend to what is *false* for as it is truth alone which can excuse or justify any man for complaining of a bad administration, I as frankly agree that nothing ought to excuse a man who raises a false charge or accusation, even against a private person, and that no manner of allowance ought to be made to him who does so against a public magistrate. *Truth* ought to govern the whole affair of libels, and yet the party accused runs risk enough even then, for if he fails in proving every tittle of what he has wrote, and to the satisfaction of the court and jury too, he may find to his cost that, when the prosecution is set on foot by men in power, it seldom wants friends to favor it. And from thence (it is said) has arisen the great diversity of opinions among judges about what words were or were not scandalous or libellous.

If then upon the whole there is so great an uncertainty among judges (learned and great men) in matters of this kind, if power has so great an influence on judges, how cautious ought we to be in determining by their judgments, especially in the

plantations and in the case of libels! There is heresy in law as well as in religion, and both have changed very much, and we well know that it is not two centuries ago that a man would have been burnt as a heretic for owning such opinions in matters of religion as are publicly wrote and printed at this day. They were fallible men, it seems, and we take the liberty not only to differ from them in religious opinions, but to condemn them and their opinions too, and I must presume that, in taking these freedoms in thinking and speaking about matters of faith or religion, we are in the right. For though it is said there are very great liberties of this kind taken in New York, yet I have heard of no information preferred by Mr. Attorney General for any offences of this sort. From which I think it is pretty clear that in New York a man may make very free with his God, but he must take special care what he says of his Governor. It is agreed upon by all men that this is a reign of liberty, and while men keep within the bounds of truth, I hope they may with safety speak and write their sentiments of the conduct of men in power—I mean of that part of their conduct only which affects the liberty or property of the people under their administration, were this to be denied, then the next step may make them slaves. For what notions can be entertained of slavery beyond that of suffering the greatest injuries and oppressions without the liberty

of complaining, or, if they do, to be destroyed, body and estate, for so doing?

It is said and insisted on by Mr Attorney General, *that government is a sacred thing, that it is to be supported and revered, it is government that protects our persons and estates, that prevents treasons, murders, robberies, riots, and all the train of evils that overturns kingdoms and states, and ruins particular persons, and if those in the administration, especially the supreme magistrate, must have all their conduct censured by private men, government cannot subsist* This is called a *licentiousness not to be tolerated* It is said, *that it brings the rulers of the people into contempt, and their authority not to be regarded, and so in the end the laws cannot be put in execution* These I say, and such as these, are the general topics insisted upon by men in power and their advocates But I wish it might be considered at the same time how often it has happened that the abuse of power has been the primary cause of these evils, and that it was the injustice and oppression of these great men which has commonly brought them into contempt with the people The craft and art of such men is great, and who that is the least acquainted with history or law can be ignorant of the specious pretences which have often been made use of by men in power to introduce arbitrary rule and destroy the liberties of a free people?

The loss of liberty to a generous mind is worse than death, and yet we know there have been those in all ages who for the sake of preferment, or some imaginary honor, have freely lent a helping hand to oppress, nay to destroy, their country This brings to my mind that saying of the immortal Brutus, when he looked upon the creatures of Caesar, who were very great men, but by no means good men "You Romans," said Brutus, "if yet I may call you so, consider what you are doing, remember that you are assisting Caesar to forge those very chains which one day he will make yourselves wear" This is

what every man (that values freedom) ought to consider he should act by judgment and not by affection or self-interest, for, where those prevail, no ties of either country or kindred are regarded, as upon the other hand, the man who loves his country prefers its liberty to all other considerations, well knowing that without liberty, life is a misery

A famous instance of this you will find in the history of another brave Roman of the same name, I mean Lucius Junius Brutus, whose story is well known and therefore I shall mention no more of it than only to show the value he put upon the freedom of his country After this great man, with his fellow citizens whom he had engaged in the cause, had banished Tarquin the Proud, the last king of Rome, from a throne which he ascended by inhuman murders and possessed by the most dreadful tyranny and proscriptions, and had by this means amassed incredible riches, even sufficient to bribe to his interest many of the young nobility of Rome to assist him in recovering the crown, but the plot being discovered, the principal conspirators were apprehended, among whom were two of the sons of Junius Brutus It was absolutely necessary that some should be made examples of, to deter others from attempting the restoring of Tarquin and destroying the liberty of Rome And to effect this it was that Lucius Junius Brutus, one of the consuls of Rome, in the presence of the Roman people, sat judge and condemned his own sons as traitors to their country And to give the last proof of his exalted virtue, and his love of liberty, he, with a firmness of mind (only becoming so great a man) caused their heads to be struck off in his own presence, and when he observed that his rigid virtue caused a sort of horror among the people, it is observed he only said, "My fellow citizens, do not think that this proceeds from any want of natural affection no, the death of the sons of Brutus can affect Brutus only, but the loss of liberty will affect my country"

Thus highly was liberty esteemed in those days that a father could sacrifice his sons to save his country. But why do I go to heathen Rome to bring instances of the love of liberty? The best blood in Britain has been shed in the cause of liberty, and the freedom we enjoy at this day may be said to be (in a great measure) owing to the glorious stand the famous Hampden, and other of our countrymen, made against the arbitrary demands and illegal impositions of the times in which they lived, who rather than give up the rights of Englishmen, and submit to pay an illegal tax, of no more, I think, than 3 shillings, resolved to undergo, and for the liberty of their country did undergo, the greatest extremities, in that arbitrary and terrible Court of Star Chamber, to whose arbitrary proceedings (it being composed of the principal men of the realm and calculated to support arbitrary government) no bounds or limits could be set, nor could any other hand remove the evil but a parliament.

Power may justly be compared to a great river, while kept within its due bounds, it is both beautiful and useful, but when it overflows its banks, it is then too impetuous to be stemmed, it bears down all before it, and brings destruction and desolation wherever it comes. If, then, this is the nature of power, let us at least do our duty, and like wise men (who value freedom) use our utmost care to support liberty, the only bulwark against lawless power, which in all ages has sacrificed to its wild lust and boundless ambition the blood of the best men that ever lived.

I hope to be pardoned, Sir, for my zeal upon this occasion, it is an old and wise caution that when our neighbor's house is on fire, we ought to take care of our own. For though, blessed be God, I live in a government where liberty is well understood and freely enjoyed, yet experience has shown us all (I'm sure it has to me) that a bad precedent in one government is soon set up for an authority in another, and therefore I cannot but think it mine,

and every honest man's duty, that (while we pay all due obedience to men in authority) we ought at the same time to be upon our guard against power, wherever we apprehend that it may affect ourselves or our fellow-subjects.

I am truly very unequal to such an undertaking on many accounts. And you see I labor under the weight of many years, and am borne down with great infirmities of body, yet old and weak as I am, I should think it my duty, if required, to go to the utmost part of the land where my service could be of any use in assisting to quench the flame of prosecutions upon informations, set on foot by the government, to deprive a people of the right of remonstrating (and complaining too) of the arbitrary attempts of men in power. Men who injure and oppress the people under their administration provoke them to cry out and complain, and then make that very complaint the foundation for new oppressions and prosecutions. I wish I could say there were no instances of this kind. But to conclude the question before the court and you gentlemen of the jury is not of small nor private concern, it is not the cause of the poor printer, nor of New York alone, which you are now trying. No! It may in its consequence affect every freeman that lives under a British government on the main of America. It is the best cause. It is the cause of liberty, and I make no doubt but your upright conduct, this day, will not only entitle you to the love and esteem of your fellow-citizens, but every man who prefers freedom to a life of slavery will bless and honor you, as men who have baffled the attempt of tyranny, and by an impartial and uncorrupt verdict have laid a noble foundation for securing to ourselves, our posterity, and our neighbors, that to which nature and the laws of our country have given us a right—the liberty both of exposing and opposing arbitrary power (in these parts of the world, at least) by speaking and writing truth.

1720 ~ *Jonathan Mayhew* ~ 1766

AMONG the most liberal of 18th Century American clergymen was Jonathan Mayhew, born on Martha's Vineyard, where his father, Experience Mayhew, had distinguished himself as an Indian missionary. Jonathan was graduated from Harvard in 1744 and was ordained minister at the West Church in Boston in 1747. Prominent conservative ministers, in protest against his ordination, did not attend. A pioneer Unitarian, he attacked the five cardinal points of Calvinism, opposed equally the Great Awakening and the establishment of an Anglican episcopate in the colonies, defended the right of revolution, and fomented feeling against the Stamp Act. Between 1749 and 1766, the year of his death, he published a long series of sermons. One of the most influential on later revolutionary thought and sentiment was the *Discourse Concerning Unlimited Submission and Non-Resistance to the Higher Powers*, delivered January 30, 1750, the anniversary day of the execution of Charles I, and printed at Boston in that same year.

[The following selection from this sermon has been modernized by the editors.]

From
DISCOURSE CONCERNING
UNLIMITED SUBMISSION
[1750]

IF WE calmly consider the nature of the thing itself, nothing can well be imagined more directly contrary to common sense than to suppose that millions of people should be subjected to the arbitrary, precarious pleasure of one single man—who has naturally no superiority over them in point of authority—so that their estates, and everything that is valuable in life, and even their lives also, shall be absolutely at his disposal, if he happens to be wanton and capricious enough to demand them. What unprejudiced man can think that God made *all* to be thus subservient to the lawless pleasure and frenzy of *one*, so that it shall always be a sin to resist him? Nothing but the most plain and express revelation from heaven could make a sober, impartial man believe such a monstrous, unaccountable doctrine, and, indeed, the thing itself appears so shocking, so out of

all proportion, that it may be questioned whether all the miracles that ever were wrought could make it credible that this doctrine really came from God. At present there is not the least syllable in Scripture which gives any countenance to it. The hereditary, indefeasible, divine right of kings, and the doctrine of non-resistance, which is built upon the supposition of such a right, are altogether as fabulous and chimerical as transubstantiation, or any of the most absurd reveries of ancient or modern visionaries. These notions are fetched neither from divine revelation nor human reason, and, if they are derived from neither of those sources, it is not much matter from whence they come or whither they go. Only it is a pity that such doctrines should be propagated in society, to raise factions and rebellions, as we see they have, in fact, been, both in the last and in the present reign.

But, then, if unlimited submission and passive obedience to the higher powers, in all possible cases, be not a duty, it will be asked, "How far are we obliged to submit?"

If we may innocently disobey and resist in some cases, why not in all? Where shall we stop? What is the measure of our duty? This doctrine tends to the total dissolution of civil government, and to introduce such scenes of wild anarchy and confusion as are more fatal to society than the worst of tyranny."

After this manner some men object, and, indeed, this is the most plausible thing that can be said in favor of such an absolute submission as they plead for. But the worst, or, rather, the best of it is, that there is very little strength or solidity in it, for similar difficulties may be raised with respect to almost every duty of natural and revealed religion. To instance only in two, both of which are near akin, and indeed exactly parallel to the case before us: it is unquestionably the duty of children to submit to their parents, and of servants to their masters, but no one asserts that it is their duty to obey and submit to them in all supposable cases, or universally a sin to resist them. Now, does this tend to subvert the just authority of parents and masters, or to introduce confusion and anarchy into private families? No. How, then, does the same principle tend to unhinge the government of that larger family and body politic? We know, in general, that children and servants are obliged to obey their parents and masters respectively, we know also, with equal certainty, that they are not obliged to submit to them in all things without exception, but may, in some cases, reasonably, and therefore innocently, resist them. These principles are acknowledged upon all hands, whatever difficulty there may be in fixing the exact limits of submission. Now, there is at least as much difficulty in stating the measure of duty in these two cases as in the case of rulers and subjects; so that this is really no objection—at least, no reasonable one—against resistance to the higher powers. Or, if it is one, it will hold equally against resistance in the other cases mentioned. It is indeed true, that turbulent, vicious-minded men may take occasion,

from this principle that their rulers may in some cases be lawfully resisted, to raise factions and disturbances in the state, and to make resistance where resistance is needless, and therefore sinful. But is it not equally true that children and servants, of turbulent, vicious minds, may take occasion, from this principle that parents and masters may in some cases be lawfully resisted, to resist when resistance is unnecessary, and therefore criminal? Is the principle, in either case, false in itself merely because it may be abused, and applied to legitimate disobedience and resistance in those instances to which it ought not to be applied? According to this way of arguing, there will be no true principles in the world, for there are none but what may be wrested and perverted to serve bad purposes, either through the weakness or wickedness of men.

A people, really oppressed in a great degree by their sovereign, cannot well be insensible when they are so oppressed, and such a people—if I may allude to an ancient fable—have, like the hesperian fruit, a dragon for their protector and guardian.¹ Nor would they have any reason to mourn if some Hercules should appear to dispatch him. For a nation thus abused to arise unanimously and resist their prince, even to the dethroning him, is not criminal, but a reasonable way of vindicating their liberties and just rights: it is making use of the means, and the only means, which God has put into their power for mutual and self defence. And it would be highly criminal in them not to make use of this means. It would be stupid tameness and unaccountable folly for whole nations to suffer *one* unreasonable, ambitious, and cruel man to wanton and riot in their misery. And in such a case, it would,

¹ In Greek mythology, the golden apples which Juno had received as a wedding present from the goddess of Earth were given for safekeeping to the daughters of Hesperis and guarded by a dragon. One of the labors of Hercules was to get these apples by slaying the dragon.

of the two, be more rational to suppose that they that did not resist, than that they who did, would receive to themselves damnation

And this naturally brings us to make some reflections upon the resistance which was made, about a century since, to that unhappy King Charles I, and upon the anniversary of his death This is a point which I should not have concerned myself about, were it not that some men continue to speak of it, even to this day, with a great deal of warmth and zeal, and in such a manner as to undermine all the principles of liberty, whether civil or religious, and to introduce the most abject slavery both in church and state—so that it is become a matter of universal concern

For what reason, then, was the resistance to King Charles made? The general answer to this inquiry is, that it was on account of the tyranny and oppression of his reign Not a great while after his accession to the throne, he married a French Catholic, and with her seemed to have wedded the politics, if not the religion of France, also For afterwards, during a reign, or, rather, a tyranny of many years, he governed in a perfectly wild and arbitrary manner, paying no regard to the constitution and the laws of the kingdom, by which the power of the crown was limited, or to the solemn oath which he had taken at his coronation It would be endless, as well as needless, to give a particular account of all the illegal and despotic measures which he took in his administration—partly from his own natural lust of power, and partly from the influence of wicked counsellors and ministers He committed many illustrious members of both Houses of Parliament to the Tower for opposing his arbitrary schemes He levied many taxes upon the people without consent of Parliament, and then imprisoned great numbers of the principal merchants and gentry for not paying them He erected, or at least revived, several arbitrary courts, in which the most unheard-of

barbarities were committed with his knowledge and approbation He supported that more than fiend, Archbishop Laud, and the clergy of his stamp, in all their church-tyranny and hellish cruelties He authorized a book in favor of sports upon the Lord's day, and several clergymen were persecuted by him and the mentioned *pious* bishop for not reading it to the people after divine service When the Parliament complained to him of the arbitrary proceedings of his corrupt ministers, he told that august body, in a rough, domineering, unprincely manner, that he wondered why any one should be so foolish and insolent as to think that he would part with the meanest of his servants upon their account He refused to call any Parliament at all for the space of twelve years together, during all which time he governed in an absolute, lawless, and despotic manner He took all opportunities to encourage the Papists, and to promote them to the highest offices of honor and trust He (probably) abetted the horrid massacre in Ireland, in which two hundred thousand Protestants were butchered by the Roman Catholics He sent a large sum of money, which he had raised by his arbitrary taxes, into Germany, to raise foreign troops, in order to force more arbitrary taxes upon his subjects He not only, by a long series of actions, but also in plain terms, asserted an absolute, uncontrollable power—saying, even, in one of his speeches to Parliament, that, as it was blasphemy to dispute what God might do, so it was sedition in subjects to dispute what the king might do! Towards the end of his tyranny he came to the House of Commons, with an armed force, and demanded five of its principal members to be delivered up to him, and this was a prelude to that unnatural war which he soon after levied against his own dutiful subjects, whom he was bound, by all the laws of honor, humanity, piety, and, I might add, of interest also, to defend and cherish with a paternal affection I have only time to hint at these facts in a general way, all which,

and many more of the same tenor, may be proved by good authorities. So that the figurative language which St John uses concerning the just and beneficent deeds of our blessed Saviour may be applied to the unrighteous and execrable deeds of this prince, viz. "And there are also many other things which 'King Charles' did, the which, if they should be written every one, I suppose that even the world itself would not contain the books that should be written." Now, it was on account of King Charles' thus assuming a power above the laws, in direct contradiction to his coronation oath, and governing, the greatest part of his time, in the most arbitrary, oppressive manner—it was upon this account that resistance was made to him, which at length issued in the loss of his crown, and of that head which was unworthy to wear it.

But by whom was this resistance made? Not by a private junto, not by a small seditious party, not by a few desperadoes, who to mend their fortunes would embroil the state, but by the Lords and Commons of England. It was they that almost unanimously opposed the king's measures for overturning the constitution, and changing that free and happy government into a wretched, absolute monarchy. It was they that, when the king was about levying forces against his subjects in order to make himself absolute, commissioned officers, and raised an army to defend themselves and the public, and it was they that maintained the war against him all along, till he was made a prisoner. This is indisputable, though it was not, properly speaking, the Parliament, but the army, which put him to death afterwards. And it ought to be freely acknowledged that most of their proceeding, in order to get this matter effected, and particularly the court by which the king was at last tried and condemned, was little better than a mere mockery of justice.

The next question which naturally arises is, whether this resistance which was made to the king by the Parliament was prop-

erly rebellion or not? The answer to which is plain—that it was not, but a most righteous and glorious stand, made in defence of the natural and legal rights of the people, against the unnatural and illegal encroachments of arbitrary power. Nor was this a rash and too sudden opposition. The nation had been patient under the oppressions of the crown, even to long-suffering, for a course of many years, and there was no rational hope of redress in any other way. Resistance was absolutely necessary, in order to preserve the nation from slavery, misery, and ruin. And who so proper to make this resistance as the Lords and Commons—the whole representative body of the people—guardians of the public welfare, and each of which was, in point of legislation, vested with an equal, coordinate power with that of the crown? Here were two branches of the legislature against one, two, which had law and equity and the constitution on their side, against one which was impiously attempting to overturn law and equity and the constitution, and to exercise a wanton, licentious sovereignty over the properties, consciences, and lives of all the people—such a sovereignty as some inconsiderately ascribe to the Supreme Governor of the world. I say, inconsiderately, because God himself does not govern in an absolutely arbitrary and despotic manner. The power of this almighty King—I speak it not without caution and reverence—the power of this almighty King is limited by law, not indeed by acts of Parliament, but by the eternal laws of truth, wisdom, and equity, and the everlasting tables of right reason—tables that cannot be repealed, or thrown down and broken like those of Moses. But King Charles set himself up above all these, as much as he did above the written laws of the realm, and made mere humor and caprice, which are no rule at all, the only rule and measure of his administration. And now is it not perfectly ridiculous to call resistance to such a tyrant by the name of *rebellion*?—the grand rebellion?

1735 ~ *John Adams* ~ 1826

JOHN ADAMS, born at Braintree, Massachusetts, was graduated from Harvard in 1755, taught school for a while, then became a lawyer, practicing first in Braintree, later in Boston. He was the author of Braintree's protest against the Stamp Act, this document served as a model for other Massachusetts towns to follow. He served in the State Assembly and the Executive Council, belonged to the first and second Continental Congresses, and was one of the signers of the Declaration of Independence, having been on the committee charged with its preparation. He rendered diplomatic service in Paris, in the Netherlands, in the peace negotiations with England, and as minister to England from 1785 to 1788. Becoming the first Vice-president of the United States in 1789, he succeeded Washington as President in 1797. Defeated for re-election in the Federalist debacle of 1800, he lived in retirement at Braintree, taking some part in the politics of Massachusetts, reading widely, and writing to a host of correspondents. He died at Quincy, Massachusetts.

[One of the most profound and lucid of early American political philosophers, he published extensively, some of his most important books being the *Defence of the Constitutions of Government of the United States* in three volumes, 1787-88, and *Discourses of Davila*, 1805. In August, 1765, he published in the *Boston Gazette* four essays protesting against the Stamp Act, these were also published in the *London Chronicle*. They appeared as a single article entitled "Dissertation on the Canon and Feudal Law" in the collection, *The True Sentiments of America*, London, 1768. The text of the present selection is from his *Works*, Boston, 1851.]

From

DISSERTATION ON THE CANON
AND THE FEUDAL LAW

[1768 (written 1765)]

"IGNORANCE and inconsideration are the two great causes of the ruin of mankind." This is an observation of Dr. Tillotson, with relation to the interest of his fellow men in a future and immortal state. But it is of equal truth and importance if applied to the happiness of men in society, on this side the grave. In the earliest ages of the world, absolute monarchy seems to

have been the universal form of government. Kings, and a few of their great counsellors and captains, exercised a cruel tyranny over the people, who held a rank in the scale of intelligence, in those days, but little higher than the camels and elephants that carried them and their engines to war.

By what causes it was brought to pass that the people in the middle ages became more intelligent in general would not, perhaps, be possible in these days to discover. But the fact is certain; and wherever a general knowledge and sensibility have prevailed among the people, arbitrary government and every kind of oppression have

lessened and disappeared in proportion. Man has certainly an exalted soul, and the same principle in human nature—that aspiring, noble principle founded in benevolence, and cherished by knowledge, I mean the love of power, which has been so often the cause of slavery—has, whenever freedom has existed, been the cause of freedom. If it is this principle that has always prompted the princes and nobles of the earth, by every species of fraud and violence to shake off all the limitations of their power, it is the same that has always stimulated the common people to aspire at independency, and to endeavor at confining the power of the great within the limits of equity and reason.

The poor people, it is true, have been much less successful than the great. They have seldom found either leisure or opportunity to form a union and exert their strength, ignorant as they were of arts and letters, they have seldom been able to frame and support a regular opposition. This, however, has been known by the great to be the tempter of mankind, and they have accordingly labored, in all ages, to wrest from the populace, as they are contemptuously called, the knowledge of their rights and wrongs, and the power to assert the former or redress the latter. I say RIGHTS, for such they have, undoubtedly, antecedent to all earthly government—*Rights*, that cannot be repealed or restrained by human laws—*Rights*, derived from the great Legislator of the universe.

Since the promulgation of Christianity, the two greatest systems of tyranny that have sprung from this original are the canon and the feudal law. The desire of dominion, that great principle by which we have attempted to account for so much good and so much evil, is, when properly restrained, a very useful and noble movement in the human mind. But when such restraints are taken off, it becomes an encroaching, grasping, restless, and ungovernable power. Numberless have been the systems of iniquity contrived by the

great for the gratification of this passion in themselves, but in none of them were they ever more successful than in the invention and establishment of the canon and the feudal law.

By the former of these, the most refined, sublime, extensive, and astonishing constitution of policy that ever was conceived by the mind of man was framed by the Romanish clergy for the aggrandisement of their own order. All the epithets I have here given to the Romish policy are just, and will be allowed to be so when it is considered, that they even persuaded mankind to believe, faithfully and undoubtedly, that God Almighty had entrusted them with the keys of heaven, whose gates they might open and close at pleasure, with a power of dispensation over all the rules and obligations of morality, with authority to license all sorts of sins and crimes, with a power of procuring or withholding the rain of heaven and the beams of the sun, with the management of earthquakes, pestilence, and famine, nay, with the mysterious, awful, incomprehensible power of creating out of bread and wine the flesh and blood of God himself. All these opinions they were enabled to spread and rivet among the people by reducing their minds to a state of sordid ignorance and staring timidity, and by infusing into them a religious horror of letters and knowledge. Thus was human nature chained fast for ages in a cruel, shameful, and deplorable servitude to him, and his subordinate tyrants, who, it was foretold, would exalt himself above all that was called God, and that was worshipped.

In the latter we find another system, similar in many respects to the former, which, although it was originally formed, perhaps, for the necessary defence of a barbarous people against the inroads and invasions of her neighboring nations, yet for the same purposes of tyranny, cruelty, and lust, which had dictated the canon law, it was soon adopted by almost all the princes of Europe, and wrought into the constitutions of their government. It was

originally a code of laws for a vast army in a perpetual encampment. The general was invested with the sovereign propriety of all the lands within the territory. Of him, as his servants and vassals, the first rank of his great officers held the lands, and in the same manner the other subordinate officers held of them, and all ranks and degrees held their lands by a variety of duties and services, all tending to bind the chains the faster on every order of mankind. In this manner the common people were held together in herds and clans in a state of servile dependence on their lords, bound, even by the tenure of their lands, to follow them, whenever they commanded, to their wars, and in a state of total ignorance of everything divine and human, excepting the use of arms and the culture of their lands.

But another event still more calamitous to human liberty was a wicked confederacy between the two systems of tyranny above described. It seems to have been even stipulated between them, that the temporal grandees should contribute everything in their power to maintain the ascendancy of the priesthood, and that the spiritual grandees in their turn, should employ their ascendancy over the consciences of the people, in impressing on their minds a blind, implicit obedience to civil magistracy.

Thus, as long as this confederacy lasted, and the people were held in ignorance, liberty, and with her, knowledge and virtue too, seem to have deserted the earth, and one age of darkness succeeded another, till God in his benign providence raised up the champions who began and conducted the Reformation. From the time of the Reformation to the first settlement of America, knowledge gradually spread in Europe, but especially in England, and in proportion as that increased and spread among the people, ecclesiastical and civil tyranny, which I use as synonymous expressions for the canon and feudal laws, seem to have lost their strength and weight. The people grew more and more sensible of

the wrong that was done them by these systems, more and more impatient under it, and determined at all hazards to rid themselves of it, till at last, under the execrable race of the Stuarts, the struggle between the people and the confederacy aforesaid of temporal and spiritual tyranny, became formidable, violent, and bloody.

It was this great struggle that peopled America. It was not religion alone, as is commonly supposed, but it was a love of universal liberty, and a hatred, a dread, a horror, of the infernal confederacy before described, that projected, conducted, and accomplished the settlement of America.

We have been afraid to think. We have felt a reluctance to examining into the grounds of our privileges, and the extent to which we have an indisputable right to demand them, against all the power and authority on earth. And many who have not scrupled to examine for themselves have yet for certain prudent reasons been cautious and diffident of declaring the result of their inquiries.

The cause of this timidity is perhaps hereditary, and to be traced back in history as far as the cruel treatment the first settlers of this country received, before their embarkation for America, from the government at home. Everybody knows how dangerous it was to speak or write in favor of anything, in those days, but the triumphant system of religion and politics. And our fathers were particularly the objects of the persecutions and proscriptions of the times. It is not unlikely, therefore, that although they were inflexibly steady in refusing their positive assent to anything against their principles, they might have contracted habits of reserve, and a cautious diffidence of asserting their opinions publicly. These habits they probably brought with them to America, and have transmitted down to us. Or we may possibly account for this appearance by the great affection and veneration Americans have always entertained for the country from whence they sprang, or by the quiet temper for which they have been remark-

able, no country having been less disposed to discontent than this, or by a sense they have that it is their duty to acquiesce under the administration of government, even when in many smaller matters grievous to them, and until the essentials of the great compact are destroyed or invaded. These peculiar causes might operate upon them, but without these, we all know that human nature itself, from indolence, modesty, humanity, or fear, has always too much reluctance to a manly assertion of its rights. Hence, perhaps, it has happened that nine tenths of the species are groaning and gasping in misery and servitude.

But whatever the cause has been, the fact is certain, we have been excessively cautious of giving offence by complaining of grievances. And it is as certain, that American governors, and their friends, and all the crown officers, have availed themselves of this disposition in the people. They have prevailed on us to consent to many things which were grossly injurious to us, and to surrender many others, with voluntary tameness, to which we had the clearest right. Have we not been treated, formerly, with abominable insolence, by officers of the navy? I mean no insinuation against any gentleman now on this station, having heard no complaint of any one of them to his dishonor. Have not some generals from England treated us like servants, nay, more like slaves than like Britons? Have we not been under the most ignominious contribution, the most abject submission, the most supercilious insults, of some custom-house officers? Have we not been trifled with, brow-beaten, and trampled on, by former governors, in a manner, which no king of England since James the Second has dared to indulge towards his subjects?

Let us take it for granted that the same great spirit which once gave Cæsar so warm a reception, which denounced hostilities against John till Magna Charta was signed, which severed the head of Charles the First from his body, and drove James the Second from his kingdom, the same

great spirit (may heaven preserve it till the earth shall be no more) which first seated the great grandfather of his present most gracious majesty on the throne of Britain,—is still alive and active and warm in England, and that the same spirit in America, instead of provoking the inhabitants of that country, will endear us to them for ever, and secure their good-will.

This spirit, however, without knowledge, would be little better than a brutal rage. Let us tenderly and kindly cherish, therefore, the means of knowledge. Let us dare to read, think, speak, and write. Let every order and degree among the people rouse their attention and animate their resolution. Let them all become attentive to the grounds and principles of government, ecclesiastical and civil. Let us study the law of nature, search into the spirit of the British constitution, read the histories of ancient ages, contemplate the great examples of Greece and Rome, set before us the conduct of our British ancestors, who have defended for us the inherent rights of mankind against foreign and domestic tyrants and usurpers, against arbitrary kings and cruel priests, in short, against the gates of earth and hell. Let us read and recollect and impress upon our souls the views and ends of our more immediate forefathers, in exchanging their native country for a dreary, inhospitable wilderness. Let us examine into the nature of that power, and the cruelty of that oppression, which drove them from their homes. Recollect their amazing fortitude, their bitter sufferings—the hunger, the nakedness, the cold, which they patiently endured—the severe labors of clearing their grounds, building their houses, raising their provisions, amidst dangers from wild beasts and savage men, before they had time or money or materials for commerce. Recollect the civil and religious principles and hopes and expectations which constantly supported and carried them through all hardships with patience and resignation. Let us recollect it was liberty, the hope of liberty for themselves and us and

ours, which conquered all discouragements, dangers, and trials. In such researches as these, let us all in our several departments cheerfully engage—but especially the proper patrons and supporters of law, learning, and religion!

Let the pulpit resound with the doctrines and sentiments of religious liberty. Let us hear the danger of thralldom to our consciences from ignorance, extreme poverty, and dependence, in short, from civil and political slavery. Let us see delineated before us the true map of man. Let us hear the dignity of his nature, and the noble rank he holds among the works of God—that consenting to slavery is a sacrilegious breach of trust, as offensive in the sight of God as it is derogatory from our own honor or interest or happiness—and that God Almighty has promulgated from heaven, liberty, peace, and good-will to man!

Let the bar proclaim “the laws, the rights, the generous plan of power” delivered down from remote antiquity—inform the world of the mighty struggles and numberless sacrifices made by our ancestors in defence of freedom. Let it be known that British liberties are not the grants of princes or parliaments, but original rights, conditions of original contracts, coequal with prerogative and coeval with government, that many of our rights are inherent and essential, agreed on as maxims, and established as preliminaries, even before a parliament existed. Let them search for the foundations of British laws and government in the frame of human nature, in the constitution of the intellectual and moral world. There let us see that truth, liberty, justice, and benevolence are its everlasting basis, and if these could be removed, the superstructure is overthrown of course.

Let the colleges join their harmony in the same delightful concert. Let every declamation turn upon the beauty of liberty and virtue, and the deformity, turpitude, and malignity of slavery and vice. Let the public disputations become researches into the grounds and nature and

ends of government, and the means of preserving the good and demolishing the evil. Let the dialogues, and all the exercises, become the instruments of impressing on the tender mind, and of spreading and distributing far and wide, the ideas of right and the sensations of freedom.

In a word, let every sluice of knowledge be opened and set a-flowing. The encroachments upon liberty in the reigns of the first James and the first Charles, by turning the general attention of learned men to government, are said to have produced the greatest number of consummate statesmen which has ever been seen in any age or nation. The Brookes, Hampdens, Vanes, Seldens, Miltons, Nedhams, Harringtons, Nevilles, Sidneys, Lockes, are all said to have owed their eminence in political knowledge to the tyrannies of those reigns.¹ The prospect now before us in America ought in the same manner to engage the attention of every man of learning to matters of power and of right, that we may be neither led nor driven blindfolded to irretrievable destruction. Nothing less than this seems to have been meditated for us, by somebody or other in Great Britain. There seems to be a direct and formal design on foot, to enslave all America. This, however, must be done by degrees. The first step that is intended seems to be an entire subversion of the whole system of our fathers by the introduction of the canon and feudal law into America. The canon and feudal systems, though greatly mutilated in England, are not yet destroyed. Like the temples and palaces in which the great contrivers of them once worshipped and inhabited, they exist in

¹ Robert Greville, Lord Brooke (1608-1643), John Hampden (1594-1643), Sir Henry Vane the elder (1589-1655) and Sir Henry Vane the younger (1613-1662), John Selden (1584-1654), John Milton (1608-1674), Marchamont Nedham (1620-1678), James Harrington (1611-1677); Sir Henry Neville (1564?-1615) and his grandson, Henry Neville (1620-1694), Algernon Sidney (1622-1683); John Locke (1632-1704).

runs, and much of the domineering spirit of them still remains. The designs and labors of a certain society, to introduce the former of them into America, have been well exposed to the public by a writer of great abilities,² and the further attempts to the same purpose, that may be made by that society, or by the ministry or parliament, I leave to the conjectures of the thoughtful. But it seems very manifest from the Stamp Act itself that a design is formed to strip us in a great measure of the means of knowledge, by loading the press, the colleges, and even an almanac and a newspaper, with restraints and duties, and to introduce the inequalities and dependencies of the feudal system, by taking from the poorer sort of people all their little subsistence, and conferring it on a set of stamp officers, distributors, and then deputies. But I must proceed no further at present. The sequel, whenever I

shall find health and leisure to pursue it, will be a "disquisition of the policy of the stamp act." In the meantime, however, let me add—these are not the vapors of a melancholy mind, nor the effusions of envy, disappointed ambition, nor of a spirit of opposition to government, but the emanations of a heart that burns for its country's welfare. No one of any feeling, born and educated in this once happy country, can consider the numerous distresses, the gross indignities, the barbarous ignorance, the haughty usurpations, that we have reason to fear are meditating for ourselves, our children, our neighbors, in short, for all our countrymen and all their posterity, without the utmost agonies of heart and many tears.

² The reference is to Jonathan Mayhew's opposition to the attempt to establish an Anglican Episcopate in the colonies.

1738 ~ Jonathan Boucher ~ 1804

THE LOYALISTS were those Americans who, in the face of revolutionary sentiment and feeling, insisted that the colonies' obligations to England were more important than their rights. The label "Tories" was also applied to them in derogation. Kenneth Roberts' *Oliver Wiswell*, 1940, is a brilliant historical novel sympathetically treating the Loyalists.

Among the clergymen representing the Loyalist point of view, none was more learned and eloquent than Jonathan Boucher. He was thus the antithesis of Jonathan Mayhew. Boucher was born in England and came to America in 1759. Ordained priest by the Bishop of London in 1762, he served as an Anglican rector in Virginia and Maryland. His sermons were so anti-revolutionary in spirit that a body of armed men forbade him on one occasion to enter his pulpit; thereafter he preached with a pair of loaded pistols on the cushion before him. He was burned in effigy and had to leave for England in September, 1775. He remained there the rest of his life, serving as vicar of Epsom.

Thirteen of the sermons he preached in America between 1763 and 1775 were published in a volume entitled *A View of the Causes and Consequences of the American Revolution*, London, 1797. No more thorough an attack on

the natural rights philosophy of the American Revolution appeared in English during the 18th Century. The sermons read as if they were the work of some 17th Century aristocrat brought up on the doctrines of Sir Robert Filmer's *Patruarcha* and the great Anglo-Catholic Caroline divines. Boucher had his sermons published at this late date because he hoped that, with the Revolution an accomplished fact, his philosophy would be pondered with more objectivity and might provide the American Federalists with arguments to combat the rising tide of Jeffersonian Republicanism.

It is significant that he dedicated the work to George Washington, who had at one time been his neighbor and friend and with whom he had exchanged numerous letters. Thackeray read these letters with some profit when he wrote his novel, *The Virginians*. Boucher also left a highly interesting *Autobiography* and compiled a *Glossary of Archaic and Provincial Words*.

[The following selections have been modernized and provided with titles by the editors.]

RELIGIOUS AND POLITICAL ENTHUSIASM

[1797 (written 1775?)]

ENTHUSIASTS conceive it to be the commencement of a millennium whilst others, of a less sanguine temperament, though they cannot so far give up their common sense as to imagine that these blind guides can possibly lead their still blinder followers to anything that is really good, yet plead for their being let alone and suffered to pursue their own projects in their own way, from a persuasion that they are too insignificant to do any harm, and that the taking any public notice of them is giving them too much consequence, and pursuing that plan which of all others is best calculated to render them still more popular. To this common and trite argument it may be answered that this is not a case in which there can be any neutrality: those who are not for the Church are against it, and if Micah of old was guilty of a great crime,¹ these men cannot be innocent. Nor is there more real weight in the suggestions of cautious discretion, that it is best not to notice erroneous opinions and mischievous persons, lest censure should raise them into consequence. Neither

moralists, nor preachers, nor legislators, in denouncing vices, regard who the persons are that are guilty of them: were the case otherwise, and were it true that vice, by being prohibited, becomes popular, moralists and preachers, and even legislators, might be charged with being the authors, rather than the correctors, of immorality and impiety.

What evils this prevalence of sectarianism, so sudden, so extraordinary, and so general, may portend to the State, I care not to think, recollecting with horror, that just such were the *signs of the times* previous to the grand rebellion in the last century. There is no denying that such disorders indicate a distempered government, just as blotches and boils indicate a bad habit of body. For it has been observed that sects in religion, and parties in politics, generally prevail together. By a sort of mutual action and reaction they produce one another, both, in their turns, becoming causes and effects. Whenever (to use Scripture phraseology) *there is no king in Israel*, that is to say, whenever, through any cause, the reins of government are relaxed, or its energies impeded,

¹ Micah, Hebrew prophet of the 8th Century B.C., cf. Old Testament Book of Micah.

then are mankind tempted to act the part of Micah, that is, to run into parties, and to frame new schemes of religion for themselves. Indeed, sects in Religion and parties in the State originate, in general, from similar principles. A sect is, in fact, a revolt against the authority of the Church, just as a faction is against the authority of the State, or, in other words, a sect is a faction in the Church, as a faction is a sect in the State, and the spirit which refuses obedience to the one is equally ready to resist the other.

POLITICAL PARTIES AND THE DECAY OF EMPIRE

[1797 (written 1775?)]

I AM not conscious that I am of a temper to rail indiscriminately against my own times. In many respects they merit much commendation, perhaps beyond all that have preceded them. Through a deference to public opinion, which abhors everything that is monstrous in manners, through the influence of fashion and habit, our character as a people is not marked by any prevailing propensity to commit great and flagrant crimes; but, I own, I hardly know how far such negative kind of merit is entitled to praise, at most, it seems to be but the virtues of that particular class of bees which in autumn are called drones, and which are innoxious only because they are impotent. However commendable it is in the character of a people that they are not marked by any great and flagrant vices, we are entitled to this commendation, if at all, by accident rather than by design, that is to say, because, fortunately for us, it is not fashionable to be eminently vicious, whilst our equal deficiency in any great virtues is in no slight degree studied and deliberate. There never was a time when a whole people were so little governed by settled good principles. Nor is this unconcern about good principles confined to matters which relate to government. By

a natural gradation in error, it pervades the whole compass of our conduct. Wise and observing persons see with sorrow that it has gained a footing in, and materially injured, every department of society. Parents complain, and not without reason, that children are no longer so respectful and dutiful as they ought to be, and as they used to be, whilst children might, with not less reason, object to their parents still more culpable instances of a failure of duty. Both employers and the employed, much to their mutual shame and inconvenience, no longer live together with anything like attachment and cordiality on either side. And the laboring classes, instead of regarding the rich as their guardians, patrons, and benefactors, now look on them as so many over-grown colossuses whom it is no demerit in them to wrong. A still more general (and it is to be feared not less just) topic of complaint is that the lower classes, instead of being industrious, frugal, and orderly, (virtues so peculiarly becoming their station in life) are become idle, improvident, and dissolute. And, however much it is to be regretted by all ranks, it does not admit of a doubt that this dissoluteness in the inferior members of the community may be traced to some corresponding profligacy in the higher orders. The manners of a community may be regarded as one great chain, of which persons in superior spheres are but the upper links. The same causes which, in the upper walks of life, lead men of active minds to engage in seditious and factious conspiracies and rebellions, lead those in lower spheres (when not attached as satellites to powerful revolters) to become either drunkards, and unmannerly, and abusive, or else, smugglers, gamblers, and cheats.

But these deviations from rectitude, though by no means inconsiderable in themselves, yet, when comprehensively considered, are but small parts of a great whole. It is in our character, as subjects, that our loss of good principles, and consequent errors in practice, are most manifest and most mischievous. The doctrine of

obedience for conscience sake is (as has just been observed) the great *cornerstone* of all good government, which, whenever any *builder* of constitutions shall be so unwise as to *refuse*, or, not refusing, shall afterwards suffer to be *destroyed*, what can he expect but that the whole fabric should be overturned, and that *on whomsoever it may fall it will grind them to powder?*

Mal-administration, corruption, and tyranny, in those who govern, sap the foundations of all good government, if with less show, yet with hardly less reality, than they are sapped by sedition and rebellion in those who are governed. That it is of great moment carefully to watch the conduct of all administrations is readily admitted, but it is of equal moment to attend with equal care to everything else which relates to legislation and government. Such vigilance, however, is the particular and exclusive duty of no individual member or members of the community, whether in a public or private capacity: it is the common duty of every man in his sphere, and the especial duty of our constitutional guardians, whom we elect for that purpose, though not for that only. This duty they equally discharge, when, in cases where the executive power requires and is entitled to support, they give it support, as when, on a contrary supposition, they oppose and endeavour to counteract measures of which they cannot conscientiously approve. But this neither supposes nor justifies a distinct and united body of systematic opponents, nor indiscriminate opposition: yet, both in the British Parliament, and in our Colonial Assemblies, ever since the system began, there has never wanted a regular corps of members in opposition, as well known and as clearly designated as any of the officers of State. This body of men has far too often opposed, not only particular measures (as every individual member is supposed to do when schemes are patronized either by those entrusted with the administration or others, which such members conceive to be unwise or unjust) but in general all meas-

ures whatever which are supported by the executive power, or by a minister: and what is most alarming is that, in this thwarting and opposing the immediate supporters of government, many instances might be mentioned, in which the Members in Opposition, as they are regularly denominated, have, indirectly at least, taken part with, encouraged, and assisted the avowed enemies of their country: one also of its more certain and constant effects is that, in common with its ministers, government in the abstract is vilified and traduced.

That some good has occasionally been effected by oppositions (which now seem to be as regular appendages to our legislatures, as if they actually were a constitutional and essential part of them) I am far from denying, but I much fear the good that is thus done bears no proportion to the evil: the former at best is uncertain, but not so the latter. As, however, it is no part of my purpose to go into a full discussion of this important question, suffice it for the present to observe (what perfectly corresponds with the sum of this discourse) that one of its certain effects is (as has just been observed) its giving rise to a low and unworthy opinion of government. Hence men of ill-informed or misdirected minds are naturally led, instead of reverencing government, to do all they can to dishonor it. It was this general habit of *speaking evil of dignities, and despising dominion*, which in the last century, more than anything else, engendered and fostered infinite *confusion and every evil work* in the State, and at length produced those *secret conspiracies and open attempts* against the laws, the liberties, and the religion of the land, such as now once more fill the minds of all observing and thinking men with apprehension and awe.

The low opinion of government naturally produces another false and dangerous estimate of things: in proportion as government is degraded, those who depress it exalt themselves. Hence, to be the friend of government, subjects a man to the mortu-

fyng suspicion of being an abject and servile mind, whilst popularity is sure to attach to those who oppose government, or rather perhaps the ministers of government. And hence, too, as flimsy oratory is always most in vogue when sound principles and sound learning are least so, our forest committees, aping the members of our conventions and congresses in their volubility of speech, as well as in their patriotism, harangue not less vehemently on these unvarying topics, the abuses of government, the villainess of those whom they call the tools of government, the disinterestedness of opposition, and the genuine love of liberty which actuates those who conduct opposition. These seem always to have been the favorite topics of that "swollen and turgid elocution," which a Roman writer, distinguished for his elegance, mentions as characteristic of his countrymen in the decline of their empire²

FICTIONS OF THE REVOLUTIONARY MIND

[1797 (written 1775?)]

THIS popular notion, that government was originally formed by the consent or by a compact of the people, rests on, and is supported by, another similar notion, not less popular, nor better founded. This other notion is that the whole human race is born equal, and that no man is naturally inferior, or, in any respect, subjected to another, and that he can be made subject to another only by his own consent. The position is equally ill-founded and false both in its premises and conclusions. In hardly any sense that can be imagined is the position strictly true, but, as applied to the case under consideration, it is demonstrably not true. Man differs from man in everything that can be supposed to lead to supremacy and subjection, *as one star differs from another star in glory*. It was the purpose of the Creator that man should be social but, without government, there

can be no society, nor, without some relative inferiority and superiority, can there be any government. A musical instrument composed of chords, keys, or pipes, all perfectly equal in size and power, might as well be expected to produce harmony, as a society composed of members all perfectly equal to be productive of order and peace. If (according to the idea of the advocates of this chimerical scheme of authority) no man could rightfully *be compelled to come in* and be a member even of a government to be formed by a regular compact, but by his own individual consent, it clearly follows, from the same principles, that neither could he rightfully be made or compelled to submit to the ordinances of any government already formed, to which he has not individually or actually consented. On the principle of equality, neither his parents, nor even the vote of a majority of society (however virtuously and honorably that vote might be obtained) can have any such authority over any man. Neither can it be maintained that acquiescence implies consent, because acquiescence may have been extorted from impotence or incapacity. Even an explicit consent can bind a man no longer than he chooses to be bound. The same principle of equality that exempts him from being governed without his own consent, clearly entitles him to recall and resume that consent whenever he sees fit, and he alone has a right to judge when and for what reasons it may be resumed.

Any attempt, therefore, to introduce this fantastic system into practice would reduce the whole business of social life to the wearisome, confused, and useless task of mankind's first expressing, and then withdrawing, then consent to an endless succession of schemes of government. Governments, though always forming, would never be completely formed for the majority today might be the minority tomorrow,

² As Boucher indicates in his notes, the quotation is from Petronius' *The Satyricon*, but the "Roman writer" referred to is Tacitus, in his *Dialogus de Oratoribus*.

and, of course, that which is now fixed might and would be soon unfixed Mr Locke indeed says that "by consenting with others to make one body-politic under government, a man puts himself under an obligation to every one of that society to submit to the determination of the majority, and to be concluded by it"³ For the sake of the peace of society, it is undoubtedly reasonable and necessary that this should be the case but, on the principles of the system now under consideration, before Mr Locke or any of his followers can have authority to say that it actually is the case, it must be stated and proved that every individual man, on entering into the social compact, did first consent, and declare his consent, to be concluded and bound in all cases by the vote of the majority In making such a declaration, he would certainly consult both his interest and his duty, but at the same time he would also completely relinquish the principle of equality, and eventually subject himself to the possibility of being governed by ignorant and corrupt tyrants Mr Locke himself afterwards disproves his own position respecting this supposed obligation to submit to the "determination of the majority," when he argues that a right of resistance still exists in the governed, for what is resistance but a recalling and resuming the consent heretofore supposed to have been given, and in fact refusing to submit to the "determination of the majority?" It does not clearly appear what Mr Locke exactly meant by what he calls "the determination of the majority" but the only rational and practical public manner of declaring "the determination of the majority" is by law the laws, therefore, in all countries, even in those that are despotically governed, are to be regarded as the declared "determination of a majority" of the members of that community, because, in such cases, even acquiescence only must be looked upon as equivalent to a declaration A right of resistance, therefore, for which Mr Locke contends, is incompatible with the duty of submitting

to the determination of "the majority," for which he also contends

It is indeed impossible to carry into effect any government which, even by compact, might be framed with this reserved right of resistance Accordingly there is no record that any such government ever was so formed If there had, it must have carried the seeds of its decay in its very constitution For, as those men who make a government (certain that they have the power) can have no hesitation to vote that they also have the right to unmake it, and as the people, in all circumstances, but more especially when trained to make and unmake governments, are at least as well disposed to do the latter as the former, it is morally impossible that there should be anything like permanency or stability in a government so formed Such a system, therefore, can produce only perpetual dissensions and contests, and bring back mankind to a supposed state of nature, arming every man's hand, like Ishmael's, against every man, and rendering the world an *aceldama*,⁴ or field of blood—Such theories of government seem to give something like plausibility to the notions of those other modern theorists who regard all governments as invasions of the natural rights of men, usurpations, and tyranny On this principle it would follow, and could not be denied, that government was indeed fundamentally, as our people are sedulously taught it still is, an evil Yet it is to government that mankind owe then having, after their fall and corruption, been again reclaimed, from a state of barbarity and war, to the conveniency and the safety of the social state and it is by means of government that society is still preserved, the weak protected from the strong, and the artless and innocent from the wrongs of proud oppressors It was not without

³ John Locke's *Two Treatises of Government* were published in 1690

⁴ Field purchased with the thirty pieces of silver which were Judas' reward for the betrayal of Christ According to *Acts* 1 18, *Aceldama* was the scene of Judas' suicide.

reason, then, that Mr Locke asserted that a greater wrong cannot be done to prince and people than is done by "propagating wrong notions concerning government"

Ashamed of this shallow device, that government originated in superior strength and violence, another party, hardly less numerous, and certainly not less confident than the former, fondly deduce it from some imaginary compact. They suppose that, in the decline perhaps of some fabulous age of gold, a multitude of human beings, who, like their brother beasts, had hitherto ranged the forests, *without guide, overseer, or ruler*—at length convinced, by experience, of the impossibility of living either alone with any degree of comfort or security, or together in society, with peace, without government, had (in some lucid interval of reason and reflection) met together in a spacious plain, for the express purpose of framing a government. Their first step must have been the transferring to some individual, or individuals, some of those rights which are supposed to have been inherent in each of them of these it is essential to government that they should be divested yet can they not, rightfully, be deprived of them otherwise than by their own consent. Now admitting this whole supposed assembly to be perfectly equal as to rights, yet all agreed as to the propriety of ceding some of them, on what principles of equality is it possible to determine, either who shall relinquish such a portion of his rights, or who shall be invested with such new accessory rights? By asking another to exercise jurisdiction over me, I clearly confess that I do not think myself his equal, and by his consenting to exercise such authority, he also virtually declares that he thinks himself superior. And, to establish this hypothesis of a compact, it is farther necessary that the whole assembly should concur in this opinion—a concurrence so extremely improbable that it seems to be barely possible. The supposition that a large concourse of people, in a rude and imperfect state of society, or even a majority of them, should thus

rationally and unanimously concur to subject themselves to various restrictions, many of them irksome and unpleasant, and all of them contrary to all their former habits, is to suppose them possessed of more wisdom and virtue than multitudes in any instance in real life have ever shown. Another difficulty respecting this notion may yet be mentioned. Without a power of life and death, it will, I presume, be readily admitted that there could be no government. Now, admitting it to be possible that men, from motives of public and private utility, may be induced to submit to many heavy penalties, and even to corporal punishment, inflicted by the sentence of the law, there is an insuperable objection to any man's giving to another a power over his life: this objection is that no man has such a power over his own life, and cannot therefore transfer to another, or to others, be they few or many, on any conditions, a right which he does not himself possess. He only who gave life can give the authority to take it away and as such authority is essential to government, this argument seems very decidedly to prove, not only that government did not originate in any compact, but also that it was originally from God.

This visionary idea of a government by compact was, as Filmer says, "first hatched in the schools, and hath, ever since, been fostered by Papists for good divinity"⁵ For some time, the world seemed to regard it merely as another Utopian fiction, and it was long confined to the disciples of Rome and Geneva, who, agreeing in nothing else, yet agreed in this. In an evil hour it gained admittance into the Church of England, being patronized by her during the civil wars, by "a few miscreants, who were as far from being true Protestants as true subjects." Mankind have listened, and continue to listen to it with a predilection

⁵ Sir Robert Filmer (d 1653) was the author of *Patriarcha, or the Natural Power of Kings*, first published in 1680. The first of Locke's *Two Treatises* is a reply to Filmer's *Patriarcha*.

and partiality, just as they do to various other exceptionable notions, which are unfavorable to true religion and sound morals, merely from imagining that, if such doctrines be true, they shall no longer be subjected to sundry restraints, which, however wholesome and proper, are too often unpalatable to our corrupt natures. What we wish to be true, we easily persuade ourselves is true. On this principle it is not difficult to account for our thus eagerly following these *ignes fatui* of our own fancies or "feelings," rather than the sober steady light of the word of God, which (in this instance as well as in others) lies under this single disadvantage, that it proposes no doctrines which may conciliate our regards by flattering our pride.

If, however, we can ever resolve no longer to be bewildered by these vain imaginations, still the interesting question presses on us, "Where," in the words of Plato, "where shall we look for the origin of government?"⁶ Let Plato himself instruct us. Taught then by this oracle of Heathen wisdom, "we will take our stations there, where the prospect of it is most easy and beautiful." Of all the theories respecting the origin of government with which the world has ever been either puzzled, amused, or instructed, that of the Scriptures alone is accompanied by no insuperable difficulties.

It was not to be expected from an all-wise and all-merciful Creator that, having formed creatures capable of order and rule, he should turn them loose into the world under the guidance only of their own unruly wills, that, like so many wild beasts, they might tear and worry one another in their mad contests for pre-eminence. His purpose from the first, no doubt, was that men should *live godly and sober lives*. But such is the sad estate of our corrupted nature that, ever since the

Fall, we have been averse from good, and prone to evil. We are, indeed, so disorderly and unmanageable that, were it not for the restraints and terrors of human laws, it would not be possible for us to dwell together. But as men were clearly formed for society and to dwell together, which yet they cannot do without the restraints of law, or, in other words, without government, it is fair to infer that government was also the original intention of God, who never decrees the end, without also decreeing the means. Accordingly, when man was made, his Maker did not turn him adrift into a shoreless ocean, without star or compass to steer by. As soon as there were some to be governed, there were also some to govern. and the first man, by virtue of that paternal claim, on which all subsequent governments have been founded, was first invested with the power of government. For we are not to judge of the Scriptures of God as we do of some other writings, and so, where no express precept appears, hastily to conclude that none was given. On the contrary, in commenting on the Scriptures, we are frequently called upon to find out the precept from the practice. Taking this rule, then, for our direction in the present instance, we find that, copying after the fair model of heaven itself, wherein there was government even among the angels, the families of the earth were subjected to rulers, at first set over them by God: *for, there is no power, but of God, the powers that be are ordained of God*. The first father was the first king: and if (according to the rule just laid down) the law may be inferred from the practice, it was thus that all government originated, and monarchy is its most ancient form.

⁶ *Laws*, Book III—Boucher's note

1750 ~ *John Trumbull* ~ 1831

THE TERM "Connecticut Wits" has been applied to a miscellaneous group of writers of that State who came to prominence before, during, and after the American Revolution. The four older members of the group were John Trumbull, Timothy Dwight, David Humphreys, and Joel Barlow. Their juniors were Theodore Dwight, Richard Alsop, Elihu H. Smith, Mason W. Cogswell, and Nathaniel Dwight. Between the "oldsters" and the "youngsters," Lemuel Hopkins, an "oldster" himself, was a kind of connecting link.

Son of a Congregational minister, Trumbull was born at Waterbury, Connecticut, and was graduated from Yale in 1767. He returned in the fall of that year to study for his M.A., which he received in 1770. He was for a while a tutor at Yale and then went to Boston to study law with John Adams. He rose to such eminence in this profession that he became State Attorney for the County of Hartford and a judge of the Superior Court of the State and of its Supreme Court of Errors. He was also Treasurer of Yale, which bestowed upon him the degree of LL.D. in 1818. He removed to Detroit in 1825 to live with his daughter, and died there.

Trumbull's friend, Samuel G. Goodrich, published his *Poetical Works* in two volumes in 1820, but by that time Trumbull's popularity had declined sharply. His two important poems, *The Progress of Dullness*, published in three parts at New Haven in 1772 and 1773, and *M'Fingal*, the first canto of which appeared in 1775 and the complete version of which was issued in four cantos at Hartford in 1782, continued the traditions of English satire, with most obvious indebtedness to Charles Churchill, Swift, Prior, and Butler's *Hudibras*. One of the distinctions of *M'Fingal*, both in its earlier and its later form, is that it adopts an attitude of burlesque detachment toward both the "Whigs" and "Tories" in the Revolutionary struggle. Trumbull himself was a middle-of-the-road "Whig," reserving his keenest thrusts for the "Tories," but being no lover of the kind of radicalism that was associated with Paine, Jefferson, and Freneau.

[The present selection is slightly modernized from the 1820 edition; the title has been supplied by the editors.]

PORTRAIT OF A TORY
[1775]

When Yankees, skilled in martial rule,
First put the British troops to school;
Instructed them in warlike trade,
And new manoeuvres of parade,

The true war-dance of Yankee-reels, 5
And manual exercise of heels,
Made them give up, like saints complete,
The arm of flesh and trust the feet,
And work, like Christians undissembling,
Salvation out, by fear and trembling, 10
Taught Percy fashionable races,

And modern modes of Chevy-Chases ¹
From Boston, in his best array,
Great 'Squire M'Fingal took his way,
And graced with ensigns of renown, 15
Steered homeward to his native town

His high descent our heralds trace
To Ossian's famed Fingalian race
For though their name some part may lack,
Old Fingal spelt it with a Mac, 20
Which great M'Pherson, with submission
We hope will add, the next edition ²

His fathers flourished in the Highlands
Of Scotia's fog-benighted islands,
Whence gained our 'Squire two gifts by
right, 25

Rebellion and the second-sight
Of these the first, in ancient days,
Had gained the noblest palms of praise,
'Gainst kings stood forth and many a
crown'd head

With terror of its might confounded, 30
Till rose a king with potent charm
His foes by goodness to disarm,
Whom ev'ry Scot and Jacobite
Straight fell in love with, at first sight,
Whose gracious speech, with aid of pen-
sions, 35

Hushed down all murmurs of dissensions,
And with the sound of potent metal,
Brought all their blust'ring swarms to
settle, ³

Who rained his ministerial mannas,
Till loud Sedition sung hosannas, 40
The good Lords-Bishops and the Kirk
United in the public work, ⁴
Rebellion from the Northern regions,
With Bute and Mansfield swore alle-
grance, ⁵

And all combined to raze as nuisance, 45
Of church and state, the constitutions,
Pull down the empire, on whose ruins
They meant to edify their new ones,
Enslave th' American wildernesses
And tear the provinces in pieces 50
For these our 'Squire among the valiant'st,
Employed his time and tools and talents;
And in their cause with manly zeal
Used his first virtue, to rebel,

And found this new rebellion pleasing 55
As his old king-destroying treason

Nor less availed his optic sleight,
And Scottish gift of second-sight
No ancient sybil famed in rhyme
Saw deeper in the womb of time, 60
No block in old Dodona's grove, ⁶
Could ever more orac'lar prove
Not only saw he all that was,
But much that never came to pass,
Whereby all prophets far outwent he, 65
Though former days produced a plenty,
For any man with half an eye,
What stands before him may espy,
But optics sharp it needs I ween,
To see what is not to be seen 70
As in the days of ancient fame
Prophets and poets were the same,
And all the praise that poets gain
Is but for what th' invent and feign
So gained our 'Squire his fame by seeing 75
Such things as never would have being
Whence he for oracles was grown
The very tripod of his town
Gazettes no sooner rose a lie in,

¹ Lord Percy commanded the party that was first opposed to the Americans at Lexington. This allusion to the family renown of Chevy-Chase arose from the precipitate manner of his Lordship's quitting the field of battle and returning to Boston.—Trumbull's note

² To Ossian, Gaelic hero of the 3rd century, son of Finn Mac Cool, James Mac-Pherson, the Scottish poet, ascribed his *The Poems of Ossian*, published 1760 and 1762 and including *Fingal, an Epic Poem in Six Books* and *Temora, an Epic Poem in Eight Books*

³ An allusion to the fact that swarming bees may be brought to "settle" by loud beating of tin pans, kettles, or some other sounding metal

⁴ Here Trumbull alludes to the influence in favor of the crown exerted by the established churches of England and Scotland

⁵ John, Earl of Bute, and Lord Mansfield were supporters and officials of George the Third

⁶ Abode of ancient Grecian oracle

But straight he fell to prophesying, 80
 Made dreadful slaughter in his course,
 O'erthrew provincials, foot and horse,
 Brought armies o'er by sudden pressings
 Of Hanoverians, Swiss, and Hessians,
 Feasted with blood his Scottish clan, 85
 And hanged all rebels, to a man,
 Divided then estates and pelf,
 And took a goodly share himself
 All this with spirit energetic,
 He did by second-sight prophetic 90

Thus stored with intellectual riches,
 Skilled was our 'Squire in making speeches,
 Where strength of brain united centers
 With strength of lungs surpassing Sten-
 tor's
 But as some muskets so contrive it, 95
 As oft to miss the mark they drive at,
 And though well aimed at duck or plover,
 Bear wide and kick their owners over
 So fared our 'Squire, whose reas'ning toil
 Would often on himself recoil, 100
 And so much injured more his side,
 The stronger arguments he applied
 As old war-elephants dismayed
 Trod down the troops that came to aid,
 And hurt their own side more in battle 105
 Than less and ordinary cattle
 Yet at town-meetings ev'ry chief
 Pinned faith on great M'Fingal's sleeve,

And as he motioned, all by rote
 Raised sympathetic hands to vote 110

The town, our hero's scene of action,
 Had long been torn by feuds of faction,
 And as each party's strength prevails,
 It turned up different heads or tails,
 With constant rattling in a trice 115
 Showed various sides as oft as dice
 As that famed weaver, wife t'Ulysses,
 By night each day's work picked in pieces,
 And though she stoutly did bestir her,
 Its finishing was ne'er the nearer ⁷ 120
 So did this town with steadfast zeal
 Weave cob-webs for the public weal,
 Which when completed, or before,
 A second vote in pieces tore
 They met, made speeches full long wind-
 ed, 125
 Resolved, protested, and rescinded,
 Addresses signed, then chose committees,
 To stop all drinking of Bohea-teas,
 With winds of doctrine veered about,
 And turned all Whig-committees out 130
 Meanwhile our hero, as their head,
 In pomp the Tory faction led,
 Still following, as the 'Squire should please,
 Successive on, like files of geese

⁷ The reference is to Penelope's strategy
 against her suitors, as set forth in Homer's
Odyssey

1737 ~ Thomas Paine ~ 1809

AS HAS BEEN pointed out in the headnote to the selections from *The Age of Reason* (Book I, Part 2), Paine ranks high as a spokesman for the "pros" of democracy. His major political and economic writings were the product of both the American and the French Revolution.

The first of these revolutions was already well under way when he wrote and issued *Common Sense*. When it appeared on January 10, 1776, almost a year after the battle of Lexington, which was fought on April 19, 1775, most of the arguments which he advanced for independence of the colonies from England

were familiar to intelligent Americans, but he summed them up so cogently and invested them with such emotive appeal that the result was a *tour de force* of propaganda. He was heavily indebted to William Burgh's *Political Disquisitions*, 1773-75, a three-volume English anthology of political thought from the Greeks to Paine's own day.

Signed "Common Sense," *The Crisis* papers were a series of pamphlets in which Paine sought to bolster American morale at successive critical moments of the Revolution. There were sixteen pamphlets in all, thirteen of which were numbered, and they appeared between 1776 and 1783, printed on many kinds of paper and read widely. The selection included here is from *Crisis I*, this number came out at a very dark moment in the early stages of the war. At the battle of Long Island the American army had been turned back in retreat toward Philadelphia, the capital city, Congress fled to Baltimore. In Philadelphia, at the height of this chaos, Paine wrote and issued *Crisis I*.

In 1782 appeared Paine's *Letter to the Abbé Raynal*, on which he had been working at intervals for about a year. One of the French Encyclopedists, the Abbé Guillaume Raynal had written a pamphlet translated as *Observations on the Revolution in America* and read widely in England and America. Paine, while admiring the Abbé's genius for ideas and rhetoric, sought to correct some of his misapprehensions as to the broader rationale behind the American Revolution.

Paine was so intimate a friend of Edmund Burke that he lived at his home for a while after going to England in 1787. In 1790 he wrote to Burke from Paris to inform him on French affairs, and was naturally shocked at Burke's arraignment of France both in his parliamentary speech of February 9, 1790, and in his *Reflections on the Late Revolution in France* of the same year. Part I of *The Rights of Man*, Paine's answer to Burke's *Reflections*, was written in England, Part II in France.

[The following two excerpts from *The Rights of Man* are taken respectively from Part I, 1791, and Part II, 1792.]

Agrarian Justice, here given in its entirety save for a brief appendix, was written in the winter of 1795-96 while Paine was in Paris, and was intended to influence French thought concerning the problem of what should be done about the property of aristocratic *émigrés*. This property was subject to confiscation as the result of laws passed during the Revolution. One radical faction was pressing for a "share-the-land" program, a reactionary or royalist faction had been conspiring to protect the property of the rich and to insure the continuance of inheritance rights. Paine's pamphlet, proposing a middle-of-the-road course, anticipated some of the ideas of English Chartism in the next century and of the American "single tax" reformer, Henry George. [*Agrarian Justice* appeared in both French and English in 1797. See Book I, Part 2, for other selections from Paine's work.]

From
COMMON SENSE .

[1776]

SOME writers have so confounded society with government, as to leave little or no distinction between them, whereas they are not only different, but have different origins. Society is produced by our wants, and government by our wickedness, the former promotes our happiness *positively*, by uniting our affections, the latter *negatively*, by restraining our vices. The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

Society in every state is a blessing, but government, even in its best state, is but a necessary evil, in its worst state, an intolerable one, for when we suffer, or are exposed to the same miseries *by a government*, which we might expect in a country *without government*, our calamity is heightened by reflecting that we furnish the means by which we suffer.

Government, like dress, is the badge of lost innocence: the palaces of kings are built on the ruins of the bowers of paradise. For, were the impulses of conscience clear, uniform, and irresistibly obeyed, man would need no other law-giver, but that not being the case, he finds it necessary to surrender up a part of his property to furnish means for the protection of the rest, and thus he is induced to do by the same prudence which in every other case, advises him out of two evils to choose the least.

Wherefore, security being the true design and end of government, it unanswerably follows, that whatever *form* thereof appears most likely to ensure it to us with the least expense and greatest benefit, is preferable to all others.

In order to give a clear and just idea of the design and end of government, let us suppose a small number of persons set-

tled in some sequestered part of the earth, unconnected with the rest, they will then represent the first peopling of any country, or of the world. In this state of natural liberty, society will be their first thought. A thousand motives will excite them thereto, the strength of one man is so unequal to his wants, and his mind so unfitted for perpetual solitude, that he is soon obliged to seek assistance and relief of another, who in his turn requires the same.

Four or five united would be able to raise a tolerable dwelling in the midst of a wilderness, but *one* man might labor out the common period of life without accomplishing anything when he had felled his timber he could not remove it, nor erect it after it was removed, hunger in the meantime would urge him from his work, and every different want call him a different way. Disease, nay even misfortune, would be death, for though neither might be mortal, yet either would disable him from living, and reduce him to a state in which he might rather be said to perish than to die.

Thus necessity, like a gravitating power, would soon form our newly-arrived emigrants into society, the reciprocal blessings of which would supersede and render the obligations of law and government unnecessary while they remained perfectly just to each other, but as nothing but heaven is impregnable to vice, it will unavoidably happen, that in proportion as they surmount the first difficulties of emigration, which bound them together in a common cause, they will begin to relax in their duty and attachment to each other, and this remissness will point out the necessity of establishing some form of government to supply the defect of moral virtue.

Some convenient tree will afford them a state-house, under the branches of which the whole colony may assemble to deliberate on public matters. It is more than probable that their first laws will have the title only of *Regulations*, and be enforced by no other penalty than public

disesteem In this first parliament every man, by natural right, will have a seat

But as the colony increases, the public concerns will increase likewise, and the distance at which the members may be separated, will render it too inconvenient for all of them to meet on every occasion as at first, when their number was small, their habitations near, and the public concerns few and trifling This will point out the convenience of their consenting to leave the legislative part to be managed by a select number chosen from the whole body, who are supposed to have the same concerns at stake which those have who appointed them, and who will act in the same manner as the whole body would were they present

If the colony continue increasing, it will become necessary to augment the number of representatives, and that the interest of every part of the colony may be attended to, it will be found best to divide the whole into convenient parts, each part sending its proper number, and that the *electeds* might never form to themselves an interest separate from the *electors*, prudence will point out the propriety of having elections often, because as the *electeds* might by that means return and mix again with the general body of the *electors* in a few months, their fidelity to the public will be secured by the prudent reflection of not making a rod for themselves And as this frequent interchange will establish a common interest with every part of the community, they will mutually and naturally support each other, and on this (not on the unmeaning name of king) depends the *strength of government and the happiness of the governed*

Here, then, is the origin and rise of government, namely, a mode rendered necessary by the inability of moral virtue to govern the world, here, too, is the design and end of government, viz, freedom and security And however our eyes may be dazzled with show, or our ears deceived by sound, however prejudice may warp our wills, or interest darken our under-

standing, the simple voice of nature and reason will say, it is right

Most wise men in their private sentiments have ever treated hereditary right with contempt, yet it is one of those evils, which when once established is not easily removed, many submit from fear, others from superstition, and the more powerful part shares with the king the plunder of the rest

This is supposing the present race of kings in the world to have had an honorable origin, whereas it is more than probable, that, could we take off the dark covering of antiquity and trace them to their first rise, we should find the first of them nothing better than the principal ruffian of some restless gang, whose savage manners or preeminence in subtilty obtained him the title of chief among plunderers, and who by increasing in power, and extending his depredations, overawed the quiet and defenseless to purchase their safety by frequent contributions Yet his electors could have no idea of giving hereditary right to his descendants, because such a perpetual exclusion of themselves was incompatible with the free and unrestrained principles they professed to live by

Wherefore, hereditary succession in the early ages of monarchy could not take place as a matter of claim, but as something casual or complemental, but as few or no records were extant in those days, and traditionary history is stuffed with fables, it was very easy after the lapse of a few generations, to trump up some superstitious tale, conveniently timed, Mahomet like, to cram hereditary rights down the throats of the vulgar

Perhaps the disorders which threatened, or seemed to threaten, on the decease of a leader, and the choice of a new one (for elections among ruffians could not be very orderly) induced many at first to favor hereditary pretensions, by which means it happened, as it hath happened since, that what at first was submitted to as a convenience, was afterwards claimed as a right

England, since the Conquest, hath known

some good monarchs, but groaned beneath a much larger number of bad ones, yet no man in his senses can say that their claim under William the Conqueror is a very honorable one

A French bastard, landing with an armed banditti, and establishing himself King of England against the consent of the natives, is in plain terms a very paltry, rascally original. It certainly hath no divinity in it.

However, it is needless to spend much time in exposing the folly of hereditary right. If there are any so weak as to believe it, let them promiscuously worship the ass and the lion, and welcome. I shall neither copy their humility nor disturb their devotion.

Yet I should be glad to ask, how they suppose kings came at first? The question admits but of three answers, viz, either by lot, by election, or by usurpation. If the first king was taken by lot, it establishes a precedent for the next, which excludes hereditary succession. Saul was, by lot, yet the succession was not hereditary, neither does it appear from that transaction that there was any intention it ever should be.

If the first king of any country was by election, that likewise establishes a precedent for the next, for to say that the right of all future generations is taken away, by the act of the first electors, in their choice not only of a king, but of a family of kings forever, hath no parallel in or out of Scripture but the doctrine of original sin, which supposes the free will of all men lost in Adam, and from such comparison, and it will admit of no other, hereditary succession can derive no glory.

For as in Adam all sinned, and as in the first electors all men obeyed, as in the one all mankind were subjected to Satan, and in the other to sovereignty, as our innocence was lost in the first, and our authority in the last; and as both disable us from reassuming some former state and privilege, it unanswerably follows that original sin and hereditary succession are parallels.

Dishonorable rank! Inglorious connection! Yet the most subtle sophist cannot produce a juster simile.

As to usurpation, no man can be so hardy as to defend it, and that William the Conqueror was an usurper is a fact not to be contradicted.

The plain truth is, that the antiquity of English monarchy will not bear looking into.

As to government matters, it is not in the power of Britain to do this continent justice: the business of it will soon be too weighty and intricate to be managed with any tolerable degree of convenience by a power so distant from us, and so very ignorant of us, for if they cannot conquer us, they cannot govern us. To be always running three or four thousand miles with a tale or a petition, waiting four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness—there was a time when it was proper, and there is a proper time for it to cease.

Small islands, not capable of protecting themselves, are the proper objects for kingdoms to take under their care, but there is something very absurd in supposing a continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet, and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe—America to itself.

I am not induced by motives of pride, party, or resentment to espouse the doctrine of separation and independence, I am clearly, positively, and conscientiously persuaded that it is the true interest of this continent to do so, that everything short of *that* is mere patchwork, that it can afford no lasting felicity—that it is leaving the sword to our children, and shrinking back at a time when a little more, a little further, would have rendered this continent the glory of the earth. . .

From
THE AMERICAN CRISIS
[1776]

THESE are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country, but he that stands it NOW, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered, yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly.—'Tis dearness only that gives everything its value. Heaven knows how to set a proper price upon its goods, and it would be strange indeed, if so celestial an article as FREEDOM should not be highly rated.

We did not make a proper use of last winter, neither could we, while we were in a dependent state. However, the fault, if it were one, was all our own, we have none to blame but ourselves.

I have as little superstition in me as any man living, but my secret opinion has ever been, and still is, that God Almighty will not give up a people to military destruction, or leave them unsupportedly to perish, who have so earnestly and so repeatedly sought to avoid the calamities of war, by every decent method which wisdom could invent. Neither have I so much of the infidel in me, as to suppose that HE has relinquished the government of the world, and given us up to the care of devils.

'Tis surprising to see how rapidly a panic will sometimes run through a country. . . Yet panics, in some cases, have their uses, they produce as much good as hurt. Their duration is always short, the mind soon grows through them, and acquires a firmer habit than before. But their peculiar advantage is, that they are the touchstones of sincerity and hypocrisy, and bring things and men to light, which might otherwise have laid forever undiscovered. In fact, they have the same effect

on secret traitors, which an imaginary apparition would have upon a private murderer. They sift out the hidden thoughts of man, and hold them up in public to the world.

I once felt that kind of anger, which a man ought to feel, against the mean principles that are held by the Tories. A noted one, who kept a tavern at Amboy, was standing at his door, with as pretty a child in his hand, about eight or nine years old, as most I ever saw, and after speaking his mind as freely as he thought was prudent, finished with this unfatherly expression, "*Well! give me peace in my day*." Not a man lives on the continent but fully believes that a separation must some time or other finally take place, and a generous parent would have said, "*If there must be trouble, let it be in my day, that my child may have peace,*" and this single reflection, well applied, is sufficient to awaken every man to duty.

America did not, nor does not, want force, but she wanted a proper application of that force. Wisdom is not the purchase of a day, and it is no wonder that we should err at first setting off. From an excess of tenderness, we were unwilling to raise an army, and trusted our cause to the temporary defence of a well-meaning militia. . . I have always considered a militia as the best troops in the world for a sudden exertion, but they will not do for a long campaign.

I turn with the warm ardour of a friend to those who have nobly stood, and are yet determined to stand the matter out. I call not upon a few, but upon all, not on THIS State or THAT State, but on EVERY State, up and help us, lay your shoulders to the wheel, better have too much force than too little, when so great an object is at stake. Let it be told to the future world, that in the depth of winter, when nothing but hope and virtue could survive, that the city and the country, alarmed at one common danger, came forth to meet and to repulse it. Say not, that thousands are gone, turn out your

tens of thousands, throw not the burden of the day upon Providence, but "show your faith by your works," that GOD may bless you. It matters not where you live, or what rank of life you hold, the evil or the blessing will reach you all. The far and the near, the home counties and the back, the rich and the poor, shall suffer or rejoice alike. The heart that feels not now, is dead. The blood of his children shall curse his cowardice, who shrinks back at a time when a little might have saved the whole, and made *them* happy. I love the man that can smile in trouble, that can gather strength from distress, and grow brave by reflection. 'Tis the business of little minds to shrink, but he whose heart is firm, and whose conscience approves his conduct, will pursue his principles unto death. My own line of reasoning is to myself as straight and clear as a ray of light. Not all the treasures of the world, so far as I believe, could have induced me to support an offensive war, for I think it murder; but if a thief break into my house, burn and destroy my property, and kill or threaten to kill me, or those that are in it, and to "*bind me in all cases whatsoever*," to his absolute will, am I to suffer it?

There are cases which cannot be overdone by language, and this is one. There are persons too who see not the full extent of the evil that threatens them, they solace themselves with hopes that the enemy, if they succeed, will be merciful. It is the madness of folly to expect mercy from those who have refused to do justice, and even mercy, where conquest is the object, is only a trick of war. The cunning of the fox is as murderous as the violence of the wolf, and we ought to guard equally against both. I dwell not upon the vapors of imagination, I bring reason to your ears, and in language as plain as A, B, C hold up truth to your eyes.

I thank GOD that I fear not. I see no real cause for fear. I know our situation well, and can see the way out of it. Once more we are again collected and

collecting, our new army at both ends of the continent is recruiting fast, and we shall be able to open the next campaign with sixty thousand men, well armed and clothed. This is our situation, and who will may know it. By perseverance and fortitude we have the prospect of a glorious issue, by cowardice and submission, the sad choice of a variety of evils—a ravaged country—a depopulated city—habitations without safety, and slavery without hope—our homes turned into barracks and bawdy-houses for Hessians, and a future race to provide for whose fathers we shall doubt of. Look on this picture, and weep over it!—and if there yet remains one thoughtless wretch who believes it not, let him suffer it unlamented.

From

LETTER TO THE ABBÉ RAYNAL
[1782]

IT IS an observation I have already made in some former publications, that the circle of civilization is yet incomplete. Mutual wants have formed the individuals of each country into a kind of national society, and here the progress of civilization has stopped. For it is easy to see, that nations with regard to each other (notwithstanding the ideal civil law, which every one explains as it suits him) are like individuals in a state of nature. They are regulated by no fixed principle, governed by no compulsive law, and each does independently what it pleases or what it can.

Were it possible we could have known the world when in a state of barbarism, we might have concluded that it never could be brought into the order we now see it. The untamed mind was then as hard, if not harder, to work upon in its individual state, than the national mind is in its present one. Yet we have seen the accomplishment of one, why then should we doubt that of the other?

There is a greater fitness in mankind to extend and complete the civilization of na-

tions with each other at this day, than there was to begin it with the unconnected individuals at first, in the same manner that it is somewhat easier to put together the materials of a machine after they are formed, than it was to form them from original matter. The present condition of the world, differing so exceedingly from what it formerly was, has given a new cast to the mind of man, more than what he appears to be sensible of. The wants of the individual, which first produced the idea of society, are now augmented into the wants of the nation, and he is obliged to seek from another country what before he sought from the next person.

Letters, the tongue of the world, have in some measure brought all mankind acquainted, and by an extension of their uses are every day promoting some new friendship. Through them distant nations become capable of conversation, and losing by degrees the awkwardness of strangers, and the moroseness of suspicion, they learn to know and understand each other. Science, the partisan of no country, but the beneficent patroness of all, has liberally opened a temple where all may meet. Her influence on the mind, like the sun on the chilled earth, has long been preparing it for higher cultivation and further improvement. The philosopher of one country sees not an enemy in the philosopher of another: he takes his seat in the temple of science, and asks not who sits beside him.

This was not the condition of the barbarian world. Then the wants of men were few and the objects within his reach. While he could acquire these, he lived in a state of individual independence, the consequence of which was, there were as many nations as persons, each contending with the other, to secure something which he had, or to obtain something which he had not. The world had then no business to follow, no studies to exercise the mind. Their time was divided between sloth and fatigue. Hunting and war were their chief occupations, sleep and food their principal enjoyments.

Now it is otherwise. A change in the mode of life has made it necessary to be busy, and man finds a thousand things to do now which before he did not. Instead of placing his ideas of greatness in the rude achievements of the savage, he studies arts, sciences, agriculture and commerce, the refinements of the gentleman, the principles of society, and the knowledge of the philosopher.

There are many things which in themselves are neither morally good nor bad, but they are productive of consequences, which are strongly marked with one or other of these characters. Thus commerce, though in itself a moral nullity, has had a considerable influence in tempering the human mind. It was the want of objects in the ancient world, which occasioned in them such a rude and perpetual turn for war. Their time hung on their hands without the means of employment. The indolence they lived in afforded leisure for mischief, and being all idle at once, and equal in their circumstances, they were easily provoked or induced to action.

But the introduction of commerce furnished the world with objects, which, in their extent, reach every man, and give him something to think about and something to do, by these his attention is mechanically drawn from the pursuits which a state of indolence and an unemployed mind occasioned, and he trades with the same countries which, in former ages, tempted by their productions, and too indolent to purchase them, he would have gone to war with.

Thus, as I have already observed, the condition of the world being materially changed by the influence of science and commerce, it is put into a fitness not only to admit of, but to desire, an extension of civilization.

The true idea of a great nation, is that which extends and promotes the principles of universal society, whose mind rises above the atmosphere of local thoughts, and considers mankind, of whatever nation or profession they may be, as the work of

one Cicero! The rage for conquest has had its fashion, and its day. Why may not the amiable virtues have the same? The Alexanders and Caesars of antiquity have left behind them their monuments of destruction, and are remembered with hatred, while those more exalted characters, who first taught society and science, are blessed with the gratitude of every age and country. Of more use was *one* philosopher, though a heathen, to the world, than all the heathen conquerors that ever existed.

Should the present Revolution be distinguished by opening a new system of extended civilization, it will receive from heaven the highest evidence of approbation, and as this is a subject to which the Abbé's powers are so eminently suited, I recommend it to his attention with the affection of a friend, and the aid of a universal citizen.

From

THE RIGHTS OF MAN [1791, 1792]

THERE never did, there never will, and there never can exist a parliament, or any description of men, or any generation of men, in any country, possessed of the right or the power of binding and controlling posterity to the "*end of time*," or of commanding forever how the world shall be governed, or who shall govern it, and therefore, all such clauses, acts or declarations, by which the makers of them attempt to do what they have neither the right nor the power to do, nor the power to execute, are in themselves null and void.

Every age and generation must be as free to act for itself, *in all cases*, as the ages and generation which preceded it. The vanity and presumption of governing beyond the grave, is the most ridiculous and insolent of all tyrannies.

Man has no property in man, neither

has any generation a property in the generations which are to follow. The Parliament or the people of 1688, or of any other period, had no more right to dispose of the people of the present day, or to bind or to control them *in any shape whatever*, than the Parliament or the people of the present day have to dispose of, bind, or control those who are to live a hundred or a thousand years hence.

Every generation is, and must be, competent to all the purposes which its occasions require. It is the living, and not the dead, that are to be accommodated. When man ceases to be, his power and his wants cease with him, and having no longer any participation in the concerns of this world, he has no longer any authority in directing who shall be its governors, or how its government shall be organized, or how administered.

I am not contending for nor against any form of government, nor for nor against any party here or elsewhere. That which a whole nation chooses to do, it has a right to do. Mr. Burke says, No. Where then does the right exist? I am contending for the rights of the *living*, and against their being willed away, and controlled and contracted for, by the assumed authority of the dead, and Mr. Burke is contending for the authority of the dead over the rights and freedom of the living.

All the European governments (France now excepted) are constructed not on the principle of universal civilization, but on the reverse of it. So far as those governments relate to each other, they are in the same condition as we conceive of savage, uncivilized life, they put themselves beyond the law as well of God as of man, and are, with respect to principle and reciprocal conduct, like so many individuals in a state of nature.

The inhabitants of every country, under the civilization of laws, easily associate together, but governments being yet in an uncivilized state, and almost continually at war, they pervert the abundance which

civilized life produces to early on the uncivilized part to a greater extent

By thus ingrafting the barbarism of government upon the internal civilization of a country, it draws from the latter, and more especially from the poor, a great portion of those earnings which should be applied to their own subsistence and comfort. Apart from all reflections of morality and philosophy it is a melancholy fact, that more than one-fourth of the labor of mankind is annually consumed by this barbarous system. What has served to continue this evil, is the pecuniary advantage which all the governments of Europe have found in keeping up this state of uncivilization. It affords to them pretenses for power and revenue, for which there would be neither occasion nor apology, if the circle of civilization were rendered complete.

Civil government alone, or the government of laws, is not productive of pretenses for many taxes; it operates at home, directly under the eye of the country, and precludes the possibility of much imposition. But when the scene is laid in the uncivilized contention of governments, the field of pretenses is enlarged, and the country, being no longer a judge, is open to every imposition, which governments please to act.

Not a thirtieth, scarcely a fortieth, part of the taxes which are raised in England are either occasioned by, or applied, to the purposes of civil government. It is not difficult to see, that the whole which the actual government does in this respect, is to enact laws, and that the country administers and executes them, at its own expense, by means of magistrates, juries, sessions, and assize, over and above the taxes which it pays.

In this view of the case, we have two distinct characters of government, the one, the civil government, or the government of laws, which operates at home, the other, the court or cabinet government, which operates abroad, on the rude plan of uncivilized life, the one attended with little

charge, the other with boundless extravagance, and so distinct are the two, that if the latter were to sink, as it were, by a sudden opening of the earth, and totally disappear, the former would not be deranged. It would still proceed, because it is the common interest of the nation that it should, and all the means are in practice.

Revolutions, then, have for their object, a change in the moral condition of governments, and with this change the burden of public taxes will lessen, and civilization will be left to the enjoyment of that abundance, of which it is now deprived.

AGRARIAN JUSTICE

[1797]

TO PRESERVE the benefits of what is called civilized life, and to remedy at the same time the evil which it has produced, ought to be considered as one of the first objects of reformed legislation.

Whether that state that is proudly, perhaps erroneously, called civilization, has most promoted or most injured the general happiness of man, is a question that may be strongly contested. On one side, the spectator is dazzled by splendid appearances, on the other, he is shocked by extremes of wretchedness, both of which it has erected. The most affluent and the most miserable of the human race are to be found in the countries that are called civilized.

To understand what the state of society ought to be, it is necessary to have some idea of the natural and primitive state of man, such as it is at this day among the Indians of North America. There is not, in that state, any of those spectacles of human misery which poverty and want present to our eyes in all the towns and streets of Europe.

Poverty, therefore, is a thing created by that which is called civilized life. It exists not in the natural state. On the other hand, the natural state is without those advantages which flow from agriculture, arts, science, and manufactures.

The life of an Indian is a continual holiday, compared with the poor of Europe and, on the other hand, it appears to be abject when compared to the rich Civilization, therefore, or that which is so called, has operated two ways to make one part of society more affluent, and the other more wretched, than would have been the lot of either in a natural state

It is always possible to go from the natural to the civilized state, but it is never possible to go from the civilized to the natural state The reason is, that man in a natural state, subsisting by hunting, requires ten times the quantity of land to range over to procure himself sustenance, than would support him in a civilized state, where the earth is cultivated

When, therefore, a country becomes populous by the additional aids of cultivation, art, and science, there is a necessity of preserving things in that state, because without it there cannot be sustenance for more, perhaps, than a tenth part of its inhabitants The thing, therefore, now to be done is to remedy the evils and preserve the benefits that have arisen to society by passing from the natural to that which is called the civilized state

In taking the matter upon this ground, the first principle of civilization ought to have been, and ought still to be, that the condition of every person born into the world, after a state of civilization commences, ought not to be worse than if he had been born before that period

But the fact is, that the condition of millions, in every country in Europe, is far worse than if they had been born before civilization began, or had been born among the Indians of North America at the present day I will show how this fact has happened

It is a position not to be contraverted that the earth, in its natural, uncultivated state was, and ever would have continued to be, *the common property of the human race*. In that state every man would have been born to property He would have been a joint life proprietor with the rest in the

property of the soil, and in all its natural productions, vegetable and animal

But the earth in its natural state, as before said, is capable of supporting but a small number of inhabitants compared with what it is capable of doing in a cultivated state And as it is impossible to separate the improvement made by cultivation from the earth itself, upon which that improvement is made, the idea of landed property arose from that inseparable connection, but it is nevertheless true, that it is the value of the improvement, only, and not the earth itself, that is individual property

Every proprietor, therefore, of cultivated lands, owes to the community a *ground-rent* (for I know of no better term to express the idea) for the land which he holds, and it is from this ground-rent that the fund proposed in this plan is to issue

It is deducible, as well from the nature of the thing as from all the histories transmitted to us, that the idea of landed property commenced with cultivation, and that there was no such thing as landed property before that time It could not exist in the first state of man, that of hunters It did not exist in the second state, that of shepherds neither Abraham, Isaac, Jacob, nor Job, so far as the history of the Bible may be credited in probable things, were owners of land

Then property consisted, as is always enumerated, in flocks and herds, and they traveled with them from place to place The frequent contentions at that time, about the use of a well in the dry country of Arabia, where those people lived, also show that there was no landed property It was not admitted that land could be claimed as property

There could be no such thing as landed property originally Man did not make the earth, and, though he had a natural right to *occupy* it, he had no right to *locate as his property* in perpetuity any part of it, neither did the Creator of the earth open a land-office, from whence the first title-deeds should issue Whence, then, arose the idea of landed property? I answer as be-

fore, that when cultivation began, the idea of landed property began with it, from the impossibility of separating the improvement made by cultivation from the earth itself, upon which that improvement was made

The value of the improvement so far exceeded the value of the natural earth, at that time, as to absorb it, till, in the end, the common right of all became confounded into the cultivated right of the individual. But there are, nevertheless, distinct species of rights, and will continue to be, so long as the earth endures

It is only by tracing things to their origin that we can gain rightful ideas of them, and it is by gaining such ideas that we discover the boundary that divides right from wrong, and teaches every man to know his own. I have entitled this tract "Agrarian Justice" to distinguish it from "Agrarian Law."

Nothing could be more unjust than agrarian law in a country improved by cultivation, for though every man, as an inhabitant of the earth, is a joint proprietor of it in its natural state, it does not follow that he is a joint proprietor of cultivated earth. The additional value made by cultivation, after the system was admitted, became the property of those who did it, or who inherited it from them, or who purchased it. It had originally no owner. While, therefore, I advocate the right, and interest myself in the hard case of all those who have been thrown out of their natural inheritance by the introduction of the system of landed property, I equally defend the right of the possessor to the part which is his.

Cultivation is at least one of the greatest natural improvements ever made by human invention. It has given to created earth a tenfold value. But the landed monopoly that began with it has produced the greatest evil. It has dispossessed more than half the inhabitants of every nation of their natural inheritance, without providing for them, as ought to have been done, an indemnification for that loss, and has thereby

created a species of poverty and wretchedness that did not exist before.

In advocating the case of the persons thus dispossessed, it is a right, and not a charity, that I am pleading for. But it is that kind of right which, being neglected at first, could not be brought forward afterwards till heaven had opened the way by a revolution in the system of government. Let us then do honor to revolutions by justice, and give currency to their principles by blessings.

Having thus, in a few words, opened the merits of the case, I shall now proceed to the plan I have to propose, which is,

To create a national fund, out of which there shall be paid to every person, when arrived at the age of twenty-one years, the sum of fifteen pounds sterling, as a compensation in part, for the loss of his or her natural inheritance, by the introduction of the system of landed property.

And also, the sum of ten pounds per annum, during life, to every person now living, of the age of fifty years, and to all others as they shall arrive at that age.

MEANS BY WHICH THE FUND IS TO BE CREATED

I have already established the principle, namely, that the earth, in its natural uncultivated state was, and ever would have continued to be, the *common property of the human race*, that in that state, every person would have been born to property, and that the system of landed property, by its inseparable connection with cultivation, and with what is called civilized life, has absorbed the property of all those whom it dispossessed, without providing, as ought to have been done, an indemnification for that loss.

The fault, however, is not in the present possessors. No complaint is intended, or ought to be alleged against them, unless they adopt the crime by opposing justice. The fault is in the system, and it has stolen imperceptibly upon the world, aided afterwards by the agrarian law of the sword.

But the fault can be made to reform itself by successive generations, and without diminishing or deranging the property of any of the present possessors, the operation of the fund can yet commence, and be in full activity, the first year of its establishment, or soon after, as I shall show

It is proposed that the payments, as already stated, be made to every person, rich or poor. It is best to make it so, to prevent invidious distinctions. It is also right it should be so, because it is in lieu of the natural inheritance, which, as a right, belongs to every man, over and above the property he may have created, or inherited from those who did. Such persons as do not choose to receive it can throw it into the common fund.

Taking it then for granted that no person ought to be in a worse condition when born under what is called a state of civilization, than he would have been had he been born in a state of nature, and that civilization ought to have made, and ought still to make, provision for that purpose, it can only be done by subtracting from property a portion equal in value to the natural inheritance it has absorbed.

Various methods may be proposed for this purpose, but that which appears to be the best (not only because it will operate without deranging any present possessors, or without interfering with the collection of taxes or *emprunts* necessary for the purposes of government and the Revolution, but because it will be the least troublesome and the most effectual, and also because the subtraction will be made at a time that best admits it) is at the moment that property is passing by the death of one person to the possession of another. In this case, the bequeather gives nothing, the receiver pays nothing. The only matter to him is, that the monopoly of natural inheritance, to which there never was a right, begins to cease in his person. A generous man would not wish it to continue, and a just man will rejoice to see it abolished.

My state of health prevents my making

sufficient inquiries with respect to the doctrine of probabilities, whereon to found calculations with such degrees of certainty as they are capable of. What, therefore, I offer on this head is more the result of observation and reflection than of received information, but I believe it will be found to agree sufficiently with fact.

In the first place, taking twenty-one years as the epoch of maturity, all the property of a nation, real and personal, is always in the possession of persons above that age. It is then necessary to know, as a datum of calculation, the average of years which persons above that age will live. I take this average to be about thirty years, for though many persons will live forty, fifty, or sixty years after the age of twenty-one years, others will die much sooner, and some in every year of that time.

Taking, then, thirty years as the average of time, it will give, without any material variation one way or other, the average of time in which the whole property or capital of a nation, or a sum equal thereto, will have passed through one entire revolution in descent, that is, will have gone by deaths to new possessors, for though, in many instances, some parts of this capital will remain forty, fifty, or sixty years in the possession of one person, other parts will have revolved two or three times before those thirty years expire, which will bring it to that average, for were one-half the capital of a nation to revolve twice in thirty years, it would produce the same fund as if the whole revolved once.

Taking, then, thirty years as the average of time in which the whole capital of a nation, or a sum equal thereto, will revolve once, the thirtieth part thereof will be the sum that will revolve every year, that is, will go by deaths to new possessors, and this last sum being thus known, and the ratio per cent to be subtracted from it determined, it will give the annual amount or income of the proposed fund, to be applied as already mentioned.

In looking over the discourse of the English Minister, Pitt, in his opening of

what is called in England the budget (the scheme of finance for the year 1796), I find an estimate of the national capital of that country. As this estimate of a national capital is prepared ready to my hand, I take it as a datum to act upon. When a calculation is made upon the known capital of any nation, combined with its population, it will serve as a scale for any other nation, in proportion as its capital and population be more or less.

I am the more disposed to take this estimate of Mr Pitt, for the purpose of showing to that minister, upon his own calculation, how much better money may be employed than in wasting it, as he has done, on the wild project of setting up Bourbon kings¹. What, in the name of heaven, are Bourbon kings to the people of England? It is better that the people have bread.

Mr Pitt states the national capital of England, real and personal, to be one thousand three hundred millions sterling, which is about one-fourth part of the national capital of France, including Belgia. The event of the last harvest in each country proves that the soil of France is more productive than that of England, and that it can better support twenty-four or twenty-five millions of inhabitants than that of England can seven or seven and a half millions.

The thirtieth part of this capital of £1,300,000,000 is £43,333,333, which is the part that will revolve every year by deaths in that country to new possessors, and the sum that will annually revolve in France in the proportion of four to one, will be about one hundred and seventy-three millions sterling. From this sum of £43,333,333 annually revolving, is to be subtracted the value of the natural inheritance absorbed in it, which, perhaps, in fair justice, cannot be taken at less, and ought not to be taken for more, than a tenth part.

It will always happen, that of the property thus revolving by deaths every year a part will descend in a direct line to sons and daughters, and the other part col-

laterally, and the proportion will be found to be about three to one, that is, about thirty millions of the above sum will descend to direct heirs, and the remaining sum of £13,333,333 to more distant relations, and in part to strangers.

Considering, then, that man is always related to society, that relationship will become comparatively greater in proportion as the next of kin is more distant, it is therefore consistent with civilization to say that where there are no direct heirs society shall be heir to a part over and above the tenth part *due* to society.

If this additional part be from five to ten or twelve per cent, in proportion as the next of kin be nearer or more remote, so as to average with the escheats that may fall, which ought always to go to society and not to the government (an addition of ten per cent more), the produce from the annual sum of £43,333,333 will be

From	
£30,000,000 at ten per cent	£3,000,000
From	
£13,333,333 at ten per cent with	
the addition of ten	
per cent more	2,666,666
£43,333,333	£5,666,666

Having thus arrived at the annual amount of the proposed fund, I come, in the next place, to speak of the population proportioned to this fund and to compare it with the uses to which the fund is to be applied.

The population (I mean that of England) does not exceed seven millions and a half, and the number of persons above the age of fifty will in that case be about four hundred thousand. There would not, how-

¹ The second William Pitt, 1759-1806, prime minister of Britain during her crucial struggle with revolutionary France, supported the unsuccessful attempt of the French Royalists to gain a foothold in France in the summer of 1795 and to set up as king Comte d'Artois, the Bourbon heir presumptive.

ever, be more than that number that would accept the proposed ten pounds sterling per annum, though they would be entitled to it I have no idea it would be accepted by many persons who had a yearly income of two or three hundred pounds sterling. But as we often see instances of rich people falling into sudden poverty, even at the age of sixty, they would always have the right of drawing all the arrears due to them. Four millions, therefore, of the above annual sum of £5,666,666 will be required for four hundred thousand aged persons, at ten pounds sterling each.

I come now to speak of the persons annually arriving at twenty-one years of age. If all the persons who died were above the age of twenty-one years, the number of persons annually arriving at that age, must be equal to the annual number of deaths, to keep the population stationary. But the greater part die under the age of twenty-one, and therefore the number of persons annually arriving at twenty-one will be less than half the number of deaths.

The whole number of deaths upon a population of seven millions and an half will be about 220,000 annually. The number arriving at twenty-one years of age will be about 100,000. The whole number of these will not receive the proposed fifteen pounds, for the reasons already mentioned, though, as in the former case, they would be entitled to it. Admitting then that a tenth part declined receiving it, the amount would stand thus

Fund annually	£5,666,666
To 400,000 aged persons at £10 each	£4,000,000
To 90,000 persons of 21 yrs, £15 ster each	1,350,000
	5,350,000
	<hr/>
Remains	£ 316,666

There are, in every country, a number of blind and lame persons, totally incapable of earning a livelihood. But as it will

always happen that the greater number of blind persons will be among those who are above the age of fifty years, they will be provided for in that class. The remaining sum of £316,666 will provide for the lame and blind under that age, at the same rate of £10 annually for each person.

Having now gone through all the necessary calculations and stated the particulars of the plan, I shall conclude with some observations.

It is not charity but a right, not bounty but justice, that I am pleading for. The present state of civilization is as odious as it is unjust. It is absolutely the opposite of what it should be, and it is necessary that a revolution should be made in it. The contrast of affluence and wretchedness continually meeting and offending the eye, is like dead and living bodies chained together. Though I care as little about riches as any man, I am a friend to riches because they are capable of good.

I care not how affluent some may be, provided that none be miserable in consequence of it. But it is impossible to enjoy affluence with the felicity it is capable of being enjoyed, while so much misery is mingled in the scene. The sight of the misery, and the unpleasant sensations it suggests, which, though they may be suffocated, cannot be extinguished, are a greater drawback upon the felicity of affluence than the proposed ten per cent upon property is worth. He that would not give the one to get rid of the other has no charity, even for himself.

There are, in every country, some magnificent charities established by individuals. It is, however, but little that any individual can do, when the whole extent of the misery to be relieved is considered. He may satisfy his conscience, but not his heart. He may give all that he has, and that all will relieve but little. It is only by organizing civilization upon such principles as to act like a system of pulleys, that the whole weight of misery can be removed.

The plan here proposed will reach the whole. It will immediately relieve and take

out of view three classes of wretchedness—the blind, the lame, and the aged poor, and it will furnish the rising generation with means to prevent their becoming poor, and it will do this without deranging or interfering with any national measures.

To show that this will be the case, it is sufficient to observe that the operation and effect of the plan will, in all cases, be the same as if every individual were *voluntarily* to make his will and dispose of his property in the manner here proposed.

But it is justice, and not charity, that is the principle of the plan. In all great cases it is necessary to have a principle more universally active than charity, and, with respect to justice, it ought not to be left to the choice of detached individuals whether they will do justice or not. Considering, then, the plan on the ground of justice, it ought to be the act of the whole, growing spontaneously out of the principles of the revolution, and the reputation of it ought to be national and not individual.

A plan upon this principle would benefit the revolution by the energy that springs from the consciousness of justice. It would multiply also the national resources, for property, like vegetation, increases by offsets. When a young couple begin the world, the difference is exceedingly great whether they begin with nothing or with fifteen pounds apiece. With this aid they could buy a cow, and implements to cultivate a few acres of land, and instead of becoming burdens upon society, which is always the case where children are produced faster than they can be fed, would be put in the way of becoming useful and profitable citizens. The national domains also would sell the better if pecuniary aids were provided to cultivate them in small lots.

It is the practice of what has unjustly obtained the name of civilization (and the practice merits not to be called either charity or policy) to make some provision for persons becoming poor and wretched only at the time they become so. Would it not, even as a matter of economy, be far

better to adopt means to prevent their becoming poor? This can best be done by making every person when arrived at the age of twenty-one years an inheritor of something to begin with.

The rugged face of society, checkered with the extremes of affluence and want, proves that some extraordinary violence has been committed upon it, and calls on justice for redress. The great mass of the poor in all countries are become an hereditary race, and it is next to impossible for them to get out of that state of themselves. It ought also to be observed that this mass increases in all countries that are called civilized. More persons fall annually into it than get out of it.

Though in a plan of which justice and humanity are the foundation-principles, interest ought not to be admitted into the calculation, yet it is always of advantage to the establishment of any plan to show that it is beneficial as a matter of interest. The success of any proposed plan submitted to public consideration must finally depend on the numbers interested in supporting it, united with the justice of its principles.

The plan here proposed will benefit all, without injuring any. It will consolidate the interest of the republic with that of the individual. To the numerous class dispossessed of their natural inheritance by the system of landed property it will be an act of national justice. To persons dying possessed of moderate fortunes it will operate as a tontine to their children, more beneficial than the sum of money paid into the fund, and it will give to the accumulation of riches a degree of security that none of the old governments of Europe, now tottering on their foundations, can give.

I do not suppose that more than one family in ten, in any of the countries of Europe, has, when the head of the family dies, a clear property left of five hundred pounds sterling. To all such the plan is advantageous. That property would pay fifty pounds into the fund, and if there were only two children under age they would receive fifteen pounds each (thirty

pounds), on coming of age, and be entitled to ten pounds a year after fifty

It is from the overgrown acquisition of property that the fund will support itself, and I know that the possessors of such property in England, though they would eventually be benefited by the protection of nine-tenths of it, will exclaim against the plan. But without entering into any inquiry how they came by that property, let them recollect that they have been the advocates of this war, and that Mr. Pitt has already laid on more new taxes to be raised annually upon the people of England, and that for supporting the despotism of Austria and the Bourbons against the liberties of France, than would pay annually all the sums proposed in this plan.

I have made the calculations stated in this plan, upon what is called personal, as well as upon landed property. The reason for making it upon land is already explained, and the reason for taking personal property into the calculation is equally well founded though on a different principle. Land, as before said, is the free gift of the Creator in common to the human race. Personal property is the *effect of society*, and it is as impossible for an individual to acquire personal property without the aid of society, as it is for him to make land originally.

Separate an individual from society, and give him an island or a continent to possess, and he cannot acquire personal property. He cannot be rich. So inseparably are the means connected with the end, in all cases, that where the former do not exist the latter cannot be obtained. All accumulation, therefore, of personal property, beyond what a man's own hands produce, is derived to him by living in society, and he owes on every principle of justice, of gratitude, and of civilization, a part of that accumulation back again to society from whence the whole came.

This is putting the matter on a general principle, and perhaps it is best to do so, for if we examine the case minutely it will

be found that the accumulation of personal property is, in many instances, the effect of paying too little for the labor that produced it, the consequence of which is, that the working hand perishes in old age, and the employer abounds in affluence.

It is, perhaps, impossible to proportion exactly the price of labor to the profits it produces, and it will also be said, as an apology for the injustice, that were a workman to receive an increase of wages, daily he would not save it against old age, nor be much better for it in the interim. Make, then, society the treasurer to guard it for him in a common fund, for it is no reason, that because he might not make a good use of it for himself, another should take it.

The state of civilization that has prevailed throughout Europe, is as unjust in its principle, as it is horrid in its effects, and it is the consciousness of this, and the apprehension that such a state cannot continue when once investigation begins in any country, that makes the possessors of property dread every idea of a revolution. It is the hazard and not the principle of revolutions that retards their progress. This being the case, it is necessary as well for the protection of property, as for the sake of justice and humanity, to form a system that, while it preserves one part of society from wretchedness, shall secure the other from depredation.

The superstitious awe, the enslaving reverence, that formerly surrounded affluence, is passing away in all countries, and leaving the possessor of property to the convulsion of accidents. When wealth and splendor, instead of fascinating the multitude, excite emotions of disgust, when, instead of drawing forth admiration, it is beheld as an insult upon wretchedness, when the ostentatious appearance it makes serves to call the right of it in question, the case of property becomes critical, and it is only in a system of justice that the possessor can contemplate security.

To remove the danger, it is necessary to remove the antipathies, and this can only

be done by making property productive of a national blessing, extending to every individual. When the riches of one man above another shall increase the national fund in the same proportion, when it shall be seen that the prosperity of that fund depends on the prosperity of individuals, when the more riches a man acquires, the better it shall be for the general mass, it is then that antipathies will cease, and property be placed on the permanent basis of national interest and protection.

I have no property in France to become subject to the plan I propose. What I have, which is not much, is in the United States of America. But I will pay one hundred pounds sterling toward this fund in France, the instant it shall be established, and I will pay the same sum in England, whenever a similar establishment shall take place in that country.

A revolution in the state of civilization is the necessary companion of revolutions in the system of government. If a revolution in any country be from bad to good, or from good to bad, the state of what is called civilization in that country, must be made conformable thereto, to give that revolution effect.

Despotic government supports itself by abject civilization, in which debasement of the human mind, and wretchedness in the mass of the people, are the chief criterions.

Such governments consider man merely as an animal, that the exercise of intellectual faculty is not his privilege, *that he has nothing to do with the laws but to obey them*, and they politically depend more upon breaking the spirit of the people by poverty, than they fear enraging it by desperation.

It is a revolution in the state of civilization that will give perfection to the Revolution of France. Already the conviction that government by representation is the true system of government is spreading itself fast in the world. The reasonableness of it can be seen by all. The justice of it makes itself felt even by its opposers. But when a system of civilization, growing out of that system of government, shall be so organized that not a man or woman born in the Republic but shall inherit some means of beginning the world, and see before them the certainty of escaping the miseries that under other governments accompany old age, the Revolution of France will have an advocate and an ally in the heart of all nations.

An army of principles will penetrate where an army of soldiers cannot, it will succeed where diplomatic management would fail. It is neither the Rhine, the Channel, nor the ocean that can arrest its progress. It will march on the horizon of the world, and it will conquer.

1743 ~ Thomas Jefferson ~ 1826

THE EPITAPH on the shaft above Jefferson's grave at Monticello, Virginia—"Here was buried Thomas Jefferson, author of the Declaration of Independence, of the statute of Virginia for religious freedom, and father of the University of Virginia"—was his own composition and thus may be said to sum up the three achievements of which he was most proud.

Born at Shadwell, Albemarle County, Virginia, April 13, 1743, he came, on his father's side, from prosperous yeomanry, and, on his mother's side, from one of the first families of Virginia—the Randolphs. Graduated from William and Mary College in 1762, he successfully practiced law and was elected in

1769 to the House of Burgesses. He married Martha Wayles Skelton in 1772. Through this marriage and through his own inheritance, he was owner of about 10,000 acres of land and over 100 slaves. From an early age he showed an amazing versatility. He became a linguist, a student of history and literature, a collector of books and art objects, an inventor, and an amateur architect. He was president of the American Philosophical Society from 1797 to 1815 and belonged to several European scientific societies. A delegate to the Continental Congress in 1775, he was appointed on the committee charged with drafting the Declaration of Independence and composed this document. He became a member of the Virginia Assembly in 1776, served one term as Governor of Virginia, and resigned this office shortly after being elected to a second term in 1780. He was a member of Congress, minister to France 1785-1789, first Secretary of State of the United States 1790-1793, and Vice-president 1797-1801.

As leader of the so-called "Republican" party, he was the foe of Hamilton and the Federalists, who regarded him as a dangerous democratic radical under French revolutionary influence. He was elected to the Presidency in the bitter campaign of 1800 and was re-elected in 1804. In 1803 he negotiated the Louisiana Purchase. Retiring to Monticello in 1809, he brought about the establishment of the University of Virginia, which was chartered in 1819. He died at Monticello July 4, 1826.

Although Jefferson was the author of but one complete book, *Notes on Virginia*, 1781-82, he was one of the most influential of early American publicists and political thinkers, greatly in advance of his day in his attitudes toward a host of problems, from Negro slavery to education. Many of his ideas received their best formulation in letters.

[The second and fourth of the following selections are from letters, respectively, to James Madison, January 30, 1787, and Gideon Granger, August 13, 1800. The third selection is from a series of memoranda which he left at his death and which were first published under the title "Anas" in Vol. IV of T. J. Randolph's *Memours*, 1829. The editors have provided two of these selections with titles.]

DECLARATION OF INDEPENDENCE [1776]

A DECLARATION by the Representatives
of the United States of America in Gen-
eral Congress assembled

When in the course of human events it
becomes necessary for one people to dis-
solve the political bands which have con-
nected them with another and to assume
among the powers of the earth the separate

and equal station to which the laws of
nature and of nature's God entitle them,
a decent respect to the opinions of man-
kind requires that they should declare the
causes which impel them to the separation.

We hold these truths to be self-evident
that all men are created equal, that they
are endowed by their Creator with inherent
and inalienable rights; that among these
are life, liberty, and the pursuit of happi-
ness, that to secure these rights govern-
ments are instituted among men, deriving

then just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their happiness. Prudence indeed will dictate that governments long established should not be changed for light and transient causes, and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, begun at a distinguished period and pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to expunge their former systems of government. The history of the present King of Great Britain is a history of unremitting injuries and usurpations, among which appears no solitary fact to contradict the uniform tenor of the rest, but all having in direct object the establishment of an absolute tyranny over these states. To prove this let facts be submitted to a candid world, for the truth of which we pledge a faith yet unsullied by falsehood.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained, and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people unless those people would relinquish the right of representation in the legis-

lature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of the public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly and continually for opposing with manly firmness his invasions on the right of the people.

He has refused for a long time after such dissolutions to cause others to be elected whereby the legislative powers incapable of annihilation have returned to the people at large for their exercise, the state remaining in the meantime exposed to all the dangers of invasion from without and convulsions within.

He has endeavored to prevent the population of these states for that purpose obstructing the laws for naturalization of foreigners, refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has suffered the administration of justice totally to cease in some of these states, refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices and the amount and payment of their salaries.

He has erected a multitude of new offices by a self-assumed power and sent hither swarms of officers to harass our people and eat out their substance.

He has kept among us, in times of peace, standing armies and ships of war without the consent of our legislatures.

He has affected to render the military independent of and superior to the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions and unacknowledged by our laws, giving his assent to their acts of pretended legislation, for quartering large bodies of armed troops among us, for protecting

them by a mock trial from punishment for any murders which they should commit on the inhabitants of these states, for cutting off our trade with all parts of the world, for imposing taxes on us without our consent, for depriving us in many cases of the benefits of trial by jury, for transporting us beyond seas to be tried for pretended offenses, for abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government and enlarging its boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies, for taking away our charters, abolishing our most valuable laws, and fundamentally the forms of our governments, for suspending our own legislatures and declaring themselves invested with power to legislate for us in all cases whatsoever

He has abdicated government here, withdrawing his governors, and declaring us out of his allegiance and protection

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people

He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny already begun, with circumstances of cruelty and perfidy unworthy the head of a civilized nation

He has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions of existence

He has incited treasonable insurrections of our fellow citizens, with the allurements of forfeiture and confiscation of our property

He has constrained others, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands

He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of

distant people, who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian King of Great Britain. Determined to keep open a market where men should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce, and that this assemblage of horrors might want no fact of distinguished dye, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them by murdering the people upon whom he also obtruded them, thus paying off former crimes committed against the liberties of one people with crimes which he urged them to commit against the lives of another

In every stage of these oppressions we have petitioned for redress in the most humble terms, our repeated petitions have been answered only by repeated injuries. A prince whose character is thus marked by every act which may define a tyrant is unfit to be the ruler of a people who mean to be free. Future ages will scarce believe that the hardness of one man adventures, within the short compass of twelve years only, to build a foundation so broad and undisguised for tyranny over a people fostered and fixed in principles of freedom

Not have we been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over these our states. We have reminded them of the circumstances of our emigration and settlement here, no one of which could warrant so strange a pretension that these were effected at the expense of our own blood and treasure, unassisted by the wealth or strength of Great Britain, that in constituting indeed our several forms of government, we had adopted a common king, thereby laying a

oundation for perpetual league and amity with them, but that submission to their Parliament was no part of our constitution nor ever in idea, if history be credited, and we have appealed to their native justice and magnanimity, as well as to the ties of our common kindred, to disavow these usurpations which were likely to interrupt our connection and correspondence. They too have been deaf to the voice of justice and of consanguinity, and when occasions have been given them, by the regular course of their laws, of removing from their councils the disturbers of our harmony, they have by their free elections re-established them in power. At this very time they are permitting their chief magistrate to send over not only soldiers of our own blood, but Scotch and other foreign mercenaries, to invade and destroy us. These facts have given the last stab to agonizing affections, and manly spirit bids us to renounce forever these unfeeling brethren. We must endeavor to forget our former love for them, to hold them as we hold the rest of mankind enemies in war, in peace friends.

We might have been a free and a great people together, but a communication of grandeur and freedom, it seems, is below their dignity. Be it so, since they will have it the road to happiness and to glory is open to us too, we will climb it apart from them, and acquiesce in the necessity which denounces our eternal separation!

We therefore, the representatives of the United States in General Congress assembled in the name and by authority of the good people of these states, reject and renounce all allegiance and subjection to the kings of Great Britain and all others who may hereafter claim by, through, or under them, we utterly dissolve all political connection which may heretofore have subsisted between us and the people or Parliament of Great Britain, and finally we do assert and declare these colonies to be free and independent, and that as free and independent states they have full power to levy war, conclude peace, contract

alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration we mutually pledge to each other our lives, our fortunes, and our sacred honor.

DEMOCRACY AND INSURGENCY

[1829 (written 1787)]

I AM impatient to learn your sentiments on the late troubles in the Eastern States.¹ So far as I have yet seen, they do not appear to threaten serious consequences. Those States have suffered by the stoppage of the channels of their commerce, which have not yet found other issues. This must render money scarce, and make the people uneasy. This uneasiness has produced acts absolutely unjustifiable, but I hope they will provoke no severities from their governments. A consciousness of those in power that their administration of the public affairs has been honest, may, perhaps, produce too great a degree of indignation, and those characters, wherein fear predominates over hope, may apprehend too much from these instances of irregularity. They may conclude too hastily that nature has formed man insusceptible of any other government but that of force, a conclusion not founded in truth nor experience. Societies exist under three forms, sufficiently distinguishable. 1 Without government, as among our Indians. 2 Under governments, wherein the will of every one has a just influence, as is the case in England, in a slight degree, and in our States, in a great one. 3 Under governments of force, as is the case in all other monarchies, and in most of the other republics. To have an idea of the curse of existence under these last, they must be seen. It is a government of wolves over sheep. It is a problem, not clear in

¹ The reference is to Shays' Rebellion against the Massachusetts state government in 1786-7.

my mind, that the first condition is not the best. But I believe it to be inconsistent with any great degree of population. The second state has a great deal of good in it. The mass of mankind under that enjoys a precious degree of liberty and happiness. It has its evils, too, the principal of which is the turbulence to which it is subject. But weigh this against the oppressions of monarchy, and it becomes nothing. *Malo periculosam libertatem quam quietam servitutem*.² Even this evil is productive of good. It prevents the degeneracy of government, and nourishes a general attention to the public affairs. I hold it that a little rebellion, now and then, is a good thing, and as necessary in the political world as storms in the physical. Unsuccessful rebellions, indeed, generally establish the encroachments on the rights of the people, which have produced them. An observation of this truth should render honest republican governors so mild in their punishment of rebellions, as not to discourage them too much. It is a medicine necessary for the sound health of government.

DEMOCRACY AND LEADERSHIP [1829 (written 1818)]

THE ALLIANCE between the States under the old Articles of Confederation, for the purpose of joint defence against the aggression of Great Britain, was found insufficient, as treaties of alliance generally are, to enforce compliance with their mutual stipulations, and these, once fulfilled, that bond was to expire of itself, and each State to become sovereign and independent in all things. Yet it could not but occur to every one that these separate independencies, like the petty states of Greece, would be eternally at war with each other, and would become at length the mere partisans and satellites of the leading powers of Europe. All then must have looked forward to some further bond of union, which would insure eternal peace, and a political system of our own, independent of that of Europe. Whether all should be

consolidated into a single government, or each remain independent as to internal matters, and the whole form a single nation as to what was foreign only, and whether that national government should be a monarchy or republic, would of course divide opinions, according to the constitutions, the habits, and the circumstances of each individual. Some officers of the army, as it has always been said and believed (and Steuben and Knox have been named as the leading agents),³ trained to monarchy by military habits, are understood to have proposed to General Washington to decide this great question by the army before its disbandment, and to assume himself the crown on the assurance of their support. The indignation with which he is said to have scouted this parricide proposition was equally worthy of his virtue and wisdom.

The next effort was (on suggestion of the same individuals, in the moment of their separation) the establishment of an hereditary order, under the name of the Cincinnati, ready prepared by that distinction to be ingrafted into the future frame of government, and placing General Washington still at their head. The General wrote to me on this subject, while I was in Congress at Annapolis, and an extract from my letter is inserted in 5th Marshall's history, page 28.⁴ He afterwards called on me at that place, on his way to a meeting of the society, and after a whole evening of consultation, he left that place fully determined to use all his endeavors for its total suppression. But he found it so

² Better hazardous liberty than peaceful servitude.

³ Frederick Wilham, Baron von Steuben, 1730-1794, was a Prussian-American general, Henry Knox, 1750-1806, was a major general and served as secretary of war 1785-1795.

⁴ Jefferson refers to John Marshall's *The Life of George Washington* . . . to which is prefixed an Introduction containing a Compendious View of the Colonies Planted by the English in the Continent of North America, which appeared in five volumes between 1804 and 1807.

firmly riveted in the affections of the members that, strengthened as they happened to be by an adventitious occurrence of the moment, he could effect no more than the abolition of its hereditary principle. He called again on his return, and explained to me fully the opposition which had been made, the effect of the occurrence from France, and the difficulty with which its duration had been limited to the lives of the present members. Further details will be found among my papers, in his and my letters, and some in the *Encyclopédie Méthodique et Dictionnaire d'Economie Politique*, communicated by myself to M. Meunier, its author, who had made the establishment of this society the ground, in that work, of a libel on our country.

The want of some authority which should procure justice to the public creditors, and an observance of treaties with foreign nations, produced, some time after, the call of a convention of the States at Annapolis. Although, at this meeting, a difference of opinion was evident on the question of a republican or kingly government, yet, so general through the States was the sentiment in favor of the former, that the friends of the latter confined themselves to a course of obstruction only, and delay, to everything proposed, they hoped that nothing being done, and all things going from bad to worse, a kingly government might be usurped, and submitted to by the people, as better than anarchy and wars internal and external, the certain consequences of the present want of a general government. The effect of their manoeuvres, with the defective attendance of deputies from the States, resulted in the measure of calling a more general convention, to be held at Philadelphia. At this, the same party exhibited the same practices, and with the same views of preventing a government of concord, which they foresaw would be republican, and of forcing through anarchy their way to monarchy. But the mass of that convention was too honest, too wise, and too steady, to be baffled and misled by their manoeuvres.

One of these was a form of government proposed by Colonel Hamilton, which would have been in fact a compromise between the two parties of royalism and republicanism. According to this, the executive and one branch of the legislature were to be during good behavior, *ie* for life, and the governors of the States were to be named by these two permanent organs. This, however, was rejected, on which Hamilton left the Convention, as desperate, and never returned again until near its final conclusion. These opinions and efforts, secret or avowed, of the advocates for monarchy, had begotten great jealousy through the States generally, and thus jealousy it was which excited the strong opposition to the conventional constitution, a jealousy which yielded at last only to a general determination to establish certain amendments as barriers against a government either monarchical or consolidated. In what passed through the whole period of these conventions, I have gone on the information of those who were members of them, being absent myself on my mission to France.

I returned from that mission in the first year of the new government, having landed in Virginia in December, 1789, and proceeded to New York in March, 1790, to enter on the office of Secretary of State. Here, certainly, I found a state of things which, of all I had ever contemplated, I the least expected I had left France in the first year of its revolution, in the fervor of natural rights, and zeal for reformation. My conscientious devotion to these rights could not be heightened, but it had been aroused and excited by daily exercise. The President received me cordially, and my colleagues and the circle of principal citizens apparently with welcome. The courtesies of dinner parties given me, as a stranger newly arrived among them, placed me at once in their familiar society. But I cannot describe the wonder and mortification with which the table conversations filled me. Politics were the chief topic, and a preference of kingly over republican

government was evidently the favorite sentiment. An apostate I could not be, nor yet a hypocrite, and I found myself, for the most part, the only advocate on the republican side of the question, unless among the guests there chanced to be some member of that party from the legislative Houses. Hamilton's financial system had then passed. It had two objects: 1st, as a puzzle, to exclude popular understanding and inquiry; 2nd, as a machine for the corruption of the legislature, for he avowed the opinion that man could be governed by one of two motives only, force or interest; force, he observed, in this country was out of the question, and the interests, therefore, of the members must be laid hold of, to keep the legislature in unison with the executive. And with grief and shame it must be acknowledged that his machine was not without effect, that even in this, the birth of our government, some members were found sordid enough to bend their duty to their interests, and to look after personal rather than public good.

FROM A LETTER TO
GIDEON GRANGER
[1829]

Monticello, August 13, 1800

DEAR SIR—I received with great pleasure your favor of June 4th, and am much comforted by the appearance of a change of opinion in your State, for though we may obtain, and I believe shall obtain, a majority in the Legislature of the United States, attached to the preservation of the federal Constitution according to its obvious principles, and those on which it was known to be received, attached equally to the preservation to the States of those rights unquestionably remaining with them; friends to the freedom of religion, freedom of the press, trial by jury and to economical government; opposed to standing armies, paper systems, war, and all connection, other than commerce, with any foreign

nation, in short, a majority firm in all those principles which we have espoused and the federalists have opposed uniformly, still, should the whole body of New England continue in opposition to these principles of government, either knowingly or through delusion, our government will be a very uneasy one. It can never be harmonious and solid, while so respectable a portion of its citizens support principles which go directly to a change of the federal Constitution, to sink the State governments, consolidate them into one, and to monarchize that. Our country is too large to have all its affairs directed by a single government. Public servants at such a distance, and from under the eye of their constituents, must, from the circumstance of distance, be unable to administer and overlook all the details necessary for the good government of the citizens, and the same circumstance, by rendering detection impossible to their constituents, will invite the public agents to corruption, plunder, and waste. And I do verily believe that if the principle were to prevail of a common law being in force in the United States (which principle possesses the General Government at once of all the powers of the State governments, and reduces us to a single consolidated government), it would become the most corrupt government on the earth. You have seen the practices by which the public servants have been able to cover their conduct, or, where that could not be done, delusions by which they have varnished it for the eye of their constituents. What an augmentation of the field for jobbing, speculating, plundering, office-building and office-hunting would be produced by an assumption of all the State powers into the hands of the General Government! The true theory of our Constitution is surely the wisest and best, that the States are independent as to everything within themselves, and united as to everything respecting foreign nations. Let the General Government be reduced to foreign concerns only, and let our affairs be disentangled from those of all other nations,

except as to commerce, which the merchants will manage the better, the more they are left free to manage for themselves, and our General Government may be reduced to a very simple organization, and a very unexpensive one, a few plain duties to be performed by a few servants. But I repeat, that this simple and economical mode of government can never be secured, if the New England States continue to support the contrary system. I rejoice, therefore, in every appearance of their returning to those principles which I had always imagined to be almost innate in them.

INAUGURATION ADDRESS

[1801]

FRIENDS and Fellow Citizens Called upon to undertake the duties of the first executive office of our country, I avail myself of the presence of that portion of my fellow citizens which is here assembled, to express my grateful thanks for the favor with which they have been pleased to look towards me, to declare a sincere consciousness that the task is above my talents, and that I approach it with those anxious and awful presentiments which the greatness of the charge and the weakness of my powers so justly inspire. A rising nation, spread over a wide and fruitful land, traversing all the seas with the rich productions of their industry, engaged in commerce with nations who feel power and forget right, advancing rapidly to destinies beyond the reach of mortal eye—when I contemplate these transcendent objects, and see the honor, the happiness, and the hopes of this beloved country committed to the issue and the auspices of this day, I shrink from the contemplation, and humble myself before the magnitude of the undertaking. Utterly indeed should I despair, did not the presence of many whom I here see remind me, that in the other high authorities provided by our Constitution, I shall find resources of wisdom, of virtue, and of zeal, on which to rely under all diffi-

culties. To you, then, gentlemen, who are charged with the sovereign functions of legislation, and to those associated with you, I look with encouragement for that guidance and support which may enable us to steer with safety the vessel in which we are all embarked amidst the conflicting elements of a troubled world.

During the contest of opinion through which we have passed, the animation of discussions and of exertions has sometimes worn an aspect which might impose on strangers unused to think freely and to speak and to write what they think, but this being now decided by the voice of the nation, enounced according to the rules of the Constitution, all will, of course, arrange themselves under the will of the law, and unite in common efforts for the common good. All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable, that the minority possess their equal rights, which equal laws must protect, and to violate would be oppression. Let us, then, fellow citizens, unite with one heart and one mind. Let us restore to social intercourse that harmony and affection without which liberty and even life itself are but dreary things. And let us reflect that having banished from our land that religious intolerance under which mankind so long bled and suffered, we have yet gained little if we countenance a political intolerance as despotic, as wicked, and capable of as bitter and bloody persecutions. During the throes and convulsions of the ancient world, during the agonizing spasms of infuriated man, seeking through blood and slaughter his long-lost liberty, it was not wonderful that the agitation of the billows should reach even this distant and peaceful shore, that this should be more felt and feared by some and less by others, that this should divide opinions as to measures of safety. But every difference of opinion is not a difference of principle. We have called by different names brethren of the same principle. We are all republicans, we are all

federalists If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error or opinion may be tolerated where reason is left free to combat it I know, indeed, that some honest men fear that a republican government cannot be strong, that this government is not strong enough But would the honest patriot, in the full tide of successful experiment, abandon a government which has so far kept us free and firm, on the theoretic and visionary fear that this government, the world's best hope, may by possibility want energy to preserve itself? I trust not I believe this, on the contrary, the strongest government on earth I believe it the only one where every man, at the call of the law, would fly to the standard of the law, and would meet invasions of the public order as his own personal concern Sometimes it is said that man cannot be trusted with the government of himself Can he, then, be trusted with the government of others? Or have we found angels in the form of kings to govern him? Let history answer this question

Let us, then, with courage and confidence pursue our own federal and republican principles, our attachment to our union and representative government Kindly separated by nature and a wide ocean from the exterminating havoc of one quarter of the globe, too high-minded to endure the degradations of the others, possessing a chosen country, with room enough for our descendants to the hundredth and thousandth generation, entertaining a due sense of our equal right to the use of our own faculties, to the acquisitions of our own industry, to honor and confidence from our fellow citizens, resulting not from birth but from our actions and their sense of them; enlightened by a benign religion, professed, indeed, and practiced in various forms, yet all of them inculcating honesty, truth, temperance, gratitude, and the love of man, acknowledging and adoring an overruling Providence, which by all its

dispensations proves that it delights in the happiness of man here and his greater happiness hereafter, with all these blessings, what more is necessary to make us a happy and a prosperous people? Still one thing more, fellow citizens—a wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned This is the sum of good government, and this is necessary to close the circle of our felicities

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper you should understand what I deem the essential principles of our government, and consequently those which ought to shape its administration I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations Equal and exact justice to all men, of whatever state or persuasion, religious or political, peace, commerce, and honest friendship, with all nations, entangling alliances with none, the support of the state governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies, the preservation of the General Government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad, a jealous care of the right of election by the people—a mild and safe corrective of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided, absolute acquiescence in the decisions of the majority—the vital principle of republics, from which is no appeal but to force, the vital principle and immediate parent of despotism, a well-disciplined militia—our best reliance in peace and for the first moments of war, till regulars may relieve them, the supremacy of the civil over the military authority, economy in the public expense, that labor may be lightly burdened, the

honest payment of our debts and sacred preservation of the public faith, encouragement of agriculture, and of commerce as its handmaid, the diffusion of information and arraignment of all abuses at the bar of public reason, freedom of religion, freedom of the press, and freedom of person under the protection of the *habeas corpus*, and trial by juries impartially selected—these principles form the bright constellation which has gone before us, and guided our steps through an age of revolution and reformation. The wisdom of our sages and blood of our heroes have been devoted to their attainment. They should be the creed of our political faith, the text of civil instruction, the touchstone by which to try the services of those we trust, and should we wander from them in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

I repair, then, fellow citizens, to the post you have assigned me. With experience enough in subordinate offices to have seen the difficulties of this, the greatest of all, I have learned to expect that it will rarely fall to the lot of imperfect man to retire from this station with the reputation and the favor which bring him into it. Without pretensions to that high confidence you reposed in our first and great revolu-

tionary character, whose preeminent services had entitled him to the first place in his country's love, and destined for him the fairest page in the volume of faithful history, I ask so much confidence only as may give firmness and effect to the legal administration of your affairs. I shall often go wrong through defect of judgment. When right, I shall often be thought wrong by those whose positions will not command a view of the whole ground. I ask your indulgence for my own errors, which will never be intentional, and your support against the errors of others who may condemn what they would not if seen in all its parts. The approbation implied by your suffrage is a great consolation to me for the past, and my future solicitude will be to retain the good opinion of those who have bestowed it in advance, to conciliate that of others by doing them all the good in my power, and to be instrumental to the happiness and freedom of all.

Relying, then, on the patronage of your good will, I advance with obedience to the work, ready to retire from it whenever you become sensible how much better choice it is in your power to make. And may that Infinite Power which rules the destinies of the universe lead our councils to what is best, and give them a favorable issue for your peace and prosperity.

1752 ~ Philip Freneau ~ 1832

THESE SELECTIONS represent different phases of Freneau as a political poet. In "A Political Litany," he is a fiery propagandist of the American Revolution. His devotion to the "radicalism" of Paine and Jefferson in the 1790's is shown in the other pieces.

[The selections are taken, respectively, from the editions of 1809, 1795, and 1815. Other selections from Freneau will be found in Book I, Parts 1 and 2.]

A POLITICAL LITANY

[1786(1775)]

Libera Nos, Domine—Deliver Us, O Lord,
not only from British Dependence,
but also,

From a junto that labour with absolute
power,

Whose schemes disappointed have made
them look sour,

From the lords of the council, who fight
against freedom,

Who still follow on where delusion shall
lead them

From the group at St James's, who slight
our petitions, 5

And fools that are waiting for further
submissions—

From a nation whose manners are rough
and severe,

From scoundrels and rascals,—do keep us
all clear

From pirates sent out by command of the
king

To murder and plunder, but never to
swing, 10

From *Wallace* and *Greaves*, and *Vipers*
and *Roses*,¹

Who, if heaven pleases, we'll give bloody
noses

From the valiant *Dunmore*, with his crew
of banditti,

Who plunder Virginians at *Williamsburg*
city,

From hot-headed *Montague*, mighty to
swear, 15

The little fat man, with his pretty white
hair ²

From bishops in Britain, who butchers are
grown,

From slaves, that would die for a smile
from the throne,

From assemblies that vote against *Congress*
proceedings,

(Who now see the fruit of their stupid
misleadings) 20

From *Tryon* the mighty, who flies from our
city,

And swelled with importance disdains the
committee

(But since he is pleased to proclaim us his
foes,

What the devil care we where the devil he
goes) ³

From the cartiff, Lord *North*, who would
bind us in chains, 25

From a royal King Log, with his tooth-
full of brains,

Who dreams, and is certain (when taking a
nap)

He has conquered our lands, as they lay
on his map ⁴

From a kingdom that bullies, and hectors,
and swears,

We send up to heaven our wishes and
prayers 30

That we, disunited, may freemen be still,
And Britain go on—to be damned if she
will

ON MR PAINE'S RIGHTS OF MAN

[1795]

Thus briefly sketched the sacred RIGHTS
OF MAN,

How inconsistent with the ROYAL PLAN¹

Which for itself exclusive honour craves,

¹ These are references to captains and ships in the British navy on the American coast

² Lord Dunmore, 1732-1809, was governor of Virginia, John Montagu, 4th Earl of Sandwich, 1718-1792, was a British statesman active in American affairs

³ William Tryon, governor of North Carolina, whose harsh treatment of his rebellious subjects was sanctioned by the British government

⁴ Lord North, 1732-1792, was prime minister 1770-1782, King Log was made king of the frogs in one of Aesop's fables by an act of Jupiter, when the frogs discovered his true nature, Jupiter had to send them another king, thus Freneau stigmatizes George the Third

Where some are masters born, and millions
 slaves
 With what contempt must every eye look
 down 5
 On that base, childish bauble called a
crown,
 The gilded bait, that lures the crowd, to
 come,
 Bow down their necks, and meet a slavish
 doom,
 The source of half the miseries men en-
 dure
 The quack that kills them, while it seems
 to cure 10
 Roused by the REASON of his manly
 page,
 Once more shall PAINE a listening world
 engage
 From Reason's source, a bold reform he
 brings,
 In raising up *mankind*, he pulls down
kings,
 Who, source of discord, patrons of all
 wrong, 15
 On blood and murder have been fed too
 long
 Hid from the world, and tutored to be
 base,
 The curse, the scourge, the ruin of our
 race,
 Their's was the task, a dull designing few,
 To shackle beings that they scarcely
 knew, 20
 Who made this globe the residence of
 slaves,
 And built their thrones on systems formed
 by knaves
 —Advance, bright years, to work their
 final fall,
 And haste the period that shall crush them
 all
 Who, that has read and scan'd the
 historic page 25
 But glows, at every line, with kindling
 rage,
 To see by them the rights of men aspersed,
 Freedom restrain'd, and Nature's law re-
 versed,
 Men, ranked with beasts, by monarchs
 will'd away,

And bound young fools, or madmen to
 obey 30
 Now driven to wars, and now oppressed
 at home,
 Compelled in crowds o'er distant seas to
 roam,
 From India's climes the plundered prize
 to bring
 To glad the strumpet, or to glut the king
 'COLUMBIA, hail! immortal be thy
 reign 35
 Without a king, we till the smiling plain,
 Without a king, we trace the unbounded
 sea,
 And traffic round the globe, through each
 degree,
 Each foreign clime our honour'd flag re-
 vives,
 Which asks no monarch, to support the
 STARS 40
 Without a *king*, the laws maintain their
 sway,
 While honour bids each generous heart
 obey
 Be ours the task the ambitious to restrain,
 And this great lesson teach—that kings are
 vain,
 That warring realms to certain ruin
 haste, 45
 That kings subsist by war, and wars are
 waste
 So shall our nation, form'd on Virtue's
 plan,
 Remain the guardian of the Rights of
 Man,
 A vast Republic, famed through every
 clime,
 Without a king, to see the end of time, 50

REFLECTIONS ON THE MUTABILITY
 OF THINGS
 [1809 (1798)]

The time is approaching, deny it who may,
 The days are not very remote,
 When the pageant that glitter'd for many
 a day,
 On the stream of oblivion will float

<p>The times are advancing when matters will turn, 5 And some, who are now in the shade And pelted by malice, or treated with scorn, Will pay, in coin that was paid</p> <p>The time it will be, when the people aroused, For better arrangements prepare, 10 And firm to the cause, that of old they espoused, Their steady attachment declare</p> <p>When tyrants will shrink from the face of the day, Or, if they presume to remain, To the tune of <i>peccavi</i>, a solo will play, 15 And lower the royalty stam</p> <p>When government favors to flattery's press Will halt on their way from afar,</p>	<p>And people will laugh at the comical dress Of the knights of the garter and star 20</p> <p>When a <i>monarch</i>, new fangled, with law- yer and scribe, In junto will cease to convene, Or take from old England a pitiful bribe, To pamper his "lughness serene,"</p> <p>When virtue and merit will have a fair chance 25 The loaves and the fishes to share, And <i>Jefferson</i>, you to your station advance, The man from the president's chair</p> <p>When honesty, honor, experience, ap- proved, No more in disgrace will retire, 30 When fops from the places of trust are removed And the leaders of faction retire</p>
---	---

1786 ~ *The Anarchiad* ~ 1787

SUGGESTED by *The Rollad*, an English satiric poem directed at the Tories, *The Anarchiad*, a mock-heroic castigation of demagoguery in America, was printed between October 26, 1786, and September 13, 1787, in twelve installments in *The New Haven Gazette*, and the *Connecticut Magazine*. It was the work of four of the famous "Connecticut Wits," David Humphreys, 1752-1818, Lemuel Hopkins, 1750-1801, Joel Barlow, 1754-1812, and John Trumbull.

[The authorship of the following selection, taken from the fourth installment, is uncertain. The title has been supplied by the present editors. The text is based on that of the 1861 reprint of *The Anarchiad*, edited by Luther G. Riggs.]

INTERREGNUM [1787]

Bow low, ye heavens, and all ye lands,
draw near,
The voice prophetic of great Anarch hear!
From Eastern climes, by light and order
driven,

To me, by fate, this Western world was
giv'n,
My standard rear'd, the realm imperial
rules, 5
The last asylum for my knaves and fools
Here shall my best and brightest empire
rise,
Wild not reign, and discord greet the skies

Awake, my chosen sons, in folly brave, Stab Independence' dance o'er Freedom's grave! 10	In faith and justice least, as last in birth, 35
Sing choral songs, while conqu'ring mobs advance, And blot the debts to Holland, Spain, and France—	Then race shall grow, a by-word through the earth
Till ruin come, with fire, and sword, and blood, And men shall ask where your republic stood	Long skill'd to act the hypocritic part, Grace on the brow, and knavery at the heart, Perform their frauds with sanctimonious air, Despise good works, and balance sins by prayer— 40
Thrice happy race! how blest are discord's heirs! 15	Forswear the public debt, the public cause. Cheat heaven with forms, and earth with tender-laws,
Blest while they know what anarchy is thems Blest while they feel to them alone 'tis given To know no sovereign, neither law nor Heaven From all mankind, by traits peculiar known, By frauds and lies distinguish'd for mine own, 20	And leave the empire, at its latest groan, To work salvation out by <i>faith alone</i>
Wonder of worlds! like whom, to mortal eyes, None e'er have risen, and none e'er shall rise!	Behold the reign of anarchy, begun, 45 And halt the business of confusion done From hell's dark caverns discord sounds alarms, Blows her loud trumpet, and calls my <i>Shays</i> to arms, O'er half the land the desperate riot runs, And maddening mobs assume their rusty guns 50
Lo, the poor Briton, who, corrupted, sold, Sees God in courts, or hears him clink in gold Whose soul, proud empire oft has taught to stray 25	From councils feeble, bolder faction grows, The daring corsairs, and the savage foes, O'er Western wilds, the tawny bands allied, Insult the States of weakness and of pride, Once friendly realms, unpaid each gen- erous loan, 55
Far as the Western world, and gates of day, Though plagu'd with debts, with rage of conquest curst, In rags and tender-acts he puts no trust, But in the public weal his own forgets, Finds heaven for him who pays the na- tion's debts, 30	Wait to divide and share them for their own
A heaven like London, his fond fancy makes, Of nectar'd porter and ambrosial steaks Not so, Columbia, shall thy sons be known To prize the public weal above their own;	Now sinks the public mind, a death-like sleep O'er all the torpid limbs begins to creep, By dull degrees decays the vital heat, The blood forgets to flow, the pulse to beat, 60 The powers of life, in mimic death with- drawn, Closed the fixed eyes with one expiring yawn, Exposed in state, to wait the funeral hour, Lie the pale relics of departed power, While conscience, harrowing up their souls, with dread, 65

Then ghost of empire stalks without a
head

No more stands forth to check the rising
feud,

Then great DEFENDER of the public
good,

Retired, in vain his sighs then fate deplore,
He hears, unmoved, the distant tempest
roar, 70

No more to save a realm, dread GREENE
appears,

Their second hope, prime object of my
fears,

Far in the south, from his pale body
riven,

The deathful angel wings his soul to
heaven¹

Here shall I reign, unbounded and
alone, 75

Nor men, nor demons, shake my baseless
throne,

Till comes the day—but late, oh, may it
spring—

When their tumultuous mobs shall ask a
king,

A king, in wrath, shall heaven, vindictive
send,

And my confusion and my empire end 80

¹ The reference is to Nathanael Greene, American Revolutionary major general, 1742-1786, prevented by death from assuming the leadership which the authors assume Washington had permanently relinquished when he retired to private life at the close of the Revolution

1757 ∞ *Alexander Hamilton* ∞ 1804

BORN in the island of Nevis January 11, 1757, Hamilton came to New York in 1772 and entered King's College, now Columbia University, the following year. His aristocratic manner and precocious intellect won him friends easily. He achieved even wider influence by writing two pamphlets against a critic of Congress, now known to be Samuel Seabury, who signed himself "A Westchester Farmer." Hamilton's pamphlets were *A Full Vindication of the Measures of Congress*, 1774, and *The Farmer Refuted*, 1775. During the Revolution, Hamilton served as an artillery captain and as secretary on Washington's staff.

Hamilton married Elizabeth Schuyler in 1780. Becoming a lawyer and a member of Congress, he was soon regarded as a great political leader. He was a delegate to the Constitutional Convention of 1787 and, when it completed its work, joined with James Madison and John Jay in writing *The Federalist* papers. The three collaborators produced a total of eighty-five of these papers or short essays, which appeared in the *New York Independent Journal* for seven months beginning with the October 27, 1787, issue. They occupy an important place in American political literature as the earliest extensive exposition of the Constitution.

Appointed Secretary of the Treasury in September, 1789, Hamilton shaped the destinies of the new nation with his *Report on Public Credit* and *Report on a National Bank*, both 1790, and *Report on Manufactures*, 1791. Advocate of a strong centralized government which would foster trade and industry

and achieve national order and power, Hamilton was a foe of the decentralization dear to agrarians as well as to insurgency in the name of the common man and an international policy concerned more with ideological consistency than with what was best for the United States. Resigning as Secretary of the Treasury in 1795, Hamilton devoted himself to the law and to political intrigue in behalf of the Federalist Party. He was shot by Aaron Burr in a duel, July 11, 1804, and died in New York the following day. Of the historical novels based on his career, one of the best is Gertrude Atherton's *The Conqueror*, 1902.

[The first of the following selections is from *The Federalist*, No. VI, and the second is from a letter to Edward Carrington, May 26, 1792. Titles have been supplied by the editors.]

TOWARD A CONFEDERATIVE
REPUBLIC
[1787]

A MAN must be far gone in Utopian speculations who can seriously doubt that, if these States should either be wholly disunited, or only united in partial confederacies, the subdivisions into which they might be thrown would have frequent and violent contests with each other. To presume a want of motives for such contests as an argument against their existence, would be to forget that men are ambitious, vindictive, and rapacious. To look for a continuation of harmony between a number of independent, unconnected sovereignties in the same neighborhood, would be to disregard the uniform course of human events, and to set at defiance the accumulated experience of ages.

The causes of hostility among nations are innumerable. There are some which have a general and almost constant operation upon the collective bodies of society. Of this description are the love of power or the desire of pre-eminence and dominion—the jealousy of power, or the desire of equality and safety. There are others which have a more circumscribed though an equally operative influence within their spheres. Such are the rivalships and competitions of commerce between commercial nations. And there are others,

not less numerous than either of the former, which take their origin entirely in private passions, in the attachments, enmities, interests, hopes, and fears of leading individuals in the communities of which they are members. Men of this class, whether the favorites of a king or of a people, have in too many instances abused the confidence they possessed, and assuming the pretext of some public motive, have not scrupled to sacrifice the national tranquillity to personal advantage or personal gratification.

The celebrated Pericles, in compliance with the resentment of a prostitute,¹ at the expense of much of the blood and treasure of his countrymen, attacked, vanquished, and destroyed the city of the Samnians. The same man, stimulated by private pique against the Megarensians, another nation of Greece, or to avoid a prosecution with which he was threatened as an accomplice in a supposed theft of the statuary of Phidias,² or to get rid of the accusations prepared to be brought against him for dissipating the funds of the state in the purchase of popularity, or from a combination of all these

¹ Aspasia, vide Plutarch's Life of Pericles—Hamilton's note.

² Phidias was supposed to have stolen some public gold, with the connivance of Pericles, for the embellishment of the statue of Minerva—Hamilton's note. Statuary here means sculptor.

causes, was the primitive author of that famous and fatal war, distinguished in the Grecian annals by the name of the Peloponnesian War, which, after various vicissitudes, intermissions, and renewals, terminated in the ruin of the Athenian commonwealth

The ambitious cardinal, who was prime minister to Henry VIII, permitting his vanity to aspire to the triple crown, entertained hopes of succeeding in the acquisition of that splendid prize by the influence of the Emperor Charles V. To secure the favor and interest of this enterprising and powerful monarch, he precipitated England into a war with France, contrary to the plainest dictates of policy, and at the hazard of the safety and independence, as well of the kingdom over which he presided by his counsels, as of Europe in general. For if there ever was a sovereign who bid fair to realize the project of universal monarchy, it was the Emperor Charles V, of whose intrigues Wolsey was at once the instrument and the dupe

The influence which the bigotry of one female, the petulance of another, and the cabals of a third,³ had in the contemporary policy, fermentations, and pacifications, of a considerable part of Europe, are topics that have been too often descanted upon not to be generally known

To multiply examples of the agency of personal considerations in the production of great national events, either foreign or domestic, according to their direction, would be an unnecessary waste of time. Those who have but a superficial acquaintance with the sources from which they are to be drawn, will themselves recollect a variety of instances, and those who have a tolerable knowledge of human nature will not stand in need of such lights, to form their opinion either of the reality or extent of that agency. Perhaps, however, a reference, tending to illustrate the general principle, may with propriety be made to a case which has lately happened among ourselves. If Shays had not been a *desperate debtor*, it is much to be doubted

whether Massachusetts would have been plunged into a civil war⁴

But notwithstanding the concurring testimony of experience, in this particular, there are still to be found visionary or designing men, who stand ready to advocate the paradox of perpetual peace between the States, though dismembered and alienated from each other. The genius of republics (say they) is pacific, the spirit of commerce has a tendency to soften the manners of men, and to extinguish those inflammable humors which have so often kindled into wars. Commercial republics, like ours, will never be disposed to waste themselves in ruinous contentions with each other. They will be governed by mutual interest, and will cultivate a spirit of mutual amity and concord

Is it not (we may ask these projectors in politics) the true interest of all nations to cultivate the same benevolent and philosophic spirit? If this be their true interest, have they in fact pursued it? Has it not, on the contrary, invariably been found that momentary passions, and immediate interests, have a more active and imperious control over human conduct than general and remote considerations of policy, utility, or justice? Have republics in practice been less addicted to war than monarchies? Are not the former administered by *men* as well as the latter? Are there not aversions, predilections, rivalships, and desires of unjust acquisitions, that affect nations as well as kings? Are not popular assemblies frequently subject to the impulses of rage, resentment, jealousy, avarice, and of other irregular and violent propensities? Is it not well known that their determinations are often governed by a few individuals in whom they place confidence, and are, of course, liable to be tainted by the

³ Hamilton refers respectively to Madame de Maintenon, the Duchess of Marlborough, and Madame de Pompadour, as he indicates in his notes

⁴ Daniel Shays of Massachusetts, 1747-1825, was the leader of an uprising in 1786-87

passions and views of those individuals? Has commerce hitherto done anything more than change the object of war? Is not the love of wealth as domineering and enterprising a passion as that of power or glory? Have there not been as many wars founded upon commercial motives since that has become the prevailing system of nations, as were before occasioned by the cupidity of territory or dominion? Has not the spirit of commerce, in many instances, administered new incentives to the appetite, both for the one and for the other? Let experience, the least fallible guide of human opinions, be appealed to for an answer to these inquiries.

Sparta, Athens, Rome, and Carthage were all republics, two of them, Athens and Carthage, of the commercial kind. Yet were they as often engaged in wars, offensive and defensive, as the neighboring monarchies of the same times. Sparta was little better than a well-regulated camp, and Rome was never sated of carnage and conquest.

Carthage, though a commercial republic, was the aggressor in the very war that ended in her destruction. Hannibal had carried her arms into the heart of Italy, and to the gates of Rome, before Scipio, in turn, gave him an overthrow in the territories of Carthage, and made a conquest of the commonwealth.

Venice, in later times, figured more than once in wars of ambition, till, becoming an object to the other Italian states, Pope Julius II found means to accomplish that formidable league,⁵ which gave a deadly blow to the power and pride of this haughty republic.

The provinces of Holland, till they were overwhelmed in debts and taxes, took a leading and conspicuous part in the wars of Europe. They had furious contests with England for the dominion of the sea, and were among the most persevering and most implacable of the opponents of Louis XIV.

In the government of Britain the representatives of the people compose one

branch of the national legislature. Commerce has been for ages the predominant pursuit of that country. Few nations, nevertheless, have been more frequently engaged in war, and the wars in which that kingdom has been engaged have, in numerous instances, proceeded from the people.

There have been, if I may so express it, almost as many popular as royal wars. The cries of the nation and the importunities of their representatives have, upon various occasions, dragged their monarchs into war, or continued them in it, contrary to their inclinations, and sometimes contrary to the real interests of the state. In that memorable struggle for superiority between the rival houses of Austria and Bourbon, which so long kept Europe in a flame, it is well known that the antipathies of the English against the French, seconding the ambition, or rather the avarice, of a favorite leader,⁶ protracted the war beyond the limits marked out by sound policy, and for a considerable time in opposition to the views of the court.

The wars of these two last-mentioned nations have in a great measure grown out of commercial considerations—the desire of supplanting and the fear of being supplanted, either in particular branches of traffic or in the general advantages of trade and navigation.

From this summary of what has taken place in other countries, whose situations have borne the nearest resemblance to our own, what reason can we have to confide in those reveries which would seduce us into an expectation of peace and cordiality between the members of the present confederacy, in a state of separation? Have we not already seen enough of the fallacy and extravagance of those idle theories which have amused us with prom-

⁶ The Duke of Marlborough—Hamilton's note.

uses of an exemption from the imperfections, weaknesses, and evils incident to society in every shape? Is it not time to awake from the deceitful dream of a golden age, and to adopt as a practical maxim for the direction of our political conduct that we, as well as the other inhabitants of the globe, are yet remote from the happy empire of perfect wisdom and perfect virtue?

Let the point of extreme depression to which our national dignity and credit have sunk, let the inconveniences felt everywhere from a lax and ill administration of government, let the revolt of a part of the State of North Carolina, the late menacing disturbances in Pennsylvania, and the actual insurrections and rebellions in Massachusetts, declare——!

So far is the general sense of mankind from corresponding with the tenets of those who endeavor to lull asleep our apprehensions of discord and hostility between the States, in event of disunion, that it has from long observation of the progress of society become a sort of axiom in politics, that vicinity, or nearness of situation, constitutes nations natural enemies. An intelligent writer expresses himself on this subject to this effect "NEIGHBORING NATIONS (says he) are naturally enemies of each other, unless their common weakness forces them to league in a CONFEDERATIVE REPUBLIC, and their constitution prevents the differences that neighborhood occasions, extinguishing that secret jealousy which disposes all states to aggrandize themselves at the expense of their neighbors."⁷ This passage, at the same time, points out the EVIL and suggests the REMEDY

TWO FOES OF FEDERAL AUTHORITY

[1879 (written 1792)]

IN ALMOST all the questions, great and small, which have arisen since the first session of Congress, Mr Jefferson and

Mr Madison have been found among those who are disposed to narrow the federal authority. The question of a national bank is one example. The question of bounties to the fisheries is another. Mr Madison resisted it on the ground of constitutionality, till it was evident, by the intermediate questions taken, that the bill would pass, and he then, under the wretched subterfuge of a change of a single word, "bounty" for "allowance," went over to the majority, and voted for the bill. On the militia bill, and in a variety of minor cases, he has leaned as much as possible to the States, and he lost no opportunity of sounding the alarm, with great affected solemnity, at encroachments, meditated on the rights of the States, and of holding up the bugbear of a faction in the government having designs unfriendly to liberty.

This kind of conduct has appeared to me the more extraordinary on the part of Mr Madison, as I know for a certainty, it was a primary article in his creed, that the real danger in our system was the subversion of the national authority by the preponderance of the State governments. All his measures have proceeded on an opposite supposition. I recur again to the instance of Freneau's paper.⁸ In matters of this kind one cannot have direct proof of men's latent views, they must be inferred from circumstances. As coadjutor of Mr Jefferson in the establishment of this paper, I include Mr Madison in the consequences imputable to it. In respect to foreign politics, the views of these gentlemen are, in my judgment, equally unsound and dangerous. They have a womanish attachment to France and a womanish resentment against Great Britain. They would draw us into the closest embrace of the former, and involve us in all the consequences of her politics, and they would risk the peace of the country in their endeavors to keep us at the greatest possible distance from the

⁷ Vide *Principes des Négociations*, par l'Abbé de Mably—Hamilton's note

⁸ A reference to the *National Gazette*.

latter. This disposition goes to a length, particularly in Mr Jefferson, of which, till lately, I had no adequate idea. Various circumstances prove to me that if these gentlemen were left to pursue their own course, there would be, in less than six months, an open war between the United States and Great Britain. I trust I have a due sense of the conduct of France towards this country in the late revolution, and that I shall always be among the foremost in making her every suitable return, but there is a wide difference between this and implicating ourselves in all her politics, between bearing good will to her and hating and wrangling with all those whom she hates. The neutral and the pacific policy appears to me to mark the true path to the United States.

Having delineated to you what I conceive to be the true complexion of the politics of these gentlemen, I will now attempt a solution of these strange appearances. Mr Jefferson, it is known, did not in the first instance cordially acquiesce in the new Constitution for the United States, he had many doubts and reserves. He left this country before we had experienced the imbecilities of the former⁹.

In France, he saw government only on the side of its abuses. He drank freely of the French philosophy, in religion, in science, in politics. He came from France in the moment of a fermentation, which he had a share in exciting, and in the passions and feelings of which he shared both from temperament and situation. He came here probably with a too partial idea of his own powers, and with the expectation of a greater share in the direction of our councils than he has in reality enjoyed. I am not sure that he had not peculiarly marked out for himself the department of the finances.

He came, electrified with attachment to France, and with the project of knitting together the two countries in the closest political bands.

Mr Madison had always entertained an

exalted opinion of the talents, knowledge, and virtues of Mr Jefferson. The sentiment was probably reciprocal. A close correspondence subsisted between them during the time of Mr Jefferson's absence from the country. A close intimacy arose upon his return.

Whether any peculiar opinions of Mr Jefferson's concerning the public debt wrought a change in the sentiments of Mr Madison (for it is certain that the former is more radically wrong than the latter), or whether Mr Madison, seduced by the expectation of popularity, and possibly by the calculation of advantage to the State of Virginia, was led to change his own opinion, certain it is that a very material change took place, and that the two gentlemen were united in the new ideas. Mr Jefferson was indiscreetly open in his approbation of Mr Madison's principles, upon his first coming to the seat of government. I say indiscreetly, because a gentleman in the administration, in one department, ought not to have taken sides against another, in another department. The course of this business and a variety of circumstances which took place left Mr Madison a very discontented and chagrined man, and begot some degree of ill-humor in Mr Jefferson. Attempts were made by these gentlemen, in different ways, to produce a commercial warfare with Great Britain. In this, too, they were disappointed. And, as they had the liveliest wishes on the subject, their dissatisfaction has been proportionably great, and, as I had not favored the project, I was comprehended in their displeasure.

These causes, and perhaps some others, created, much sooner than I was aware of it, a systematic opposition to me, on the part of these gentlemen. My subversion, I am now satisfied, has been long an object with them.

⁹ By "former" Hamilton refers to the former "constitution" or union based on the Articles of Confederation.

1706 ~ *Benjamin Franklin* ~ 1790

THE CONSTITUTIONAL Convention which opened at Philadelphia May 25, 1787, and completed its deliberations September 17 of the same year, needed a harmonizing and moderating influence. Precisely such an influence was provided by Benjamin Franklin, who, nearing his eighty-second birthday, was the oldest delegate.

Two of his Convention speeches, which he wrote out and which were read by James Wilson, are included here. The first, delivered June 2, was in opposition to proposed executive salaries. Although it had little effect on the action of the Convention, it was listened to with respect and is interesting for its incidental reflections of Franklin's political philosophy. The second speech, delivered at the very close of the Convention, reveals strikingly the spirit of this philosophy and was widely circulated afterwards as the most brilliant literary achievement of four months of speechifying. The third of the following selections was a letter to the *Federal Gazette*. Probably written in 1788, it shows to what an extent Franklin desired to influence public opinion to accept the new Constitution, despite its imperfections, which he recognized. The last selection is one of his addresses as president of the society which was to exercise considerable influence on later Abolitionism. This address was delivered Nov. 9, 1789.

[The texts of these selections have been modernized, for original texts, consult the Smyth edition of Franklin's *Writings*. Other selections from Franklin's works will be found in Book I, Part 2.]

SPEECH IN THE CONSTITUTIONAL CONVENTION ON THE SUBJECT OF SALARIES [1818 (written 1787)]

SIR. It is with reluctance that I rise to express a disapprobation of any one article of the plan, for which we are so much obliged to the honorable gentleman who laid it before us. From its first reading, I have borne a good will to it, and, in general, wished it success. In this particular of salaries to the executive branch, I happen to differ, and, as my opinion may appear new and chimerical, it is only from a persuasion that it is right, and from a sense of duty, that I hazard it. The Committee will judge of my reasons when they have heard them, and their judgment may

possibly change mine. I think I see inconveniences in the appointment of salaries, I see none in refusing them, but on the contrary great advantages.

Sir, there are two passions which have a powerful influence in the affairs of men. These are *ambition* and *avarice*, the love of power and the love of money. Separately, each of these has great force in prompting men to action, but when united in view of the same object, they have in many minds the most violent effects. Place before the eyes of such men a post of *honor*, that will at the same time be a place of *profit*, and they will move heaven and earth to obtain it. The vast number of such places it is that renders the British Government so tempestuous. The struggles for them are the

true source of all those factions which are perpetually dividing the nation, distracting its councils, hurrying it sometimes into fruitless and mischievous wars, and often compelling a submission to dishonorable terms of peace

And of what kind are the men that will strive for this profitable preeminence, through all the bustle of cabal, the heat of contention, the infinite mutual abuse of parties, tearing to pieces the best of characters? It will not be the wise and moderate, the lovers of peace and good order, the men fittest for the trust. It will be the bold and the violent, the men of strong passions and indefatigable activity in their selfish pursuits. These will thrust themselves into your government, and be your rulers. And these, too, will be mistaken in the expected happiness of their situation, for their vanquished competitors, of the same spirit, and from the same motives, will perpetually be endeavoring to distress their administration, thwart their measures, and render them odious to the people.

Besides these evils, Sir, though we may set out in the beginning with moderate salaries, we will find that such will not be of long continuance. Reasons will never be wanting for proposed augmentations, and there will always be a party for giving more to the rulers, that the rulers may be able in return to give more to them. Hence, as all history informs us, there has been in every state and kingdom a constant kind of warfare between the governing and the governed, the one striving to obtain more for its support, and the other to pay less. And this has alone occasioned great convulsions, actual civil wars, ending either in dethroning of the princes or enslaving of the people. Generally, indeed, the ruling power carries its point, and we see the revenues of princes constantly increasing, and we see that they are never satisfied, but always in want of more. The more the people are discontented with the oppression of taxes, the greater need the prince has of money to distribute among his partisans, and pay the troops that are

to suppress all resistance, and enable him to plunder at pleasure. There is scarce a king in a hundred who would not, if he could, follow the example of Pharaoh—get first all the people's money, then all their lands, and then make them and their children servants forever. It will be said that we do not propose to establish kings. I know it. But there is a natural inclination in mankind to kingly government. It sometimes relieves them from aristocratic domination. They had rather have one tyrant than 500. It gives more of the appearance of equality among citizens, and that they like. I am apprehensive, therefore—perhaps too apprehensive—that the government of these States may in future times end in a monarchy. But this catastrophe, I think, may be long delayed, if in our proposed system we do not sow the seeds of contention, faction, and tumult, by making our posts of honor places of profit. If we do, I fear that, though we employ at first a number and not a single person, the number will in time be set aside, it will only nourish the foetus of a king (as the honorable gentleman from Virginia very aptly expressed it), and a king will the sooner be set over us.

It may be imagined by some that this is an Utopian idea, and that we can never find men to serve us in the executive department without paying them well for their services. I conceive this to be a mistake. Some existing facts present themselves to me, which incline me to a contrary opinion. The high sheriff of a county in England is an honorable office, but it is not a profitable one. It is rather expensive, and therefore not sought for. But yet it is executed, and well executed, and usually by some of the principal gentlemen of the county. In France, the office of counsellor, or member of their judiciary parliaments, is more honorable. It is therefore purchased at a high price, there are indeed fees on the law proceedings, which are divided among them, but these fees do not amount to more than three per cent on the sum paid for the place. Therefore, as legal

interest is there at five per cent, they in fact pay two per cent for being allowed to do the judiciary business of the nation, which is at the same time entirely exempt from the burden of paying them any salaries for their services. I do not, however, mean to recommend this as an eligible mode for our judiciary department. I only bring the instance to show that the pleasure of doing good and serving their country, and the respect such conduct entitles them to, are sufficient motives with some minds to give up a great portion of their time to the public, without the mean inducement of pecuniary satisfaction.

Another instance is that of a respectable society who have made the experiment and practiced it with success, now more than a hundred years. I mean the Quakers. It is an established rule with them that they are not to go to law, but in their controversies they must apply to their monthly, quarterly, and yearly meetings. Committees of these sit with patience to hear the parties, and spend much time in composing their differences. In doing this, they are supported by a sense of duty, and the respect paid to usefulness. It is honorable to be so employed, but it was never made profitable by salaries, fees, or perquisites. And indeed, in all cases of public service, the less the profit the greater the honor.

To bring the matter nearer home, have we not seen the greatest and most important of our offices, that of General of our armies, executed for eight years together, without the smallest salary, by a patriot whom I will not now offend by any other praise, and this, through fatigues and distresses, in common with the other brave men, his military friends and companions, and the constant anxieties peculiar to his station? And shall we doubt finding three or four men in all the United States with public spirit enough to bear sitting in peaceful council for perhaps an equal term, merely to preside over our civil concerns, and see that our laws are duly executed? Sir, I have a better opinion of our country. I think we shall never be

without a sufficient number of wise and good men to undertake, and execute well and faithfully, the office in question.

Sir, the saving of the salaries, that may at first be proposed, is not an object with me. The subsequent mischiefs of proposing them are what I apprehend. And therefore it is that I move the amendment. If it is not seconded or accepted, I must be contented with the satisfaction of having delivered my opinion frankly, and done my duty.

SPEECH IN THE CONVENTION
AT THE CONCLUSION OF
ITS DELIBERATIONS
[1787 and 1793 (written 1787)]

MR. PRESIDENT. I confess that I do not entirely approve of this Constitution at present, but, Sir, I am not sure I shall never approve it, for, having lived long, I have experienced many instances of being obliged, by better information or fuller consideration, to change my opinions even on important subjects, which I once thought right, but found to be otherwise. It is therefore that, the older I grow, the more apt I am to doubt my own judgment of others. Most men, indeed, as well as most sects in religion, think themselves in possession of all truth, and that wherever others differ from them, it is so far error. Steele, a Protestant, in a dedication, tells the Pope that the only difference between our two churches in their opinions of the certainty of their doctrine is the Romish Church is *infallible* and the Church of England is *never in the wrong*. But, though many private persons think almost as highly of their own infallibility as of that of their sect, few express it so naturally as a certain French lady who, in a little dispute with her sister, said, "But I meet with nobody but myself that is *always* in the right." "*Je ne trouve que moi qui ait toujours raison*."

In these sentiments, Sir, I agree to this Constitution, with all its faults—if they

are such, because I think a general government necessary for us, and there is no *form* of government but what may be a blessing to the people, if well administered, and I believe, farther, that this is likely to be well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other. I doubt, too, whether any other convention we can obtain may be able to make a better constitution, for, when you assemble a number of men, to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests, and their selfish views. From such an assembly can a *perfect* production be expected? It therefore astonishes me, Sir, to find this system approaching so near to perfection as it does, and I think it will astonish our enemies, who are waiting with confidence to hear that our councils are confounded like those of the builders of Babel, and that our States are on the point of separation, only to meet hereafter for the purpose of cutting one another's throats. Thus I consent, Sir, to this Constitution, because I expect no better, and because I am not sure that it is not the best. The opinions I have had of its *errors* I sacrifice to the public good. I have never whispered a syllable of them abroad. Within these walls they were born, and here they shall die. If every one of us, in returning to our constituents, were to report the objections he has had to it, and endeavor to gain partisans in support of them, we might prevent its being generally received, and thereby lose all the salutary effects and great advantages resulting naturally in our favor among foreign nations, as well as among ourselves, from our real or apparent unanimity. Much of the strength and efficiency of any government, in procuring and securing happiness to the people, depends on *opinion*, on the general opinion of the goodness of that government, as

well as of the wisdom and integrity of its governors. I hope, therefore, for our own sakes, as a part of the people, and for the sake of our posterity, that we shall act heartily and unanimously in recommending this Constitution, wherever our influence may extend, and turn our future thoughts and endeavors to the means of having it *well administered*.

On the whole, Sir, I cannot help expressing a wish, that every member of the Convention who may still have objections to it, would with me on this occasion doubt a little of his own infallibility, and, to make *manifest* our *unanimity*, put his name to this instrument.

A COMPARISON OF THE CONDUCT OF THE ANCIENT JEWS AND OF THE ANTI-FEDERALISTS IN THE UNITED STATES OF AMERICA

[1788 and 1793 (written 1788?)]

A ZEALOUS advocate for the proposed Federal Constitution, in a certain public assembly, said that "the repugnance of a great part of mankind to good government was such that he believed that, if an angel from heaven was to bring down a constitution formed there for our use, it would nevertheless meet with violent opposition." He was reproved for the supposed extravagance of the sentiment, and he did not justify it. Probably it might not have immediately occurred to him that the experiment had been tried and that the event was recorded in the most faithful of all histories, the Holy Bible, otherwise he might, as it seems to me, have supported his opinion by that unexceptionable authority.

The Supreme Being had been pleased to nourish up a single family by continued acts of his attentive Providence till it became a great people, and, having rescued them from bondage, by many miracles performed by his servant Moses, he personally delivered to that chosen servant, in the

presence of the whole nation, a constitution and code of laws for their observance, accompanied and sanctioned with promises of great rewards, and threats of severe punishments, as the consequence of their obedience or disobedience

This constitution, though the Deity himself was to be at its head (and it is therefore called by political writers a *theocracy*), could not be carried into execution but by the means of his ministers, Aaron and his sons were therefore commissioned to be, with Moses, the first established ministry of the new government

One would have thought that this appointment of men who had distinguished themselves by procuring the liberty of their nation and had hazarded their lives in openly opposing the will of a powerful monarch, who would have retained that nation in slavery, might have been an appointment acceptable to a grateful people, and that a constitution framed for them by the Deity himself might, on that account, have been secure of a universal welcome reception Yet there were in every one of the *thirteen tribes* some discontented, restless spirits, who were continually exciting them to reject the proposed new government, and this from various motives

Many still retained an affection for Egypt, the land of their nativity, and those, whenever they felt any inconvenience or hardship, though the natural and unavoidable effect of their change of situation, exclaimed against their leaders as the authors of their trouble, and were not only for returning into Egypt, but for stoning their deliverers Those inclined to idolatry were displeased that their *Gold Calf* was destroyed Many of the chiefs thought the new constitution might be injurious to their particular interests, that the *profitable places* would be *engrossed by the families and friends of Moses and Aaron*, and others equally well-born excluded In Josephus and the Talmud, we learn some particulars, not so fully narrated in the

Scripture We are there told, "That Corah was ambitious of the priesthood, and offended that it was conferred on Aaron, and this, as he said, by the authority of Moses only, *without the consent of the people* He accused Moses of having, by various artifices, fraudulently obtained the government, and deprived the people of their liberties, and of *conspiring* with Aaron to perpetuate the tyranny in their family Thus, though Corah's real motive was the supplanting of Aaron, he persuaded the people that he meant only the public good, and they, moved by his insinuations, began to cry out, 'Let us maintain the common liberty of our *respective* tribes, we have freed ourselves from the slavery imposed on us by the Egyptians, and shall we now suffer ourselves to be made slaves by Moses? If we must have a master, it were better to return to Pharaoh, who at least fed us with bread and onions, than to serve this new tyrant, who by his operations has brought us into danger of famine' Then they called in question the *reality of his conference* with God, and objected the *privacy of the meetings*, and the *preventing any of the people from being present* at the colloquies, or even approaching the place, as grounds of great suspicion They accused Moses also of *peculation*, as embezzling part of the golden spoons and the silver chargers, that the princes had offered at the dedication of the altar, and the offerings of gold by the common people, as well as most of the poll-tax, and Aaron they accused of pocketing much of the gold of which he pretended to have made a molten calf Besides *peculation*, they charged Moses with *ambition*, to gratify which passion he had, they said, deceived the people, by promising to bring them to a land flowing with milk and honey, instead of doing which, he had brought them *from* such a land, and that he thought light of all this mischief, provided he could make himself an *absolute prince* That, to support the new dignity with splendor in his family, the partial poll-tax already levied and given

to Aaron was to be followed by a general one, which would probably be augmented from time to time, if he were suffered to go on promulgating new laws, on pretence of new occasional revelations of the divine will, till their whole fortunes were devoured by that aristocracy."

Moses denied the charge of peculation, and his accusers were destitute of proofs to support it, though *facts*, if real, are in their nature capable of proof "I have not," said he (with holy confidence in the presence of his God), "I have not taken from this people the value of an ass, nor done them any other injury." But his enemies had made the charge, and with some success among the populace, for no kind of accusation is so readily made, or easily believed, by knaves as the accusation of knavery.

In fine, no less than two hundred and fifty of the principal men, "famous in the congregation, men of renown," heading and exciting the mob, worked them up to such a pitch of frenzy that they called out, "Stone 'em, stone 'em, and thereby *secure our liberties*, and let us choose other captains, that may lead us back into Egypt, in case we do not succeed in reducing the Canaanites!"

On the whole, it appears that the Israelites were a people jealous of their newly-acquired liberty, which jealousy was in itself no fault, but, when they suffered it to be worked upon by artful men, pretending public good, with nothing really in view but private interest, they were led to oppose the establishment of the *new constitution*, whereby they brought upon themselves much inconvenience and misfortune. It appears further, from the same inestimable history, that, when after many ages that constitution was become old and much abused, and an amendment of it was proposed, the populace, as they had accused Moses of the ambition of making himself a *prince*, and cried out, "Stone him, stone him," so, excited by their high priests and *scribes*, they exclaimed against the Messiah, that he aimed at becoming

King of the Jews, and cried out, "Crucify him, Crucify him." From all which we may gather that popular opposition to a public measure is no proof of its impropriety, even though the opposition be excited and headed by men of distinction.

To conclude, I beg I may not be understood to infer that our General Convention was divinely inspired, when it formed the new Federal Constitution, merely because that Constitution has been unreasonably and vehemently opposed, yet I must own I have so much faith in the general government of the world by *Providence*, that I can hardly conceive a transaction of such momentous importance to the welfare of millions now existing, and to exist in the posterity of a great nation, should be suffered to pass without being in some degree influenced, guided, and governed by that omnipotent, omnipresent, and beneficent Ruler, in whom all inferior spirits live, and move, and have their being.

AN ADDRESS TO THE PUBLIC FROM
THE PENNSYLVANIA SOCIETY FOR
PROMOTING THE ABOLITION OF
SLAVERY AND THE RELIEF OF
FREE NEGROES UNLAWFULLY
HELD IN BONDAGE
[1789 and 1806 (written 1789)]

IT IS with peculiar satisfaction we assure the friends of humanity that, in prosecuting the design of our association, our endeavors have proved successful, far beyond our most sanguine expectations.

Encouraged by this success and by the daily progress of that luminous and benign spirit of liberty, which is diffusing itself throughout the world, and humbly hoping for the continuance of the divine blessing on our labors, we have ventured to make an important addition to our original plan, and do therefore earnestly solicit the support and assistance of all who can feel the tender emotions of sympathy and compassion, or relish the exalted pleasure of beneficence.

Slavery is such an atrocious debasement of human nature that its very extirpation, if not performed with solicitous care, may sometimes open a source of serious evils.

The unhappy man who has long been treated as a brute animal too frequently sinks beneath the common standard of the human species. The galling chains that bind his body do also fetter his intellectual faculties and impair the social affections of his heart. Accustomed to move like a mere machine, by the will of a master, reflection is suspended, he has not the power of choice, and reason and conscience have but little influence over his conduct, because he is chiefly governed by the passion of fear. He is poor and friendless, perhaps worn out by extreme labor, age, and disease.

Under such circumstances, freedom may often prove a misfortune to himself, and prejudicial to society.

Attention to emancipated black people, it is therefore to be hoped, will become a branch of our national policy, but, as far as we contribute to promote this emancipation, so far that attention is evidently a serious duty incumbent on us, and which we mean to discharge to the best of our judgment and abilities.

To instruct, to advise, to qualify those, who have been restored to freedom, for the exercise and enjoyment of civil liberty, to promote in them habits of industry, to furnish them with employments suited to their age, sex, talents, and other circumstances, and to procure their children an education calculated for their future situation in life, these are the great outlines of the annexed plan, which we have adopted, and which we conceive will essentially promote the public good, and the happiness of these our hitherto too much neglected fellow-creatures.

A plan so extensive cannot be carried into execution without considerable pecuniary resources, beyond the present ordinary funds of the Society. We hope much from the generosity of enlightened and benevolent freemen, and will gratefully receive any donations or subscriptions for this purpose, which may be made to our treasurer, James Starr, or to James Pemberton, chairman of our committee of correspondence.

Signed, by order of the Society,

B. Franklin, President.

An Exchange of Letters Between John Adams and Samuel Adams

1802

WHILE John Adams was vice-president of the United States, he exchanged letters with Samuel Adams, then lieutenant-governor of Massachusetts, on one of the fundamental issues confronting the new nation—the rôle of the people, of the common man, versus the rôle of a civilized minority, of the uncommon man, in preserving liberty. The exchange, including two letters from each, was published in Boston in 1802 in a pamphlet of thirty-two pages. The John Adams selection is taken from the third letter in the series, dated New York, October 18, 1790, the Samuel Adams selection is part of his reply, the fourth letter, dated November 20 of the same year.

Samuel Adams, a second cousin of John, was born in Boston in 1722. A graduate of Harvard, he proved unsuccessful as a lawyer, a petty official, and a business man, but became one of the most effective organizers of various forms of opposition to Britain, such as non-importation associations, the "Sons of Liberty," the "Boston Tea Party," and the "committees of correspondence," which were propaganda agencies. He was also the author of several of the more influential documents stating the grievances of the colonies, such as the "Resolves" adopted October 29, 1765, by the Massachusetts House of Representatives, and "The Rights of the Colonists," which anticipated the Declaration of Independence and was officially approved by the Town of Boston at a public meeting, November 20, 1772. His later public life was a long and distinguished one. He belonged to the Continental Congresses, signed the Declaration of Independence, was a delegate to the Massachusetts constitutional convention of 1779-80, and held various posts in the government of that State. After serving as lieutenant-governor, he was governor from 1794 to 1797. He died in 1803.

[For other selections from the writings of John Adams, see pp. 277-82.]

JOHN ADAMS TO SAMUEL ADAMS
[1802 (written 1790)]

I AM very willing to agree with you in fancying that in the greatest improvements of society government will be in the republican form. It is a fixed principle with me that all good government is and must be republican. But, at the same time, your candor will agree with me that there is not in lexicography a more fraudulent word. Whenever I use the word *republic* with approbation, I mean a government in which the people have collectively, or by representation, an essential share in the sovereignty.

With you I have also the honor most perfectly to harmonize in your sentiments of the humanity and wisdom of promoting education in knowledge, virtue, and benevolence. But I think that these will confirm mankind in the opinion of the necessity of preserving and strengthening the dikes against the ocean, its tides and storms. Human appetites, passions, prejudices, and self-love will never be conquered by benevolence and knowledge alone, introduced by human means. The millennium itself neither supposes nor implies it. All civil government is then to cease, and the Mes-

siah is to reign. That happy and holy state is therefore wholly out of this question. You and I agree in the utility of universal education, but will nations agree in it as fully and extensively as we do, and be at the expense of it? We know, with as much certainty as attends any human knowledge, that they will not. We cannot, therefore, advise the people to depend for their safety, liberty, and security upon hopes and blessings which we know will not fall to their lot. If we do our duty then to the people, we shall not deceive them, but advise them to depend upon what is in their power and will to relieve them.

Philosophers, ancient and modern, do not appear to me to have studied nature, the whole of nature, and nothing but nature. Lycurgus' principle was war and family pride, Solon's was what the people would bear, etc. The best writings of antiquity upon government, those, I mean, of Aristotle, Zeno, and Cicero, are lost. We have human nature, society, and universal history to observe and study, and from these we may draw all the real principles which ought to be regarded. Disciples will follow their masters, and interested partisans their chiefs; let us like it or not,

we cannot help it. But if the true principles can be discovered, and fairly, fully, and impartially laid before the people, the more light increases, the more the reason of them will be seen, and the more disciples they will have. Prejudice, passion, and private interest, which will always mingle in human inquiries, one would think might be enlisted on the side of truth, at least in the greatest number, for certainly the majority are interested in the truth, if they could see to the end of all its consequences. "Kings have been deposed by aspiring nobles." True, and never by any other. "These" (the nobles, I suppose) "have waged everlasting war against the common rights of men." True, when they have been possessed of the *summa imperii*¹ in one body, without a check. So have the plebeians, so have the people, so have kings, so has human nature, in every shape and combination, and so it ever will. But, on the other hand, the nobles have been essential parties in the preservation of liberty, whenever and wherever it has existed. In Europe, they alone have preserved it against kings and people, whenever it has been preserved, or, at least, with very little assistance from the people. One hideous despotism, as horrid as that of Turkey, would have been the lot of every nation of Europe, if the nobles had not made stands. By nobles, I mean not peculiarly an hereditary nobility, or any particular modification, but the natural and actual aristocracy among mankind. The existence of this you will not deny. You and I have seen four noble families rise up in Boston—the Crafts, Gores, Dawes, and Austins. These are as really a nobility in our town as the Howards, Somersets, Berties, etc., in England. Blind, undistinguishing reproaches against the aristocratical part of mankind, a division which nature has made and we cannot abolish, are neither pious nor benevolent. They are as pernicious as they are false. They serve only to foment prejudice, jealousy, envy, animosity, and malevolence. They serve no ends but those of sophistry,

fraud, and the spirit of party. It would not be true, but it would not be more egregiously false, to say that the people have waged everlasting war against the rights of men.

"The love of liberty," you say, "is interwoven in the soul of man." So it is, according to La Fontaine, in that of a wolf,² and I doubt whether it be much more rational, generous, or social, in one than in the other, until in man it is enlightened by experience, reflection, education, and civil and political institutions, which are at first produced and constantly supported and improved by a few, that is, by the nobility. The wolf in the fable, who preferred running in the forest, lean and hungry, to the sleek, plump, and round sides of the dog, because he found the latter was sometimes restrained, had more love of liberty than most men. The numbers of men in all ages have preferred ease, slumber, and good cheer to liberty, when they have been in competition. We must not then depend alone upon the love of liberty in the soul of man for its preservation. Some political institutions must be prepared to assist this love against its enemies. Without these, the struggle will ever end only in a change of impostors. When the people, who have no property, feel the power in their own hands to determine all questions by a majority, they ever attack those who have property, till the injured men of property lose all patience, and recur to finesse, trick, and stratagem, to outwit those who have too much strength, because they have too many hands to be resisted any other way. Let us be impartial, then, and speak the whole truth. Till we do, we shall never discover all the true principles that are necessary. The multitude, therefore, as well as the nobles, must have a check.

¹ Highest powers

² The *Fables* of the French poet, Jean de La Fontaine, 1621-1695, were published 1668-1694.

SAMUEL ADAMS TO JOHN ADAMS
[1802 (written 1790)]

A REPUBLIC, you tell me, is a government in which "the people have an essential *share* in the sovereignty" Is not the *whole* sovereignty, my friend, essentially in the people? Is not government designed for the welfare and happiness of all the people? And is it not the uncontrollable, essential right of the people to amend and alter, or annul their constitution and frame a new one, whenever they shall think it will better promote their own welfare and happiness to do it? That the sovereignty resides in the people is a political doctrine which I have never heard an American politician seriously deny The constitutions of the American States reserve to the people the exercise of the rights of sovereignty, by the annual or biennial elections of their governors, senators, and representatives, and by empowering their own representatives to impeach the greatest officers of the state before the senators, who are also chosen by themselves We, *the people* is the style of the federal Constitution They adopted it, and, conformably to it, they delegate the exercise of the powers of government to particular persons who, after short intervals, resign their powers to the people, and they will reelect them, or appoint others, as they think fit .

We agree in the utility of universal education, but "will nations agree in it as fully and extensively as we do?" Why should they not? It would not be fair to conclude that, because they have not yet been disposed to agree in it, they never will It is allowed that the present age is more enlightened than former ones Freedom of inquiry is certainly more encouraged, the feelings of humanity have softened the heart, the true principles of civil and religious liberty are better understood, tyranny in all its shapes is more detested, and bigotry, if not still blind, must be mortified to see that she is despised Such an age may afford at least a

flattering expectation that nations, as well as individuals, will view the utility of *universal education* in so strong a light as to induce sufficient national patronage and support Future ages will probably be more enlightened than this

The love of liberty is interwoven in the soul of man "So is it in that of a wolf" However irrational, ungenerous, and unsocial the love of liberty may be in a rude savage, he is capable of being enlightened by experience, reflection, education, and civil and political institutions But the nature of the wolf is, and ever will be, confined to running in the forest to satisfy his hunger and his brutal appetites, the dog is inclined, in a very easy way, to seek his living, and fattens his sides from what comes from his master's kitchen The comparison of La Fontaine is, in my opinion, ungenerous, unnatural, and unjust

Among the numbers of men, my friend, are to be found not only those who have "preferred ease, slumber, and good cheer, to liberty," but others, who have eagerly sought after thrones and sceptres, hereditary shares in sovereignty, riches and splendor, titles, stars, garters, crosses, eagles, and many other childish playthings, at the expense of real nobility, without one thought or care for the liberty and happiness of the rest of mankind

"The people, who have no property, feel the power of government by a majority, and ever attack those who have property" "The injured men of property recur to finesse, trick, and stratagem to outwit them" True These may proceed from a lust of domination in *some* of both parties Be this as it may, it has been known that such deceitful tricks have been practiced by some of the rich upon their unsuspecting fellow-citizens, to turn the determination of questions so as to answer their own selfish purposes To plunder or filch the rights of men are crimes equally immoral and nefarious, though committed in different manners Neither of them is confined to the rich or the poor, they are too common among both The lords, as well as

the commons, of Great Britain, by continued large majorities, endeavored by finesse, tricks, and stratagems, as well as threats, to prevail on the American colonies to surrender their liberty and property to their disposal. These failing, they attempted to *plunder* our rights by force of arms. We feared their arts more than their aims. Did the members of that hereditary house of lords, who constituted those repeated majorities, then possess the spirit of nobility? Not so, I think. That spirit resided in the *illustrious* minorities in both houses.

But, "by nobles," who have prevented "one hideous despotism, as horrid as that of Turkey, from falling to the lot of every nation of Europe," you mean, "not peculiarly an hereditary nobility, or any particular modification, but the natural and actual aristocracy among mankind," the existence of which I am not disposed to deny. Where is this aristocracy found? Among men of all ranks and conditions. The cottager may beget a wise son, the noble, a fool. The one is capable of great improvement, the other, not. Education is within the power of man and societies of men. Wise and judicious modes of education, patronized and supported by communities, will draw together the sons of

the rich and the poor, among whom it makes no distinction, it will cultivate the natural genius, elevate the soul, excite laudable emulation to excel in knowledge, piety, and benevolence, and, finally, it will reward its patrons and benefactors, by shedding its benign influence on the public mind. Education inures men to thinking and reflection, to reasoning and demonstration. It discovers to them the moral and religious duties they owe to God, their country, and to all mankind. Even savages might, by the means of education, be instructed to frame the best civil and political institutions, with as much skill and ingenuity as they now shape their arrows. Education leads youth to "the study of human nature, society, and universal history," from whence they may "draw all the principles" of political architecture which ought to be regarded. All men are "interested in the truth." Education, by showing them "the end of all its consequences," would induce at least the greatest numbers to enlist on its side. The man of good understanding, who has been well-educated, and improves these advantages, as far as his circumstances will allow, in promoting the happiness of mankind, in my opinion, and I am inclined to think in yours, is indeed "well-born" .

1765 ~ William Hill Brown ~ 1793

DURING the post-Revolutionary flowering of *belles-lettres*, a great deal of sentimental fiction appeared in American magazines and in book form. Strongly influenced by the work of Richardson, much of this fiction was intended to warn its bourgeois female readers against the libertinism of men still behaving according to the aristocratic double standard of morality. It was intended, further, to improve the character of these readers by emptying their tear ducts over the plight of virtue. Actually, it often increased their frivolity by making them more sexually conscious and emotionally vulnerable. Yet this trend in fiction had a definite relationship to the ideology of democracy. Social and educational notions tending to undermine the prejudices derived from a more feudal or stratified order of things were introduced into the love story.

The Power of Sympathy, published anonymously in Boston in 1789 in

two volumes, was dedicated "To the Young Ladies of United Columbia" as "Intended to represent the specious Causes, and to Expose the fatal Consequences of SEDUCTION, To inspire the Female Mind With a Principle of Self Complacency, and to Promote the Economy of Human Life" The seduction is mostly in the past and in interpolated stories The hero, Harrington, is virtuously in love with Harriot and writes of his love to his friend, Worthy Harriot's confidante, Myra, is advised by a cultivated mentor, Mrs Holmes Poor Harrington and Harriot are foredoomed to tragedy because Harrington's father was guilty of a libertine lapse

This first American sentimental novel was for a long time erroneously attributed to the poetess, Mrs Sarah Wentworth Morton, but is now known to have been the work of William Hill Brown, of Boston He also wrote verse, essays, two plays and another short novel, *Ira and Isabella*, published in 1807, which has a plot somewhat similar to that of *The Power of Sympathy* with the exception that the ending is happy

From
THE POWER OF SYMPATHY
[1789]

HARRINGTON TO WORTHY

Boston

AM I to believe my eyes—my ears—my heart!—and yet I cannot be deceived—We are generally most stupid and incredulous in what most materially concerns us We find the greatest difficulty, in persuading ourselves of the attainment of what we most ardently desire—She loves!—I say to myself, Harriot loves me, and I reverence myself

I think I may now take upon me some share of happiness—I may say I have not lived in vain—for all my heart holds dear is mine—joy and love encompass me—peace and tranquillity are before me, the prospect is fair and promising as the gilded dawn of a summer's day—There is none to supplant me in her affection—I dread no rival, for our tempers are similar, and our hearts beat in unison together.

Adieu!

HARRINGTON TO WORTHY

Boston

LOVE softens and refines the manners—

polishes the asperities of awkwardness, and fits us for the society of gentle beings It goes further, it mends the heart, and makes us better men—it gives the faint-hearted an extraordinary strength of soul, and renders them equal and frequently superior to danger and distress

My passions you know are quick, my prejudices sometimes obstinate—She tells me these things are wrong—This gentle reprimand is so tempered with love that I think she commends me I however promise a reform, and am much pleased with the improvement Harriot moulds my heart into what form she chooses

A little party is proposed tomorrow evening, and I shall attend Harriot These elegant relaxations prevent the degeneracy of human nature, exhilarate the spirits, and wind up this machine of ours for another revolution of business

HARRINGTON TO WORTHY

Boston

OUR little party was overthrown by a strange piece of folly A Miss P—was introduced, a young lady of beauty and elegant accomplishments The whole company were beginning to be cheerful—business and care were disgusted at the sight of so many happy countenances,

and had gone out from among us Jollity and good humour bade us prepare for the dance—unhappily at this juncture a lady and gentleman were engaged in a conversation concerning Miss P——, and one of them repeated the words “a mechanic’s daughter”—it is supposed the word “mechanic” was repeated scornfully—She heard it—thought herself insulted—and indignantly retired—Disorder and confusion immediately took place, and the amusement was put an end to for the evening

I wish people would consider how little time they have to frolic here—that they would improve it to more advantage, and not dispute for any precedence or superiority but in good nature and sociability—“a mechanic”—and pray whence this distinction!

Inequality among mankind is a foe to our happiness—it even affects our little parties of pleasure—Such is the fate of the human race, one order of men lords it over another, but upon what grounds its right is founded I could never be satisfied

For this reason, I like a democratical better than any other kind of government, and were I a Lycurgus no distinction of rank should be found in my commonwealth

In my tour through the United States, I had an opportunity of examining and comparing the different manners and dispositions of the inhabitants of the several republics Those of the southern states, accustomed to a habit of domineering over their slaves, are haughtier, more tenacious of honour, and indeed possess more of an aristocratic temper than their sisters of the confederacy As we travel to the northward, the nature of the constitution seems to operate on the minds of the people—slavery is abolished—all men are declared free and equal, and then tempers are open, generous and communicative It is the same in all those countries where the people enjoy independence and equal liberty. Why then should those distinctions arise which are inimical to domestic quietude? Or why should the noisy voice of those

who seek distinction, so loudly reecho in the ears of peace and jollity, as to deafen the sound of the music? For while we are disputing who shall lead off the dance, behold! the instrument gets out of tune—a string snaps—and where is our chance for dancing?

Adieu!

MRS HOLMES TO MYRA

Bellevue

I AM sometimes mortified to find the books which I recommend to your perusal are not always applicable to the situation of an American lady The general observations of some English books are the most useful things contained in them, the principal parts being chiefly filled with local descriptions, which a young woman here is frequently at a loss to understand

I send you a little work entitled, “A Lady of Quality’s Advice to her Children,” which, though not altogether free from this exception, is highly worthy of your attention A parent who is represented struggling with the distress of a lingering illness bequeaths a system of education to her offspring I do not recommend it to you as a novel, but as a work that speaks the language of the heart and that inculcates the duty we owe to ourselves, to society and the Deity

Didactic essays are not always capable of engaging the attention of young ladies We fly from the labored precepts of the essayist to the sprightly narrative of the novelist Habituate your mind to remark the difference between truth and fiction You will then always be enabled to judge of the propriety and justness of a thought, and never be misled to form wrong opinions, by the meretricious *dress* of a pleasing tale You will then be capable of deducing the most profitable lessons of instruction, and the design of your reading will be fully accomplished—

Hence you will be provided with a key to the characters of men: To unlock these

curious cabinets is a very useful as well as entertaining employment. Of those insidious gentlemen, who plan their advances towards us on the Chesterfieldian system, let me advise you to beware. A prudent commander would place a double watch, if he apprehended the enemy were more disposed to take the fort by secrecy and undermining than by an open assault.

I cannot but smile sometimes to observe the ridiculous figure of some of our young gentlemen, who affect to square their conduct by his Lordship's principles of politeness—they never tell a story unless it be very short—they talk of decorum and the *etiquette*—they detest everything vulgar or common—they are on the rack if an old man should let fall a proverb—and a thousand more trifling affectations, the ridicule of which arises, not so much from their putting on this foreign dress, as from their ignorance or vanity in pretending to imitate those rules which were designed for an English nobleman—Unless, therefore, they have a prospect of being called by Congress to execute some foreign negotiation, they ought certainly to be minding their business.

This affectation of fine breeding is destructive to morals. Dissimulation and insincerity are connected with its tenets, and are mutually inculcated with the art of pleasing.

A person of this character grounds his motives for pleasing on the most selfish principle—He is polite, not for the honor of obliging you, as he endeavors to make you believe, but that he himself might be obliged. Suspect him, therefore, of insincerity and treachery, who sacrifices truth to complaisance, and advises you to the pursuit of an object, which would tend to his advantage.

Always distinguish the man of sense from the coxcomb. Mr. Worthy is possessed of a good understanding and an exact judgment. If you are united with him, let it be the study of your life to preserve his love and esteem. His amiable character is adorned with modesty and a

disposition to virtue and sobriety. I never anticipate your future happiness, but I contemplate this part of his character with pleasure. But remember the fidelity of a wife alone will not always secure the esteem of a husband, when her personal attractions do not continue to delight his eye, she will flatter his judgment. I think you are enabled to perform this, because you are solicitous to supply your mind with those amiable qualities which are more durable than beauty. When you are no longer surrounded with a flattering circle of young men, and the world shall cease to call you beautiful, your company will be counted by men of sense, who know the value of your conversation.

I am pleased with the conduct of some agreeable girls and the return of civility and attention they often make to the concerted compliments of a certain class of beaux. These ladies wisely consider them as the butterflies of a day, and therefore generally scorn to break them on a wheel!

When you are in company, where the vain and thoughtless endeavor to show their ingenuity by ridiculing particular orders of men, your prudence will dictate to you not to countenance their abuse—The book I have just mentioned intimates that “there are a great many things done and said in company which a woman of virtue will neither see nor hear”—To discountenance levity is a sure way to guard against the encroachment of temptation, to participate in the mirth of a buffoon is to render yourself equally ridiculous. We owe to ourselves a detestation of folly, and to the world, the appearance of it. I would have you avoid coquetry and affectation, and the observance of my maxims will never make you a prude—Pretend, therefore, should a vain youth throw out illiberal sarcasms against mechanics, lawyers, ministers, virtue, religion, or any serious subject, not to comprehend the point of his wit.

I have seldom spoken to you on the importance of religion, and the veneration due to the characters of the clergy. I always supposed your good sense capable of sug-

gesting their necessity and eligibility The ministers of no nation are more remarkable for learning and piety than those of this country The fool may pretend to scorn, and the religious to condemn, but every person of sense and reflection must admire that sacred order, whose business is to inform the understanding, and regulate the passions of mankind Surely, therefore, that class of men will continue to merit our esteem and affection, while virtue remains upon earth

I am always pleased with the reasonable and amiable light in which the clergy are placed by the author of the *Guardian*—"The light," says he, "in which these points should be exposed to the view of one who is prejudiced against the names, *Religion, Church, Priest*, or the like, is to consider the clergy as so many philosophers, the churches as schools, and their sermons as lectures for the improvement and information of the audience How would the heart of Tully or Socrates have rejoiced, had they lived in a nation where the law had made provision for philosophers to read lectures of philosophy, every seventh day, in several thousands of schools, erected at the public charge, throughout the whole country, at which lectures, all ranks and sexes, without distinction, were obliged to be present, for their general improvement!"

You may, perhaps, think this letter too serious, but remember that virtue and religion are the foundation of education

Adieu!

MRS HOLMES TO MYRA

Bellevue

YOU will observe, my dear friend, that most of the letters I have written to you of late, on female education, are confined to the subject of study I am sensible of the ridicule sometimes levelled at those who are called learned ladies Either these ladies must be uncommonly pedantic, or those who ridicule them, uncommonly ignorant—Do not be apprehensive of acquiring that

title, or sharing the ridicule, but remember that the knowledge which I wish you to acquire is necessary to adorn your many virtues and amiable qualifications This ridicule is evidently a transatlantic idea, and must have been imbibed from the source of some English novel or magazine—The American ladies of this class, who come within our knowledge, we know to be justly celebrated as ornaments to society, and an honor to the sex When it is considered how many of our countrywomen are capable of the task, it is a matter of regret that American literature boasts so few productions from the pens of the ladies

Self-complacency is a most necessary acquirement—for the value of a woman will always be commensurate to the opinion she entertains of herself A celebrated European wit, in a letter to a lady, concentrates much good advice in one short rule of conduct, "Reverence Thyself"

I was this morning reading Swift's letter to a very young lady on her marriage Although this famous writer is not celebrated for delicacy or respect towards us, yet I wish some of his observations contained less truth—If you are in company, says this writer, when the conversation turns on the manners and customs of remote nations, or on books in verse or prose, or on the nature and limits of virtue and vice, it is a shame for a lady not to relish such discourses, not to improve by them, and endeavor by reading and information to have her share in those entertainments, rather than turn aside, as is the usual custom, and consult with the woman who sits next her about a new cargo of fans

He then descends to particulars and insists on the necessity of orthography Is it not a little hard, continues he, that not one gentleman's daughter in a thousand should be brought to read or understand her own natural tongue, or be judge of the easiest books that are written in it, as any one may find, who can have the patience to hear them mangle a play or a novel?

If there be any of your acquaintance to whom this passage is applicable, I hope you will recommend the study of Mr Webster's *Grammatical Institute*, as the best work in our language to facilitate the knowledge of grammar. I cannot but think Mr Webster intended his valuable book for the benefit of his countrywomen. For while he delivers his rules in a pure, precise, and elegant style, he explains his meaning by examples which are calculated to inspire the female mind with a thirst for emulation and a desire of virtue.

No subject has been more exhausted than that of education. Many Utopian schemes have been delineated, and much speculation employed. When I peruse these labors, and am persuaded the intention of their authors is to promote our welfare, I feel myself prompted to a prudent and amiable demeanour, and I suppose every woman of reason and reflection feels the same inclination to virtue, and the same sensations of gratitude in reading the works of those writers, the characteristics of whom are sentiment, morality and benevolence.

What books do you read, my dear? We are now finishing Barlow's *Vision of Columbus*, and shall begin upon Dwight's *Conquest of Canaan* in a few days.¹ It is very

agreeable to read with one who points out the beauties of the author as we proceed. Such an one is Worthy—Sometimes Mr Holmes makes one of our party, and his notes and references to the ancient poets are very entertaining. Worthy is delighted with the ease and freedom with which we live here. We have little concerts, we walk, we ride, we read, we have good company—this is Bellevue in all its glory!

Adieu, Adieu, my dear—I shall continue this subject no longer, though I flatter myself you would receive my hints with satisfaction, because you must be persuaded I love you, and so interest myself in your welfare—I need not add that I think your conduct worthy of you. You are such a good girl that I know not in what to direct you, for you leave me no room for advice—continue to anticipate the desires of my heart, and to secure the high opinion you have there obtained.

Your friend forever!

¹ *The Vision of Columbus* by Joel Barlow, 1754-1812, was published 1787. A patriotic poem in nine books, it is superior to his later epic, *The Columbrad* (1807). *The Conquest of Canaan* by Timothy Dwight, 1752-1817, was published in 1785. Both Barlow and Dwight were "Connecticut Wits."

1748 ~ *Hugh Henry Brackenridge* ~ 1816

THE SENTIMENTAL spirit in fiction found its counterbalance in the satiric spirit. Fielding and Smollett did not keep pace in America with Richardson and Sterne, but they were not absent, and of course Cervantes was found with them. Where the sentimental spirit had dispensed democratic ideology with a free hand and without critical reservations, the satiric spirit tended to subject some of this ideology to a more rigorously realistic view.

At least this is the case in the lone satiric masterpiece of early American fiction, *Modern Chivalry; or, The Adventures of Captain Farrago and Teague O'Regan*, which was issued in installments from 1792 to 1815. Chaotically episodic in structure and mixed in style, with short essays interrupting the narrative, *Modern Chivalry* has a zest and power that rarely flag. Hugh Henry Brackenridge, its author, was born in Scotland. His father, a poor farmer,

brought the family to frontier Pennsylvania when Hugh was five. Despite an environment not likely to lead to intellectual distinction, Hugh knew a great deal of Latin and some Greek by the time he was thirteen, and two years later was teaching school in Gunpowder Falls, Maryland. His five years there made him realize the need of more education, with the consequence that he was graduated in 1771 from the College of New Jersey, now Princeton University. There he had Philip Freneau and James Madison as classmates, belonged to the Whig Literary Society, and made his debut as a writer when he and Freneau collaborated on a prose tale entitled *Father Bombo's Pilgrimage to Mecca* and on the commencement poem, *The Rising Glory of America*.

After returning for his M. A., Brackenridge continued to teach, even during the first years of the Revolution, but eventually he entered Washington's army as chaplain. Leaving the army in 1778, he invested capital and energy at Philadelphia in the *United States Magazine*, the first number of which appeared January, 1779. When it succumbed at the end of that year, Brackenridge turned to the study of the law. He was admitted to the bar in 1780 at Philadelphia and then went on to less crowded Pittsburgh to practice, remaining there for twenty years. He bought land, built a house, married, had a son, helped start the *Pittsburgh Gazette*, and ran successfully for the State Assembly. Changing his mind concerning his campaign promises, he was accused of being a traitor, despite his attempt to give his reasons fully. The experience made him severely critical of the democratic electorate. With his political ambitions frustrated and his first wife dead, Brackenridge married again. Politics continued to interest him, but the course he steered was sometimes an uncertain one. Getting involved in the Whisky Insurrection of western Pennsylvania because he was in demand for legal advice, he was questioned by Alexander Hamilton and absolved of treason.

At first an ardent advocate of the French Revolution, Brackenridge had a revulsion of feeling toward it. Although he founded the Republican party in western Pennsylvania, he was defeated in a bitter campaign for the State Assembly. The party rewarded him, however, for his activity in its behalf: he was appointed a justice of the Supreme Court of Pennsylvania. Establishing the newspaper, *Tree of Liberty*, he gave further support to Jefferson's cause. Yet he was to differ with Jefferson on the importance and integrity of law and lawyers. His collection of legal papers, *Law Miscellany*, 1814, was a real contribution to his profession. He died at Carlisle, Pennsylvania.

The story of Brackenridge's life is that of a true democrat who yet had his reservations about democracy. This is the point of view of *Modern Chivalry*, which utilizes all his rich knowledge of the frontier, of men and manners, of local and world politics.

[The following selections, taken from the opening chapters, have been supplied with titles by the editors.]

From
MODERN CHIVALRY
[1792]

HORSES AND MEN

JOHN FARRAGO was a man of about fifty-three years of age, of good natural sense, and considerable reading, but in some things whimsical, owing perhaps to his greater knowledge of books than of the world, but, in some degree also, to his having never married, being what they call an old bachelor, a characteristic of which is, usually, singularity and whim. He had the advantage of having had in early life an academic education, but having never applied himself to any of the learned professions, he had lived the greater part of his life on a small farm, which he cultivated with servants or hired hands, as he could conveniently supply himself with either. The servant that he had at this time was an Irishman, whose name was Teague Oregan [O'Regan]. I shall say nothing of the character of this man, because the very name imports what he was.

A strange idea came into the head of Captain Farrago about this time, for, by the bye, I had forgot to mention that having been chosen captain of a company of militia in the neighborhood, he had gone by the name of Captain ever since, for the rule is, once a captain, and always a captain, but, as I was observing, the idea had come into his head, to saddle an old horse that he had, and ride about the world a little, with his man Teague at his heels, to see how things were going on here and there, and to observe human nature. For it is a mistake to suppose that a man cannot learn man by reading him in a corner as well as on the widest space of transaction. At any rate, it may yield amusement.

It was about a score of miles from his own house that he fell in with what we call races. The jockeys, seeing him advance, with Teague by his side, whom they took for his groom, conceived him to be some

person who had brought his horse to enter for the purse. Coming up and accosting him, said they, "You seem to be for the races, Sir, and have a horse to enter?" "Not at all," said the Captain, "this is but a common palfrey, and by no means remarkable for speed or bottom, he is a common plough horse which I have used on my farm for several years, and can scarce go beyond a trot much less match himself with your blooded horses that are going to take the field on this occasion."

The jockeys were of opinion, from the speech, that the horse was what they call a bife, and that under the appearance of leanness and stiffness, there was concealed some hidden quality of swiftness uncommon. For they had heard of instances, where the most knowing had been taken in by mean looking horses, so that having laid two, or more, to one, they were nevertheless bit by the bet and the mean looking nags proved to be horses of a more than common speed and bottom. So that there is no trusting appearances. Such was the reasoning of the jockeys. For they could have no idea that a man could come there in so singular a manner, with a groom at his foot, unless he had some great object of making money by the adventure. Under this idea, they began to interrogate him with respect to the blood and pedigree of his horse whether he was of the Dove, or the bay mare that took the purse, and was imported by such a one at such a time? whether his sire was Tameilane or Bajazet?

The Captain was irritated at the questions and could not avoid answering—"Gentlemen," said he, "it is a strange thing that you should suppose that it is of any consequence what may be the pedigree of a horse. For even in men it is of no avail. Do we not find that sages have had blockheads for their sons, and that blockheads have had sages? It is remarkable that, as estates have seldom lasted three generations, so understanding and ability have seldom been transmitted to the second. There never was a greater man, take him as an

oiator and philosopher, than Cicero and never was there a person who had greater opportunities than his son Marcus, and yet he proved of no account or reputation. This is an old instance, but there are a thousand others. Chesterfield and his son are mentioned. It is true, Philip and Alexander may be said to be exceptions. Philip of the strongest possible mind, capable of almost everything we can conceive, the deepest policy and the most determined valor, his son Alexander not deficient in the first, and before him in the last, if it is possible to be before a man than whom you can suppose nothing greater. It is possible, in modern times, that Tippu Saib may be equal to his father Hyder Ali.¹ Some talk of the two Pitts. I have no idea that the son is, in any respect, equal to old Sir William. The one is a labored artificial minister, the other spoke with the thunder and acted with the lightning of the gods. I will venture to say that when the present John Adamses, and Lees, and Jeffersons, and Jays, and Henrys, and other great men, who figure upon the stage at this time, have gone to sleep with their fathers, it is an hundred to one if there is any of their descendants who can fill their places. Was I to lay a bet for a great man, I would sooner pick up the brat of a tinker than go into the great houses to choose a piece of stuff for a man of genius. Even with respect to personal appearance, which is more in the power of natural production, we do not see that beauty always produces beauty, but, on the contrary, the homeliest persons have oftentimes the best favored offspring, so that there is no rule or reason in these things. With respect to this horse, therefore, it can be of no moment whether he is blooded or studded, or what he is. He is a good old horse, used to the plough, and carries my weight very well, and I have never yet made enquiry with respect to his ancestors, or affronted him so much as to cast up to him the defect of parentage. I bought him some years ago from Neil Thomas, who had him from a colt. As far

as I can understand, he was of a brown mare that John M'Neis had, but of what horse I know no more than the horse himself. His gaits are good enough, as to riding a short journey or seven or eight miles, or the like, but he is rather a pacer than a trotter, and though his bottom may be good enough in carrying a bag to the mill, or going in the plough, or the sled, or the harrow, etc., yet his wind is not so good, nor his speed, as to be fit for the heats."

The jockeys thought the man a fool and gave themselves no more trouble about him.

AN ELECTION

THE CAPTAIN, rising early next morning and setting out on his way, had now arrived at a place where a number of people were convened, for the purpose of electing persons to represent them in the legislature of the state. There was a weaver who was a candidate for this appointment and seemed to have a good deal of interest among the people. But another, who was a man of education, was his competitor. Relying on some talent of speaking which he thought he possessed, he addressed the multitude.

Said he, "Fellow citizens, I pretend not to any great abilities, but am conscious to myself that I have the best good will to serve you. But it is very astonishing to me that this weaver should conceive himself qualified for the trust. For though my acquirements are not great, yet his are still less. The mechanical business which he pursues must necessarily take up so much of his time that he cannot apply himself to political studies. I should therefore think it would be more answerable to your dignity, and conducive to your interest, to be represented by a man at least of some letters than by an illiterate handi-

¹Tippu Sahib, 1749-1799, was sultan of Mysore, India, and son of Haidar Ali, or Hyder Ali, who died 1782 and was sultan before him.

craftsman like this It will be more honorable for himself to remain at his loom and knot threads than to come forward in a legislative capacity because, in the one case, he is in the sphere where God and nature has placed him, in the other, he is like a fish out of water, and must struggle for breath in a new element

"Is it possible he can understand the affairs of government, whose mind has been concentrated to the small object of weaving webs, to the price by the yard, the gist of the thread, and such like matters as concern a manufacturer of cloths? The feet of him who weaves are more occupied than the head, or at least as much, and therefore the whole man must be, at least, but in half accustomed to exercise his mental powers For these reasons, all other things set aside, the chance is in my favor, with respect to information However, you will decide, and give your suffrages to him or to me, as you shall judge expedient"

The Captain, hearing these observations and looking at the weaver, could not help advancing, and undertaking to subjoin something in support of what had been just said Said he, "I have no prejudice against a weaver more than another man Nor do I know any harm in the trade, save that from the sedentary life in a damp place, there is usually a paleness of the countenance but this is a physical, not a moral evil Such usually occupy subterranean apartments, not for the purpose, like Demosthenes, of shaving their heads, and writing over eight times the history of Thucydides, and perfecting a style of oratory, but rather to keep the thread moist, or because this is considered but as an inglorious sort of trade, and is frequently thrust away into cellars, and damp out-houses, which are not occupied for a better use

"But to rise from the cellar to the senate house would be an unnatural hoist To come from counting threads, and adjusting them to the splits of a reed, to regulate the finances of a government, would be pre-

posterous, there being no congruity in the case There is no analogy between knotting threads and framing laws It would be a reversion of the order of things Not that a manufacturer of linen or woollen, or other stuff, is an inferior character, but a different one from that which ought to be employed in affairs of state It is unnecessary to enlarge on this subject, for you must all be convinced of the truth and propriety of what I say But if you will give me leave to take the manufacturer aside a little, I think I can explain to him my ideas on the subject, and very probably prevail with him to withdraw his pretensions" The people, seeming to acquiesce, and beckoning to the weaver, they drew aside, and the Captain addressed him in the following words

"Mr Traddle," said he, for that was the name of the manufacturer "I have not the smallest idea of wounding your sensibility, but it would seem to me it would be more your interest to pursue your occupation than to launch out into that of which you have no knowledge When you go to the senate house, the application to you will not be to warp a web, but to make laws for the commonwealth Now, suppose that the making of these laws requires a knowledge of commerce, or of the interests of agriculture, or those principles on which the different manufactures depend, what service could you render? It is possible you might think justly enough, but could you speak? You are not in the habit of public speaking You are not furnished with those commonplace ideas with which even very ignorant men can pass for knowing something There is nothing makes a man so ridiculous as to attempt what is above his sphere You are no tumbler, for instance, yet should you give out that you could vault upon a man's back, or turn head over heels, like the wheels of a cart, the stiffness of your joints would encumber you, and you would fall upon your back-side to the ground Such a squash as that would do you damage The getting up to ride on the state is an unsafe thing to those

who are not accustomed to such horsemanship. It is a disagreeable thing for a man to be laughed at, and there is no way of keeping oneself from it but by avoiding all affectation."

While they were thus discoursing, a bustle had taken place among the crowd. Teague, hearing so much about elections and serving the government, took it into his head that he could be a legislator himself. The thing was not displeasing to the people, who seemed to favor his pretensions, owing, in some degree, to there being several of his countrymen among the crowd, but more especially to the fluctuation of the popular mind, and a disposition to what is new and ignoble. For though the weaver was not the most elevated object of choice, yet he was still preferable to this tatterdemalion, who was but a menial servant, and had so much of what is called a brogue on his tongue as to fall far short of an elegant speaker.

The Captain, coming up and finding what was on the carpet, was greatly chagrined at not having been able to give the multitude a better idea of the importance of a legislative trust, alarmed, also, from an apprehension of the loss of his servant. Under these impressions, he resumed his address to the multitude. Said he, "This is making the matter still worse, gentlemen; this servant of mine is but a bog-trotter, who can scarcely speak the dialect in which your laws ought to be written, but certainly has never read a single treatise on any political subject, for the truth is, he cannot read at all. The young people of the lower class, in Ireland, have seldom the advantage of a good education, especially the descendants of the ancient Irish, who have most of them a great assurance of countenance, but little information, or literature. This young man, whose family name is Oregon, has been my servant for several years. And, except a too great fondness for women, which now and then brings him into scrapes, he has demeaned himself in a manner tolerable enough. But he is totally ignorant of the great principles of

legislation, and more especially, the particular interests of the government. A free government is a noble possession to a people, and this freedom consists in an equal right to make laws, and to have the benefit of the laws when made. Though doubtless, in such a government, the lowest citizen may become chief magistrate, yet it is sufficient to possess the right, not absolutely necessary to exercise it. Or even if you should think proper, now and then, to show your privilege, and exert, in a signal manner, the democratic prerogative, yet is it not descending too low to fling away from me a hurling, which I cannot well spare, to serve your purpose? You are surely carrying the matter too far, in thinking to make a senator of this hostler, to take him away from an employment to which he has been bred, and put him to another, to which he has served no apprenticeship, to set those hands which have been lately employed in currying my horse, to the draughting bills, and preparing business for the house."

The people were tenacious of their choice and insisted on giving Teague their suffrages, and by the frown upon their brows seemed to indicate resentment at what had been said, as indirectly charging them with want of judgment, or calling in question their privilege to do what they thought proper. "It is a very strange thing," said one of them, who was a speaker for the rest, "that after having conquered Burgoyne and Cornwallis, and got a government of our own, we cannot put in it whom we please. This young man may be your servant, or another man's servant, but if we choose to make him a delegate, what is that to you? He may not be yet skilled in the matter, but there is a good day a-coming. We will empower him, and it is better to trust a plain man like him than one of your high flyers, that will make laws to suit their own purposes."

Said the Captain, "I had much rather you would send the weaver, though I thought that improper, than to invade my household, and thus detract from me the very

person that I have about me to brush my boots and clean my spurs" The prolocutor of the people gave him to understand that his surmises were useless, for the people had determined on the choice, and Teague they would have for a representative

Finding it answered no end to expostulate with the multitude, he requested to speak a word with Teague by himself Stepping aside, he said to him, composing his voice and addressing him in a soft manner, "Teague, you are quite wrong in this matter they have put into your head Do you know what it is to be a member of a deliberate body? What qualifications are necessary? Do you understand anything of geography? If a question should be, to make a law to dig a canal in some part of the state, can you describe the bearing of the mountains, and the course of the rivers? Or if commerce is to be pushed to some new quarter, by the force of regulations, are you competent to decide in such a case? There will be questions of law and astronomy on the carpet How you must gape and stare like a fool, when you come to be asked your opinion on these subjects? Are you acquainted with the abstract principles of finance, with the funding public securities, the ways and means of raising the revenue, providing for the discharge of the public debts, and all other things which respect the economy of the government? Even if you had knowledge, have you a facility of speaking? I would suppose you would have too much pride to go to the house just to say, Ay, or No This is not the fault of your nature, but of your education, having been accustomed to dig turf in your early years, rather than instructing yourself in the classics, or common school books

"When a man becomes a member of a public body, he is like a racoon, or other beast that climbs up the fork of a tree,

the boys pushing at him with pitch-forks, or throwing stones, or shooting at him with an arrow, the dogs barking in the meantime One will find fault with your not speaking, another with your speaking, if you speak at all They will have you in the newspapers, and ridicule you as a perfect beast There is what they call the caricatura, that is, representing you with a dog's head, or a cat's claw As you have a red head, they will very probably make a fox of you, or a sorrel horse, or a brindled cow It is the devil in hell to be exposed to the squibs and crackers of the gazette wits and publications You know no more about these matters than a goose, and yet you would undertake rashly, without advice, to enter on the office, nay, contrary to advice For I would not for a thousand guineas, though I have not the half of it to spare, that the breed of the Oregans should come to this, bringing on them a worse stain than stealing sheep, to which they are addicted You have nothing but your character, Teague, in a new country to depend upon Let it never be said that you quitted an honest livelihood, the taking care of my horse, to follow the new-fangled whims of the times, and to be a statesman"

Teague was moved chiefly with the last part of the address, and consented to give up the object

The Captain, glad of this, took him back to the people, and announced his disposition to decline the honor which they had intended him

Teague acknowledged that he had changed his mind, and was willing to remain in a private station

The people did not seem well pleased with the Captain, but as nothing more could be said about the matter, they turned their attention to the weaver, and gave him their suffrages

HUMANISM AND BEYOND

GENERAL INTRODUCTION 1800-1860

I

GRADUATING at 18 in the Bowdoin College class of 1825, Henry Wadsworth Longfellow wrote the required commencement oration on the subject "Our Native Writers." He voiced an almost religious devotion to the ideal of a national literature, and expressed his confidence that "palms are to be won by our native writers!—by those, that have been nursed and brought up . . . in the civil and religious freedom of our country."

The young Longfellow spoke for a generation. The creation of a worthy national literature was consciously recognized as a present and imperative duty by many young men and women who came to maturity in the first half-century of the nation's life. They were stimulated by earlier American writers. As a sophomore, Longfellow had read "*Arthur Mervyn*, a novel—an American novel—from the elegant pen of C. B. Brown," as he reported to his mother in a letter gushing with enthusiastic appreciation of Brown and regret that "the author . . . as an American has never received from his countrymen that praise and renown, which was his due." The work of Franklin and Freneau, the "Connecticut Wits" and Brackenridge, the narratives of settlers, explorers, Indian fighters, the great political documents of the revolutionary period—all these gave ground on which to build. Divided as they were by political and sectional differences in the first years of the new nation, Americans were united in the feeling that "the eyes of the world were upon them," as one editor put it, and the expression of the already varied life of America in literature seemed to many an essential part of what was expected of them. The new West, powerful as a symbol in the American mind and swiftly gaining importance in practical affairs, contributed mightily to the conception of a national literature. As the century advanced, economic and social conflicts, religious and philosophical problems, shared in its shaping.

For the building of an American literature, however, there must be American readers, and the facilities for bringing American writers and readers into fruitful relationship—literary periodicals and book publishers. The young Longfellow stated the problem bluntly in his commencement address: "If we would ever have a national literature, our native writers must be patronized." Provision of the channels for that patronage was a mandatory first step in the early decades of the new century. Though a few important literary magazines had been established before 1800, none of these survived into the new century. American book publishing was similarly undeveloped.

Colonial publishing had not been a specialized industry, but had been undertaken by booksellers and job-printers working together. Indeed the local

printer, whether in city or village, was often also a newspaper editor, a bookseller, and a publisher of pamphlets, textbooks, and even works of general literature. Up until the middle of the nineteenth century, small-town printers continued occasionally to issue books, thus providing work for their typesetters in dull seasons.

Isaiah Thomas, of Worcester, editor of the famous *Massachusetts Spy*, attempted two magazines at different times, and by 1800 had built up, with the aid of his partner Andrews, one of the largest book publishing houses in the United States. From the by-product of a country shop to the output of a large and profitable business with its main office in Boston, the Thomas & Andrews books exemplify the growth of early American publishing. Mathew Carey, of Philadelphia, who had edited one of the best of the American magazines shortly before the turn of the century, was by 1800 devoting his energies to the founding of a publishing concern which was later famous as Carey & Lea. In the first few decades of the new century, specialized book publishing firms sprang up in all the leading American cities.

Many of these houses found their prosperity in pirating English books and thus seemed to some observers to be doing a disservice to American literature. Carey & Lea, invading New York bookstores, strained every resource to get new Scott and Dickens romances to an avid public before the Harpers could do it. But the Carey firm also published Freneau, Irving, and Cooper, and later some of the early work of Poe and Simms. About the middle of the century the works of both Irving and Cooper were taken over by G. P. Putnam, whose publishing business had grown out of the Wiley Bookshop established in New York in 1807. Up in Boston, William D. Ticknor bought the Old Corner Bookstore in 1832, from that beginning there later emerged the firm of Ticknor & Fields, which eventually became the publisher of the great New England poets and essayists.

Several of the important literary periodicals before 1850 were published by their editors or by supporting literary clubs. The *Port Folio* (1801-27), of Philadelphia, was both edited and published during its early and best years by the brilliant Joseph Dennie. The *North American Review* (1815-1940) was owned for many years by a Boston literary coterie and edited by Harvard professors. Heavy though it was, its criticism was often distinguished and it was generally conceded to be the best of American reviews. More popular in tone was *Graham's Magazine* (1841-58), of Philadelphia, edited and published by George R. Graham, who had Edgar Allan Poe as an assistant for a short time. Poe was editor for a little more than two years of the *Southern Literary Messenger* (1834-64), of Richmond, but for the most part this magazine was edited by its publishers. The *Knickerbocker, or New York Monthly Magazine* (1833-65) was edited and published in its best years by Lewis Gaylord Clark. And the inimitable *Godey's Lady's Book* (1830-98), of Phila-

delphia, was owned and published by Louis A. Godey & Company until 1877.

Graham's and *Godey's* did no small service to American literature in the forties and fifties by paying good writers well. Poe, Lowell, Bryant, Cooper, Longfellow, and Simms, as well as many who were vastly inferior, enjoyed the largess of these princes of the magazine world.

Encouraged and supported by American publishers and periodicals, the "native writers" envisioned by the young Longfellow fulfilled their obligation, realized their dream. In the period between 1825 and the Civil War, they created a great national literature.

II

Definition of the problem was another necessary part of the job. What were to be the purposes and the distinguishing characteristics of American literature—what should the American writer try to do? How far should American literature build on that of Britain and of Europe, how far be militantly independent? Was a real American literature as yet practicable at all? On this last as on all these questions there was the widest disagreement, ranging from the assertion that significant literary production is impossible in a raw and crude society, that only the cultural silt of many centuries can feed the fine flower of letters (an attitude still sometimes encountered after one hundred and fifty years), to the confident vision of an American literature that should surpass all the literary achievements of earlier ages and other lands.

These were properly questions for critical analysis, and the need for "confident and independent criticism of American books," voiced by the elder Richard Henry Dana in *The Idle Man* (1821-22), was generally recognized. Many critics and reviewers helped to state the issues. Joseph Dennie of the *Port Folio*, firm in the Federalist tradition, held for the most part to the view that little could be expected of American writers and that few American books deserved attention. Edward Everett, as editor of the *North American Review*, defended himself against the charge of neglecting his own country by declaring that "the American books are too poor to praise." On the other hand, Robert Walsh in his *American Quarterly Review* rebuked "the prevalence of a certain colonial spirit." The editor of the *Philadelphia Literary Gazette* recommended, as the best method to create a national literature, "to make our poetry national and peculiar, to hang its flowers around our history, to interweave it with our local attachments, to dye it deeply in the grain of our prejudices and passions." John Knapp, writing on "National Poetry" in the *North American Review* in 1818, exhorted poets to find subjects in Indian antiquities. More substantial contributions to American criticism were such discriminating discussions of current books, both British and American, as those of F. W. P. Greenwood, also in the *North American Review*.

But by far the most important contributions to the definition of the problem of a national literature were made by those who combined the force of creative example with their critical analysis. First among these was Washington Irving. His *A History of New York* by Diedrich Knickerbocker was an already existing answer to Sydney Smith's derisive question, in the *Edinburgh Review* for January, 1820, "Who reads an American book?" Popular on both sides of the Atlantic, it demonstrated the ability of at least one American writer to deal entertainingly and effectively, in the modes of satire and burlesque, with both historical and contemporary American materials. It was in the *Sketch Book*, however, that Irving made his greatest contribution. One of its essays, "English Writers on America," deals directly with one of the crucial issues in the definition of our national literature—that of the relation of American writers to British writers, of America to Britain. It is an attempt at mediation in the literary warfare in which Irving's friend, James Kirke Paulding, was notably belligerent. Irving did not hesitate to speak plainly of the unworthy motives and evil effects of many British books which he thought unfairly critical of America, but he was equally candid in pointing out the disservice to their own country of American writers who wrote in the same temper.

It was in other parts of the *Sketch Book*, however, that Irving did most to establish and clarify the conception of a national literature. In "Philip of Pokanoket" and "Traits of Indian Character" he laid foundations for all subsequent significant treatments of the American Indian. In the great Hudson Valley tales, "Rip Van Winkle" and the rest, he showed conclusively that American life could be made the substance of enduringly satisfying literary expression.

William Cullen Bryant was one of the early makers of our national literature who participated most substantially in the conscious definition of its purposes and the establishment of its standards. In "An Essay on American Poetry," published in the *North American Review* for July, 1818, he examined candidly and fairly the work of a large number of American writers of verse, and then proceeded to an eminently sensible and constructive statement of the whole problem of the American poet in his time, and a discriminating appraisal of current trends. This article is one of the major early documents in the definition of a national literature. Bryant's later critical articles in the *North American Review* and elsewhere are of similar quality. The impact of his own creative work, however, was far greater than that of his criticism. Such pieces as "The Hunter of the Prairies," "To the Fringed Gentian," and "To a Waterfowl" are as unmistakably American as they are indisputably poetry. To Bryant's contemporaries, they had the force of living examples.

Like Irving, James Fenimore Cooper practised American literature before he preached it. Cooper's failure with British materials in *Precaution*, his suc-

cess when he turned to American scenes and characters in *The Spy*, was adduced as evidence by Robert Walsh in his argument for the use of native materials by American writers, in an article in the *American Quarterly Review* for June, 1827. Certainly Cooper's example was stimulating. As he struck out in rapid succession, within four years, the broad fields of his major achievement in fiction—the American past in *The Spy*, the frontier with its typical figure, Natty Bumppo, in *The Pioneers*, the sea in *The Pilot*, the conflict between red and white in *The Last of the Mohicans*—the structure of the national literature grew swiftly.

But Cooper was not content to teach by example. When in 1828, from the vantage point of Paris, he undertook to write a British traveler's account of America as it should be written, in *Notions of the Americans*, he devoted one of his hypothetical "traveling bachelor's" letters to the subject, "American Literature." His analysis was clear and firm, though some of his findings were inconsistent with his own previously published successful work. Cooper's definition of American literature was part of his general view of American life, explicitly set forth in *A Letter to His Countrymen* (1834) and *The American Democrat* (1838). Cooper held a high ideal for the American citizen, as for the American writer. His rebuke of whatever seemed to him inconsistent with or inimical to the attainment of that ideal was always caustic, sometimes contentious. The American temper in the 1830's was scarcely amenable to influence by adverse criticism, and Cooper's expository writing had little practical effect beyond the exasperation of his enemies. His very great contribution to the development of a national literature was made almost wholly by his continuing production as a novelist.

Edgar Allan Poe shared largely in the shaping of the conception of a national literature, both by precept and by example. His contribution was to create more interest in artistic standards, to emphasize the writer's conscience. He did this not only in his criticism, but also through the widely influential example of his stories and his poems. Though Poe used American scenes in "The Gold Bug" and a few other stories, that use was merely incidental. His theory of poetry precluded the introduction of details derived directly from external experience. Hence his creative work served as a salutary and timely demonstration of the truth that the American writer need not be narrowly limited in his choice of subject matter, while at the same time it provided the stimulus of the attainment of high literary standards by a native writer. Poe's criticism was the most effective of his generation. As a practicing reviewer he was fearless in appraisal, merciless in castigation, he was also forthright in recognition of merit where he saw it. He went beyond mere reviewing to the formulation of critical theory and the examination of literary problems, including those peculiar to the American writer. His work as a whole was a major contribution to the development of the national literature.

Yet it remained for a writer whose greatness Poe failed to recognize, Ralph Waldo Emerson, to make the definitive statement of the whole matter. The great sentences of "The American Scholar," his Harvard Phi Beta Kappa address of 1837—clearly meant for the writer as well as the teacher and student—held for Emerson's contemporaries, and still hold in large degree, the essence of what it is that must make American literature American.

Emerson's disciple, Margaret Fuller, applied his teachings in her practical work as reviewer and editor. Henry David Thoreau, in parts of *Walden* and *A Week on the Concord and Merrimack Rivers*, developed and clarified Emerson's principles—with added elements from his own thinking—in some of the most illuminating discussion of fundamental literary problems to be found anywhere in American literature.

William Gilmore Simms, appraising Cooper's work as American historical novelist from the vantage point of his own interest and experience in historical fiction, displayed broad critical vision of American literary problems as well as his personal capacity for justice and generosity. Herman Melville likewise made his chief critical contribution to contemporary understanding of the national literature in his comment on a fellow novelist. In his essay, "Hawthorne and His Mosses," which appeared in the New York *Literary World* in August, 1850, he not only pointed out in Hawthorne's choice and use of materials depths of significance which other contemporaries had missed, but made both for Hawthorne and for the national literature as a whole bold claims of positive greatness.

The mature Longfellow gently satirized in his novel *Kavanaugh* (1849) the more blatant and bumptious varieties of literary nationalism. He had already achieved, in the popularity of *Evangeline* (1847), all that his youthful vision had promised for the "native writers" of America—even to the patronage which he had demanded as necessary "if we are ever to have a national literature." By the mid-century that national literature was accomplished fact. The facilities for bringing writers and readers together had been created and had been used. The definition of the purposes and character of such a literature had been largely achieved. Meanwhile other motives had gained primary importance in its development and direction.

III

From the very beginning of this period, and gaining force with every decade, a new factor had naturally and spontaneously aided in the development of a truly national literature. The successive development of the trans-Appalachian region, the Middle West, the great plains, and the Far West brought great rivers and valleys and deserts and plains and mountains within the grand over-view of the American scene. Land and opportunity in the West drew men

and money steadily from the older seaboard states throughout the first two generations of our national history. Pioneer ideals, manners and ways of life affected the East as well as the West and helped to form the conception and shape the expression of Americanism. Products of the West modified the national economy and motivated national politics, from the whisky of Pennsylvania to the gold of California. Perhaps most significantly, the national thinking was affected by the West, both as fact and as symbol.

It was inevitable, then, that the West should have a place in the national literature. Most of the major writers of these generations saw the West, if only briefly, at first hand. Irving, Cooper, Simms, Bryant, Emerson, Thoreau, Whitman, and for each his western experience was significant and stimulating, finding expression in his writing. No doubt the popular conception of the West was more largely shaped, however, by the books of such romancers as Robert Montgomery Bird of Philadelphia, whose *Nick of the Woods* (1837) is a lurid tale of Indian fighting in frontier Kentucky, and Judge James Hall, of Illinois and Ohio, whose stories in *Legends of the West* (1832) and other volumes follow conventional patterns but are based on direct observation.

For the reader of today the best understanding of the westward movement is to be found in the writings of actual participants in the life of the frontier. Often crude in form, these documents of first-hand experience have force and flavor exceeding anything transient visitors to the frontier could produce. From the first groups of settlers who crossed the mountains into Tennessee and Kentucky came back letters and journals, records of things seen and done, and this autobiographical record of the frontier continued for a century, forming a great body of writing marked by richness of detail and vitality of incident, and often possessing true literary distinction.

Explorers, traders, naturalists, missionaries, and first settlers of the wilderness were the makers of this literature. For example, the *Journals* of the Lewis and Clark expedition of 1804-6 have positive literary interest. Timothy Flint's *Recollections of the Last Ten Years* (1826) give vivid pictures of life on the Mississippi and in Missouri and Arkansas in 1815, when Flint traveled those frontiers as a missionary. John J. Audubon's study of the birds and animals of the West yielded incidental portrayals of the region and the life of the frontier. The *Narrative of the Life of David Crockett, of the State of Tennessee* (1834), is one of the liveliest and most enjoyable of all books of the frontier. Peter Cartwright's *Autobiography* (1857) and *The Backwoods Preacher* (1858) narrate with gusto the exploits of a redoubtable Methodist evangelist in the Ohio River valley during the period of settlement.

Though not a bona-fide settler, Francis Parkman participated in the westward migration in such fashion as to make *The California and Oregon Trail* (1849) a classic of the westward movement. Lewis G. Gaiard's *Wah-to'-yah and the Taos Trail* (1850) is a less widely known but equally valuable book of the

same period The Gold Rush and the settlement of California brought forth a great body of writing about that new frontier and the journey thither

Originating as autobiographical record of personal observation and later assuming fictional elaboration, one specialized type of writing about the frontier deserves emphasis both for its historical importance and for its intrinsic interest This is the humorous tale of frontier incidents and characters Flourishing especially in what was then the Southwest, in the years from 1835 to 1855, frontier humor developed into a body of writing which afforded the background for the regional writing of Mark Twain and possesses marked interest and value today

Most of the makers of this literature were professional men—lawyers, physicians, journalists—who saw and shared the rough life of the border settlements Then humorous intention freed these writers from many of the constraints to which serious fiction of the time was subjected The result is that we find in these stories a degree of realism unparalleled elsewhere in their literary generation—a realism which makes them of first importance as documents of social history and at the same time relates them closely to fiction of much later date Elements of folklore, of fantasy and exaggeration, give these stories added value as revelations of the mind of the frontier and of the America of a century ago

Augustus Baldwin Longstreet, a Georgia lawyer and judge, teacher and editor, was a pioneer in this field His *Georgia Scenes*, a collection of sketches previously published in local newspapers, appeared in 1835 Nearly all of the books of frontier humor were similarly collections of tales first written for local newspapers Many found their way to ultimate book publication through the columns of *The Spirit of the Times*, a New York periodical of the world of sport—especially horse racing—edited by William T Porter

Another Georgian for a time associated with Longstreet, William Tappan Thompson, wrote some of the most pleasing examples of frontier humor in the collections called *Major Jones' Courtship* (1843), *Chronicles of Pineville* (1845), and *Major Jones' Sketches of Travel* (1847) *The Adventures of Simon Suggs* (1845), by Johnson J Hooper, an Alabama lawyer, legislator and editor, is an episodic novel portraying with brilliant realism the career of a frontier swindler and minor criminal Thomas Bangs Thorpe, painter and editor, wrote some of the most finished examples of the humorous tale of frontier life for his volumes *The Mysteries of the Back-woods* (1846) and *The Hwe of the Bee Hunter* (1854) Joseph G Baldwin put his own experience as a young lawyer in the old Southwest into the flavorful pages of *The Flush Times of Alabama and Mississippi* (1853) Perhaps most gifted of all these humorists of the frontier was George W Harris, of Tennessee, postmaster and hunter, silversmith and river boat captain, and creator of Sut Lovingood, a frontier yarn-spinner, practical joker, and poet Coarse and elemental in their

humorous elements, Harris's stories are memorable in their figurative language and in their frank pictures of the life of the border settlements. They were seemingly not collected in book form until 1867, under the title *Sut Lovingood*.

In these two types of writing, the autobiographical record of frontier experience and the humorous fictional elaboration of that experience, the contribution of the westward movement to American literature is of high importance, increasingly recognized both as the source of a powerful impulse toward the native and the authentic in our national literature, and for its own lasting interest and meaning.

IV

But the West of the decades from 1800 to 1850 was more than a rich mine for students of nature and of human nature, far more than a nursery for bizarre characters and the humorists who wrote of them. It was a fateful reality in the practical affairs of the whole nation, politically, economically, socially. By the mid-century the lines had been drawn, the stage set, for what had already been called "the irrepressible conflict" between North and South. Sectionalism threatened nationalism. And in the genesis of the conflict, as in its ultimate solution, the part played by the West was decisive.

Sectional differentiation had begun in the colonies and was reflected in colonial literature. The South had early adopted—though not wholly, either then or later—the plantation system, dependent on slave labor. The middle colonies and New England had developed a system of small farming based on individual ownership and operation. The pre-eminence of New England in commerce was early established.

Political independence and the two wars with Britain made domestic industry necessary if that commerce was to survive. But the industrial revolution came slowly to America. Hamilton's dream of great native manufacturing enterprises had to wait almost a generation for fulfilment. It was hard to overcome the ingrained predilections and prejudices of an agrarian society. The West played a part in this retardation: why should a man stay in a factory in Rhode Island or Connecticut when he could buy a rich farm in the West for a few months' wages? But what the exhortations of economists and the persuasions of traders could not accomplish, the development of this same West eventually achieved. Its cheap grains and meats broke the back of New England's agriculture, its boundless market for manufactured goods made industrialization the inescapable alternative.

The maintenance of a labor force was exceedingly difficult in the days of industrial pioneering—again because of the land of opportunity beyond the mountains. But a rising flood of immigration from Europe—systematically

cultivated as a part of New England's commerce, just as the slave trade had been earlier—solved that problem. Between 1820 and 1860 over five million immigrants came to America—roughly one-sixth of the nation's population at the latter date. Economic necessity kept most of these immigrants at least temporarily in the seaboard states. Irish immigrant women replaced the Massachusetts farm girls in the mills of Lowell. Before that shift had been accomplished, industrialism had begun to display all the ugly by-products which had become familiar in England a generation earlier. The speculative character of both the rapid industrial expansion and the exploitation of the resources of the West kept the economy of the whole nation unstable, and panics—that of 1837 was especially severe—brought recurring unemployment and fluctuation in wages. Labor organization followed, at first local and largely impotent, strikes, lockouts, the blacklist and the speed-up, became well known phenomena. It was in 1837 that Horace Greeley, New England farm boy making his way in New York, saw with incredulous horror able-bodied men and women begging for a chance to work—that, in America! George Ripley found thirty human beings, diseased and starving, living in one cellar room in a Boston slum.

It was against this background of expanding industrialism that the writers of New England and the middle states in the 1830's and 40's lived their lives and did their work. Some of them were almost wholly untouched by it, seemingly unaware of it—Longfellow most notably. Perhaps Poe's private tragedies insulated him against the woes of the world. Others were affected only narrowly, as Whittier, or briefly, as Lowell.

For some of the greatest the problem presented to their minds by the life about them was at once complicated and intensified by the religious dilemma of the times. The traditional Calvinism had largely lost its authority in the centres in which men thought and wrote, its hold upon the more active minds of the new generation was weak indeed. The Unitarianism which had succeeded it in parts of New England had grown so tepid, so hollow, as to make its ministry intolerable to men of such diverse backgrounds as Emerson and Orestes A. Brownson—the Harvard graduate and descendant of a long line of clergymen and scholars, the Vermont farm boy who had never entered a college door. Brownson became a minister to the people of Boston without denominational ties, a social reformer and agitator like George Ripley. Before he reached the goal of his pilgrimage, he startlingly anticipated the findings of Marx and Engels in his study of "The Laboring Classes," published in the *Boston Quarterly Review* in July and October, 1840. He resolved the dilemma at last by becoming a Roman Catholic, to continue his editing and writing for thirty years as the most influential lay spokesman of Catholicism in the United States. Emerson left the Unitarian ministry to write *Nature* (1836) and to become the prophet of American transcendentalism.

V

Transcendentalism must be viewed in its social matrix, in relation to the political instability of the young democracy which so vexed and alarmed Cooper, to the economic tensions attendant on the adolescence of American industrialism, to the humanitarian impulses which found their most substantial expression in abolitionism, to the rapid advance of American science in this period, and especially to the religious dilemma already noted. But transcendentalism was primarily an intellectual attitude, a philosophical position, and its interest to the student of American thought far exceeds the measure of its influence on the practical affairs of the nation. To its contemporaries, it is true, transcendentalism assumed the character of a movement, with social and political reformers numbered among its leaders as well as writers and philosophers, with its dissident religious groups and its experimental socialistic or communistic communities, with its lectures, magazines, and books. The term "transcendental nonsense" came to be widely applied to whatever seemed radical, revolutionary, or merely unconventional.

Emerson recognized this popular attitude in his lecture "The Transcendentalist," one of a series of eight on "The Times" which he delivered in Boston in 1841-42. In this lecture he defined transcendentalism simply as "Idealism, Idealism as it appears in 1842." The name, he explained, had been derived from "Immanuel Kant, of Königsberg, who replied to the skeptical philosophy of Locke, which insisted that there was nothing in the intellect which was not previously in the experience of the senses, by showing that there was a very important class of ideas or imperative forms which did not come by experience, but through which experience was acquired, that these were intuitions of the mind itself, and he denominated them *Transcendental* forms." Major contributions to Emerson's thinking came directly from Coleridge, whose *Aids to Reflection* was published in the United States in 1829, and from Carlyle, Emerson's friend and correspondent. *Sartor Resartus* was published in book form in the United States earlier than in England, and became a kind of bible to many American readers. Behind Coleridge and Carlyle lay the work of the German idealistic philosophers, not Kant alone but also notably Fichte and Schelling, read in their own language by William Ellery Channing the elder and other Americans. To the thinking of Emerson and of Thoreau Oriental philosophy and religion contributed materially. The transcendentalists read also with definite effect British poets and prose writers of the seventeenth century. Emerson quoted Herbert at length in *Nature*, and Melville declared that "had not Sir Thomas Browne lived, Emerson would not have mystified." Emerson went beyond all these sources to give much study to Swedenborg. Finally,

transcendentalism owed more than has been often recognized to native American religious and philosophical influences—the God and “grace” of Puritan mysticism, the “inner light” of the Quakers, the “Bible of creation” of the Deists

Transcendentalism had direct relation to the philosophical foundations of democracy in its emphasis on the perfectibility of the individual. Emerson asked in *Nature*, “Who can set bounds to the possibilities of man?” In his assertion of intuition as the supreme source of truth the transcendentalist found sanction for unconventional and even for revolutionary conduct. As Emerson put it, “In action he easily incurs the charge of antinomianism by his avowal that he, who has the Law-giver, may with safety not only neglect, but even contravene every written commandment.” It was not hard for a sincere transcendentalist to defy the Fugitive Slave Law.

“Build therefore your own world,” Emerson instructed his reader in the final paragraph of *Nature*. “As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, mad-houses, prisons, enemies, vanish, they are temporary and shall be no more seen.” Thus did transcendentalism dispose of the problem of evil.

For Herman Melville, as for Nathaniel Hawthorne, neither Brownson’s solution of the dilemma of the times nor Emerson’s proved possible. The “darkness” that Melville heralded in Hawthorne, in “Hawthorne and His Mosses,” was in his own heart as well. Both men found it inescapable in the world around them. Neither could find in transcendentalism’s assertion of absolute good an answer to the problems of human suffering, to the ultimate question of the nature of evil. Hawthorne was in some degree content to embody his vision of life’s unreconciled conflicts in allegory and legend. Melville came to grips with the problem, profoundly and desperately, almost to the point of his own destruction, and attained only late in his life a partial resolution.

Perhaps of them all Thoreau came closest to a durable integration. What Emerson taught he tested in the fire of intense actual experience. In all American literature there is no clearer vision of the meanness and ugliness of life as it was (and is) lived than in *Walden*, or a surer grasp of life’s potential wholeness and ultimate meaning.

VI

The humanitarian concern which was a striking characteristic of New England society in this period, finding its most significant manifestation in abolitionism, may well have had its roots in the religious dilemma of the times. Perhaps the Puritan conscience, denied the sanctions of a vigorous creed but far from dead, had a share in driving New Englanders to the evangel of reforms in diet, dress and recreation as well as in more fundamental things.

From New England the gospels spread to the middle states and—largely through the efforts of transplanted New Englanders—throughout the West

Some of the efforts toward reform were primarily economic in intention George Ripley's observation of the life of the poor in Boston's congested slums fired him with radical enthusiasm The experiment in communal living which he inaugurated at Brook Farm—with Hawthorne as a temporary participant, and Emerson and Margaret Fuller as interested observers—was the most famous of many attempts to demonstrate the reconstruction of society in the image of widely varying utopias Brook Farm was soon reorganized along the lines proposed by Fourier, the French socialistic thinker whose ideas were propagated in America by Albert Brisbane and, in somewhat modified form, by Horace Greeley Fourierism attained for a time the prominence of national organization, and many experiments in its application were undertaken But all the Fourierist communities were short-lived—as were, indeed, all the other experiments of the kind except those which possessed definite religious elements

More substantial in its ultimate effect was the agitation for a liberalized land policy on the part of the federal government Sustained and concerted demand that the still undeveloped lands of the West should be withheld from speculation and opened to actual settlers on liberal terms finally resulted in the Homestead Act which Abraham Lincoln signed in 1862, with its profound influence on the character of subsequent western settlement

Also of great practical effectiveness was the effort for educational reform which, like so many other reform movements, originated in Massachusetts in the 1830's The experiments of Bronson Alcott in teaching little children should be better known by educators today Horace Mann, as commissioner of education for Massachusetts, was the prime mover in the gradual achievement of better training for teachers, in the general improvement of both elementary and secondary schools, and indirectly in the tardy enactment of laws restricting the paid labor of children

Paralleling the agitation for educational reform was that for improved legal status for women, and later for equal suffrage Lucretia Mott was an early leader in this movement, and Margaret Fuller, in her *Woman in the Nineteenth Century* (1845), its chief literary exponent Women played leading parts in many of the humanitarian crusades Dorothea Dix, for example, almost single-handed brought about nation-wide improvement in the care of the feeble-minded and insane Increasingly during this period women demanded and obtained admission to college and professional training Oberlin, the first co-educational college in America, was founded in 1833 and gave its first degrees to women in 1841 Elizabeth Blackwell, graduating at the Geneva Medical School of Western New York in 1849, became America's first woman to be licensed as a doctor of medicine

Women were leaders, too, in the most spectacular of the crusades marked

by moral purpose, that against intemperance. This movement attained great prominence in the 1830's and 40's, with its bannered parades of the boys and girls of the "cold water army," its Washingtonian Society of reformed drunkards—who found emotional lectures on their past experiences highly remunerative—and its enormous and flamboyant literature. Timothy Shay Arthur was one of the most popular of the writers who used fiction in the cause of temperance, and his *Ten Nights in a Bar-Room and What I Saw There* (1855) may properly be called a classic of the movement.

VII

But the movement which dwarfed all the others both in the quality of its literary expression and in its effect on American history was that for the abolition of Negro slavery. Abolitionism had deeper roots, for some of its leaders, than any of the other movements. Members of the Society of Friends had been agitating against slavery in America for almost a century. Such a Friend as John Greenleaf Whittier, devout by inheritance and by conviction, came naturally to his abolitionism. Yet there is something like escapism in his complaisant comment on New England's industrialism—as in "The Lighting Up"—while devoting his full energy to the condemnation of human wrong in another part of the country. Orestes Brownson indicted, in "The Laboring Classes," the New Englander who "in these times . . . is shedding crocodile tears over the deplorable condition of the poor laborer, while he docks his wages twenty-five per cent . . . shouts for liberty, stickles for equality, and is horrified at a Southern planter who keeps slaves." He was not alone, even in New England, in seeing something of inconsistency in the fierceness of such abolitionists as Wendell Phillips and William Lloyd Garrison toward the South, while they gave but small attention to the faults of the social system of their own section.

The South saw changes during the first half of the century, too. The opening of the rich black lands along the Mississippi after the Creek War gave great impetus to the plantation system, and made the labor of black men profitable again after a generation in which it seemed that the problem of slavery might solve itself peacefully through economic causes. The South experienced an industrial revolution, also, but in reverse. It possessed natural facilities for extensive industry and commerce—water power, fine harbors, inland waterways. But the plantation system which involved ownership of the labor force soaked up the South's fluid capital, and her industries dwindled and died early in the century. Thereafter the development of the "cotton kingdom" and of the industrial oligarchy of New England's textile factories was reciprocal.

The intellectual life of the South remained largely static through the

earlier decades of the century, its small minority of readers comfortably addicted to the Roman classics and Walter Scott. It quickened in response to the attacks of the abolitionists. Such rejoinders as W. J. Grayson's *The Hueling and the Slave*, a long poem which compared the sufferings of New England's factory workers with an idyllic picture of the comfort and security of Southern slaves, may have caused some Northerners to see more clearly the faults of their own society, but probably had little practical effect except in the sharpening of sectional animosity. Almost universally the abolitionist attack identified the individual Southerner with the institution of slavery, and the section with both. Even Whittier, Lowell, Thoreau came to voice an intemperate hatred of the people and the region. Southern writers replied in kind and in full measure. The war between the states began on the printing presses of Boston and Charleston.

The enactment of the new Fugitive Slave Law in 1850 and subsequent attempts to enforce it in the North brought the controversy to its bitterest extremities of word and deed. The South had long maintained the doctrine of states' rights, had appealed to the principle of self-determination. Yet Southern control of the administration and the Congress resulted in this law, which meant the use of the federal power to compel citizens of Northern states to violate their ideas of freedom and humanity. The Burns case at Boston, the Dred Scott decision, and John Brown's raid at Harper's Ferry marked stages in the intensification of the conflict.

As the pressure of sectional antagonisms had increased, the South had felt compelled to look to the developing West for its only hope of retaining a balance in political power. The contest for control of the West was crucial. Successive measures of compromise proved ineffective. In the end sectionalism became the greatest force in American life. Literature had played a great part in creating it, and was decisively affected by it. Even before 1850 the conflict was called inevitable. When it came it shattered the structure of national literature which the half-century had built, affected profoundly the life and work of every important American writer of a generation, and made necessary after 1865 a new beginning.

Economic, political, social, and intellectual backgrounds for American literature from 1800 to 1861 may most conveniently be reviewed in Charles and Mary Beard's *The Rise of American Civilization*, Vol. I (New York, 1927) and in Vols. V, VI, and VII of *A History of American Life*, edited by A. M. Schlesinger and D. R. Fox. These are, respectively, J. A. Krout and D. R. Fox's *The Completion of Independence 1790-1830* (New York, 1944), Carl R. Fish's *The Rise of the Common Man 1830-1850* (New York, 1935), and A. C. Cole's *The Irrepressible Conflict 1850-1865* (New York, 1934). E. D. Branch's *The Sentimental Years* (New York, 1936) is a valuable general study of the 1840's. H. W. Schneider's *A History of American Philosophy* (New York, 1946), Merle Curti's *The Growth of American Thought* (New York, 1943), V. L. Parrington's *The Romantic Revolution in America 1800-1860* (New York, 1927), which

is Vol II in his *Main Currents in American Thought*, R H Gabriel's *The Course of American Democratic Thought* (New York, 1940), Charles and Mary Beard's *The American Spirit* (New York, 1942), H M Jones' *Ideas in America* (Cambridge, 1944), and H A Myers' *Are Men Equal?* (New York, 1945) are stimulating contributions to the history of ideas. H M Jones' *America and French Culture 1750-1848* (Chapel Hill, 1927) and O W Long's *Literary Pioneers* (New York, 1935) treat the impact of Europe on the shaping of a national literature, for the impact of the West, consult Lucy Hazard's *The Frontier in American Literature* (New York, 1927), R L Rusk's *The Literature of the Middle Western Frontier*, in two volumes (New York, 1925), Constance Rourke's *American Humor* (New York, 1931), and Walter Blair's *House Sense in American Humor* (Chicago, 1942). Useful studies of transcendentalism are O B Frothingham's *Transcendentalism in New England* (New York, 1876), H C Goddard's *Studies in New England Transcendentalism* (New York, 1908), Clarence Gohdes' *Periodicals of American Transcendentalism* (Durham, 1931), and Arthur Christy's *The Orient in American Transcendentalism* (New York, 1932). Van Wyck Brooks' *The World of Washington Irving* (New York, 1944), *The Flowering of New England 1815-1865* (New York, 1936), and *The Times of Melville and Whitman* (New York, 1947), are readable impressionistic cultural histories, with a tendency to create a literary mythology. F O Matthiessen's *American Renaissance* (New York, 1941) is a penetrating if sometimes prolix commentary on the work of major writers. A H Quinn's *A History of the American Drama from the Beginning to the Civil War* (New York, 1923, revised 1943) and *American Fiction* (New York, 1936), F L Pattee's *The Development of the American Short Story* (New York, 1923), H R Brown's *The Sentimental Novel in America 1789-1860* (New York, 1940), E C Stedman's *Poets of America* (Boston, 1885), Alfred Kreymborg's *A History of American Poetry Our Singing Strength* (New York, 1929), G W Allen's *American Prosody* (New York, 1935), and Bernard Smith's *Forces in American Criticism* (New York, 1939) are stimulating surveys of literary genres. G H Orians' *A Short History of American Literature* (New York, 1940) offers synoptic analyses of literary decades, F L Pattee's *The Feminine Fifties* (New York, 1940) is an entertaining excursion into every phase of the literary production of one of these decades. Standard literary histories are *The Cambridge History of American Literature* (New York, 1917-1921), W F Taylor's *A History of American Letters* (Boston and New York, 1936), P H Boynton's *Literature and American Life* (Boston and New York, 1936), and F L Pattee's *The First Century of American Literature 1770-1870* (New York, 1935). F L Mott's *A History of American Magazines*, Vols I and II, and *American Journalism*, both previously listed, are the best treatments of their subjects.

American Literature 1800-1860

I

THE FOUNDING OF A NATIONAL LITERATURE

1783 ~ *Washington Irving* ~ 1859

WITH the possible exception of Benjamin Franklin, Washington Irving was the first American to achieve real literary fame on both sides of the Atlantic, also he was probably the first American to enjoy adequate income from literary work. He was one of the chief shapers and builders of our national literature. The best of his books are still widely read and enjoyed today.

The youngest child in a large New York family, he had little formal education, none at the collegiate level. He studied law in desultory fashion for some years, "reading" as was the custom of the time in the offices of established lawyers, but giving much more serious attention to the business of being a young man about town—dancing and theater-going, dining and talking with congenial groups of friends—and to writing. He was only nineteen when his brother Peter began publishing in the newspaper he edited a series of Washington's juvenile essays in the *Spectator* vein, over the signature "Jonathan Oldstyle, Gent."

When he was twenty-three, Washington Irving finally gained admission to the bar, but the event was completely overshadowed in his personal interest by a project which matured just two months later—the launching of the satirical magazine *Salmagundi* on Jan. 24, 1807. It was a joint enterprise of Washington and his brother William Irving, and their friend James Kirke Paulding, whose sister William had married. Current fashions and fashionable people, plays and actors, periodicals and editors, politicians and militia officers, were sharply and saucily satirized in the pocket-size numbers. This not unworthy prototype of today's *New Yorker* was a great success in the already cosmopolitan city of 68,000. The sophisticated and the intellectuals bought it, discussed it, speculated as to the identities thinly concealed in such "profiles" as those of Ichabod Fungus, Timothy Gibley, and Dr. Christopher Costive.

The young editors (or their publisher) soon tired of *Salmagundi*, but within its twenty varied and experimental numbers Washington Irving had measured his talent, and had struck out the field of his further development. Barely two years later—on Dec. 6, 1809—appeared *A History of New York*, by "Diedrich Knickerbocker"—Irving's first important work and the foundation of his later success and fame.

Washington Irving's first book sold amazingly well. It was condemned in certain quarters as an irreverent caricature of the founding fathers, but there is much more sound history in the book than its primary purpose of entertainment would suggest. Irving had done no little real research, and presented a clearer and more complete account of New York's colonial history—in spite of emphasis on burlesque elements—than had previously appeared. More

largely responsible for the immediate popularity of *A History of New York* was the considerable element of satire directed toward contemporary figures and affairs. Irving was a fashionable New Yorker in politics as in other things—a Federalist, though never a violent partisan. Jefferson and the Democrats were targets of “Knickerbocker’s” pen. The sketch of the New Amsterdam governor “William the Testy” is a satirical portrait of Jefferson in physiognomy, dress, personal interests and habits, and public policies.

Ten years elapsed before the publication of Irving’s next book. In the interval he had read widely, especially in the private library of his friend Henry Brevoort, had edited for two years one of the short-lived magazines of the period, the *Analectic* of Philadelphia, writing for it memorable essays demanding greater justice in the national attitude toward the Indians, had worked for his brothers’ importing firm, at first only desultorily, later earnestly and gallantly in the period of economic disorder following the War of 1812. It was the failure of this business, with resulting loss of income to himself and his brothers’ need for help, which brought the easy-going Irving to the writing of *The Sketch Book of Geoffrey Crayon, Gent.*, published serially in 1819-20 and immediately successful in both England and America.

A new Irving appeared in *The Sketch Book*—a writer not only more mature, more sure in his craft, but different in his essential purpose. The focus of his work had shifted, in those ten years, from satire to sentiment. It is precisely this change in Irving which gives him peculiar interest to the literary historian. *Salmagundi* and *A History of New York* belonged to the 18th century in spirit, in method, and in purpose. *The Sketch Book* belonged to the 19th. Irving had become a Romantic.

Few books of the Romantic period are so readable today as Irving’s *Sketch Book*. It is good reading straight through, the universal fame of such school book favorites as “Rip Van Winkle” and “The Legend of Sleepy Hollow” should not be permitted to obscure its other widely varied details. Irving included in it the temperate but forceful essays in defense of the American Indian which he had written for the *Analectic*, “Traits of Indian Character” and “Philip of Pokanoket”, these are consistent with the general Romantic attitude toward primitive peoples, but unmistakably personal and genuine in feeling. Similarly American in details and Romantic in source and attitude are the stories of the Hudson Valley which have done most to make the *Sketch Book* immortal. But more than half its material is British—a cordial sharing of Irving’s experience in visiting Westminster Abbey and Stratford-on-Avon, of English Christmas festivities and village stories. In “English Writers on America” he expressed his regret at “the literary animosity daily growing up between England and America,” and at once announced and exemplified his determination to combat it.

That determination he put into effect in *Bracebridge Hall*, published in

1822 More unified than Irving's other books of this period, this idyllic record of experience in a rural England untouched by industrial revolution and social conflict is still pleasant reading "I had always a great facility at receiving pleasurable impressions," Irving testified in an "Autobiographical Fragment" which is the most revealing document of his life This characteristic is peculiarly evident to the reader of *The Sketch Book* and *Bracebridge Hall*

For most of the materials of *Tales of a Traveller* (1824) Irving went to Germany But the best things in it were results of returns to American folk materials—notably one of Irving's finest short stories, "The Devil and Tom Walker"

The remaining 33 years of Irving's long life were divided between Europe and America, between diplomatic service and arduous and productive literary labor There were three years in Spain, 1826-29, and two in England, 1830-31, a triumphal return to America and an extensive tour in the South and West in 1832, then ten years in New York Irving returned to Spain in 1842 as American Minister, remaining for three years Back in America once more, he resumed his residence at "Sunnyside," a comfortable country home at Tarrytown-on-the-Hudson, and remained there, except for a period of research at Washington, until his death in 1859

None of the books of these later years hold for modern readers the appeal of Irving's earlier work From his residence and study in Spain came *The Alhambra* (1832), a readable volume of descriptive sketches and traditional tales, and four works in Spanish history From his western expedition he drew the material of *A Tour on the Prairies* (1835) and the inspiration for *Astoria* (1836) and *Adventures of Captain Bonneville* (1837) *Wolfert's Roost* (1855) is the best of three volumes of later gleanings from *Sketch Book* fields Of his four biographies, the five-volume *Life of Washington* (1855-59) was the consuming and triumphant labor of Irving's last years Though there is much good reading in the many pages of these later books, much of lively narrative and colorful detail, Irving's permanent place in our literature is secured primarily by the *Sketch Book* and his other earlier work

"It is with delight we share the world with you" So wrote one of his older brothers to young Washington Irving in 1804 The words express the experience of millions of readers through five generations There is little depth in Irving's work, either intellectual or emotional, little outright power or striking beauty Yet one need look no further for an explanation of its durable appeal than to the personality it reveals Irving was a man of lively and kindly curiosity about a multitude of things, sensitive and generous, unfailingly sincere, both a regionalist and a cosmopolitan Not only his brothers, but literally hundreds of friends through his long life, found it a delight to share the world with him And so does the reader even today, in the writing which is so warm and full an expression of a very likable man

[S T Williams' *The Life of Washington Irving*, 2 vols (New York, 1934) is the standard biography H A Pochmann's *Irving* (New York, 1934) in the American Writers Series and Van Wyck Brooks' *The World of Washington Irving* (New York, 1934) provide good critical material The authorized biography is Pierre M Irving's *The Life and Letters of Washington Irving* (New York, 1862-63)

The text of the selections from *A History of New York* has been abridged from that of the first edition, 1809, as reprinted in *Diedrich Knickerbocker's A History of New York*, edited by Stanley Williams and Tremain McDowell, American Authors series, 1927 The text of the other selections is that of *The Works of Washington Irving*, Spuyten Duyvil edition, 1881 Most of Irving's notes have been omitted]

From
A HISTORY OF NEW YORK
[1809]

HOW THE FORT GOED HOOP WAS FEARFULLY BELEAGUERED—HOW THE RENOWNED WOUTER FELL INTO A PROFOUND DOUBT, AND HOW HE FINALLY EVAPORATED

BY THIS time my readers must fully perceive what an arduous task I have undertaken—collecting and collating, with painful minuteness, the chronicles of past times, whose events almost defy the powers of research—raking in a little kind of Herculaneum of history, which had lain nearly for ages buried under the rubbish of years, and almost totally forgotten—raking up the limbs and fragments of disjointed facts, and endeavouring to put them scrupulously together, so as to restore them to their original form and connexion—now luging forth the character of an almost forgotten hero, like a mutilated statue—now deciphering a half-defaced inscription, and now lighting upon a mouldering manuscript, which, after painful study, scarce repays the trouble of perusal

In such case, how much has the reader to depend upon the honour and probity of his author, lest, like a cunning antiquarian, he either impose upon him some spurious fabrication of his own, for a precious relic from antiquity—or else

dress up the dismembered fragment with such false trappings, that it is scarcely possible to distinguish the truth from the fiction with which it is enveloped This is a grievance which I have more than once had to lament, in the course of my wearisome researches among the works of my fellow-historians, who have strangely disguised and distorted the facts respecting this country, and particularly respecting the great province of New Netherlands, as will be perceived by any who will take the trouble to compare their romantic effusions, tricked out in the meretricious gauds of fable, with this excellent little history—universally to be renowned for its severe simplicity and unerring truth

I have had more vexations of the kind to encounter, in those parts of my history which treat of the transactions on the eastern border, than in any other, in consequence of the troops of historians who have infested those quarters, and have shewn the honest people of New Nederlandt no mercy in their works Among the rest, Mr Benjamin Trumbull¹ arrogantly declares, that "the Dutch were always mere intruders" Now to this I shall make no other reply than to proceed in the steady narration of my history, which will contain

¹ Clergyman and historian (1735-1820), native and life-long resident of Connecticut, author of *A General History of the United States of America*, 3 vols (Boston, 1765-1810)

not only proofs that the Dutch had clear title and possession in the fair valleys of the Connecticut, and that they were wrongfully dispossessed thereof—but likewise, that they have been scandalously maltreated *ever* since by the misrepresentations of the crafty historians of New England. And in this I shall be guided by a spirit of truth and impartiality, and as regard to my immortal fame—for I would not wittingly dishonour my work by a single falsehood, misrepresentation, or prejudice, though it should gain our forefathers the whole country of New England.

It was at an early period of the province, and previous to the arrival of the renowned Wouter, that the cabinet of Nieuw Nederlandts purchased the lands about the Connecticut, and established, for their superintendence and protection, a fortified post on the banks of the river, which was called Fort Goed Hoop, and was situated hard by the present fair city of Hartford. The command of this important post, together with the rank, title, and appointment of commissary, were given in charge to the gallant Jacobus Van Curlet, or, as some historians will have it, Van Curlis—a most doughty soldier, of that stomachful class of which we have such numbers on parade days—who are famous for eating all they kill. He was of a very soldierlike appearance, and would have been an exceeding tall man had his legs been in proportion to his body, but the latter being long, and the former uncommonly short, it gave him the uncouth appearance of a tall man's body mounted upon a little man's legs. He made up for this transpirt construction of body by throwing his legs to such an extent when he marched, that you would have sworn he had on the identical seven-league boots of the far-famed Jack the giant-killer, and so astonishingly high did he tread, on any great military occasion, that his soldiers were oftentimes alarmed, lest the little man should trample himself under-foot.

But notwithstanding the erection of this fort, and the appointment of this ugly little man of war as a commander, the intrepid Yankees continued those daring interlopings, which I have hinted at in my last chapter, and taking advantage of the character which the cabinet of Wouter Van Twiller soon acquired, for profound and phlegmatic tranquillity—did audaciously invade the territories of the Nieuw Nederlandts, and *squat* themselves down within the very jurisdiction of Fort Goed Hoop.

On beholding this outrage, the long-bodied Van Curlet proceeded as became a prompt and valiant officer. He immediately protested against these unwarrantable encroachments, in Low Dutch, by way of inspiring more terror, and forthwith despatched a copy of the protest to the governor at New Amsterdam, together with a long and bitter account of the aggressions of the enemy. This done, he ordered his men, one and all, to be of good cheer—shut the gate of the fort, smoked three pipes, went to bed, and awaited the result with a resolute and intrepid tranquillity that greatly animated his adherents, and no doubt struck sore dismay and affright into the hearts of the enemy.

Now it came to pass, that about this time the renowned Wouter Van Twiller, full of years and honours, and council dinners, had reached that period of life and faculty which, according to the great Gulliver, entitles a man to admission into the ancient order of Struldbruggs. He employed his time in smoking his Turkish pipe, amid an assembly of sages equally enlightened and nearly as venerable as himself, and who, for their silence, their gravity, their wisdom, and their cautious averseness to coming to any conclusion in business, are only to be equalled by certain profound corporations which I have known in my time. Upon reading the protest of the gallant Jacobus Van Curlet, therefore, his excellency fell straightway into one of the deepest doubts that ever he was known to encounter; his capacious head gradually drooped on his chest, he closed his eyes,

and inclined his ear to one side, as if listening with great attention to the discussion that was going on in his belly, which all who knew him declared to be the huge court-house or council chamber of his thoughts, forming to his head what the House of Representatives does to the Senate. An articulate sound, very much resembling a snore, occasionally escaped him—but the nature of this internal cogitation was never known, as he never opened his lips on the subject to man, woman, or child. In the meantime, the protest of Van Culet lay quietly on the table, where it served to light the pipes of the venerable sages assembled in council, and in the great smoke which they raised, the gallant Jacobus, his protest, and his mighty Fort Goed Hoop, were soon as completely beclouded and forgotten as is a question of emergency swallowed up in the speeches and resolution of a modern session of Congress.

There are certain emergencies when your profound legislators and sage deliberative councils are mightily in the way of a nation, and when an ounce of hare-brained decision is worth a pound of sage doubt and cautious discussion. Such, at least, was the case at present, for while the renowned Wouter Van Twiller was daily battling with his doubts, and his resolution growing weaker and weaker in the contest, the enemy pushed further and further into his territories, and assumed a most formidable appearance in the neighbourhood of Fort Goed Hoop. Here they founded the mighty town of *Piquag*, or, as it has since been called, *Weathersfield*, a place which, if we may credit the assertion of that worthy historian, John Josselyn, Gent,² "hath been infamous by reason of the witches therein." And so daring did these men of *Piquag* become, that they extended those plantations of onions, for which their town is illustrious, under the very noses of the garrison of Fort Goed Hoop—inasmuch that the honest Dutchmen could not look toward that quarter without tears in their eyes.

This crying injustice was regarded with proper indignation by the gallant Jacobus Van Culet. He absolutely trembled with the amazing violence of his choler, and the exacerbations of his valour, which seemed to be the more turbulent in their workings, from the length of the body in which they were agitated. He forthwith proceeded to strengthen his redoubts, heighten his breastworks, deepen his fosse, and fortify his position with a double row of abattis, after which valiant precautions, he with unexampled intrepidity despatched a fresh courier with tremendous accounts of his perilous situation. Never did the modern hero, who immortalized himself at the second Sabine war, show greater valour in the art of letter writing, or distinguish himself more gloriously upon paper, than the heroic Van Culet.

The courier chosen to bear these alarming despatches was a fat, only little man, as being least liable to be worn out, or to lose leather on the journey, and to insure his speed, he was mounted on the fleetest waggon horse in the garrison, remarkable for his length of limb, largeness of bone, and hardness of trot, and so tall, that the little messenger was obliged to climb on his back by means of his tail and crupper. Such extraordinary speed did he make, that he arrived at Fort Amsterdam in little less than a month, though the distance was full two hundred pipes, or about a hundred and twenty miles.

The extraordinary appearance of this portentous stranger would have thrown the whole town of New Amsterdam into a quandary, had the good people troubled themselves about any thing more than their domestic affairs. With an appearance of great hurry and business, and smoking a short travelling pipe, he proceeded on a long swing trot through the muddy lanes of the metropolis, demolishing whole batches of dirt pies, which the little Dutch

² Author of *New England Rarities* (London, 1672) and *Two Voyages to New England* (London, 1674).

children were making in the road, and for which kind of pastry the children of this city have ever been famous. On arriving at the governor's house, he climbed down from his steed in great trepidation, roused the gray-headed door-keeper, old Skaats, who, like his lineal descendant and faithful representative, the venerable crier of our court, was nodding at his post—rattled at the door of the council chamber, and startled the members as they were dozing over a plan for establishing a public market.

At that very moment a gentle grunt, or rather a deep-drawn snore, was heard from the chair of the governor, a whiff of smoke was at the same instant observed to escape from his lips, and a slight cloud to ascend from the bowl of his pipe. The council of course supposed him engaged in deep sleep for the good of the community, and, according to custom in all such cases established, every man bawled out silence, in order to maintain tranquillity, when, of a sudden, the door flew open, and the little courier straddled into the apartment, cased to the middle in a pair of Hessian boots, which he had got into for the sake of expedition. In his right hand he held forth the ominous despatches, and with his left he grasped firmly the waistband of his galligaskins, which had unfortunately given way, in the exertion of descending from his horse. He stumped resolutely up to the governor, and with more hurry than perspicuity, delivered his message. But fortunately his ill tidings came too late to ruffle the tranquillity of this most tranquil of rulers. His venerable excellency had just breathed and smoked his last—his lungs and his pipe having been exhausted together, and his peaceful soul, as Dan Homer would have said, having escaped in the last whiff that curled from his tobacco pipe. In a word, the renowned Wouter Van Twiller, alias Walter the Doubter, who had so often slumbered with his contemporaries, now slept with his fathers, and Wilhelmus Kieft governed in his stead.

CONTAINING THE CHRONICLES OF THE
REIGN OF WILLIAM THE TESTY

HE WAS a brisk, waspish, little old gentleman, who had dried and wilted away, partly through the natural process of years, and partly from being parched and burnt up by his fiery soul, which blazed like a vehement rush light in his bosom, constantly inciting him to most valorous broils, altercations and misadventures. I have heard it observed by a profound and philosophical judge of human nature, that if a woman waxes fat as she grows old, the tenure of her life is very precarious, but if haply she wilts, she lives forever—such likewise was the case with William the Testy, who grew tougher in proportion as he dried. He was some such a little dutchman as we may now and then see, stumping briskly about the streets of our city, in a broad skated coat, with buttons nearly as large as the shield of Ajax, which makes such a figure in Dan Homer, an old fashioned cocked hat stuck on the back of his head, and a cane as high as his chin. His visage was broad, but his features sharp, his nose turned up with a most petulant curl, his cheeks, like the region of Terra del Fuego, were scorched into a dusky red—doubtless in consequence of the neighborhood of two fierce little grey eyes, through which his torrid soul beamed as fervently, as a tropical sun blazing through a pair of burning glasses. The corners of his mouth were curiously modeled into a kind of fret work, not a little resembling the wrinkled proboscis of an irritable pug dog—in a word he was one of the most positive, restless, ugly little men, that ever put himself in a passion about nothing.

No sooner had this bustling little man been blown by a whiff of fortune into the seat of government, than he called together his council and delivered a very animated speech on the affairs of the province. As everybody knows what a glorious oppor-

tunity a governor, a president, or even an emperor has, of drubbing his enemies in his speeches, messages and bulletins, where he has the talk all on his own side, they may be sure the high mettled William Kieft did not suffer so favorable an occasion to escape him, of evincing that gallantry of tongue, common to all able legislators

The council remained for some time silent, after he had finished, whether struck dumb with admiration at the brilliancy of his project, or put to sleep by the length of his harangue, the history of the times doth not mention Suffice it to say, they at length gave a universal grunt of acquiescence Governor Kieft having thus vented his indignation, felt greatly relieved—adjourned the council *sine die*—put on his cocked hat and corduroy small clothes, and mounting a tall raw boned charger, trotted out to his country seat, which was situated in a sweet, sequestered swamp, now called Dutch street, but more commonly known by the name of Dog's Misery

Now it happened that at this time there sojourned in New Amsterdam one Anthony Van Coilear, a jolly fat Dutch trumpeter, of a pleasant burley visage—famous for his long wind and his huge whiskers, and who as the story goes, could twang so potently upon his instrument, as to produce an effect upon all within hearing, as though ten thousand bag-pipes were singing most lustily i' the nose Him did the illustrious Kieft pick out as the man of all the world, most fitted to be the champion of New Amsterdam, and to garrison its fort, making little doubt but that his instrument would be as effectual and offensive in war as was that of the Paladin Astolpho,³ or the more classic horn of Alecto⁴ It would have done one's heart good to have seen the governor snapping his fingers and fidgeting with delight, while his sturdy trumpeter strutted up and down the ramparts, fearlessly twanging his trumpet in the face of the whole world, like a thrice valorous editor daringly in-

sulting all the principalities and powers—on the other side of the Atlantic

Nor was he content with thus strongly garrisoning the fort, but he likewise added exceedingly to its strength by furnishing it with a formidable battery of Quaker guns—rearing a stupendous flagstaff in the centre which overtopped the whole city—and moreover by building a great windmill on one of the bastions This last to be sure, was somewhat of a novelty in the art of fortification, but as I have already observed Wilham Kieft was notorious for innovations and experiments, and traditions do affirm that he was much given to mechanical inventions—constructing patent smoke-jacks—carts that went before the horses, and especially erecting windmills, for which machines he had acquired a singular predilection in his native town of Saardam

All these scientific vagaries of the little governor were cried up with ecstasy by his adherents as proofs of his universal genius—but there were not wanting ill-natured grumblers who railed at him as employing his mind in frivolous pursuits, and devoting that time to smoke-jacks and windmills, which should have been occupied in the more important concerns of the province Nay they even went so far as to hint once or twice, that his head was turned by his experiments, and that he really thought to manage his government, as he did his mills—by mere wind!—such is the illiberality and slander to which your enlightened rulers are ever subject

The great defect of Wilhelmus Kieft's policy was, that though no man could be more ready to stand forth in an hour of emergency, yet he was so intent upon guarding the national pocket, that he suffered the enemy to break its head—in other words, whatever precaution for public safety he adopted, he was so intent upon rendering it cheap, that he invariably

³ A character in the Charlemagne romances, who possessed a horn which, when sounded, brought terror to hearers

⁴ One of the three Erinnys or Furies

rendered it ineffectual. All this was a remote consequence of his profound education at the Hague—where having acquired a smattering of knowledge, he was ever after a great conner of indexes, continually dipping into books, without ever studying to the bottom of any subject, so that he had the scum of all kinds of authors fermenting in his pericranium. In some of these title page researches he unluckily stumbled over a grand political *cabalistic word*, which, with his customary facility he immediately incorporated into his great scheme of government, to the irremediable injury and delusion of the honest province of Nieuw Nederlandts, and the eternal misleading, of all experimental rulers.

Not to keep my reader in any suspense, the word which had so wonderfully arrested the attention of Wilham the Testy and which in German characters, had a particularly black and ominous aspect, on being fairly translated into the English is no other than *economy*—a talismanic term, which by constant use and frequent mention, has ceased to be formidable in our eyes, but which has as terrible potency as any in the arcana of necromancy.

When pronounced in a national assembly it has an immediate effect in closing the hearts, beclouding the intellects, drawing the purse strings and buttoning the breeches pockets of all philosophic legislators. Nor are its effects on the eye less wonderful. It produces a contraction of the retina, an obscurity of the crystalline lens, a viscosity of the vitreous and an inspiration of the aqueous humours, an induration of the tunica sclerotica and a convexity of the cornea, insomuch that the organ of vision loses its strength and perspicuity, and the unfortunate patient becomes *myopes* or in plain English, purblind, perceiving only the amount of immediate expense without being able to look further, and regard it in connexion with the ultimate object to be effected. "So that," to quote the words of the eloquent Burke, "a briar at his nose is of greater magnitude than an oak at five hundred

yards distance." Such are its instantaneous operations, and the results are still more astonishing. By its magic influence seventy-four shink into frigates—frigates into sloops, and sloops into gunboats. As the defenceless fleet of Eneas, at the command of the protecting Venus, changed into sea nymphs and protected itself by diving,⁵ so the mighty navy of America, by the cabalistic word economy, dwindles into small craft, and shelters itself in a mill-pond!

ENGLISH WRITERS ON AMERICA [1820 (1819)]

"Methinks I see in my mind a noble and pussant nation, rousing herself like a strong man after sleep, and shaking her invincible locks, methinks I see her as an eagle, mewing her mighty youth, and kindling her undazzled eyes at the full mid-day beam"—*Milton on the Liberty of the Press*¹

IT IS with feelings of deep regret that I observe the literary animosity daily growing up between England and America. Great curiosity has been awakened of late with respect to the United States, and the London press has teemed with volumes of travels through the Republic, but they seem intended to diffuse error rather than knowledge, and so successful have they been, that, notwithstanding the constant intercourse between the nations, there is no people concerning whom the great mass of the British public have less pure information, or entertain more numerous prejudices.

English travellers are the best and the worst in the world. Where no motives of pride or interest intervene, none can equal them for profound and philosophical views of society, or faithful and graphical descriptions of external objects, but when either the interest or reputation of their

⁵ A reference to Virgil's *Aeneid*.

¹ *Arcopagitica. A Defense of Uncensored Printing*.

own country comes in collision with that of another, they go to the opposite extreme, and forget their usual probity and candor, in the indulgence of splenetic remark, and an illiberal spirit of ridicule.

Hence, their travels are more honest and accurate, the more remote the country described. I would place implicit confidence in an Englishman's descriptions of the regions beyond the cataracts of the Nile, of unknown islands in the Yellow Sea, of the interior of India; or of any other tract which other travellers might be apt to picture out with the illusions of their fancies. But I would cautiously receive his account of his immediate neighbors, and of those nations with which he is in habits of most frequent intercourse. However I might be disposed to trust his probity, I dare not trust his prejudices.

It has also been the particular lot of our country to be visited by the worst kind of English travellers. While men of philosophical spirit and cultivated minds have been sent from England to ransack the poles, to penetrate the deserts, and to study the manners and customs of barbarous nations, with which she can have no permanent intercourse of profit or pleasure; it has been left to the broken-down tradesman, the scheming adventurer, the wandering mechanic, the Manchester and Birmingham agent, to be her oracles respecting America. From such sources she is content to receive her information respecting a country in a singular state of moral and physical development; a country in which one of the greatest political experiments in the history of the world is now performing; and which presents the most profound and momentous studies to the statesman and the philosopher.²

That such men should give prejudicial accounts of America is not a matter of surprise. The themes it offers for contemplation are too vast and elevated for their capacities. The national character is yet in a state of fermentation; it may have its frothiness and sediment, but its ingredients are sound and wholesome; it has already

given proofs of powerful and generous qualities; and the whole promises to settle down into something substantially excellent. But the causes which are operating to strengthen and ennoble it, and its daily indications of admirable properties, are all lost upon these purblind observers; who are only affected by the little asperities incident to its present situation. They are capable of judging only of the surface of things, of those matters which come in contact with their private interests and personal gratifications. They miss some of the snug conveniences and petty comforts which belong to an old, highly-finished, and over-populous state of society, where the ranks of useful labor are crowded, and many earn a painful and servile subsistence by studying the very caprices of appetite and self-indulgence. These minor comforts, however, are all-important in the estimation of narrow minds; which either do not perceive, or will not acknowledge, that they are more than counterbalanced among us, by great and generally diffused blessings.

They may, perhaps, have been disappointed in some unreasonable expectation of sudden gain. They may have pictured America to themselves an El Dorado, where gold and silver abounded, and the natives were lacking in sagacity; and where they were to become strangely and suddenly rich, in some unforeseen but easy manner. The same weakness of mind that indulges absurd expectations produces petulance in disappointment. Such persons become embittered against the country on finding that there, as everywhere else, a man must sow before he can reap; must win wealth by industry and talent; and must contend with the common difficulties of nature and the shrewdness of an intelligent and enterprising people.

Perhaps, through mistaken or ill-directed hospitality, or from the prompt disposition

² Channing and Hart's *Guide to the Study of American History* (Boston, 1896), pp. 78-86, presents an extensive list of books recording the travels of Englishmen in America.

to cheer and countenance the stranger prevalent among my countrymen, they may have been treated with unwonted respect in America; and, having been accustomed all their lives to consider themselves below the surface of good society, and brought up in a servile feeling of inferiority, they become arrogant on the common boon of civility; they attribute to the lowliness of others their own elevation; and underrate a society where there are no artificial distinctions, and where, by any chance, such individuals as themselves can rise to consequence.

One would suppose, however, that information coming from such sources, on a subject where the truth is so desirable, would be received with caution by the censors of the press, that the motives of these men, their veracity, their opportunities of inquiry and observation, and their capacities for judging correctly, would be rigorously scrutinized before their evidence was admitted, in such sweeping extent, against a kindred nation. The very reverse, however, is the case, and it furnishes a striking instance of human inconsistency. Nothing can surpass the vigilance with which English critics will examine the credibility of the traveller who publishes an account of some distant and comparatively unimportant country. How warily will they compare the measurements of a pyramid, or the descriptions of a ruin; and how sternly will they censure any inaccuracy in these contributions of merely curious knowledge: while they will receive, with eagerness and unhesitating faith, the gross misrepresentations of coarse and obscure writers, concerning a country with which their own is placed in the most important and delicate relations. Nay, they will even make these apocryphal volumes text-books, on which to enlarge, with a zeal and an ability worthy of a more generous cause.

I shall not, however, dwell on this irksome and hackneyed topic; nor should I have adverted to it, but for the undue interest apparently taken in it by my countrymen, and certain injurious effects which

I apprehend it might produce upon the national feeling. We attach too much consequence to these attacks. They cannot do us any essential injury. The tissue of misrepresentations attempted to be woven round us are like cobwebs woven round the limbs of an infant giant. Our country continually outgrows them. One falsehood after another falls off of itself. We have but to live on, and every day we live a whole volume of refutation.

All the writers of England united, if we could for a moment suppose their great minds stooping to so unworthy a combination, could not conceal our rapidly-growing importance and matchless prosperity. They could not conceal that these are owing, not merely to physical and local, but also to moral causes—to the political liberty, the general diffusion of knowledge, the prevalence of sound moral and religious principles, which give force and sustained energy to the character of a people; and which, in fact, have been the acknowledged and wonderful supporters of their own national power and glory.

But why are we so exquisitely alive to the aspersions of England? Why do we suffer ourselves to be so affected by the contumely she has endeavored to cast upon us? It is not in the opinion of England alone that honor lives and reputation has its being. The world at large is the arbiter of a nation's fame; with its thousand eyes it witnesses a nation's deeds, and from their collective testimony is national glory or national disgrace established.

For ourselves, therefore, it is comparatively of but little importance whether England does us justice or not; it is, perhaps, of far more importance to herself. She is installing anger and resentment into the bosom of a youthful nation, to grow with its growth, and strengthen with its strength. If in America, as some of her writers are laboring to convince her, she is hereafter to find an invidious rival and a gigantic foe, she may thank those very writers for having provoked rivalry and irritated hostility. Every one knows the all-

pervading influence of literature at the present day, and how much the opinions and passions of mankind are under its control. The mere contests of the sword are temporary, their wounds are but in the flesh, and it is the pride of the generous to forgive and forget them; but the slanders of the pen pierce to the heart; they rankle longest in the noblest spirits; they dwell ever present in the mind, and render it morbidly sensitive to the most trifling collision. It is but seldom that any one overt act produces hostilities between two nations; there exists, most commonly, a previous jealousy and ill-will, a predisposition to take offence. Trace these to their cause, and how often will they be found to originate in the mischievous effusions of mercenary writers, who, secure in their closets, and for ignominious bread, concoct and circulate the venom that is to inflame the generous and the brave.

I am not laying too much stress upon this point; for it applies most emphatically to our particular case. Over no nation does the press hold a more absolute control than over the people of America; for the universal education of the poorest classes makes every individual a reader. There is nothing published in England on the subject of our country that does not circulate through every part of it. There is not a calumny dropped from an English pen, nor an unworthy sarcasm uttered by an English statesman, that does not go to blight good-will, and add to the mass of latent resentment. Possessing, then, as England does, the fountain-head whence the literature of the language flows, how completely is it in her power, and how truly is it her duty, to make it the medium of amiable and magnanimous feeling—a stream where the two nations might meet together and drink in peace and kindness. Should she, however, persist in turning it to waters of bitterness, the time may come when she may repent her folly. The present friendship of America may be of but little moment to her; but the future destinies of that country do not admit of a doubt,

over those of England there lower some shadows of uncertainty. Should, then, a day of gloom arrive—should those reverses overtake her, from which the proudest empires have not been exempt—she may look back with regret at her infatuation, in repulsing from her side a nation she might have grappled to her bosom, and thus destroying her only chance for real friendship beyond the boundaries of her own dominions.

There is a general impression in England, that the people of the United States are inimical to the parent country. It is one of the errors which have been diligently propagated by designing writers. There is, doubtless, considerable political hostility, and a general soreness at the illiberality of the English press; but, generally speaking, the prepossessions of the people are strongly in favor of England. Indeed, at one time they amounted, in many parts of the Union, to an absurd degree of bigotry. The bare name of Englishman was a passport to the confidence and hospitality of every family, and too often gave a transient currency to the worthless and the ungrateful. Throughout the country there was something of enthusiasm connected with the idea of England. We looked to it with a hallowed feeling of tenderness and veneration, as the land of our forefathers—the august repository of the monuments and antiquities of our race—the birthplace and mausoleum of the sages and heroes of our paternal history. After our own country, there was none in whose glory we more delighted—none whose good opinion we were more anxious to possess—none toward which our hearts yearned with such throbbings of warm consanguinity. Even during the late war,² whenever there was the least opportunity for kind feelings to spring forth, it was the delight of the generous spirits of our country to show that, in the midst of hostilities, they still kept alive the sparks of future friendship.

Is all this to be at an end? Is this

² The War of 1812-14.

golden band of kindred sympathies, so rare between nations, to be broken forever? Perhaps it is for the best—it may dispel an illusion which might have kept us in mental vassalage; which might have interfered occasionally with our true interests, and prevented the growth of proper national pride. But it is hard to give up the kindred tie! and there are feelings dearer than interest—closer to the heart than pride—that will still make us cast back a look of regret as we wander farther and farther from the paternal roof, and lament the waywardness of the parent that would repel the affections of the child.

Short-sighted and injudicious, however, as the conduct of England may be in this system of aspersion, recrimination on our part would be equally ill-judged. I speak not of a prompt and spirited vindication of our country, nor the keenest castigation of her slanderers—but I allude to a disposition to retaliate in kind, to retort sarcasm and inspire prejudice, which seems to be spreading widely among our writers. Let us guard particularly against such a temper; for it would double the evil, instead of redressing the wrong. Nothing is so easy and inviting as the retort of abuse and sarcasm; but it is a paltry and an unprofitable contest. It is the alternative of a morbid mind, fretted into petulance, rather than warmed into indignation. If England is willing to permit the mean jealousies of trade, or the rancorous animosities of politics, to deprave the integrity of her press, and poison the fountain of public opinion, let us beware of her example. She may deem it her interest to diffuse error and engender antipathy, for the purpose of checking emigration; we have no purpose of the kind to serve. Neither have we any spirit of national jealousy to gratify; for as yet, in all our rivalships with England, we are the rising and the gaining party. There can be no end to answer, therefore, but the gratification of resentment—a mere spirit of retaliation; and even that is impotent. Our retorts are never republished in England; they fall

short, therefore, of their aim; but they foster a querulous and peevish temper among our writers; they sour the sweet flow of our early literature, and sow thorns and brambles among its blossoms. What is still worse, they circulate through our own country, and, as far as they have effect, excite virulent national prejudices. This last is the evil most especially to be deprecated. Governed, as we are, entirely by public opinion, the utmost care should be taken to preserve the purity of the public mind. Knowledge is power, and truth is knowledge; whoever, therefore, knowingly propagates a prejudice, wilfully saps the foundation of his country's strength.

The members of a republic, above all other men, should be candid and dispassionate. They are, individually, portions of the sovereign mind and sovereign will, and should be enabled to come to all questions of national concern with calm and unbiased judgments. From the peculiar nature of our relations with England, we must have more frequent questions of a difficult and delicate character with her, than with any other nation; questions that affect the most acute and excitable feelings; and as, in the adjustment of these, our national measures must ultimately be determined by popular sentiment, we cannot be too anxiously attentive to purify it from all latent passion or prepossession.

Opening, too, as we do, an asylum for strangers from every portion of the earth, we should receive all with impartiality. It should be our pride to exhibit an example of one nation, at least, destitute of national antipathies, and exercising, not merely the overt acts of hospitality, but those more rare and noble courtesies which spring from liberality of opinion.

What have we to do with national prejudices? They are the inveterate diseases of old countries, contracted in rude and ignorant ages, when nations knew but little of each other, and looked beyond their own boundaries with distrust and hostility. We, on the contrary, have sprung into national existence in an enlightened and philosophic

age, when the different parts of the habitable world, and the various branches of the human family, have been indefatigably studied and made known to each other, and we forego the advantages of our birth, if we do not shake off the national prejudices, as we would the local superstitions, of the old world.

But above all let us not be influenced by any angry feelings, so far as to shut our eyes to the perception of what is really excellent and amiable in the English character. We are a young people, necessarily an imitative one, and must take our examples and models, in a great degree, from the existing nations of Europe. There is no country more worthy of our study than England. The spirit of her constitution is most analogous to ours. The manners of her people—their intellectual activity, their freedom of opinion, their habits of thinking on those subjects which concern the dearest interests and most sacred charities of private life—are all congenial to the American character, and, in fact, are all intrinsically excellent; for it is in the moral feeling of the people that the deep foundations of British prosperity are laid; and however the superstructure may be timeworn or overrun by abuses, there must be something solid in the basis, admirable in the materials, and stable in the structure of an edifice that so long has towered unshaken amidst the tempests of the world.

Let it be the pride of our writers, therefore, discarding all feelings of irritation, and disdaining to retaliate the illiberality of British authors, to speak of the English nation without prejudice, and with determined candor. While they rebuke the indiscriminating bigotry with which some of our countrymen admire and imitate everything English, merely because it is English, let them frankly point out what is really worthy of approbation. We may thus place England before us as a perpetual volume of reference, wherein are recorded sound deductions from ages of experience; and while we avoid the errors and absurdities which may have crept into

the page, we may draw thence golden maxims of practical wisdom, wherewith to strengthen and to embellish our national character.

PHILIP OF POKANOKET

AN INDIAN MEMOIR

[1820 (1813)]

As monumental bronze unchanged his look,
A soul that pity touch'd, but never shook.
Tran'd from his tree-rock'd cradle to his
bier
The fierce extremes of good and ill to
brook,
Impassive—fearing but the shame of fear—
A stoic of the woods—a man without a
tear.—*Campbell.*

IT IS to be regretted that those early writers who treated of the discovery and settlement of America have not given us more particular and candid accounts of the remarkable characters that flourished in savage life. The scanty anecdotes which have reached us are full of peculiarity and interest; they furnish us with nearer glimpses of human nature, and show what man is in a comparatively primitive state and what he owes to civilization. There is something of the charm of discovery in lighting upon these wild and unexplored tracts of human nature; in witnessing, as it were, the native growth of moral sentiment, and perceiving those generous and romantic qualities which have been artificially cultivated by society vegetating in spontaneous hardihood and rude magnificence.

In civilized life, where the happiness, and indeed almost the existence, of man depends so much upon the opinion of his fellow-men, he is constantly acting a studied part. The bold and peculiar traits of native character are refined away or softened down by the levelling influence of what is termed good-breeding; and he practises so many petty deceptions and affects so many generous sentiments for the pur-

poses of popularity that it is difficult to distinguish his real from his artificial character. The Indian, on the contrary, free from the restraints and refinements of polished life, and in a great degree a solitary and independent being, obeys the impulses of his inclination or the dictates of his judgment, and thus the attributes of his nature, being freely indulged, grow singly great and striking. Society is like a lawn, where every roughness is smoothed, every bramble eradicated, and where the eye is delighted by the smiling verdure of a velvet surface; he, however, who would study Nature in its wildness and variety must plunge into the forest, must explore the glen, must stem the torrent, and dare the precipice.

These reflections arose on casually looking through a volume of early colonial history wherein are recorded, with great bitterness, the outrages of the Indians and their wars with the settlers of New England. It is painful to perceive, even from these partial narratives, how the footsteps of civilization may be traced in the blood of the aborigines, how easily the colonists were moved to hostility by the lust of conquest; how merciless and exterminating was their warfare. The imagination shrinks at the idea how many intellectual beings were hunted from the earth, how many brave and noble hearts, of Nature's sterling coinage, were broken down and trampled in the dust.

Such was the fate of Philip of Pokanoket, an Indian warrior whose name was once a terror throughout Massachusetts and Connecticut. He was the most distinguished of a number of contemporary sachems who reigned over the Pequods, the Narragansetts, the Wampanoags, and the other eastern tribes at the time of the first settlement of New England; a band of native untaught heroes who made the most generous struggle of which human nature is capable, fighting to the last gasp in the cause of their country, without a hope of victory or a thought of renown. Worthy of an age of poetry and fit subjects for

local story and romantic fiction, they have left scarcely any authentic traces on the page of history, but stalk like gigantic shadows in the dim twilight of tradition.

When the Pilgrims, as the Plymouth settlers are called by their descendants, first took refuge on the shores of the New World from the religious persecutions of the Old, their situation was to the last degree gloomy and disheartening. Few in number, and that number rapidly perishing away through sickness and hardships, surrounded by a howling wilderness and savage tribes, exposed to the rigors of an almost arctic winter and the vicissitudes of an ever-shifting climate, their minds were filled with doleful forebodings, and nothing preserved them from sinking into despondency but the strong excitement of religious enthusiasm. In this forlorn situation they were visited by Massasoit, chief sagamore of the Wampanoags, a powerful chief who reigned over a great extent of country. Instead of taking advantage of the scanty number of the strangers and expelling them from his territories, into which they had intruded, he seemed at once to conceive for them a generous friendship, and extended towards them the rites of primitive hospitality. He came early in the spring to their settlement of New Plymouth, attended by a mere handful of followers, entered into a solemn league of peace and amity, sold them a portion of the soil, and promised to secure for them the good-will of his savage allies. Whatever may be said of Indian perfidy, it is certain that the integrity and good faith of Massasoit have never been impeached. He continued a firm and magnanimous friend of the white men, suffering them to extend their possessions and to strengthen themselves in the land, and betraying no jealousy of their increasing power and prosperity. Shortly before his death he came once more to New Plymouth with his son Alexander, for the purpose of renewing the covenant of peace and of securing it to his posterity.

At this conference he endeavored to pro-

tect the religion of his forefathers from the encroaching zeal of the missionaries, and stipulated that no further attempt should be made to draw off his people from their ancient faith, but, finding the English obstinately opposed to any such condition, he mildly relinquished the demand. Almost the last act of his life was to bring his two sons, Alexander and Philip (as they had been named by the English), to the residence of a principal settler, recommending mutual kindness and confidence, and entreating that the same love and amity which had existed between the white men and himself might be continued afterwards with his children. The good old sachem died in peace, and was happily gathered to his fathers before sorrow came upon his tribe; his children remained behind to experience the ingratitude of white men.

His eldest son, Alexander, succeeded him. He was of a quick and impetuous temper, and proudly tenacious of his hereditary rights and dignity. The intrusive policy and dictatorial conduct of the strangers excited his indignation, and he beheld with uneasiness their exterminating wars with the neighboring tribes. He was doomed soon to incur their hostility, being accused of plotting with the Narragansetts to rise against the English and drive them from the land. It is impossible to say whether this accusation was warranted by facts or was grounded on mere suspicions. It is evident, however, by the violent and overbearing measures of the settlers that they had by this time begun to feel conscious of the rapid increase of their power, and to grow harsh and inconsiderate in their treatment of the natives. They despatched an armed force to seize upon Alexander and to bring him before their courts. He was traced to his woodland haunts, and surprised at a hunting-house where he was reposing with a band of his followers, unarmed, after the toils of the chase. The suddenness of his arrest and the outrage offered to his sovereign dignity so preyed upon the irascible feelings of this proud

savage as to throw him into a raging fever. He was permitted to return home on condition of sending his son as a pledge for his reappearance, but the blow he had received was fatal, and before he reached his home he fell a victim to the agonies of a wounded spirit.

The successor of Alexander was Metacombet, or King Philip, as he was called by the settlers on account of his lofty spirit and ambitious temper. These, together with his well-known energy and enterprise, had rendered him an object of great jealousy and apprehension, and he was accused of having always cherished a secret and implacable hostility towards the whites. Such may very probably and very naturally have been the case. He considered them as originally but mere intruders into the country, who had presumed upon indulgence and were extending an influence baneful to savage life. He saw the whole race of his countrymen melting before them from the face of the earth, their territories slipping from their hands, and their tribes becoming feeble, scattered, and dependent. It may be said that the soil was originally purchased by the settlers; but who does not know the nature of Indian purchases in the early periods of colonization? The Europeans always made thrifty bargains through their superior adroitness in traffic, and they gained vast accessions of territory by easily-provoked hostilities. An uncultivated savage is never a nice inquirer into the refinements of law by which an injury may be gradually and legally inflicted. Leading facts are all by which he judges; and it was enough for Philip to know that before the intrusion of the Europeans his countrymen were lords of the soil, and that now they were becoming vagabonds in the land of their fathers.

But whatever may have been his feelings of general hostility and his particular indignation at the treatment of his brother, he suppressed them for the present, renewed the contract with the settlers, and resided peaceably for many years at Pokanoket, or, as it was called by the English,

Mount Hope,¹ the ancient seat of dominion of his tribe. Suspicions, however, which were at first but vague and indefinite, began to acquire form and substance, and he was at length charged with attempting to instigate the various eastern tribes to rise at once, and by a simultaneous effort to throw off the yoke of their oppressors. It is difficult at this distant period to assign the proper credit due to these early accusations against the Indians. There was a proneness to suspicion and an aptness to acts of violence on the part of the whites that gave weight and importance to every idle tale. Informers abounded where tale-bearing met with countenance and reward, and the sword was readily unsheathed when its success was certain and it carved out empire.

The only positive evidence on record against Philip is the accusation of one Sausaman, a renegade Indian, whose natural cunning had been quickened by a partial education which he had received among the settlers. He changed his faith and his allegiance two or three times with a facility that evinced the looseness of his principles. He had acted for some time as Philip's confidential secretary and counsellor, and had enjoyed his bounty and protection. Finding, however, that the clouds of adversity were gathering round his patron, he abandoned his service and went over to the whites, and in order to gain their favor charged his former benefactor with plotting against their safety. A rigorous investigation took place. Philip and several of his subjects submitted to be examined, but nothing was proved against them. The settlers, however, had now gone too far to retract; they had previously determined that Philip was a dangerous neighbor; they had publicly evinced their distrust, and had done enough to insure his hostility; according, therefore, to the usual mode of reasoning in these cases, his destruction had become necessary to their security. Sausaman, the treacherous informer, was shortly afterwards found dead in a pond, having fallen a victim to the

vengeance of his tribe. Three Indians, one of whom was a friend and counsellor of Philip, were apprehended and tried, and on the testimony of one very questionable witness were condemned and executed as murderers.

This treatment of his subjects and ignominious punishment of his friend outraged the pride and exasperated the passions of Philip. The bolt which had fallen thus at his very feet awakened him to the gathering storm, and he determined to trust himself no longer in the power of the white men. The fate of his insulted and broken-hearted brother still rankled in his mind; and he had a further warning in the tragical story of Miantonimo, a great sachem of the Narragansetts, who, after manfully facing his accusers before a tribunal of the colonists, exculpating himself from a charge of conspiracy and receiving assurances of amity, had been perfidiously despatched at their instigation. Philip therefore gathered his fighting-men about him, persuaded all strangers that he could to join his cause, sent the women and children to the Narragansetts for safety, and wherever he appeared was continually surrounded by armed warriors.

When the two parties were thus in a state of distrust and irritation, the least spark was sufficient to set them in a flame. The Indians, having weapons in their hands, grew mischievous and committed various petty depredations. In one of their maraudings a warrior was fired on and killed by a settler. This was the signal for open hostilities; the Indians pressed to revenge the death of their comrade, and the alarm of war resounded through the Plymouth colony.

In the early chronicles of these dark and melancholy times we meet with many indications of the diseased state of the public mind. The gloom of religious abstraction and the wildness of their situation among trackless forests and savage tribes had

¹ New Bristol, Rhode Island—Irving's note.

disposed the colonists to superstitious fancies, and had filled their imaginations with the frightful chimeras of witchcraft and spectrology. They were much given also to a belief in omens. The troubles with Philip and his Indians were preceded, we are told, by a variety of those awful warnings which forerun great and public calamities. The perfect form of an Indian bow appeared in the air at New Plymouth, which was looked upon by the inhabitants as a "prodigious apparition." At Hadley, Northampton, and other towns in their neighborhood "was heard the report of a great piece of ordnance, with a shaking of the earth and a considerable echo."² Others were alarmed on a still sunshiny morning by the discharge of guns and muskets, bullets seemed to whistle past them, and the noise of drums resounded in the air, seeming to pass away to the westward; others fancied that they heard the galloping of horses over their heads; and certain monstrous births which took place about the time filled the superstitious in some towns with doleful forebodings. Many of these portentous sights and sounds may be ascribed to natural phenomena—to the northern lights which occur vividly in those latitudes, the meteors which explode in the air, the casual rushing of a blast through the top branches of the forest, the crash of fallen trees or disrupted rocks, and to those other uncouth sounds and echoes which will sometimes strike the ear so strangely amidst the profound stillness of woodland solitudes. These may have startled some melancholy imaginations, may have been exaggerated by the love for the marvellous, and listened to with that avidity with which we devour whatever is fearful and mysterious. The universal currency of these superstitious fancies and the grave record made of them by one of the learned men of the day are strongly characteristic of the times.

The nature of the contest that ensued was such as too often distinguishes the warfare between civilized men and savages. On the part of the whites it was con-

ducted with superior skill and success, but with a wastefulness of the blood and a disregard of the natural rights of their antagonists; on the part of the Indians it was waged with the desperation of men fearless of death, and who had nothing to expect from peace but humiliation, dependence, and decay.

The events of the war are transmitted to us by a worthy clergyman of the time, who dwells with horror and indignation on every hostile act of the Indians, however justifiable, whilst he mentions with applause the most sanguinary atrocities of the whites. Philip is reviled as a murderer and a traitor, without considering that he was a true-born prince gallantly fighting at the head of his subjects to avenge the wrongs of his family, to retrieve the tottering power of his line, and to deliver his native land from the oppression of usurping strangers.

The project of a wide and simultaneous revolt, if such had really been formed, was worthy of a capacious mind, and had it not been prematurely discovered might have been overwhelming in its consequences. The war that actually broke out was but a war of detail, a mere succession of casual exploits and unconnected enterprises. Still, it sets forth the military genius and daring prowess of Philip, and wherever, in the prejudiced and passionate narrations that have been given of it, we can arrive at simple facts, we find him displaying a vigorous mind, a fertility of expedients, a contempt of suffering and hardship, and an unconquerable resolution that command our sympathy and applause.

Driven from his paternal domains at Mount Hope, he threw himself into the depths of those vast and trackless forests that skirted the settlements and were almost impervious to anything but a wild beast or an Indian. Here he gathered together his forces, like the storm accumulating its stores of mischief in the bosom of

² The Rev. Increase Mather's history.—Irving's note.

the thundercloud, and would suddenly emerge at a time and place least expected, carrying havoc and dismay into the villages. There were now and then indications of these impending ravages that filled the minds of the colonists with awe and apprehension. The report of a distant gun would perhaps be heard from the solitary woodland, where there was known to be no white man; the cattle which had been wandering in the woods would sometimes return home wounded; or an Indian or two would be seen lurking about the skirts of the forests and suddenly disappearing, as the lightning will sometimes be seen playing silently about the edge of the cloud that is brewing up the tempest.

Though sometimes pursued and even surrounded by the settlers, yet Philip as often escaped almost miraculously from their toils, and, plunging into the wilderness, would be lost to all search or inquiry until he again emerged at some far distant quarter, laying the country desolate. Among his strongholds were the great swamps or morasses which extend in some parts of New England, composed of loose bogs of deep black mud, perplexed with thickets, brambles, rank weeds, the shattered and mouldering trunks of fallen trees, overshadowed by lugubrious hemlocks. The uncertain footing and the tangled mazes of these shaggy wilds rendered them almost impracticable to the white man, though the Indian could thread their labyrinths with the agility of a deer. Into one of these, the great swamp of Pocasset Neck, was Philip once driven with a band of his followers. The English did not dare to pursue him, fearing to venture into these dark and frightful recesses, where they might perish in fens and miry pits or be shot down by lurking foes. They therefore invested the entrance to the Neck, and began to build a fort with the thought of starving out the foe; but Philip and his warriors wafted themselves on a raft over an arm of the sea in the dead of night, leaving the women and children behind, and escaped away to the westward, kindling the flames of war

among the tribes of Massachusetts and the Nipmuck country and threatening the colony of Connecticut.

In this way Philip became a theme of universal apprehension. The mystery in which he was enveloped exaggerated his real terrors. He was an evil that walked in darkness, whose coming none could foresee and against which none knew when to be on the alert. The whole country abounded with rumors and alarms. Philip seemed almost possessed of ubiquity, for in whatever part of the widely-extended frontier an irruption from the forest took place, Philip was said to be its leader. Many superstitious notions also were circulated concerning him. He was said to deal in necromancy, and to be attended by an old Indian witch or prophetess, whom he consulted and who assisted him by her charms and incantations. This, indeed, was frequently the case with Indian chiefs, either through their own credulity or to act upon that of their followers; and the influence of the prophet and the dreamer over Indian superstition has been fully evidenced in recent instances of savage warfare.

At the time that Philip effected his escape from Pocasset his fortunes were in a desperate condition. His forces had been thinned by repeated fights and he had lost almost the whole of his resources. In this time of adversity he found a faithful friend in Canonchet, chief sachem of all the Narragansetts. He was the son and heir of Miantonimo, the great sachem who, as already mentioned, after an honorable acquittal of the charge of conspiracy, had been privately put to death at the perfidious instigations of the settlers. "He was the heir," says the old chronicler, "of all his father's pride and insolence, as well as of his malice towards the English;" he certainly was the heir of his insults and injuries and the legitimate avenger of his murder. Though he had forborne to take an active part in this hopeless war, yet he received Philip and his broken forces with open arms and gave

them the most generous countenance and support. This at once drew upon him the hostility of the English, and it was determined to strike a signal blow that should involve both the sachems in one common ruin. A great force was therefore gathered together from Massachusetts, Plymouth, and Connecticut, and was sent into the Narragansett country in the depth of winter, when the swamps, being frozen and leafless, could be traversed with comparative facility and would no longer afford dark and impenetrable fastnesses to the Indians.

Apprehensive of attack, Canonchet had conveyed the greater part of his stores, together with the old, the infirm, the women and children of his tribe, to a strong fortress, where he and Philip had likewise drawn up the flower of their forces. This fortress, deemed by the Indians impregnable, was situated upon a rising mound or kind of island of five or six acres in the midst of a swamp; it was constructed with a degree of judgment and skill vastly superior to what is usually displayed in Indian fortification, and indicative of the martial genius of these two chieftains.

Guided by a renegade Indian, the English penetrated, through December snows, to this stronghold and came upon the garrison by surprise. The fight was fierce and tumultuous. The assailants were repulsed in their first attack, and several of their bravest officers were shot down in the act of storming the fortress, sword in hand. The assault was renewed with greater success. A lodgment was effected. The Indians were driven from one post to another. They disputed their ground inch by inch, fighting with the fury of despair. Most of their veterans were cut to pieces, and after a long and bloody battle, Philip and Canonchet, with a handful of surviving warriors, retreated from the fort and took refuge in the thickets of the surrounding forest.

The victors set fire to the wigwams and the fort; the whole was soon in a blaze;

many of the old men, the women, and the children perished in the flames. This last outrage overcame even the stoicism of the savage. The neighboring woods resounded with the yells of rage and despair uttered by the fugitive warriors, as they beheld the destruction of their dwellings and heard the agonizing cries of their wives and offspring. "The burning of the wigwams," says a contemporary writer, "the shrieks and cries of the women and children, and the yelling of the warriors, exhibited a most horrible and affecting scene, so that it greatly moved some of the soldiers." The same writer cautiously adds, "They were in *much doubt* then, and afterwards seriously inquired, whether burning their enemies alive could be consistent with humanity, and the benevolent principles of the gospel."³

The fate of the brave and generous Canonchet is worthy of particular mention: the last scene of his life is one of the noblest instances on record of Indian magnanimity.

Broken down in his power and resources by this signal defeat, yet faithful to his ally and to the hapless cause which he had espoused, he rejected all overtures of peace offered on condition of betraying Philip and his followers, and declared that "he would fight it out to the last man, rather than become a servant to the English." His home being destroyed, his country harassed and laid waste by the incursions of the conquerors, he was obliged to wander away to the banks of the Connecticut, where he formed a rallying-point to the whole body of western Indians and laid waste several of the English settlements.

Early in the spring he departed on a hazardous expedition, with only thirty chosen men, to penetrate to Seaconck, in the vicinity of Mount Hope, and to procure seed corn to plant for the sustenance of his troops. This little band of adventurers

³ MS. of the Rev. W. Ruggles.—Irving's note,

had passed safely through the Pequod country, and were in the centre of the Narragansett, resting at some wigwams near Pautucket River, when an alarm was given of an approaching enemy. Having but seven men by him at the time, Canonchet despatched two of them to the top of a neighboring hill to bring intelligence of the foe.

Panic-struck by the appearance of a troop of English and Indians rapidly advancing, they fled in breathless terror past their chieftain, without stopping to inform him of the danger. Canonchet sent another scout, who did the same. He then sent two more, one of whom, hurrying back in confusion and affright, told him that the whole British army was at hand. Canonchet saw there was no choice but immediate flight. He attempted to escape round the hill, but was perceived and hotly pursued by the hostile Indians and a few of the fleetest of the English. Finding the swiftest pursuer close upon his heels, he threw off, first his blanket, then his silver-laced coat and belt of peag, by which his enemies knew him to be Canonchet, and redoubled the eagerness of pursuit.

At length, in dashing through the river, his foot slipped upon a stone, and he fell so deep as to wet his gun. This accident so struck him with despair that, as he afterwards confessed, "his heart and his bowels turned within him, and he became like a rotten stick, void of strength."

To such a degree was he unnerved that, being seized by a Pequod Indian within a short distance of the river, he made no resistance, though a man of great vigor of body and boldness of heart. But on being made prisoner the whole pride of his spirit arose within him, and from that moment we find, in the anecdotes given by his enemies, nothing but repeated flashes of elevated and prince-like heroism. Being questioned by one of the English who first came up with him, and who had not attained his twenty-second year, the proud-hearted warrior, looking with lofty contempt upon his youthful countenance, re-

plied, "You are a child—you cannot understand matters of war; let your brother or your chief come: him will I answer."

Though repeated offers were made to him of his life on condition of submitting with his nation to the English, yet he rejected them with disdain, and refused to send any proposals of the kind to the great body of his subjects, saying that he knew none of them would comply. Being reproached with his breach of faith towards the whites, his boast that he would not deliver up a Wampanoag nor the paring of a Wampanoag's nail, and his threat that he would burn the English alive in their houses, he disdained to justify himself, haughtily answering that others were as forward for the war as himself, and "he desired to hear no more thereof."

So noble and unshaken a spirit, so true a fidelity to his cause and his friend, might have touched the feelings of the generous and the brave; but Canonchet was an Indian, a being towards whom war had no courtesy, humanity no law, religion no compassion: he was condemned to die. The last words of his that are recorded are worthy the greatness of his soul. When sentence of death was passed upon him, he observed "that he liked it well, for he should die before his heart was soft or he had spoken anything unworthy of himself." His enemies gave him the death of a soldier, for he was shot at Stonningham by three young sachems of his own rank.

The defeat at the Narragansett fortress and the death of Canonchet were fatal blows to the fortunes of King Philip. He made an ineffectual attempt to raise a head of war by stirring up the Mohawks to take arms; but, though possessed of the native talents of a statesman, his arts were counteracted by the superior arts of his enlightened enemies, and the terror of their warlike skill began to subdue the resolution of the neighboring tribes. The unfortunate chieftain saw himself daily stripped of power, and his ranks rapidly thinning around him. Some were suborned by the whites; others fell victims to hunger and

fatigue and to the frequent attacks by which they were harassed. His stores were all captured, his chosen friends were swept away from before his eyes; his uncle was shot down by his side; his sister was carried into captivity; and in one of his narrow escapes he was compelled to leave his beloved wife and only son to the mercy of the enemy "His ruin," says the historian, "being thus gradually carried on, his misery was not prevented, but augmented thereby; being himself made acquainted with the sense and experimental feeling of the captivity of his children, loss of friends, slaughter of his subjects, bereavement of all family relations, and being stripped of all outward comforts before his own life should be taken away."

To fill up the measure of his misfortunes, his own followers began to plot against his life, that by sacrificing him they might purchase dishonorable safety. Through treachery a number of his faithful adherents, the subjects of Wetamoe, an Indian princess of Pocasset, a near kinswoman and confederate of Philip, were betrayed into the hands of the enemy. Wetamoe was among them at the time, and attempted to make her escape by crossing a neighboring river; either exhausted by swimming or starved with cold and hunger, she was found dead and naked near the water-side. But persecution ceased not at the grave. Even death, the refuge of the wretched, where the wicked commonly cease from troubling, was no protection to this outcast female, whose great crime was affectionate fidelity to her kinsman and her friend. Her corpse was the object of unmanly and dastardly vengeance; the head was severed from the body and set upon a pole, and was thus exposed at Taunton to the view of her captive subjects. They immediately recognized the features of their unfortunate queen, and were so affected at this barbarous spectacle that we are told they broke forth into the "most horrid and diabolical lamentations."

However Philip had borne up against the complicated miseries and misfortunes

that surrounded him, the treachery of his followers seemed to wring his heart and reduce him to despondency. It is said that "he never rejoiced afterwards, nor had success in any of his designs." The spring of hope was broken—the ardor of enterprise was extinguished; he looked around, and all was danger and darkness; there was no eye to pity nor any arm that could bring deliverance. With a scanty band of followers, who still remained true to his desperate fortunes, the unhappy Philip wandered back to the vicinity of Mount Hope, the ancient dwelling of his fathers. Here he lurked about like a spectre among the scenes of former power and prosperity, now bereft of home, of family, and of friend. There needs no better picture of his destitute and piteous situation than that furnished by the homely pen of the chronicler, who is unwarily enlisting the feelings of the reader in favor of the hapless warrior whom he reviles. "Philip," he says, "like a savage wild beast, having been hunted by the English forces through the woods above a hundred miles backward and forward, at last was driven to his own den upon Mount Hope, where he retired, with a few of his best friends, into a swamp, which proved but a prison to keep him fast till the messengers of death came by divine permission to execute vengeance upon him."

Even in this last refuge of desperation and despair a sullen grandeur gathers round his memory. We picture him to ourselves seated among his care-worn followers, brooding in silence over his blasted fortunes, and acquiring a savage sublimity from the wildness and dreariness of his lurking-place. Defeated, but not dismayed—crushed to the earth, but not humiliated—he seemed to grow more haughty beneath disaster, and to experience a fierce satisfaction in draining the last dregs of bitterness. Little minds are tamed and subdued by misfortune, but great minds rise above it. The very idea of submission awakened the fury of Philip, and he smote to death one of his followers who proposed

an expedient of peace. The brother of the victim made his escape, and in revenge betrayed the retreat of his chieftain. A body of white men and Indians were immediately despatched to the swamp where Philip lay crouched, glaring with fury and despair. Before he was aware of their approach they had begun to surround him. In a little while he saw five of his trustiest followers laid dead at his feet; all resistance was vain; he rushed forth from his covert, and made a headlong attempt to escape, but was shot through the heart by a renegade Indian of his own nation.

Such is the scanty story of the brave but unfortunate King Philip, persecuted while living, slandered and dishonored when dead. If, however, we consider even the prejudiced anecdotes furnished us by his enemies, we may perceive in them traces of amiable and lofty character sufficient to awaken sympathy for his fate and respect for his memory. We find that amidst all the harassing cares and ferocious passions of constant warfare he was alive to the softer feelings of conjugal love and paternal tenderness and to the generous sentiment of friendship. The captivity of his "beloved wife and only son" are mentioned with exultation as causing him poignant misery; the death of any near friend is triumphantly recorded as a new blow on his sensibilities; but the treachery and desertion of many of his followers, in whose affections he had confided, is said to have desolated his heart and to have bereaved him of all further comfort. He was a patriot attached to his native soil—a prince true to his subjects and indignant of their wrongs—a soldier daring in battle, firm in adversity, patient of fatigue, of hunger, of every variety of bodily suffering, and ready to perish in the cause he had espoused. Proud of heart and with an untamable love of natural liberty, he preferred to enjoy it among the beasts of the forests or in the dismal and famished recesses of swamps and morasses, rather than bow his haughty spirit to submission and live dependent and despised in the

ease and luxury of the settlements. With heroic qualities and bold achievements that would have graced a civilized warrior, and have rendered him the theme of the poet and the historian, he lived a wanderer and a fugitive in his native land, and went down, like a lonely bark foundering amid darkness and tempest, without a pitying eye to weep his fall or a friendly hand to record his struggle.

THE DEVIL AND TOM WALKER

[1824]

A FEW miles from Boston in Massachusetts, there is a deep inlet, winding several miles into the interior of the country from Charles Bay, and terminating in a thickly-wooded swamp or morass. On one side of this inlet is a beautiful dark grove; on the opposite side the land rises abruptly from the water's edge into a high ridge, on which grow a few scattered oaks of great age and immense size. Under one of these gigantic trees, according to old stories, there was a great amount of treasure buried by Kidd the pirate. The inlet allowed a facility to bring the money in a boat secretly and at night to the very foot of the hill, the elevation of the place permitted a good lookout to be kept that no one was at hand, while the remarkable trees formed good landmarks by which the place might easily be found again. The old stories add, moreover, that the devil presided at the hiding of the money, and took it under his guardianship; but this, it is well known, he always does with buried treasure, particularly when it has been ill-gotten. Be that as it may, Kidd never returned to recover his wealth; being shortly after seized at Boston, sent out to England, and there hanged for a pirate.

About the year 1727, just at the time that earthquakes were prevalent in New England, and shook many tall sinners down upon their knees, there lived near this place a meagre, miserly fellow, of the name of Tom Walker. He had a wife as

miserly as himself: they were so miserly that they even conspired to cheat each other. Whatever the woman could lay hands on, she hid away, a hen could not cackle but she was on the alert to secure the new-laid egg. Her husband was continually prying about to detect her secret hoards, and many and fierce were the conflicts that took place about what ought to have been common property. They lived in a forlorn-looking house that stood alone, and had an air of starvation. A few straggling savin-trees, emblems of sterility, grew near it, no smoke ever curled from its chimney; no traveller stopped at its door. A miserable horse, whose ribs were as articulate as the bars of a gridiron, stalked about a field, where a thin carpet of moss, scarcely covering the ragged beds of pudding-stone, tantalized and balked his hunger; and sometimes he would lean his head over the fence, look piteously at the passer-by, and seem to petition deliverance from this land of famine.

The house and its inmates had altogether a bad name. Tom's wife was a tall termagant, fierce of temper, loud of tongue, and strong of arm. Her voice was often heard in wordy warfare with her husband; and his face sometimes showed signs that their conflicts were not confined to words. No one ventured, however, to interfere between them. The lonely wayfarer shrunk within himself at the horrid clamor and clapper-clawing; eyed the den of discord askance; and hurried on his way, rejoicing, if a bachelor, in his celibacy.

One day that Tom Walker had been to a distant part of the neighborhood, he took what he considered a short cut homeward, through the swamp. Like most short cuts, it was an ill-chosen route. The swamp was thickly grown with great gloomy pines and hemlocks, some of them ninety feet high, which made it dark at noonday, and a retreat for all the owls of the neighborhood. It was full of pits and quagmires, partly covered with weeds and mosses, where the green surface often betrayed the traveller into a gulf of black, smothering

mud: there were also dark and stagnant pools, the abodes of the tadpole, the bullfrog, and the water-snake; where the trunks of pines and hemlocks lay half-drowned, half-rotting, looking like alligators sleeping in the mire.

Tom had long been picking his way cautiously through this treacherous forest, stepping from tuft to tuft of rushes and roots, which afforded precarious footholds among deep sloughs; or pacing carefully, like a cat, along the prostrate trunks of trees; startled now and then by the sudden screaming of the bittern, or the quacking of a wild duck rising on the wing from some solitary pool. At length he arrived at a firm piece of ground, which ran out like a peninsula into the deep bosom of the swamp. It had been one of the strongholds of the Indians during their wars with the first colonists. Here they had thrown up a kind of fort, which they had looked upon as almost impregnable, and had used as a place of refuge for their squaws and children. Nothing remained of the old Indian fort but a few embankments, gradually sinking to the level of the surrounding earth, and already overgrown in part by oaks and other forest trees, the foliage of which formed a contrast to the dark pines and hemlocks of the swamp.

It was late in the dusk of evening when Tom Walker reached the old fort, and he paused there awhile to rest himself. Any one but he would have felt unwilling to linger in this lonely, melancholy place, for the common people had a bad opinion of it, from the stories handed down from the time of the Indian wars; when it was asserted that the savages held incantations here, and made sacrifices to the evil spirit.

Tom Walker, however, was not a man to be troubled with any fears of the kind. He reposed himself for some time on the trunk of a fallen hemlock, listening to the boding cry of the tree-toad, and delving with his walking-staff into a mound of black mould at his feet. As he turned up the soil unconsciously, his staff struck against something hard. He raked it out of

the vegetable mould, and lo! a cloven skull, with an Indian tomahawk buried deep in it, lay before him. The rust on the weapon showed the time that had elapsed since this deathblow had been given. It was a dreary memento of the fierce struggle that had taken place in this last foothold of the Indian warriors.

"Humph!" said Tom Walker, as he gave it a kick to shake the dirt from it.

"Let that skull alone!" said a gruff voice. Tom lifted up his eyes, and beheld a great black man seated directly opposite him, on the stump of a tree. He was exceedingly surprised, having neither heard nor seen any one approach, and he was still more perplexed on observing, as well as the gathering gloom would permit, that the stranger was neither negro nor Indian. It is true he was dressed in a rude half-Indian garb, and had a red belt or sash swathed round his body; but his face was neither black nor copper-color, but swarthy and dingy, and begrimed with soot, as if he had been accustomed to toil among fires and forges. He had a shock of coarse black hair, that stood out from his head in all directions, and bore an axe on his shoulder.

He scowled for a moment at Tom with a pair of great red eyes.

"What are you doing on my grounds?" said the black man, with a hoarse growling voice.

"Your grounds!" said Tom, with a sneer, "no more your grounds than mine; they belong to Deacon Peabody."

"Deacon Peabody be d——d," said the stranger, "as I flatter myself he will be, if he does not look more to his own sins and less to those of his neighbors. Look yonder, and see how Deacon Peabody is faring."

Tom looked in the direction that the stranger pointed, and beheld one of the great trees, fair and flourishing without, but rotten at the core, and saw that it had been nearly hewn through, so that the first high wind was likely to blow it down. On the bark of the tree was scored the name

of Deacon Peabody, an eminent man, who had waxed wealthy by driving shrewd bargains with the Indians. He now looked around, and found most of the tall trees marked with the name of some great man of the colony, and all more or less scored by the axe. The one on which he had been seated, and which had evidently just been hewn down, bore the name of Crowninshield, and he recollected a mighty rich man of that name, who made a vulgar display of wealth, which it was whispered he had acquired by buccaneering.

"He's just ready for burning!" said the black man, with a growl of triumph. "You see I am likely to have a good stock of firewood for winter."

"But what right have you," said Tom, "to cut down Deacon Peabody's timber?"

"The right of a prior claim," said the other. "This woodland belonged to me long before one of your white-faced race put foot upon the soil."

"And pray, who are you, if I may be so bold?" said Tom.

"Oh, I go by various names. I am the wild huntsman in some countries; the black miner in others. In this neighborhood I am known by the name of the black woodsman. I am he to whom the red men consecrated this spot, and in honor of whom they now and then roasted a white man, by way of sweet-smelling sacrifice. Since the red men have been exterminated by you white savages, I amuse myself by presiding at the persecutions of Quakers and Anabaptists; I am the great patron and prompter of slave-dealers, and the grand-master of the Salem witches."

"The upshot of all which is, that, if I mistake not," said Tom, sturdily, "you are he commonly called Old Scratch."

"The same, at your service!" replied the black man, with a half civil nod.

Such was the opening of this interview, according to the old story; though it has almost too familiar an air to be credited. One would think that to meet with such a singular personage, in this wild, lonely place, would have shaken any man's nerves,

but Tom was a hard-minded fellow, not easily daunted, and he had lived so long with a termagant wife, that he did not even fear the devil.

It is said that after this commencement they had a long and earnest conversation together, as Tom returned homeward. The black man told him of great sums of money buried by Kidd the pirate, under the oak-trees on the high ridge, not far from the morass. All these were under his command, and protected by his power, so that none could find them but such as propitiated his favor. These he offered to place within Tom Walker's reach, having conceived an especial kindness for him, but they were to be had only on certain conditions. What these conditions were may be easily surmised, though Tom never disclosed them publicly. They must have been very hard, for he required time to think of them, and he was not a man to stick at trifles when money was in view. When they had reached the edge of the swamp, the stranger paused. "What proof have I that all you have been telling me is true?" said Tom. "There's my signature," said the black man, pressing his finger on Tom's forehead. So saying, he turned off among the thickets of the swamp, and seemed, as Tom said, to go down, down, down, into the earth, until nothing but his head and shoulders could be seen, and so on, until he totally disappeared.

When Tom reached home, he found the black print of a finger burnt, as it were, into his forehead, which nothing could obliterate.

The first news his wife had to tell him was the sudden death of Absalom Crown-inshield, the rich buccancer. It was announced in the papers, with the usual flourish, that "A great man had fallen in Israel."

Tom recollected the tree which his black friend had just hewn down, and which was ready for burning. "Let the freebooter roast," said Tom, "who cares!" He now felt convinced that all he had heard and seen was no illusion.

He was not prone to let his wife into his confidence; but as this was an uneasy secret, he willingly shared it with her. All her avarice was awakened at the mention of hidden gold, and she urged her husband to comply with the black man's terms, and secure what would make them wealthy for life. However Tom might have felt disposed to sell himself to the Devil, he was determined not to do so to oblige his wife, so he flatly refused, out of the mere spirit of contradiction. Many and bitter were the quarrels they had on the subject; but the more she talked, the more resolute was Tom not to be damned to please her.

At length she determined to drive the bargain on her own account, and if she succeeded, to keep all the gain to herself. Being of the same fearless temper as her husband, she set off for the old Indian fort towards the close of a summer's day. She was many hours absent. When she came back, she was reserved and sullen in her replies. She spoke something of a black man, whom she had met about twilight hewing at the root of a tall tree. He was sulky, however, and would not come to terms. She was to go again with a propitiatory offering, but what it was she forebore to say.

The next evening she set off again for the swamp, with her apron heavily laden. Tom waited and waited for her, but in vain; midnight came, but she did not make her appearance: morning, noon, night returned, but still she did not come. Tom now grew uneasy for her safety, especially as he found she had carried off in her apron the silver tea-pot and spoons, and every portable article of value. Another night elapsed, another morning came; but no wife. In a word, she was never heard of more.

What was her real fate nobody knows, in consequence of so many pretending to know. It is one of those facts which have become confounded by a variety of historians. Some asserted that she lost her way among the tangled mazes of the swamp, and sank into some pit or slough; others,

more uncharitable, hinted that she had eloped with the household booty, and made off to some other province; while others surmised that the tempter had decoyed her into a dismal quagmire, on the top of which her hat was found lying. In confirmation of this, it was said a great black man, with an axe on his shoulder, was seen late that very evening coming out of the swamp, carrying a bundle tied in a check apron, with an air of surly triumph.

The most current and probable story, however, observes, that Tom Walker grew so anxious about the fate of his wife and his property, that he set out at length to seek them both at the Indian fort. During a long summer's afternoon he searched about the gloomy place, but no wife was to be seen. He called her name repeatedly, but she was nowhere to be heard. The bittern alone responded to his voice, as he flew screaming by: or the bull-frog croaked dolefully from a neighboring pool. At length, it is said, just in the brown hour of twilight, when the owls began to hoot, and the bats to flit about, his attention was attracted by the clamor of carrion crows hovering about a cypress-tree. He looked up, and beheld a bundle tied in a check apron, and hanging in the branches of the tree, with a great vulture perched hard by, as if keeping watch upon it. He leaped with joy; for he recognized his wife's apron, and supposed it to contain the household valuables.

"Let us get hold of the property," said he, consolingly to himself, "and we will endeavor to do without the woman."

As he scrambled up the tree, the vulture spread its wide wings, and sailed off, screaming, into the deep shadows of the forest. Tom seized the checked apron, but, woeful sight! found nothing but a heart and liver tied up in it!

Such, according to this most authentic old story, was all that was to be found of Tom's wife. She had probably attempted to deal with the black man as she had been accustomed to deal with her husband; but though a female scold is generally con-

sidered a match for the devil, yet in this instance she appears to have had the worse of it. She must have died game, however; for it is said Tom noticed many prints of cloven feet deeply stamped about the tree, and found handfuls of hair, that looked as if they had been plucked from the coarse black shock of the woodman. Tom knew his wife's prowess by experience. He shrugged his shoulders, as he looked at the signs of a fierce clapper-clawing. "Egad," said he to himself, "Old Scratch must have had a tough time of it!"

Tom consoled himself for the loss of his property, with the loss of his wife, for he was a man of fortitude. He even felt something like gratitude towards the black woodman, who, he considered, had done him a kindness. He sought, therefore, to cultivate a further acquaintance with him, but for some time without success, the old black-legs played shy, for whatever people may think, he is not always to be had for calling for. he knows how to play his cards when pretty sure of his game.

At length, it is said, when delay had whetted Tom's eagerness to the quick, and prepared him to agree to anything rather than not gain the promised treasure, he met the black man one evening in his usual woodman's dress, with his axe on his shoulder, sauntering along the swamp, and humming a tune. He affected to receive Tom's advances with great indifference, made brief replies, and went on humming his tune.

By degrees, however, Tom brought him to business, and they began to haggle about the terms on which the former was to have the pirate's treasure. There was one condition which need not be mentioned, being generally understood in all cases where the devil grants favors; but there were others about which, though of less importance, he was inflexibly obstinate. He insisted that the money found through his means should be employed in his service. He proposed, therefore, that Tom should employ it in the black traffic; that is to say, that he should fit out a slave-ship. This, however, Tom

resolutely refused. he was bad enough in all conscience, but the devil himself could not tempt him to turn slave-trader.

Finding Tom so squeamish on this point, he did not insist upon it, but proposed, instead, that he should turn usurer, the devil being extremely anxious for the increase of usurers, looking upon them as his peculiar people.

To this no objections were made, for it was just to Tom's taste.

"You shall open a broker's shop in Boston next month," said the black man.

"I'll do it to-morrow, if you wish," said Tom Walker.

"You shall lend money at two per cent a month."

"Egad, I'll charge four!" replied Tom Walker.

"You shall extort bonds, foreclose mortgages, drive the merchants to bankruptcy"——

"I'll drive them to the d——," cried Tom Walker.

"You are the usurer for my money!" said black-legs with delight. "When will you want the rhino?"

"This very night."

"Done!" said the devil.

"Done!" said Tom Walker.—So they shook hands and struck a bargain.

A few days' time saw Tom Walker seated behind his desk in a counting-house in Boston.

His reputation for a ready-moneyed man, who would lend money out for a good consideration, soon spread abroad. Everybody remembers the time of Governor Belcher, when money was particularly scarce. It was a time of paper credit. The country had been deluged with government bills, the famous Land Bank had been established; there had been a rage for speculating; the people had run mad with schemes for new settlements; for building cities in the wilderness; land-jobbers went about with maps of grants, and townships, and Eldorados, lying nobody knew where, but which everybody was ready to purchase. In a word, the great speculating fever which breaks out

every now and then in the country, had raged to an alarming degree, and everybody was dreaming of making sudden fortunes from nothing. As usual the fever had subsided; the dream had gone off, and the imaginary fortunes with it; the patients were left in doleful plight, and the whole country resounded with the consequent cry of "hard times."

At this propitious time of public distress did Tom Walker set up as usurer in Boston. His door was soon thronged by customers. The needy and adventurous; the gambling speculator; the dreaming land-jobber; the thriftless tradesman; the merchant with cracked credit; in short, everyone driven to raise money by desperate means and desperate sacrifices, hurried to Tom Walker.

Thus Tom was the universal friend of the needy, and acted like a "friend in need"; that is to say, he always exacted good pay and good security. In proportion to the distress of the applicant was the highness of his terms. He accumulated bonds and mortgages; gradually squeezed his customers closer and closer: and sent them at length, dry as a sponge, from his door.

In this way he made money hand over hand; became a rich and mighty man, and exalted his cocked hat upon 'Change. He built himself, as usual, a vast house, out of ostentation, but left the greater part of it unfinished and unfurnished, out of parsimony. He even set up a carriage in the fulness of his vanglory, though he nearly starved the horses which drew it: and as the ungreased wheels groaned and screeched on the axle-trees, you would have thought you heard the souls of the poor debtors he was squeezing.

As Tom waxed old, however, he grew thoughtful. Having secured the good things of this world, he began to feel anxious about those of the next. He thought with regret on the bargain he had made with his black friend, and set his wits to work to cheat him out of the conditions. He became, therefore, all of a sudden, a violent

church-goer. He prayed loudly and strenuously, as if heaven were to be taken by force of lungs. Indeed, one might always tell when he had sinned most during the week, by the clamor of his Sunday devotion. The quiet Christians who had been modestly and steadfastly travelling Zionward, were struck with self-reproach at seeing themselves so suddenly outstripped in their career by this new-made convert. Tom was as rigid in religious as in money matters; he was a stern supervisor and censurer of his neighbors, and seemed to think every sin entered up to their account became a credit on his own side of the page. He even talked of the expediency of reviving the persecution of Quakers and Anabaptists. In a word, Tom's zeal became as notorious as his riches.

Still, in spite of all this strenuous attention to forms, Tom had a lurking dread that the devil, after all, would have his due. That he might not be taken unawares, therefore, it is said he always carried a small Bible in his coat-pocket. He had also a great folio Bible on his counting-house desk, and would frequently be found reading it when people called on business; on such occasions he would lay his green spectacles in the book, to mark the place, while he turned round to drive some usurious bargain.

Some say that Tom grew a little crack-brained in his old days, and that, fancying his end approaching, he had his horse new shod, saddled and bridled, and buried with his feet uppermost; because he supposed that at the last day the world would be turned upside down; in which case he should find his horse standing ready for mounting, and he was determined at the worst to give his old friend a run for it. This, however, is probably a mere old wives' fable. If he really did take such a precaution, it was totally superfluous; at least so says the authentic old legend; which closes his story in the following manner.

One hot summer afternoon in the dog-days, just as a terrible black thunder-gust was coming up, Tom sat in his counting-

house, in his white linen cap and India silk morning-gown. He was on the point of foreclosing a mortgage, by which he would complete the ruin of an unlucky land-speculator for whom he had professed the greatest friendship. The poor land-jobber begged him to grant a few months' indulgence. Tom had grown testy and irritated, and refused another day.

"My family will be ruined, and brought upon the parish," said the land-jobber.

"Charity begins at home," replied Tom; "I must take care of myself in these hard times."

"You have made so much money out of me," said the speculator.

Tom lost his patience and his piety. "The devil take me," said he, "if I have made a farthing!"

Just then there were three loud knocks at the street-door. He stepped out to see who was there. A black man was holding a black horse, which neighed and stamped with impatience.

"Tom, you're come for," said the black fellow, gruffly. Tom shrank back, but too late. He had left his little Bible at the bottom of his coat-pocket, and his big Bible on the desk buried under the mortgage he was about to foreclose: never was sinner taken more unawares. The black man whisked him like a child into the saddle, gave the horse the lash, and away he galloped, with Tom on his back, in the midst of the thunder-storm. The clerks stuck their pens behind their ears, and stared after him from the windows. Away went Tom Walker, dashing down the streets; his white cap bobbing up and down; his morning-gown fluttering in the wind, and his steed striking fire out of the pavement at every bound. When the clerks turned to look for the black man, he had disappeared.

Tom Walker never returned to foreclose the mortgage. A countryman, who lived on the border of the swamp, reported that in the height of the thunder-gust he had heard a great clattering of hoofs and a howling along the road, and running to the window

caught sight of a figure, such as I have described, on a horse that galloped like mad across the fields, over the hills, and down into the black hemlock swamp towards the old Indian fort; and that shortly after a thunder-bolt falling in that direction seemed to set the whole forest in a blaze.

The good people of Boston shook their heads and shrugged their shoulders, but had been so much accustomed to witches and goblins, and tricks of the devil, in all kinds of shapes, from the first settlement of the colony, that they were not so much horror-struck as might have been expected. Trustees were appointed to take charge of Tom's effects. There was nothing, however, to administer. On searching his coffers, all his bonds and mortgages were found reduced to cinders. In place of gold and silver, his iron chest was filled with chips and shavings; two skeletons lay in his stable instead of his half-starved horses, and the very next day his great house took fire and was burnt to the ground.

Such was the end of Tom Walker and his ill-gotten wealth. Let all griping money-brokers lay this story to heart. The truth of it is not to be doubted. The very hole under the oak-trees, whence he dug Kidd's money, is to be seen to this day; and the neighboring swamp and old Indian fort are often haunted in stormy nights by a figure on horseback, in morning-gown and white cap, which is doubtless the troubled spirit of the usurer. In fact, the story has resolved itself into a proverb, and is the origin of that popular saying, so prevalent throughout New England, of "The Devil and Tom Walker."

From

A TOUR OF THE PRAIRIES [1835]

A SECRET EXPEDITION

ON THE following morning we were rejoined by the rangers who had remained

at the last encampment, to seek for the stray horses. They had tracked them for a considerable distance through bush and brake, and across streams, until they found them cropping the herbage on the edge of a prairie. Their heads were in the direction of the fort, and they were evidently grazing their way homeward, heedless of the unbounded freedom of the prairies so suddenly laid open to them.

About noon the weather held up, and I observed a mysterious consultation going on between our half-breeds and Tonish;¹ it ended in a request that we would dispense with the services of the latter for a few hours, and permit him to join his comrades in a grand foray. We objected that Tonish was too much disabled by aches and pains for such an undertaking; but he was wild with eagerness for the mysterious enterprise, and, when permission was given him, seemed to forget all his ailments in an instant.

In a short time the trio were equipped and on horseback, with rifles on their shoulders and handkerchiefs twisted round their heads, evidently bound for a grand scamper. As they passed by the different lodges of the camp, the vainglorious little Frenchman could not help boasting to the right and left of the great things he was about to achieve, though the taciturn Beatte,² who rode in advance, would every now and then check his horse, and look back at him with an air of stern rebuke. It was hard, however, to make the loquacious Tonish play "Indian."

Several of the hunters, likewise, sallied forth, and the prime old woodman, Ryan, came back early in the afternoon, with ample spoil, having killed a buck and two fat does. I drew near to a group of rangers that had gathered round him as he stood by the spoil, and found they were discussing the merits of a stratagem sometimes used in deer hunting. This consists in imitating, with a small instrument called

¹ A hunter of Irving's party.

² Captain of Irving's party.

a bleat, the cry of the fawn, so as to lure the doe within reach of the rifle. There are bleats of various kinds, suited to calm or windy weather, and to the age of the fawn. The poor animal, deluded by them, in its anxiety about its young, will sometimes advance close up to the hunter "I once bleated a doe," said a young hunter, "until it came within twenty yards of me and presented a sure mark. I levelled my rifle three times, but had not the heart to shoot, for the poor doe looked so wistfully, that it in a manner made my heart yearn. I thought of my own mother, and of how anxious she used to be about me when I was a child; so to put an end to the matter, I gave a halloo, and started the doe out of rifle-shot in a moment."

"And you did right," cried honest old Ryan. "For my part, I never could bring myself to bleating deer. I've been with hunters who had bleats, and have made them throw them away. It's a rascally trick to take advantage of a mother's love for her young."

Toward evening our three worthies returned from their mysterious foray. The tongue of Tonish gave notice of their approach long before they came in sight; for he was vociferating at the top of his lungs, and rousing the attention of the whole camp. The lagging gait and reeking flanks of the horses, gave evidence of hard riding; and, on nearer approach, we found them hung round with meat like a butcher's shambles. In fact, they had been scouring an immense prairie that extended beyond the forest, and which was covered with herds of buffalo. Of this prairie, and the animals upon it, Beattie had received intelligence a few days before, in his conversation with the Osages, but had kept the information a secret from the rangers, that he and his comrades might have the first dash at the game. They had contented themselves with killing four; though, if Tonish might be believed, they might have slain them by scores.

These tidings, and the buffalo meat brought home in evidence, spread exulta-

tion through the camp, and every one looked forward with joy to a buffalo hunt on the prairies. Tonish was again the oracle of the camp, and held forth by the hour to a knot of listeners, crouched round the fire, with their shoulders up to their ears. He was now more boastful than ever of his skill as a marksman. All his want of success in the early part of our march he attributed to being "out of luck," if not "spell-bound;" and finding himself listened to with apparent credulity, gave an instance of the kind, which he declared had happened to himself, but which was evidently a tale picked up among his relations, the Osages.

According to this account, when about fourteen years of age, as he was one day hunting, he saw a white deer come out from a ravine. Crawling near to get a shot, he beheld another and another come forth, until there were seven, all as white as snow. Having crept sufficiently near, he singled one out and fired, but without effect. The deer remained unfrightened. He loaded and fired again and missed. Thus he continued firing and missing until all his ammunition was expended, and the deer remained without a wound. He returned home despairing of his skill as a marksman, but was consoled by an old Osage hunter. These white deer, said he, have a charmed life, and can only be killed by bullets of a particular kind.

The old Indian cast several balls for Tonish, but would not suffer him to be present on the occasion, nor inform him of the ingredients and mystic ceremonies.

Provided with these balls, Tonish again set out in quest of the white deer, and succeeded in finding them. He tried at first with ordinary balls, but missed as before. A magic ball, however, immediately brought a fine buck to the ground. Whereupon the rest of the herd immediately disappeared and were never seen again.

October 29th.—The morning opened gloomy and lowering; but toward eight o'clock the sun struggled forth and lighted up the forest, and the notes of the bugle

gave signal to prepare for marching. Now began a scene of bustle, and clamor, and gayety. Some were scampering and brawling after their horses, some were riding in bare-backed, and driving in the horses of their comrades. Some were stripping the poles of the wet blankets that had served for shelters; others packing up with all possible dispatch, and loading the baggage horses as they arrived, while others were cracking off their damp rifles and charging them afresh, to be ready for the sport.

About ten o'clock, we began our march. I loitered in the rear of the troop as it forded the turbid brook, and defiled through the labyrinths of the forest. I always felt disposed to linger until the last straggler disappeared among the trees and the distant note of the bugle died upon the ear, that I might behold the wilderness relapsing into silence and solitude. In the present instance, the deserted scene of our late bustling encampment had a forlorn and desolate appearance. The surrounding forest had been in many places trampled into a quagmire. Trees felled and partly hewn in pieces, and scattered in huge fragments; tent-poles stripped of their covering; smouldering fires, with great morsels of roasted venison and buffalo meat, standing in wooden spits before them, hacked and slashed by the knives of hungry hunters; while around were strewn the hides, the horns, the antlers, and bones of buffaloes and deer, with uncooked joints, and unplucked turkeys, left behind with that reckless improvidence and wastefulness which young hunters are apt to indulge when in a neighborhood where game abounds. In the meantime a score or two of turkey-buzzards, or vultures, were already on the wing, wheeling their magnificent flight high in the air, and preparing for a descent upon the camp as soon as it should be abandoned.

AMUSEMENTS IN THE CAMP

On returning to the camp we found it a scene of the greatest hilarity. Some of

the rangers were shooting at a mark, others were leaping, wrestling, and playing at prison bars. They were mostly young men, on their first expedition, in high health and vigor, and buoyant with anticipations; and I can conceive nothing more likely to set the youthful blood into a flow, than a wild wood life of the kind, and the range of a magnificent wilderness, abounding with game and fruitful of adventure. We send our youth abroad to grow luxurious and effeminate in Europe; it appears to me, that a previous tour on the prairies would be more likely to produce that manliness, simplicity, and self-dependence, most in unison with our political institutions.

While the young men were engaged in these boisterous amusements, a graver set, composed of the Captain, the Doctor, and other sages and leaders of the camp, were seated or stretched out on the grass, round a frontier map, holding a consultation about our position, and the course we were to pursue. . . .

Before sunset, we were summoned by little Tonish to a sumptuous repast. Blankets had been spread on the ground near to the fire, upon which we took our seats. A large dish, or bowl, made from the root of a maple tree, and which we had purchased at the Indian village, was placed on the ground before us, and into it were emptied the contents of one of the camp kettles, consisting of a wild turkey hashed, together with slices of bacon and lumps of dough. Beside it was placed another bowl of similar ware, containing an ample supply of fritters. After we had discussed the hash, two wooden spits, on which the ribs of a fat buck were broiling before the fire, were removed and planted in the ground before us, with a triumphant air, by little Tonish. Having no dishes, we had to proceed in hunter's style, cutting off strips and slices with our hunting knives, and dipping them in salt and pepper. To do justice to Tonish's cookery, however, and to the keen sauce of the prairies, never have I tasted venison so delicious. With

all this, our beverage was coffee, boiled in a camp kettle, sweetened with brown sugar, and drunk out of tin cups: and such was the style of our banqueting throughout this expedition, whenever provisions were plenty, and as long as flour and coffee and sugar held out.

As the twilight thickened into night, the sentinels were marched forth to their stations around the camp, an indispensable precaution in a country infested by Indians. The encampment now presented a picturesque appearance. Camp fires were blazing and smouldering here and there among the trees, with groups of rangers round them, some seated or lying on the ground, others standing in the ruddy glare of the flames, or in shadowy relief. At some of the fires there was much boisterous mirth, where peals of laughter were mingled with loud ribald jokes and uncouth exclamations; for the group was evidently a raw, undisciplined band, levied among the wild youngsters of the frontier, who had enlisted, some for the sake of roving adventure, and some for the purpose of getting a knowledge of the country. Many of them were the neighbors of their officers, and accustomed to regard them with the familiarity of equals and companions. None of them had any idea of the restraint and decorum of a camp, or ambition to acquire a name for exactness in a profession in which they had no intention of continuing.

While this boisterous merriment prevailed at some of the fires, there suddenly rose a strain of nasal melody from another, at which a choir of "vocalists" were uniting their voices in a most lugubrious psalm tune. This was led by one of the lieutenants; a tall, spare man, who we were informed had officiated as schoolmaster, singing-master, and occasionally as Methodist preacher, in one of the villages of the frontier. The chant rose solemnly and sadly in the night air, and reminded me of the description of similar canticles in the camps of the Covenanters; and, indeed, the strange medley of figures and faces

and uncouth garbs, congregated together in our troop, would not have disgraced the banners of Praise-God Barebones.³

In one of the intervals of this nasal psalmody, an amateur owl, as if in competition, began his dreary hooting. Immediately there was a cry throughout the camp of "Charley's owl! Charley's owl!" It seems this "obscure bird" had visited the camp every night, and had been fired at by one of the sentinels, a half-witted lad, named Charley; who, on being called up for firing when on duty, excused himself by saying, that he understood owls made uncommonly good soup.

One of the young rangers mimicked the cry of this bird of wisdom, who, with a simplicity little consonant with his character, came hovering within sight, and alighted on the naked branch of a tree, lit up by the blaze of our fire. The young Count immediately seized his fowling-piece, took fatal aim, and in a twinkling the poor bird of ill omen came fluttering to the ground. Charley was now called upon to make and eat his dish of owl-soup, but declined, as he had not shot the bird.

In the course of the evening, I paid a visit to the Captain's fire. It was composed of huge trunks of trees, and of sufficient magnitude to roast a buffalo whole. Here were a number of the prime hunters and leaders of the camp, some sitting, some standing, and others lying on skins or blankets before the fire, telling old frontier stories about hunting and Indian warfare.

As the night advanced, we perceived above the trees to the west, a ruddy glow flushing up the sky.

"That must be a prairie set on fire by the Osage hunters," said the Captain.

"It is at the Red Fork," said Beattie, regarding the sky. "It seems but three miles distant, yet it perhaps is twenty."

About half past eight o'clock, a beautiful pale light gradually sprang up in the east,

³ A Baptist preacher and member of Cromwell's "Little Parliament" of 1653. His actual name was Praisegod Barbon, or Barebone.

a precursor of the rising moon. Drawing off from the Captain's lodge, I now prepared for the night's repose. I had determined to abandon the shelter of the tent, and henceforth to bivouac like the rangers. A bear-skin spread at the foot of a

tree was my bed, with a pair of saddlebags for a pillow. Wrapping myself in blankets, I stretched myself on this hunter's couch, and soon fell into a sound and sweet sleep, from which I did not awake until the bugle sounded at daybreak.

1794 ~ William Cullen Bryant ~ 1878

WHEN in 1817 the still youthful *North American Review* published "Thanatopsis," the editor was told that he had been imposed on: "no one on this side of the Atlantic," the critic insisted, "is capable of writing such verses." The skeptic—R. H. Dana the elder—was soon to learn that William Cullen Bryant had written "Thanatopsis" not only on this side of the Atlantic, but at the age of sixteen—that he had published his first book at fourteen! Seventy fruitful years separated that juvenile volume—an imitative political satire called *The Embargo*—and Bryant's last communication to the American people, a few weeks before his death, an address on the unveiling of the statue of the Italian patriot Mazzini. The image of Bryant which is most familiar is that of the bearded patriarch of letters, full of years and honors; but it was a quiet, earnest boy in his teens and twenties, an ardent reader and walker, studying and practising law in rural villages, fighting his inward way to religious and political liberalism, who wrote the first genuine poetry of the new national literature.

His early achievement was due in no small measure to the home in which he grew up, and especially to the extraordinarily sympathetic and helpful interest of his father. Dr. Peter Bryant, widely known and loved as a physician and respected as a legislator, was a lover of books and a man of liberal sympathies in political and religious matters. He guided his son's reading and encouraged his writing. But the battles the young writer had to fight were personal ones. They marked his passage from a naive federalism to a democratic faith that made him a supporter of Andrew Jackson, and in later years one of the founders of the Republican party and one of the earliest and staunchest adherents of Abraham Lincoln in the East; and from a narrow Calvinism to Unitarianism and to even broader religious sympathies.

He spent one year at Williams College, but most of his study was private—first in preparation for college, later in reading law. He earned a living for ten years as a lawyer—and as town clerk, justice of the peace, and hog reeve—in small towns of the hill country of western Massachusetts. Here he met and married Frances Farmer, "fairest of the rural maids," matured his knowledge and love of the out-of-doors in many walking trips, and wrote

steadily. He experimented unsuccessfully with fiction. But his criticism early showed extraordinary breadth of understanding and sureness of judgment, and his poetry, influenced at first by Thomson, Cowper and Southey, then by Byron and Wordsworth, soon became consistently American, and his own While others were still only talking about a national literature, Bryant was making it

At thirty he left rural Massachusetts for New York City, and the law for journalism. Four years later, as editor-in-chief and part owner of the *New York Evening Post*, he assumed responsibilities which he was to discharge with high distinction for almost fifty years. Bryant was one of the greatest and most consistent liberal editors in the history of American journalism. He was alive to the issues of his time, forthright in his championship of labor and his denunciation of slavery. Frequent visits to his brothers who were pioneers in Illinois kept him in touch with the development of the West. He maintained standards of journalistic dignity, courage, and good taste in a time when these qualities were rare in American newspapers.

Bryant continued to write and publish throughout his life; a verse translation of Homer was a major achievement of his later years. But most of his work which has greatest vitality had been completed before he moved to New York, and all of his best fills only a slender volume. That best wears well. It is free from obscurity either accidental or designed, from pretentiousness, from falsehood of any kind—completely integrated, simple because it is sure. It is restrained but not timid, quiet but not dull. The range of experience, both inward and outward, presented in Bryant's poetry is not wide; but it is widely accessible to readers of varying ages, backgrounds, and special tastes. In his expression of this experience Bryant challenged successfully the difficulties of the most exacting traditional poetic forms: William Ellery Leonard considers him, "with Poe, America's finest artist in verse." But the greatest virtue of his work is its integrity, its truth of form and phrase as personal utterance.

[Biographical and critical studies of Bryant are those by John Bigelow (Boston, 1890) and W. A. Bradley (New York, 1905). A good introduction is Tremaine McDowell's *Bryant* (New York, 1935) in the American Writers Series. The authorized biography is Parke Godwin's *Life of Bryant*, 2 vols. (New York, 1883). The text used in the selections is that of the collected edition, edited by Parke Godwin (New York, 1884).]

THANATOPSIS

[1821 (1817)]

TO HIM who in the love of Nature holds
Communion with her visible forms, she
speaks

A various language; for his gayer hours

She has a voice of gladness, and a smile
And eloquence of beauty, and she glides 5
Into his darker musings, with a mild

And healing sympathy, that steals away
Their sharpness, ere he is aware. When
thoughts

Of the last bitter hour come like a blight

Over thy spirit, and sad images 10
 Of the stern agony, and shroud, and pall,
 And breathless darkness, and the narrow
 house,
 Make thee to shudder, and grow sick at
 heart;—
 Go forth, under the open sky, and list
 To Nature's teachings, while from all
 around— 15
 Earth and her waters, and the depths of
 air—
 Comes a still voice.¹—

Yet a few days, and thee
 The all-beholding sun shall see no more
 In all his course, nor yet in the cold
 ground,
 Where thy pale form was laid, with many
 tears, 20
 Nor in the embrace of ocean, shall exist
 Thy image. Earth, that nourished thee,
 shall claim
 Thy growth, to be resolved to earth again,
 And, lost each human trace, surrendering
 up
 Thine individual being, shalt thou go 25
 To mix for ever with the elements,
 To be a brother to the insensible rock
 And to the sluggish clod, which the rude
 swain
 Turns with his share, and treads upon.
 The oak
 Shall send his roots abroad, and pierce thy
 mould. 30

Yet not to thine eternal resting-place
 Shalt thou retire alone, nor couldst thou
 wish
 Couch more magnificent. Thou shalt lie
 down
 With patriarchs of the infant world—with
 kings,
 The powerful of the earth—the wise, the
 good, 35
 Fair forms, and hoary seers of ages past,
 All in one mighty sepulchre. The hills
 Rock-ribbed and ancient as the sun,—the
 vales
 Stretching in pensive quietness between;
 The venerable woods—rivers that move 40
 In majesty, and the complaining brooks

That make the meadows green; and, poured
 round all,
 Old Ocean's gray and melancholy waste,—
 Are but the solemn decorations all
 Of the great tomb of man. The golden
 sun, 45
 The planets, all the infinite host of heaven,
 Are shining on the sad abodes of death,
 Through the still lapse of ages. All that
 tread
 The globe are but a handful to the tribes
 That slumber in its bosom.—Take the
 wings 50
 Of morning, pierce the Barcan wilderness,²
 Or lose thyself in the continuous woods
 Where rolls the Oregon, and hears no
 sound,
 Save his own dashings—yet the dead are
 there:
 And millions in those solitudes, since
 first 55
 The flight of years began, have laid them
 down
 In their last sleep—the dead reign there
 alone.
 So shalt thou rest, and what if thou
 withdraw
 In silence from the living, and no friend
 Take note of thy departure? All that
 breathe 60
 Will share thy destiny. The gay will laugh
 When thou art gone, the solemn brood of
 care
 Plod on, and each one as before will chase
 His favorite phantom; yet all these shall
 leave
 Their mirth and their employments, and
 shall come 65
 And make their bed with thee. As the long
 train
 Of ages glides away, the sons of men,
 The youth in life's fresh spring, and he
 who goes
 In the full strength of years, matron and
 maid,
 The speechless babe, and the gray-headed
 man— 70

¹ As originally printed in the *North American Review*, the poem began here.

² North African desert region.

Shall one by one be gathered to thy side,
By those, who in their turn shall follow
them.

So live, that when thy summons comes to
join

The innumerable caravan, which moves
To that mysterious realm, where each shall
take 75

His chamber in the silent halls of death,
Thou go not, like the quarry-slave at night,
Scourged to his dungeon, but, sustained
and soothed

By an unfaltering trust, approach thy
grave,

Like one who wraps the drapery of his
couch 80

About him, and lies down to pleasant
dreams.

TO A WATERFOWL¹
[1821 (1818)]

Whither, midst falling dew,
While glow the heavens with the last steps
of day,
Far, through their rosy depths, dost thou
pursue

Thy solitary way?

Vainly the fowler's eye 5
Might mark thy distant flight to do thee
wrong,

As, darkly painted on the crimson sky,
Thy figure floats along.

Seek'st thou the plashy brink
Of weedy lake, or marge of river wide, 10
Or where the rocking billows rise and sink
On the chafed ocean-side?

There is a Power whose care
Teaches thy way along that pathless
coast—

The desert and illimitable air— 15
Lone wandering, but not lost.

All day thy wings have fanned,
At that far height, the cold, thin atmos-
phere,

Yet stoop not, weary, to the welcome land,
Though the dark night is near, 20

And soon that toil shall end;
Soon shalt thou find a summer home, and
rest,

And scream among thy fellows; reeds shall
bend,

Soon, o'er thy sheltered nest.

Thou'rt gone, the abyss of heaven 25
Hath swallowed up thy form; yet, on my
heart

Deeply hath sunk the lesson thou hast
given,

And shall not soon depart.

He who, from zone to zone,
Guides through the boundless sky thy cer-
tain flight, 30

In the long way that I must tread alone,
Will lead my steps aright.

"OH FAIREST OF THE RURAL
MAIDS"
[1832 (1820)]

Oh fairest of the rural maids!
Thy birth was in the forest shades;
Green boughs, and glimpses of the sky,
Were all that met thy infant eye.

Thy sports, thy wanderings, when a child, 5
Were ever in the sylvan wild;
And all the beauty of the place
Is in thy heart and on thy face.

The twilight of the trees and rocks
Is in the light shade of thy locks; 10
Thy step is as the wind, that weaves
Its playful way among the leaves.

Thine eyes are springs, in whose serene
And silent waters heaven is seen;
Their lashes are the herbs that look 15
On their young figures in the brook.

The forest depths, by foot unpressed,
Are not more sunless than thy breast;
The holy peace that fills the air
Of those calm solitudes, is there. 20

¹ For the circumstances under which
this poem was written, see Parke Godwin's
Life of Bryant (New York, 1883), vol. I,
pp. 143-44.

TO THE FRINGED GENTIAN

[1832 (1829)]

Thou blossom bright with autumn dew,
And colored with the heaven's own blue,
That openest when the quiet light
Succeeds the keen and frosty night.

Thou comest not when violets lean 5
O'er wandering brooks and springs unseen,
Or columbines, in purple dressed,
Nod o'er the ground-bird's hidden nest.

Thou waitest late and com'st alone,
When woods are bare and birds are
flown, 10
And frosts and shortening days portend
The aged year is near his end.

Then doth thy sweet and quiet eye
Look through its fringes to the sky,
Blue—blue—as if that sky let fall 15
A flower from its cerulean wall.

I would that thus, when I shall see
The hour of death draw near to me,
Hope, blossoming within my heart,
May look to heaven as I depart. 20

MIDSUMMER

[1832 (1826)]

A power is on the earth and in the air
From which the vital spirit shrinks
afraid,
And shelters him, in nooks of deepest
shade,
From the hot steam and from the fiery
glare.
Look forth upon the earth—her thousand
plants 5
Are smitten; even the dark sun-loving
maize
Faints in the field beneath the torrid
blaze;
The herd beside the shaded fountain pants;
For life is driven from all the landscape
brown;

The bird has sought his tree, the snake
his den, 10

The trout floats dead in the hot stream,
and men
Drop by the sun-stroke in the populous
town;
As if the Day of Fire had dawned, and sent
Its deadly breath into the firmament.

THE HUNTER OF THE PRAIRIES

[1836 (1834)]

Ay, this is freedom!—these pure skies
Were never stained with village smoke:
The fragrant wind, that through them flies,
Is breathed from wastes by plough un-
broke.

Here, with my rifle and my steed, 5
And her who left the world for me,
I plant me, where the red deer feed
In the green desert—and am free.

For here the fair savannas know
No barriers in the bloomy grass; 10
Wherever breeze of heaven may blow,
Or beam of heaven may glance, I pass.
In pastures, measureless as air,
The bison is my noble game;
The bounding elk, whose antlers tear 15
The branches, falls before my arm.

Mine are the river-fowl that scream
From the long stripe of waving sedge;
The bear that marks my weapon's gleam,
Hides vainly in the forest's edge; 20
In vain the she-wolf stands at bay;
The brinded catamount, that lies
High in the boughs to watch his prey,
Even in the act of springing, dies.

With what free growth the elm and
plane 25
Fling their huge arms across my way,
Grey, old, and cumbered with a train
Of vines, as huge, and old, and gray!
Free stray the lucid streams, and find
No taint in these fresh lawns and
shades; 30
Free spring the flowers that scent the wind
Where never scythe has swept the glades.

Alone the Fire, when frostwinds sere
 The heavy herbage of the ground,
 Gathers his annual harvest here, 35
 With roaring like the battle's sound,
 And hurrying flames that sweep the plain,
 And smoke-streams gushing up the sky.
 I meet the flames with flames again,
 And at my door they cower and die. 40

Here, from dim woods, the aged past
 Speaks solemnly, and I behold
 The boundless future in the vast
 And lonely river, seaward rolled.
 Who feeds its founts with rain and dew? 45
 Who moves, I ask, its gliding mass,
 And trains the bordering vines, whose blue
 Bright clusters tempt me as I pass?

Broad are these streams—my steed obeys,
 Plunges, and bears me through the
 tide. 50
 Wide are these woods—I tread the maze
 Of giant stems, nor ask a guide.
 I hunt till day's last glimmer dies
 O'er woody vale and grassy height;
 And kind the voice and glad the eyes, 55
 That welcome my return at night.

THE BATTLE-FIELD [1842 (1837)]

Once this soft turf, this rivulet's sands,
 Were trampled by a hurrying crowd,
 And fiery hearts and armed hands
 Encountered in the battle-cloud.

Ah! never shall the land forget 5
 How gushed the life-blood of her brave—
 Gushed, warm with hope and courage yet
 Upon the soil they fought to save.

Now all is calm and fresh and still;
 Alone the chirp of flitting bird, 10
 And talk of children on the hill,
 And bell of wandering kine, are heard.

No solemn host goes trailing by
 The black-mouthed gun and staggering
 wain;

Men start not at the battle cry, 15
 Oh, be it never heard again!

Soon rested those who fought; but thou,
 Who minglest in the harder strife
 For truths which men receive not now,
 Thy warfare only ends with life. 20

A friendless warfare! lingering long
 Through weary day and weary year,
 A wild and many-weaponed throng
 Hang on thy front, and flank, and rear.

Yet nerve thy spirit to the proof, 25
 And blench not at thy chosen lot.
 The timid good may stand aloof,
 The sage may frown—yet faint thou not.

Nor heed the shaft too surely cast,
 The foul and hissing bolt of scorn; 30
 For with thy side shall dwell, at last,
 The victory of endurance born.

Truth, crushed to earth, shall rise again;
 Th' eternal years of God are hers;
 But Error, wounded, writhes in pain, 35
 And dies among his worshippers.

Yea, though thou lie upon the dust,
 When they who helped thee flee in fear,
 Die full of hope and manly trust,
 Like those who fell in battle here. 40

Another hand thy sword shall wield,
 Another hand the standard wave,
 Till from the trumpet's mouth is pealed
 The blast of triumph o'er thy grave.

THE DEATH OF LINCOLN [1865]

Oh, slow to smite and swift to spare,
 Gentle and merciful and just!
 Who, in the fear of God, didst bear
 The sword of power, a nation's trust!

In sorrow by thy bier we stand, 5
 Amid the awe that hushes all,
 And speak the anguish of a land
 That shook with horror at thy fall.

Thy task is done; the bond are free:
 We bear thee to an honored grave, 10
 Whose proudest monument shall be
 The broken fetters of the slave.

Pure was thy life, its bloody close
 Hath placed thee with the sons of light,
 Among the noble host of those 15
 Who perished in the cause of Right.

From

AN ESSAY ON AMERICAN POETRY
 [1884 (1818)]

OF THE poetry of the United States different opinions have been entertained, and prejudice on the one side and partiality on the other have equally prevented a just and rational estimate of its merits. Abroad our literature has fallen under unmerited contumely, from those who were but slenderly acquainted with the subject on which they professed to decide, and at home it must be confessed that the swaggering and pompous pretensions of many have done not a little to provoke and excuse the ridicule of foreigners. Either of these extremes exerts an injurious influence on the cause of letters in our country. To encourage exertion and embolden merit to come forward, it is necessary that they should be acknowledged and rewarded. Few men have the confidence to solicit what is wantonly withheld, or the courage to tread a path which presents no prospect but the melancholy wrecks of those who have gone before them. National gratitude, national pride—every high and generous feeling that attaches us to the land of our birth, or that exalts our characters as individuals—ask of us that we should foster the infant literature of our country, and that genius and industry, employing their efforts to hasten its perfection, should receive from our hands that celebrity which reflects as much honor on the nation which confers it as on those to whom it is extended.

On the other hand, it is not necessary for these purposes—it is even detrimental

—to bestow on mediocrity the praise due to excellence, and still more so is the attempt to persuade ourselves and others into an admiration of the faults of favorite writers. We make but a contemptible figure in the eyes of the world, and set ourselves up as objects of pity to our posterity, when we affect to rank the poets of our own country with those mighty masters of song who have flourished in Greece, Italy, and Britain. Such extravagant admiration may spring from a praiseworthy and patriotic motive, but it seems to us that it defeats its own object of encouraging our literature, by seducing those who would aspire to the favor of the public into an imitation of imperfect models, and leading them to rely too much on the partiality of their countrymen to overlook their deficiencies. Were our rewards bestowed only on what is intrinsically meritorious, merit alone would have any apology for appearing before the public. The poetical adventurer should be taught that it is only the production of genius, taste, and diligence that can find favor at the bar of criticism; that his writings are not to be applauded merely because they are written by an American, and are not decidedly bad; and that he must produce some more satisfactory evidence of his claim to celebrity than an extract from the parish register. To show him what we expect of him, it is as necessary to point out the faults of his predecessors as to commend their excellences. He must be taught as well what to avoid as what to imitate. This is the only way of diffusing and preserving a pure taste, both among those who read and those who write, and, in our opinion, the only way of affording merit a proper and effectual encouragement. . . .

With respect to the style of poetry prevailing at the present day in our country, we apprehend that it will be found, in too many instances, tinged with a sickly and affected imitation of the peculiar manner of some of the late popular poets of England. We speak not of a disposition to emulate whatever is beautiful and excel-

lent in their writings, still less would we be understood as intending to censure that sort of imitation which, exploring all the treasures of English poetry, culls from all a diction that shall form a natural and becoming dress for the conceptions of the writer—this is a course of preparation which every one ought to go through before he appears before the public—but we desire to set a mark on that servile habit of copying which adopts the vocabulary of some favorite author, and apes the fashion of his sentences, and cramps and forces the ideas into a shape which they would not naturally have taken, and of which the only recommendation is, not that it is most elegant or most striking, but that it bears some resemblance to the manner of him who is proposed as a model. This way of writing has an air of poverty and meanness; it seems to indicate a paucity of reading as well as a perversion of taste; it might almost lead us to suspect that the writer had but one or two examples of poetical composition in his hands, and was afraid of expressing himself, except according to some formula which they might contain; and it ever has been, and ever will be, the resort of those who are sensible that their works need some factitious recommendation to give them even a temporary popularity.

On the whole, there seems to be more good taste among those who read than those who write poetry in our country. . . . We know of no instance in which great poetical merit has come forward, and, finding its claims unallowed, been obliged to retire to the shade from which it emerged. Whenever splendid talents of this description shall appear, we believe that there will be found a disposition to encourage and reward them. The fondness for literature is fast increasing, and, if this were not the case, the patrons of literature have multiplied, of course, and will continue to multiply, with the mere growth of our population. The best popular English works of the day are often reprinted here—they are dispersed all over the Union—they are

found in everybody's hands—they are made the subject of everybody's conversation. What should hinder our native works, if equal in merit, from meeting an equally favorable reception? . . .

THE RIGHT OF WORKMEN TO STRIKE¹ [1884 (1836)]

SENTENCE was passed on Saturday on the twenty "men who had determined not to work." The punishment selected, on due consideration, by the judge, was that officers appointed for the purpose should immediately demand from each of the delinquents a sum of money which was named in the sentence of the court. The amount demanded would not have fallen short of the savings of many years. Either the offenders had not parted with these savings, or their brother workmen raised the ransom money for them on the spot. The fine was paid over as required. All is now well; justice has been satisfied. But if the expenses of their families had anticipated the law, and left nothing in their hands, or if friends had not been ready to buy the freedom of their comrades, they would have been sent to prison, and there they would have staid, until their wives and children, besides earning their own bread, had saved enough to redeem the captives from their cells. Such has been their punishment. What was their offence? They had committed the crime of unanimously declining to go to work at the wages offered to them by their masters. They had said to one another, "Let us come out from the meanness and misery of our caste. Let us begin to do what every order more privileged and more honoured is doing everyday. By the means which we believe to be the best let

¹ Indicted under the laws against conspiracy, 21 journeyman-tailors were tried in the New York Court of Oyer and Terminer, and convicted and heavily fined, in June, 1836. This editorial appeared in the *New York Evening Post*, June 13, 1836.

us raise ourselves and our families above the humbleness of our condition. We may be wrong, but we cannot help believing that we might do much if we were true brothers to each other, and would resolve not to sell the only thing which is our own, the cunning of our hands, for less than it is worth." What other things they may have done is nothing to the purpose: it was for this they were condemned, it is for this they are to endure the penalty of the law.

We call upon a candid and generous community to mark that the punishment inflicted upon these twenty "men who had determined not to work" is not directed against the offence of conspiring to prevent others by force from working at low wages, but expressly against the offence of settling by pre-concert the compensation which they thought they were entitled to obtain. It is certainly superfluous to repeat, that this journal would be the very last to oppose a law levelled at any attempt to molest the labourer who chooses to work for less than the prices settled by the union. We have said, and to cut off cavil, we say it now again, that a conspiracy to deter, by threats of violence, a fellow workman from arranging his own terms with his employers, is a conspiracy to commit a felony—a conspiracy which, being a crime against liberty, we should be the first to condemn—a conspiracy which no strike should, for its own sake, countenance for a moment—a conspiracy already punishable by the statute, and far easier to reach than the one of which "the twenty" stood accused; but a conspiracy, we must add, that has not a single feature in common with the base and barbarous prohibition under which the offenders were indicted and condemned.

They were condemned because they had determined not to work for the wages that were offered them! Can any thing be imagined more abhorrent to every sentiment of generosity or justice, than the law which arms the rich with the legal right to fix, by assize, the wages of the poor? If

this is not SLAVERY, we have forgotten its definition. Strike the right of associating for the sale of labour from the privileges of a freeman, and you may as well at once bind him to a master, or ascribe him to the soil. If it be not in the colour of his skin, and in the poor franchise of naming his own terms in a contract for his work, what advantage has the labourer of the north over the bondman of the south? Punish by human laws a "determination not to work," make it penal by any other penalty than idleness inflicts, and it matters little whether the task-masters be one or many, an individual or an order, the hateful scheme of slavery will have gained a foothold in the land. And then the meanness of this law, which visits with its malice those who cling to it for protection, and shelters with all its fences those who are raised above its threats. A late solicitation for its aid against employers, is treated with derision and contempt, but the moment the "masters" invoked its intervention, it came down from its high place with most indecent haste, and has now discharged its fury upon the naked heads of wretches so forlorn, that their worst faults multiply their titles to a liberty which they must learn to win from livelier sensibilities than the barren benevolence of Wealth, or the tardy magnanimity of Power.

SENSITIVENESS TO FOREIGN OPINION¹ [1884 (1839)]

COOPER'S last work, "Home as Found," has been fiercely attacked, in more than one quarter, for its supposed tendency to convey to the people of other countries a bad idea of our national character. Without staying to examine whether all Mr. Cooper's animadversions on American manners are perfectly just, we seize

¹ This editorial appeared in the *New York Evening Post*, Jan. 11, 1839.

the occasion to protest against this excessive sensibility to the opinion of other nations. It is no matter what they think of us. We constitute a community large enough to form a great moral tribunal for the trial of any question which may arise among ourselves. There is no occasion for this perpetual appeal to the opinions of Europe. We are competent to apply the rules of right and wrong boldly and firmly, without asking in what light the superior judgment of the Old World may regard our decisions.

It has been said of Americans that they are vainglorious, boastful, fond of talking of the greatness and the advantages of their country, and of the excellence of their national character. They have this foible in common with other nations; but they have another habit which shows that, with all their national vanity, they are not so confident of their own greatness, or of their own capacity to estimate it properly, as their boasts would imply. They are perpetually asking, What do they think of us in Europe? How are we regarded abroad? If a foreigner publishes an account of his travels in this country, we are instantly on the alert to know what notion of our character he has communicated to his countrymen, if an American author publishes a book, we are eager to know how it is received abroad, that we may know how to judge it ourselves. So far has this humor been carried that we have seen an extract, from a third- or fourth-rate critical work in England, condemning

some American work, copied into all our newspapers one after another, as if it determined the character of the work beyond appeal or question.

For our part, we admire and honor a fearless accuser of the faults of so thin-skinned a nation as ours, always supposing him to be sincere and well-intentioned. He may be certain that where he has sowed animadversion he will reap an abundant harvest of censure and obloquy. He will have one consolation, however, that if his book be written with ability it will be read, that the attacks which are made upon it will draw it to the public attention; and that it may thus do good even to those who recalcitrate most violently against it.

If every man who writes a book, instead of asking himself the question what good it will do at home, were first held to inquire what notions it conveys of Americans to persons abroad, we should pull the sinews out of our literature. There is much want of free-speaking as things stand at present, but this rule will abolish it altogether. It is bad enough to stand in fear of public opinion at home, but, if we are to superadd the fear of public opinion abroad, we submit to a double despotism. Great reformers, preachers of righteousness, eminent satirists in different ages of the world—did they, before entering on the work they were appointed to do, ask what other nations might think of their countrymen if they gave utterance to the voice of salutary reproof?

1789 ~ *James Fenimore Cooper* ~ 1851

IT IS easy to make fun of Cooper: of his stilted style, of his preposterous feminine characters, or "females," as he called them. Mark Twain, in his "Fenimore Cooper's Literary Offenses," held Cooper up to merciless ridicule; Thackeray's "The Stars and Stripes" and Bret Harte's "Muck-a-Muck" are uproarious Cooper parodies. But the reader who assumes that his laughter has taken Cooper's measure is self-deceived. There is a solid core of merit in almost

every one of Cooper's fifty books. To find it one must achieve a certain immunity to, or tolerance of, his faults: his formal, pedantic sentence structure and his frequently trite and colorless vocabulary; his inveterate contentiousness and didacticism; his repeated subservience to the conventions of the bad romantic novel. For most readers of today this tolerance is not easy to attain; but it is worth the effort.

Once we can read Cooper without pain, we can read him with very real pleasure and profit, finding him amusing, entertaining, informative, even stimulating. In his pages our American world of the past, in all its diversity, becomes more picturesquely alive than in those of any other early American writer. We assemble a gallery of notable and memorable characters, sharply individualized and pungently real. We encounter many passages of external action hard to equal in any fiction. We experience also the clash of ideas, tenaciously held and vigorously set forth—ideas we may find repugnant in some instances, though candor may compel us to admit, on due reflection, that they are ideas which have great vitality today. And behind all this we come to know Cooper the man, one of the most highly individual and deeply interesting human beings in our literary history.

Much of the substance of Cooper's fiction came directly from his own life. The son of the wealthiest and most influential man of a frontier community in western New York, he had an adventurous boyhood, two stormy years at Yale, and a brief career as a naval officer before he married and settled into the life of a country squire. His first novel was a poor imitation of the currently popular British fiction of aristocratic society, but in the second he found himself as a writer. There is some justification for dating the beginning of our national literature from the publication of *The Spy* in 1821. Here was broad, just, and essentially realistic treatment of events of the Revolutionary War; here native American materials were used in fiction with unmistakable authority for the first time. The book was an immediate success, and at thirty-two Cooper found himself suddenly the most popular writer in America.

Promptly Cooper wrote again, choosing the western New York frontier of his boyhood as the new source of material. In *The Pioneers* (1823) he first sketched the character of Natty Bumppo-Hawkeye-Leatherstocking, his greatest character and a real contribution to American mythology. Less vigorous in action than its predecessor or immediate successors, *The Pioneers*, as social history, is one of the most substantial of all Cooper's novels. A third time Cooper dipped into his own past, this time into his experience at sea. *The Pilot* (1824) is the first great American sea story: strong in action, accurate in technical detail, weak as Cooper almost always is in its "heroic" and highborn characters, but fine in its delineation of Long Tom Coffin, the lonely pilot, and of the life at sea. In *The Last of the Mohicans* (1826) he greatly strengthened the dramatic figure of the man of the wilderness, and also in his trio of Indian

characters—Uncas, Chingachgook and Magua—he made his second major contribution to the world-picture of the American past.

When in 1831 Cooper completed his first decade as a writer he had produced ten books, nine of them novels, eight of these American historical romances. By 1840 he was to write and publish fourteen books, but not one of them an American historical romance. In 1826 Cooper had taken his family to Paris, to give his young daughters the educational and social opportunities which he thought appropriate; he remained abroad for more than seven years, gaining perspective on both Europe and America and deriving pleasure and stimulus from association with Scott—who was generously kind—and other writers. Cooper found his romances immensely popular in England and on the continent. Only gradually did he come to realize how far were his foreign readers from interpreting these books properly and understanding contemporary America. In these years British and European travelers in steady procession were crossing the Atlantic and returning to publish books about America. To Cooper all these books were inadequate and most of them unfair. Some of the British accounts were particularly vicious, and American writers were beginning to reply in kind. Cooper was too good an American not to use his prominence and influence, and the advantage of his European residence and popularity, in this literary war. He published in 1828 a descriptive and interpretative account of his native land under the title *Notions of the Americans*, giving it the form of a series of personal letters from a cultured European traveler to the fellow members of a cosmopolitan and distinguished geographical society. Though avowedly limited in scope to the parts of the country Cooper knew at first hand, the book is scrupulously accurate in details, broad and just in general observation, and acute in analysis. But the foreign readers of Cooper were not much impressed. They preferred to believe in the picture of America in the *Leatherstocking Tales*—a wilderness peopled by hunters and Indians—which confirmed their prejudices. American readers, on the other hand, actively resented the adverse criticisms which Cooper's sense of truth had led him to include.

Before Cooper returned from Europe in 1832 he had written three historical novels with European settings, *The Bravo* (1831), *The Heidenmauer* (1832), and *The Headsman* (1833), designed, he declared, to reveal to American readers the inferiority of European social standards and attitudes by tracing their development. Refusing to be so edified, his American public accused him of deserting native materials. One attack in particular moved Cooper to reply, and he found himself involved in a quarrel with his own countrymen—a quarrel which deepened with the years and affected almost all his later work. Its immediate fruits were two ventures into polemics in which Cooper stated his position and defined his political philosophy, *A Letter to His Countrymen* (1834) and *The American Democrat* (1838); and *The Monikins* (1835), a satire

which was much indebted to Swift's *Gulliver's Travels* and in which the brash materialism and shallow optimism of the 1830's in both America and England were caustically arraigned. Though brilliant in parts, the satire is heavy-handed and much too longwinded. The experiment of *The Monikins* having failed—the book brought only jeers and abuse—Cooper tried another: a fictional portrayal of contemporary American life with a serious critical purpose. The point of view he used (again drawing on his own experience) was that of an American returning with his family to his native land after some years abroad. Social criticism is subordinated to the excitement of a sea voyage in *Homeward Bound* (1838); but it is the chief ingredient of *Home as Found* (1838), which, for all its clumsiness and crudities, presents a caustic indictment of practices and attitudes in American society and politics conflicting with the principles Cooper laid down in the same year in *The American Democrat*. During the decade he somehow found time to put together five volumes of accounts of his European travels, and to write his admirable and unduly neglected *History of the Navy of the United States of America*.

From these years of constant controversy and almost incredible productiveness Cooper entered upon the third decade—plus two years—which would round out his career. From 1840 to his death in 1851 he wrote a series of biographies of naval officers and one of a common sailor, a play, and thirteen long novels. It is not surprising that in such a bulk of work there is much that is poor. What is surprising is that Cooper could turn from the pressures and irritations of the late 1830's to complete the Leatherstocking series with two of his best novels, *The Pathfinder* (1840) and *The Deerslayer* (1841). These books have qualities of freshness and tenderness totally absent from the work which immediately preceded them *Satanstoe* (1845), the first of a trilogy which justifies landlords against anti-rent propaganda and includes *The Chain-bearer* (1845) and *The Redskins* (1846), is also one of the best novels in all Cooper's work, perhaps the most rewarding of his books to the reader of today. In this story, written at fifty-six, Cooper achieved a mellowness both in style and in characterization which he had never attained before, nor would reach again; and the book is excellent as social history of colonial New York. Other notable novels of Cooper's last decade are *Wyandotté* (1843), which contains some of his best portrayal of Indian character, and *The Oak Openings* (1848), the fruit of a trip to the western frontier of Michigan in 1847. His last novel, *Ways of the Hour* (1850), has a certain limited interest as an attack on the jury system, and perhaps more as an ancestral example of the modern murder mystery.

The aging Cooper, playing chess with his wife in quiet evenings, long since alienated from almost all his friends and from much of his once enthusiastic popular following, is a somewhat pathetic figure. In the years following his death Bryant and others justly acknowledged his service to American letters.

But for two generations his reputation rested almost solely upon his romances of forest and sea, and only in recent years has his social criticism been fairly appraised. Today he is increasingly appreciated as a writer of lasting interest and value to the reader who will take the trouble to know him well

[R. E. Spiller's *Fenimore Cooper, Critic of His Times* (New York, 1931) and H. W. Boynton's *James Fenimore Cooper* (New York, 1931) are the best biographies. Good introductions are to be found in Spiller's *Cooper* in the American Writers Series, in Yvor Winters' *Maule's Curse* (Norfolk, Conn., 1938), and in George Snell's *The Shapers of American Fiction* (New York, 1947).]

The text of the selections from *Notions of the Americans* is that of the edition of 1828. Titles have been supplied by the present editors, and the text has been slightly abridged. The text of the selections from *The American Democrat* is that of the edition of 1838. The text of the selections from the novels is that of the collected edition, New York, 1859-61.]

From
NOTIONS OF THE AMERICANS
[1828]

THE AMERICAN SCENE

TO Sir Edward Waller, Bart:

Once for all, dear Waller, I wish you to understand that—a few peaceable and half-civilized remains of tribes, that have been permitted to reclaim small portions of land, excepted—an inhabitant of New-York is actually as far removed from a savage as an inhabitant of London. The former has to traverse many hundred leagues of territory to enjoy even the sight of an Indian, in a tolerably wild condition; and the latter may obtain a similar gratification at about the same expense of time and distance, by crossing the ocean to Labrador. A few degraded descendants of the ancient warlike possessors of this country are indeed seen wandering among the settlements, but the Indian must now be chiefly sought west of the Mississippi, to be found in any of his savage grandeur.

Cases do occur, beyond a doubt, in which luckless individuals are induced to make their settlement in some unpropitious spot where the current of emigration obsti-

nately refuses to run. These subjects of an unfortunate speculation are left to struggle for years in a condition between rude civilization, and one approaching to that of the hunter, or to abandon their possessions, and to seek a happier section of the country. Nine times in ten, the latter course is adopted. But when this tide of emigration has set steadily towards any favoured point for a reasonable time, it is absurd to seek for any vestige of a barbarous life among the people. The emigrants carry with them (I now speak of those parts of the country I have seen) the wants, the habits, and the institutions, of an advanced state of society. The shop of the artisan is reared simultaneously with the rude dwelling of the farmer. The trunks of trees, piled on each other, serve for both for a few years, and then succeed dwellings of wood, in a taste, magnitude, and comfort, that are utterly unknown to men of similar means in any other quarter of the world, which it has yet been my lot to visit. The little school-house is shortly erected at some convenient point, and a tavern, a store, (the American term for a shop of all sales,) with a few tenements occupied by mechanics, soon indicate the spot for a church, and the site of the future village. From fifty or a hundred

of these centres of exertion, spread swarms that in a few years shall convert mazes of dark forests into populous, wealthy, and industrious counties. The manufactures of Europe, of the Indies, and of China, are seen exposed for sale, by the side of the coarse products of the country; and the same individual who vends the axe to fell the adjoining forest, can lay before your eyes a very tolerable specimen of Lyons silk, of English broadcloth, of Nankins, of teas, of coffees, or indeed of most of the more common luxuries of life. The number and quality of the latter increase with the growth of the establishment; and it is not too much to say, that an American village store, in a thriving part of the country, where the settlements are of twenty years' standing, can commonly supply as good an assortment of the manufactures of Europe, as a collection of shops in any European country town; and, if the general nature of their stock be considered, embracing, as it does, some of the products of all countries, one much greater.

As to wild beasts, savages, etc., etc., they have no existence in these regions. A solitary bear, or panther, or even a wolf, wandering near the flocks of a country twenty years old, has an effect like that produced by an invasion. In the earlier days of the settlement, it is a task to chase the ravenous beasts from the neighbourhood. A price is offered for their heads, and for a time a mutual destruction against the flocks on one side, and the beasts on the other, is the consequence. In a year or two, this task is reduced to an occasional duty. In a few more, it is sought as an amusement: and ere the twenty years expire, the appearance of a wolf among the American farms is far less common than on the most ancient plains of certain parts of France. Every man has his rifle or his musket; and every man not only knows how, but he is fond of using them against such foes. Thus, you see, though wild beasts may be permitted, like Raphael's Seraphim, to encircle your pictures of American manners in faint relief,

they must rarely indeed be permitted to enter into the action of the piece; more especially if the scene be laid in any of the settled portions of the three States that form the subject of this letter.

We made part of this excursion in the public stages, part with hired horses, and part in steamboats. It is impossible to enter on a description of the surface of the country we saw, for it included mountains, valleys, and vast plains, intermingled in such a manner as to render the task wearisome. We had gone about fifty miles west of Albany, when my companion desired the vehicle to stop, and invited me to mount a gentle ascent on foot. On reaching the summit, he turned and pointed to a view which resembled none I had ever before witnessed.

We were travelling along the termination of a range of mountains, which, running north and south, fell gracefully away, in the former direction, into what is called the valley of the Mohawk, before they gradually rose again on the other side of that river. The descent and the ascent were very similar, the intervening country lying in broken and irregular terraces, which often had the appearance of fertile valleys, before the rich bottoms of the river are gained. Our precise position was on the very brow of one of the most projecting spurs of this broken range, and it admitted of an uninterrupted prospect to the north-east, and to the north-west, of the falling country in our front, and of the rising hills opposite, that could not have been contained in a circumference of much less than two hundred miles. The view was limited to what lay in advance of a line drawn nearly east and west, the adjacent mountains presenting obstacles to our vision, further south. It was completely an American scene, embracing all that admixture of civilization, and of the forest, of the works of man, and of the reign of nature, that one can so easily imagine to belong to this country.

There was perhaps an equal distribution of field and forest. The latter term is not,

however, the best, since it was a constant succession of open land and of wood, in proportions which, without being exactly, were surprisingly equal. You have stood upon a height, and looked down upon a fertile French plain, over which agriculture has been conducted on a scale a little larger than common. You may remember the divisions formed by the hues of the grains of the vineyards, and of the grasses, which gave to the whole an air so chequered and remarkable. Now, by extending the view to the size I have named, and enlarging these chequered spots to a corresponding scale, you get a tolerably accurate idea of what I would describe. The dark green shadows are produced by the foliage of a wood, reserved, perhaps, for the use of half a dozen farms, and lying in a body, (some common objection to culture influencing that number of proprietors to select adjacent ground for their reservations,) and the fields of golden yellow, or of various shades and hues, are produced by the open fields. The distance diminishes the objects to the eye, and brings the several parts so much in union, as to lend to the whole the variegated aspect of the sort of plain just mentioned. The natural river which divides this glorious panorama in nearly two equal parts, with its artificial rival,¹ and the sweet meadows that border its banks, were concealed beneath the brow of the last precipitous descent. But countless farmhouses, with their capacious out-buildings, dotted the fields, like indicated spots on a crowded map. From those in the near view, rose the light vapoury summer smoke. The fields were alive with herds, and with numberless and nearly imperceptible white atoms, which, but for their motion, it would not have been easy to imagine flocks. In the distance, though these more minute objects were lost, habitations, barns, and pyramids of hay and of grain, could be distinguished, until the power of vision failed. Immediately at our feet, at the distance of a few miles, lay a wide, rich terrace, intersected with roads, that were

bordered, as usual, by scattered farm buildings, surrounded by their granaries and barns. Near its centre, a cluster of buildings assumed the air of a hamlet. From among these roofs, rose the spire of a country church. I was told that a multitude of villages lay within the limits of the view; but as they were generally placed near some stream, for the advantage of its water-power, the uneven formation of the land hid them from our sight. The eye overlooked even the cities of Albany and Troy, and rested, in that direction, on some of the lesser spurs of the mountains of Vermont.

As I looked upon this scene, I felt it only wanted the recollections of monuments of antiquity to give it the deepest interest. The opinion might have escaped my lips, amid the expressions of a sincere delight. My companion gently touched an arm, and directed my attention from the view to himself. He was standing at my elbow with an open map of the country in his hand. As he met my eye, he gravely said, "You complain of the absence of association to give its secret, and perhaps greatest charm which such a sight is capable of inspiring. You complain unjustly. The moral feeling with which a man of sentiment and knowledge looks upon the plains of your hemisphere, is connected with his recollections, here it should be mingled with his hopes. The same effort of the mind is as equal to the one as to the other. Examine this map. You see our position, and you know the space that lies between us and the sea. Now look westward, and observe how many degrees of longitude, what broad reaches of territory must be passed before you gain the limits of our establishments, and the consequent reign of abundance and civilization." Here he dropped the map; and I fancied he even spoke with solemnity, as he continued—"Count ——," he said, "you see that I

¹ The great Canal, 360 miles in length. [Cooper's note. The Erie Canal, joining the Hudson River and Lake Erie. It was completed in 1825.]

am a man of middle age: listen to what even my short memory extends. Along the river which lies hid in the deep valley before us, the labours of man have existed for more than a century. There are one or two shallow streams near us, along which the enterprize of the settlers early directed itself. A few miles to the west, we shall enter a little valley, where a handfull of refugees from Ireland took up their abodes some eighty years ago; and there are other insulated spots, where solitary individuals trusted to the savage, and raised their simple dwellings before the war of the revolution. But that little plain, at our feet, could have fed, and clothed, and harboured all who were then scattered, not only over the parts of the country I have shown you here, but," sweeping his hand along the map, across states and territories larger than those governed by most of the European monarchs, "all of white colour, who then inhabited these wide regions too. I remember this country, Sir, as it existed in my childhood; and it is vain to say, it is a land without recollections. Draw a line from this spot, north and south, and all of civilization that you shall see for a thousand miles west, is what man has done since my infancy. You exclude, by this boundary, far more than you gain in the meagre exceptions. That view before you is but a fac-simile of a thousand others. I know not what honest pleasure is to be found in recollection, that cannot be excited by a knowledge of these facts. These are retrospects of the past, which, brief and familiar as they are, lead the mind insensibly to cheerful anticipations, which may penetrate into a futurity as dim and as fanciful as any fictions the warmest imaginations can conceive of the past. But the speculator on moral things can enjoy a satisfaction here, that he who wanders over the plains of Greece will seek in vain. The pleasure of the latter, if he be wise and good, is unavoidably tinged with melancholy regrets; while here all that reason allows may be hoped for in behalf of man. Every

one in mediocrity of circumstances has enjoyed some of that interest which is attendant on the advancement of those objects on which he has fastened a portion of his affections. It may be the moral or physical improvement of his child,—the embellishment of a garden, a paddock, a park, or of the conveniences of some town; but, depend on it, there is no pleasure connected with any interest of this character, that is commensurate with that we enjoy, who have seen the birth, infancy, and youth, and who are now about to become spectators of the maturity, of a whole country. We live in the excitement of a rapid and constantly progressive condition. The impetus of society is imparted to all its members and we advance because we are not accustomed to stand still. Even the sagacious and enterprising New-Englandman, gets an additional impulse in such a living current; the descendant of the Hollander is fast losing his phlegm; and men of all nations, hereditary habits and opinions, receive an onward impulse by the constant influence of such a communion. I have stood upon this identical hill, and seen nine tenths of its smiling prospect darkened by the shadows of the forest. You observe what it is to-day. He who comes a century hence, may hear the din of a city rising from that very plain, or find his faculties confused by the number and complexity of its works of art."

AMERICAN LITERATURE

TO the Abbate Giromachi:

You ask me to write freely on the subject of the literature and the arts of the United States. The subjects are so meagre as to render it a task that would require no small portion of the talents necessary to figure in either, in order to render them of interest. Still, as the request has come in so urgent a form, I shall endeavor to oblige you. . . .

As respects authorship, there is not much to be said. Compared to the books that are

printed and read, those of native origin are few indeed. The principal reason of this poverty of original writers, is owing to the circumstance that men are not yet driven to their wits for bread. The United States are the first nation that possessed institutions, and, of course, distinctive opinions of its own, that was ever dependent on a foreign people for its literature. Speaking the same language as the English, and long in the habit of importing their books from the mother country, the revolution effected no immediate change in the nature of their studies, or mental amusements. The works were re-printed, it is true, for the purposes of economy, but they still continued English. Had the latter nation used this powerful engine with tolerable address, I think they would have secured such an ally in this country as would have rendered their own decline not only more secure, but as illustrious as had been their rise. There are many theories entertained as to the effect produced in this country by the falsehoods and jealous calumnies which have been undeniably uttered in the mother country, by means of the press, concerning her republican descendant. It is my own opinion that, like all other ridiculous absurdities, they have defeated themselves, and that they are now more laughed at and derided, even here, than resented. By all that I can learn, twenty years ago, the Americans were, perhaps, far too much disposed to receive the opinions and to adopt the prejudices of their relatives; whereas, I think it is very apparent that they are now beginning to receive them with singular distrust. It is not worth our while to enter further into this subject, except as it has had, or is likely to have, an influence on the national literature.

It is quite obvious, that, so far as taste and forms alone are concerned, the literature of England and that of America must be fashioned after the same models. The authors, previously to the revolution, are common property, and it is quite idle to say that the American has not just as good

a right to claim Milton, and Shakspeare, and all the old masters of language, for his countrymen, as an Englishman. The Americans having continued to cultivate, and to cultivate extensively, an acquaintance with the writers of the mother country, since the separation, it is evident they must have kept pace with the trifling changes of the day. The only peculiarity that can, or ought to be expected in their literature, is that which is connected with the promulgation of their distinctive political opinions. They have not been remiss in this duty, as any one may see, who chooses to examine their books. But we will devote a few minutes to a more minute account of the actual condition of American literature. . . .

The literature of the United States has, indeed, two powerful obstacles to conquer before (to use a mercantile expression) it can ever enter the markets of its own country on terms of perfect equality with that of England. Solitary and individual works of genius may, indeed, be occasionally brought to light, under the impulses of the high feeling which has conceived them; but, I fear, a good, wholesome, profitable and continued pecuniary support, is the applause that talent most craves. The fact, that an American publisher can get an English work without money, must, for a few years longer, (unless legislative protection shall be extended to their own authors,) have a tendency to repress a national literature. No man will pay a writer for an epic, a tragedy, a sonnet, a history, or a romance, when he can get a work of equal merit for nothing. I have conversed with those who are conversant on the subject, and, I confess, I have been astonished at the information they imparted.

A capital American publisher has assured me that there are not a dozen writers in this country, whose works he should feel confidence in publishing at all, while he reprints hundreds of English books without the least hesitation. This preference is by no means so much owing to any

difference in merit, as to the fact that, when the price of the original author is to be added to the uniform hazard which accompanies all literary speculations, the risk becomes too great. The general taste of the reading world in this country is better than that of England. The fact is both proved and explained by the circumstance that thousands of works that are printed and read in the mother country, are not printed and read here. The publisher on this side of the Atlantic has the advantage of seeing the reviews of every book he wishes to print, and, what is of far more importance, he knows, with the exception of books that he is sure of selling, by means of a name, the decision of the English critics before he makes his choice. Nine times in ten, popularity, which is all he looks for, is a sufficient test of general merit. Thus, while you find every English work of character, or notoriety, on the shelves of an American book-store, you may ask in vain for most of the trash that is so greedily devoured in the circulating libraries of the mother country, and which would be just as eagerly devoured here, had not a better taste been created by a compelled abstinence. That taste must now be overcome before such works could be sold at all.

When I say that books are not rejected here, from any want of talent in the writers, perhaps I ought to explain. I wish to express something a little different. Talent is sure of too many avenues to wealth and honours, in America, to seek, unnecessarily, an unknown and hazardous path. It is better paid in the ordinary pursuits of life, than it would be likely to be paid by an adventure in, which an extraordinary and skilful, because practised, foreign competition is certain. Perhaps high talent does not often make the trial with the American bookseller; but, it is precisely for the reason I have named.

The second obstacle against which American literature has to contend, is in the poverty of materials. There is scarcely an ore which contributes to the wealth of the

author, that is found, here, in veins as rich as in Europe. There are no annals for the historian; no follies (beyond the most vulgar and commonplace) for the satirist, no manners for the dramatist, no obscure fictions for the writer of romance; no gross and hardy offences against decorum for the moralist; nor any of the rich artificial auxiliaries of poetry. The weakest hand can extract a spark from the flint, but it would baffle the strength of a giant to attempt kindling a flame with a pudding-stone. I very well know there are theorists who assume that the society and institutions of this country are, or ought to be, particularly favourable to novelties and variety. But the experience of one month, in these States, is sufficient to show any observant man the falsity of their position. The effect of a promiscuous assemblage any where, is to create a standard of deportment; and great liberty permits every one to aim at its attainment. I have never seen a nation so much alike in my life, as the people of the United States, and what is more, they are not only like each other, but they are remarkably like that which common sense tells them they ought to resemble. No doubt, traits of character that are a little peculiar, without, however, being either very poetical, or very rich, are to be found in remote districts; but they are rare, and not always happy exceptions. In short, it is not possible to conceive a state of society in which more of the attributes of plain good sense, or fewer of the artificial absurdities of life, are to be found, than here. There is no costume for the peasant, (there is scarcely a peasant at all,) no wig for the judge, no baton for the general, no diadem for the chief magistrate. The darkest ages of their history are illuminated by the light of truth; the utmost efforts of their chivalry are limited by the laws of God; and even the deeds of their sages and heroes are to be sung in a language that would differ but little from a version of the ten commandments. However useful and respectable all this may be in actual life, it indi-

cates but one direction to the man of genius. . . .

Notwithstanding the overwhelming influence of British publications, and all the difficulties I have named, original books are getting to be numerous in the United States. The impulses of talent and intelligence are bearing down a thousand obstacles. I think the new works will increase rapidly, and that they are destined to produce a powerful influence on the world. We will pursue this subject another time. —Adieu.

From

THE AMERICAN DEMOCRAT
[1838]

AN ARISTOCRAT AND A DEMOCRAT

WE LIVE in an age, when the words aristocrat and democrat are much used, without regard to the real significations. An aristocrat is one of a few, who possess the political power of a country; a democrat, one of the many. The words are also properly applied to those who entertain notions favorable to aristocratical, or democratical forms of government. Such persons are not, necessarily, either aristocrats, or democrats in fact, but merely so in opinion. Thus a member of a democratical government may have an aristocratical bias, and *vice versa*.

To call a man who has the habits and opinions of a gentleman, an aristocrat, from that fact alone, is an abuse of terms, and betrays ignorance of the true principles of government, as well as of the world. It must be an equivocal freedom, under which every one is not the master of his own innocent acts and associations; and he is a sneaking democrat, indeed, who will submit to be dictated to, in those habits over which neither law nor morality assumes a right of control.

Some men fancy that a democrat can only be one who seeks the level, social, mental and moral, of the majority, a rule that would at once exclude all men of refinement, education and taste from the

class. These persons are enemies of democracy, as they at once render it impracticable. They are usually great sticklers for their own associations and habits, too, though unable to comprehend any of a nature that are superior. They are, in truth, aristocrats in principle, though assuming a contrary pretension; the ground work of all their feelings and arguments being self. Such is not the intention of liberty, whose aim is to leave every man to be the master of his own acts; denying hereditary honors, it is true, as unjust and unnecessary, but not denying the inevitable consequences of civilization.

The law of God is the only rule of conduct, in this, as in other matters. Each man should do as he would be done by. Were the question put to the greatest advocate of indiscriminate association, whether he would submit to have his company and habits dictated to him, he would be one of the first to resist the tyranny; for they, who are the most rigid in maintaining their own claims, in such matters, are usually the loudest in decrying those whom they fancy to be better off than themselves. Indeed, it may be taken as a rule in social intercourse, that he who is the most apt to question the pretensions of others, is the most conscious of the doubtful position he himself occupies; thus establishing the very claims he affects to deny, by letting his jealousy of it be seen. Manners, education and refinement, are positive things, and they bring with them innocent tastes which are productive of high enjoyments; and it is as unjust to deny their possessors their indulgence, as it would be to insist on the less fortunate's passing the time they would rather devote to athletic amusements, in listening to operas for which they have no relish, sung in a language they do not understand.

All that democracy means, is as equal a participation in rights as is practicable; and to pretend that social equality is a condition of popular institutions, is to assume that the latter are destructive of civilization, for, as nothing is more self-

evident than the impossibility of raising all men to the highest standard of tastes and refinement, the alternative would be to reduce the entire community to the lowest. The whole embarrassment on this point exists in the difficulty of making men comprehend qualities they do not themselves possess. We can all perceive the difference between ourselves and our inferiors, but when it comes to a question of the difference between us and our superiors, we fail to appreciate merits of which we have no proper conceptions. In face of this obvious difficulty, there is the safe and just governing rule, already mentioned, or that of permitting every one to be the undisturbed judge of his own habits and associations, so long as they are innocent, and do not impair the rights of others to be equally judges for themselves. It follows, that social intercourse must regulate itself, independently of institutions, with the exception that the latter, while they withhold no natural, bestow no factitious advantages beyond those which are inseparable from the rights of property, and general civilization.

In a democracy, men are just as free to aim at the highest attainable places in society, as to obtain the largest fortunes; and it would be clearly unworthy of all noble sentiment to say, that the grovelling competition for money shall alone be free, while that which enlists all the liberal acquirements and elevated sentiments of the race, is denied the democrat. Such an avowal would be at once a declaration of the inferiority of the system, since nothing but ignorance and vulgarity could be its fruits.

The democratic gentleman must differ in many essential particulars, from the aristocratical gentleman, though in their ordinary habits and tastes they are virtually identical. Their principles vary; and, to a slight degree, their deportment accordingly. The democrat, recognizing the right of all to participate in power, will be more liberal in his general sentiments, a quality of superiority in itself. but, in conceding

this much to his fellow man, he will proudly maintain his own independence of vulgar domination, as indispensable to his personal habits. The same principles and manliness that would induce him to depose a royal despot, would induce him to resist a vulgar tyrant.

There is no more capital, though more common error, than to suppose him an aristocrat who maintains his independence of habits; for democracy asserts the control of the majority, only in matters of law, and not in matters of custom. The very object of the institution is the utmost practicable personal liberty, and to affirm the contrary, would be sacrificing the end to the means.

An aristocrat, therefore, is merely one who fortifies his exclusive privileges by positive institutions, and a democrat, one who is willing to admit of a free competition, in all things. To say, however, that the last supposes this competition will lead to nothing, is an assumption that means are employed without any reference to an end. He is the purest democrat who best maintains his rights, and no rights can be dearer to a man of cultivation, than exemptions from unseasonable invasions on his time, by the coarse-minded and ignorant.

ON AMERICAN EQUALITY

THE EQUALITY of the United States is no more absolute than that of any other country. There may be less inequality in this nation than in most others, but inequality exists, and, in some respects, with stronger features than it is usual to meet with in the rest of christendom.

The rights of property being an indispensable condition of civilization, and its quiet possession everywhere guaranteed, equality of condition is rendered impossible. One man must labor, while another may live luxuriously on his means; one has leisure and opportunity to cultivate his tastes, to increase his information, and to refine his habits, while another is com-

pelled to toil, that he may live. One is reduced to serve, while another commands, and, of course, there can be no equality in their social conditions.

The justice and relative advantage of these differences, as well as their several duties, will be elsewhere considered.

By the inequality of civil and political rights that exists in certain parts of the Union, and the great equality that exists in others, we see the necessity of referring the true character of the institutions to those of the states, without a just understanding of which, it is impossible to obtain any general and accurate ideas of the real polity of the country.

The same general exceptions to civil and political equality, that are found in other free countries, exist in this, though under laws peculiar to ourselves. Women and minors are excluded from the suffrage, and from maintaining suits at law, under the usual provisions, here as well as elsewhere. None but natives of the country can fill many of the higher offices, and paupers, felons and all those who have not fixed residences, are also excluded from the suffrage. In a few of the states property is made the test of political rights, and, in nearly half of them, a large portion of the inhabitants, who are of a different race from the original European occupants of the soil, are entirely excluded from all political, and from many of the civil rights, that are enjoyed by those who are deemed citizens. A slave can neither choose, nor be chosen to office, nor, in most of the states, can even a free man, unless a white man. A slave can neither sue nor be sued; he can not hold property, real or personal, nor can he, in many of the states, be a witness in any suit, civil or criminal.

It follows from these facts, that absolute equality of condition, of political rights, or of civil rights, does not exist in the United States, though they all exist in a much greater degree in some states than in others, and in some of the states, perhaps, to as great a degree as is practicable. In what are usually called the free

states of America, or those in which domestic slavery is abolished, there is to be found as much equality in every respect as comports with safety, civilization and the rights of property. This is also true, as respects the white population, in those states in which domestic slavery does exist; though the number of the bond is in a large proportion to that of the free.

As the tendency of the institutions of America is to the right, we learn in these truths, the power of facts, every question of politics being strictly a question of practice. They who fancy it possible to frame the institutions of a country, on the pure principles of abstract justice, as these principles exist in theories, know little of human nature, or of the restraints that are necessary to society. Abuses assail us in a thousand forms, and it is hopeless to aspire to any condition of humanity, approaching perfection. The very necessity of a government at all, arises from the impossibility of controlling the passions by any other means than that of force.

The celebrated proposition contained in the declaration of independence is not to be understood literally. All men are not "created equal," in a physical, or even in a moral sense, unless we limit the signification to one of political rights. This much is true, since human institutions are a human invention, with which nature has had no connection. Men are not born equals, physically, since one has a good constitution, another a bad; one is handsome, another ugly; one white, another black. Neither are men born equals morally, one possessing genius, or a natural aptitude, while his brother is an idiot. As regards all human institutions men are born equal, no sophistry being able to prove that nature intended one should inherit power and wealth, another slavery and want. Still artificial inequalities are the inevitable consequences of artificial ordinances, and in founding a new governing principle for the social compact, the American legislators instituted new modes of difference.

The very existence of government at all,

infers inequality. The citizen who is preferred to office becomes superior of those who are not, so long as he is the repository of power, and the child inherits the wealth of the parent as a controlling law of society. All that the great American proposition, therefore, can mean, is to set up new and juster notions of natural rights than those which existed previously, by asserting, in substance, that God has not instituted political inequalities, as was pretended by the advocates of the *Jus Divinum*, and that men possessed a full and natural authority to form such social institutions as best suited their necessities.

There are numerous instances in which the social inequality of America may do violence to our notions of abstract justice, but the compromise of interests under which all civilized society must exist, renders this unavoidable. Great principles seldom escape working injustice in particular things, and this so much the more, in establishing the relations of a community, for in them many great, and frequently conflicting principles enter, to maintain the more essential features of which sacrifices of parts become necessary. If we would have civilization and the exertion indispensable to its success, we must have property; if we have property, we must have its rights; if we have the rights of property, we must take those consequences of the rights of property which are inseparable from the rights themselves.

The equality of rights in America, therefore, after allowing for the striking exception of domestic slavery, is only a greater extension of the principle than common, while there is no such thing as an equality of condition. All that can be said of the first, is that it has been carried as far as a prudent discretion will at all allow, and of the last, that the inequality is the simple result of civilization, unaided by any of those factitious plans that have been elsewhere devised in order to augment the power of the strong, and to enfeeble the weak.

Equality is no where laid down as a

governing principle of the institutions of the United States, neither the word, nor any inference that can be fairly deduced from its meaning, occurring in the constitution. As respects the states, themselves, the professions of an equality of rights are more clear, and slavery excepted, the intention in all their governments is to maintain it, as far as practicable, though equality of condition is no where mentioned, all political economists knowing that it is unattainable, if, indeed, it be desirable. Desirable in practice, it can hardly be, since the result would be to force all down to the level of the lowest.

All that a good government aims at, therefore, is to add no unnecessary and artificial aid to the force of its own unavoidable consequences, and to abstain from fortifying and accumulating social inequality as a means of increasing political inequalities.

THE SPY
[1821]

HARVEY BIRCH

IN PERSON, the pedler was a man above the middle height, spare, but full of bone and muscle. At first sight, his strength seemed unequal to manage the unwieldy burden of his pack, yet he threw it on and off with great dexterity, and with as much apparent ease as if it had been filled with feathers. His eyes were grey, sunken, restless, and, for the fitting moments that they dwelt on the countenances of those with whom he conversed, they seemed to read the very soul. They possessed, however, two distinct impressions, which, in a great measure, characterized the whole man. When engaged in traffic, the intelligence of his face appeared lively, active, and flexible, though uncommonly acute; if the conversation turned on the ordinary transactions of life, his air became abstracted and restless; but if, by chance, the revolution and the country were the topic, his whole system seemed altered—

all his faculties were concentrated: he would listen for a great length of time, without speaking, and then would break silence by some light and jocular remark, that was too much at variance with his former manner, not to be an affectation. But of the war, and of his father, he seldom spoke, and always from some very obvious necessity.

THE PIONEERS
[1823]

LEATHERSTOCKING

"AH! the game is becoming hard to find, indeed, Judge, with your clearings and betterments," said the old hunter, with a kind of compelled resignation. "The time has been when I have shot thirteen deer, without counting the fa'ns, standing in the door of my own hut, and for bear's meat, if one wanted a ham or so, he had only to watch a-nights, and he could shoot one by moonlight, through the cracks of the logs; nor fear of his oversleeping himself neither, for the howling of the wolves was sartin to keep his eyes open. There's old Hector"—patting with affection a tall hound of black and yellow spots, with white belly and legs, that just then came in on the scent, accompanied by the slut he had mentioned; "see where the wolves bit his throat, the night I druv them from the venison that was smoking on the chimney top—that dog is more to be trusted than many a Christian man; for he never forgets a friend, and loves the hand that gives him bread."

There was a peculiarity in the manner of the hunter that attracted the notice of the young female, who had been a close and interested observer of his appearance and equipments, from the moment he came into view. He was tall, and so meagre as to make him seem above even the six feet that he actually stood in his stockings. On his head, which was thinly covered with lank, sandy hair, he wore a cap made of foxskin, resembling in shape the one we

have already described, although much inferior in finish and ornaments. His face was skinny and thin almost to emaciation, but yet it bore no signs of disease—on the contrary, it had every indication of the most robust and enduring health. The cold and exposure had, together, given it a color of uniform red. His gray eyes were glancing under a pair of shaggy brows, that overhung them in long hairs of gray mingled with their natural hue, his scraggy neck was bare, and bunt to the same tint with his face, though a small part of a shirt collar, made of the country check, was to be seen above the overdress he wore. A kind of coat, made of dressed deerskin, with the hair on, was belted close to his lank body, by a girdle of colored worsted. On his feet were deerskin moccasins, ornamented with porcupines' quills, after the manner of the Indians, and his limbs were guarded with long leggings of the same material as the moccasins, which, gartering over the knees of his tarnished buckskin breeches, had obtained for him among the settlers the nickname of Leather-Stocking. Over his left shoulder was slung a belt of deerskin, from which depended an enormous ox-horn, so thinly scraped as to discover the powder it contained. The larger end was fitted ingeniously and securely with a wooden bottom, and the other was stopped tight by a little plug. A leathern pouch hung before him, from which, as he concluded his last speech, he took a small measure, and, filling it accurately with powder, he commenced reloading the rifle, which, as its butt rested on the snow before him, reached nearly to the top of his foxskin cap.

THE LAST OF THE MOHICANS
[1826]

DAVID GAMUT

THE PERSON of this individual was to the last degree ungainly, without being in any particular manner deformed. He had all the bones and joints of other men,

without any of their proportions. Erect, his stature surpassed that of his fellows; seated, he appeared reduced within the ordinary limits of the race. The same contrariety in his members seemed to exist throughout the whole man. His head was large; his shoulders narrow; his arms long and dangling; while his hands were small, if not delicate. His legs and thighs were thin, nearly to emaciation, but of extraordinary length; and his knees would have been considered tremendous, had they not been outdone by the broader foundations on which this false superstructure of blended human orders was so profanely reared. The ill-sorted and injudicious attire of the individual only served to render his awkwardness more conspicuous. A sky-blue coat, with short and broad skirts and low cape, exposed a long thin neck, and longer and thinner legs, to the worst anatomical versions of the evil-disposed. His nether garment was of yellow nankeen, closely fitted to the shape, and tied at his bunches of knees by large knots of white ribbon, a good deal sullied by use. Clouded cotton stockings, and shoes, on one of the latter of which was a plated spur, completed the costume of the lower extremity of this figure, no curve or angle of which was concealed, but, on the other hand, studiously exhibited, through the vanity or simplicity of its owner. From beneath the flap of an enormous pocket of a soiled vest of embossed silk, heavily ornamented with tarnished silver lace, projected an instrument, which, from being seen in such martial company, might have been easily mistaken for some mischievous and unknown implement of war. Small as it was, this uncommon engine¹ had excited the curiosity of most of the Europeans in the camp, though several of the provincials were seen to handle it, not only without fear, but with the utmost familiarity. A large, civil cocked hat, like those worn by clergymen within the last thirty years, surmounted the whole, furnishing dignity to a good-natured and somewhat vacant countenance, that apparently needed such artificial aid, to

support the gravity of some high and extraordinary trust.

CHINGACHGOOK AND HAWKEYE

ON that day, two men were lingering on the banks of a small but rapid stream, within an hour's journey of the encampment of Webb, like those who awaited the appearance of an absent person, or the approach of some expected event. The vast canopy of woods spread itself to the margin of the river, overhanging the water, and shadowing its dark current with a deeper hue. The rays of the sun were beginning to grow less fierce, and the intense heat of the day was lessened, as the cooler vapors of the springs and fountains rose above their leafy beds, and rested in the atmosphere. Still that breathing silence, which marks the drowsy sultriness of an American landscape in July, pervaded the secluded spot, interrupted only by the low voices of the men, the occasional lazy tap of a woodpecker, the discordant cry of some gaudy jay, or a swelling on the ear, from the dull roar of a distant waterfall.

These feeble and broken sounds were, however, too familiar to the foresters, to draw their attention from the more interesting matter of their dialogue. While one of these loiterers showed the red skin and wild accoutrements of a native of the woods, the other exhibited, through the mask of his rude and nearly savage equipments, the brighter, though sunburnt and long-faded, complexion of one who might claim descent from European parentage. The former was seated on the end of a mossy log, in a posture that permitted him to heighten the effect of his earnest language, by the calm but expressive gestures of an Indian engaged in debate. His body, which was nearly naked, presented a terrific emblem of death, drawn in intermingled colors of white and black. His closely shaved head, on which no other hair than the well known and chivalrous

¹ David's pitch-pipe.

scalping tuft was preserved, was without ornament of any kind, with the exception of a solitary eagle's plume, that crossed his crown, and depended over the left shoulder. A tomahawk and scalping-knife, of English manufacture, were in his girdle; while a short military rifle, of that sort with which the policy of the whites armed their savage allies, lay carelessly across his bare and sinewy knee. The expanded chest, full formed limbs, and grave countenance of this warrior, would denote that he had reached the vigor of his days, though no symptoms of decay appeared to have yet weakened his manhood.

The frame of the white man, judging by such parts as were not concealed by his clothes, was like that of one who had known hardships and exertion from his earliest youth. His person, though muscular, was rather attenuated than full; but every nerve and muscle appeared strung and indurated by unremitted exposure and toil. He wore a hunting-shirt of forest green, fringed with faded yellow, and a summer cap of skins which had been shorn of their fur. He also bore a knife in a girdle of wampum, like that which confined the scanty garments of the Indian, but no tomahawk. His moccasins were ornamented after the gay fashion of the natives, while the only part of his underdress which appeared below the hunting-frock, was a pair of buckskin leggings, that laced at the sides, and which were gartered above the knees with the sinews of a deer. A pouch and horn completed his personal accoutrements, though a rifle of great length, which the theory of the more ingenious whites had taught them was the most dangerous of all fire-arms, leaned against a neighboring sapling. The eye of the hunter, or scout, whichever he might be, was small, quick, keen, and restless, roving while he spoke, on every side of him, as if in quest of game, or distrusting the sudden approach of some lurking enemy. Notwithstanding these symptoms of habitual suspicion, his countenance was not only without guile, but at the moment at

which he is introduced, it was charged with an expression of sturdy honesty.

THE WEPT OF WISH-TON-WISH

[1829]

THE REVEREND MEEK WOLFE

THE REVEREND Meek Wolfe was, in spirit, a rare combination of the humblest self-abasement and of fierce spiritual denunciation. Like so many others of his sacred calling in the colony he inhabited, he was not only the descendant of a line of priests, but it was his greatest earthly hope that he should also become the progenitor of a race in whom the ministry was to be perpetuated as severely as if the regulated formula of the Mosaic dispensation were still in existence. He had been educated in the infant college of Harvard, an institution that the emigrants from England had the wisdom and enterprise to found within the first five-and-twenty years of their colonial residence. Here this scion of so pious and orthodox a stock had abundantly qualified himself for the intellectual warfare of his future life, by regarding one set of opinions so steadily, as to leave little reason to apprehend he would ever abandon the most trifling outworks of his faith. No citadel ever presented a more hopeless curtain to the besieger, than did the mind of this zealot to the efforts of conviction; for on the side of his opponents, he contrived that every avenue should be closed by a wall blank as indomitable obstinacy could oppose. He appeared to think that all the minor conditions of argument and reason had been disposed of by his ancestors, and that it only remained for him to strengthen the many defences of his subject, and now and then to scatter by a fierce sortie the doctrinal skirmishers who might occasionally approach his parish. There was a remarkable singleness of mind in this religionist which, while it in some measure rendered even his bigotry

respectable, greatly aided in clearing the knotty subject with which he dealt, of much embarrassing matter. In his eyes, the straight and narrow path would hold but few, besides his own flock. He admitted some fortuitous exceptions, in one or two of the nearest parishes, with whose clergymen he was in the habit of exchanging pulpits; and perhaps, here and there, in a saint of the other hemisphere, or of the more distant towns of the Colonies, the brightness of whose faith was something aided, in his eyes, by distance, as this opaque globe of ours is thought to appear a ball of light to those who inhabit its satellite. In short, there was an admixture of seeming charity with an exclusiveness of hope, an unweariness of exertion with a coolness of exterior, a disregard of self with the most complacent security, and an uncomplaining submission to temporal evils with the loftiest spiritual pretensions, that in some measure rendered him a man as difficult to comprehend as to describe.

HOMEWARD BOUND
[1838]

STEADFAST DODGE AND JOHN TRUCK

THE ACCIDENTS of life could scarcely form extremes of character more remote than that of Steadfast Dodge and that of John Truck. The first never did anything beyond acts of the most ordinary kind, without first weighing its probable effect in the neighborhood; its popularity or unpopularity; how it might tally with the different public opinions that were whiffing through the country; in what manner it would influence the next election, and whether it would be likely to elevate him or depress him in the public mind. No Asiatic slave stood more in terror of a vindictive master than Mr. Dodge stood in trembling before the reproofs, comments, censures, frowns, cavillings and remarks of every man in his county, who happened to

belong to the political party that just at that moment was in power. As to the minority, he was as brave as a lion, could snap his fingers at them, and was foremost in deriding and scoffing at all they said or did. Thus, however, was in connection with politics only, for, the instant party-drill ceased to be of value, Steadfast's valor oozed out of his composition, and in all other things he dutifully consulted every public opinion of that neighborhood. This estimable man had his weak points as well as another, and what is more, he was quite sensible of them, as was proved by a most jealous watchfulness of his besetting sins, in the way of exposure if not of indulgence. In a word, Steadfast Dodge was a man that wished to meddle with and control all things, without possessing precisely the spirit that was necessary to leave him master of himself; he had a rabid desire for the good opinion of everything human, without always taking the means necessary to preserve his own; was a stout declaimer for the rights of the community while forgetting that the community itself is but a means set up for the accomplishment of a given end; and felt an inward and profound respect for anything that was beyond his reach, which manifested itself, not in manly efforts to attain the forbidden fruit, but rather in a spirit of opposition and detraction, that only betrayed, through its jealousy, the existence of the feeling; which jealousy, however, he affected to conceal under an intense regard for popular rights, since he was apt to aver it was quite intolerable that any man should possess anything, even to qualities, in which his neighbors might not properly participate. All these, moreover, and many similar traits, Mr. Dodge encouraged in the spirit of liberty!

On the other hand, John Truck sailed his own ship, was civil to his passengers from habit as well as policy; knew that every vessel must have a captain; believed mankind to be little better than asses, took his own observations, and cared

not a straw for those of his mates; was never more bent on following his own views than when all hands grumbled and opposed him; was daring by nature, decided from use and long self-reliance, and was every way a man fitted to steer his bark through the trackless ways of life, as well as those of the ocean. It was fortunate for one in his particular position, that nature had made the possessor of so much self-will and temporary authority, cool and sarcastic rather than hot-headed and violent; and for this circumstance Mr. Dodge in particular had frequent occasions for felicitation.

HOME AS FOUND
[1838]

ARISTABULUS BRAGG

MR. ARISTABULUS BRAGG was born in one of the western counties of Massachusetts, and emigrated to New York, after receiving his education, at the mature age of nineteen; at twenty-one he was admitted to the bar, and for the last seven years he has been a successful practitioner in all the courts of Otsego, from the justice's to the circuit. His talents are undeniable, as he commenced his education at fourteen and terminated it at

twenty-one, the law course included. This man is an epitome of all that is good and all that is bad in a very large class of his fellow-citizens. He is quick-witted, prompt in action, enterprising in all things in which he has nothing to lose, but wary and cautious in all things in which he has a real stake, and ready to turn not only his hand, but his heart and his principles, to anything that offers an advantage. With him, literally, "nothing is too high to be aspired to, nothing too low to be done." He will run for Governor, or for town clerk, just as opportunities occur, is expert in all the practices of his profession, has had a quarter's dancing, with three years in the classics, and turned his attention toward medicine and divinity, before he finally settled down into the law. Such a compound of shrewdness, imprudence, common-sense, pretension, humility, cleverness, vulgarity, kind-heartedness, duplicity, selfishness, law-honesty, moral fraud and mother wit, mixed up with a smattering of learning and much penetration in practical things, can hardly be described, as any one of his prominent qualities is certain to be met by another quite as obvious that is almost its converse. Mr. Bragg, in short, is purely a creature of circumstances, his qualities pointing him out for either a member of Congress or a deputy sheriff, offices that he is equally ready to fill.

1809 ~ *Edgar Allan Poe* ~ 1849

I

WALTER DE LA MARE, one of the most whimsically imaginative of modern English writers, has a short story entitled "A Revenant," to be found in his *The Wind Blows Over*. It tells how the ghost of Edgar Allan Poe revisits the glimpses of the moon for an evening in November, 1932, and attends a popular lecture on his writings by a Professor Monk. When the audience has departed, the ghost waylays the professor, puts a few modest

questions, and does a bit of lecturing on his own account. The professor is soon suffering from an acute case of reduced dimensions. Among the many pointed remarks of his shadowy heckler that deflate the balloon of academic authority, the following is especially pertinent. "‘You made pretty play with the artistic temperament—with your morbid, and your moody, and your melancholy, and your misanthrope—but of the artist’s *conscience* not one word.’”

The term “artistic temperament” is often used to refer to the merely eccentric or negative traits of artistically inclined people. There is warrant, of course, for applying it in this sense to the man Poe. During his bizarre career, he displayed, at one time or another and under diverse pressures, several of these traits, such as hypersensitiveness, emotional instability, intellectual arrogance, insobriety, and the like. But none of them was so central or so persistent in his many-sided personality as was a demon, a still small voice, which haunted the vortices of his brain.

This demon held up for him standards of perfection for writing both poetry and prose. It drove him ceaselessly to satisfy these standards, even at the expense of his health and the happiness prized by ordinary men. It caused him to express mournful envy of the angel Israfil, whom he imagined as singing a supreme melody in a heaven of timeless Platonic ideas and essences. It made him so unsparingly caustic toward the performances of some of the other writers of his time that George Graham, the magazine-owner for whom he worked in Philadelphia, was moved to comment: “Literature with him was religion; and he, its high-priest, with a whip of scorpions scourged the money-changers from the temple.”

It was this demon of his, furthermore, that prompted him to headlong dissent from several of the prevailing literary trends in the America of the 1830’s and the 1840’s. New England transcendentalism, for example, became so distasteful to him that he sought to improve upon its metaphysical profundities by solving the riddle of the universe according to his own lights in his treatise or “prose poem,” *Eureka*. Finally, throughout Poe’s mature creative years, it was this same demon that helped keep alive in him the dream, the *ignis fatuus*, that he would some day found and edit a really first-rate magazine for a public which he thought was oversupplied with inferior ones.

For this demon of Poe’s the only fitting label is “the artist’s conscience.” It is a useful concept to explain both the man and the writer.

II

Poe had what may be called an hereditary right to his artist’s conscience, as well as to a few of the eccentricities that Philistines have exaggerated in their “pretty play” with his “artistic temperament.” His English-born mother, Elizabeth Arnold, made her debut as an actress at the age of nine in Boston

in 1796. When she died at the age of twenty-four in Richmond, Va., she had endeared herself to theater-goers in most of the important Atlantic seaboard cities of the United States, and had enacted 201 different rôles. These ranged from the heroines of high tragedy and melodrama through the gentlewomen of satirical and sentimental comedy to even a few hoydens of farce, and there were fourteen Shakespearean characterizations, including Ariel, Ophelia, Cordelia, Juliet, and Desdemona.

Poe's father, David Poe, Jr., of a Baltimore, Md., Irish family, abandoned study of the law and made his debut as an actor at the age of nineteen in Charleston, S. C., in 1803. He was soon playing in the same stock company with Elizabeth Arnold and her first husband, Charles Hopkins, and married her in the spring of 1806, about five months after Hopkins' death. Alcoholism, ill health, and adverse journalistic criticism of his acting drove David Poe from the stage in 1809, but his record of 137 parts, nineteen of them Shakespearean, shows that, even though he may have lacked his wife's genius, he must have been a "trouper" of no mean versatility.

Because of his parents' profession, Poe happened to be born in Boston. The day was January 19, 1809, and the only name given him was "Edgar." It was also an accident of the theatrical profession that he was left an orphan in Richmond. The day was December 8, 1811, when his mother died there on tour, and the whereabouts of his father were unknown. While his older brother, William, and his little sister, Rosalie, found other homes, he was taken into that of the wealthy Richmond tobacco merchant and shipowner, John Allan, who did not formally adopt him but stamped him permanently as his foster son by providing him with a middle name.

Thus Poe, before he was old enough to have any say in the matter, was snatched from the rootless, hard-working world of theatrical Bohemia, and established in the seemingly secure, comfortable world of the Virginia upper *bourgeoisie* and aristocracy. As he grew to manhood, however, and the security of this world proved a sham, and its comfort had too many strings attached, he preferred to make his own way in another kind of Bohemia, almost as rootless, even more hard-working than that his parents had known. This was the Bohemia of literary journalism, and as one of its harried denizens and hangers-on, he was to move, like his parents, from city to city of the Atlantic seaboard.

III

It is a mistake, however, to regard Poe's connection with the Allan family and its world as a stroke of tragic destiny. John Allan was a Scotch gentleman of considerable culture. He could write letters with a distinct literary flavor and took some interest in both philosophy and science. Poe's formal education

was begun in a Richmond private school. Then, from 1815 to 1820, he had an educational experience of which no other major American writer of his time could boast. Between the highly impressionable ages of six and eleven, he traveled with the Allan family to England and Scotland and attended several schools there. During the last three years of the Allans' visit, he was a student of the Reverend John Bransby at the Manor House School at Stoke-Newington, England. Some of his reactions to this school are recorded in his story, "William Wilson."

Returning home with the Allans, he continued his formal education under several Richmond tutors. Although some of his more aristocratic schoolmates looked down on him as an outsider, he won friends and admirers by his skill at swimming, boxing, and running, his ability to quote Latin verses, and his unusual command of French.

About this time his "sentimental education" began also. When Rob Stanard, one of his young friends, took him to meet Jane Stith Craig Stanard, his beautiful mother, Poe idealized her so fervently that he was to write about her the poem, "To Helen," wherein she is associated with "the glory that was Greece," "the grandeur that was Rome," and "Holy-Land." He was deeply grieved when she died in 1824. He next fell in love with Sarah Elmira Royster, a charming Richmond girl in her middle 'teens. Although they were engaged to be married, she was soon to become the wealthy Mrs. Shelton.

The last real formal education that Poe received was the year he spent at the University of Virginia in 1826, shortly after its establishment by Thomas Jefferson. The buildings at Charlottesville were models of classic architecture, grouped in a valley through which the Rivanna River ran and beyond which, on two sides, receded mountain ridges into blue distance. By the end of the term in December, Poe ranked high in Latin, French, and Italian, and from the well-stocked library had withdrawn, among other things, several volumes of Rollins' *Ancient History* and a couple of volumes by Voltaire. But he had also piled up gambling debts on the ground that he needed, for required academic expenditures and for the maintenance of his status as a gentleman, more money than John Allan had thought fit to provide him with. Although the known facts show that Poe was in the right, Allan found his logic difficult to accept. They quarreled, and in the spring of 1827 Poe made his first attempt to break away from the world of his foster father, and of Sarah Royster, and to put the uneven but unique education he had received to the acid test of earning his own living.

The symbol of his new freedom was a thin pamphlet of verse issued by an obscure Boston printer in the early summer of that same year. The title was *Tamerlane and Other Poems*. The only indication of the author on cover and titlepage was the by-line, "By a Bostonian." There was an epigraph, from William Cowper:

"Young heads are giddy, and young hearts are warm,
And make mistakes for manhood to reform."

Today one of the rarest of Americana, this pamphlet sold then for only twelve and one-half cents. It was Poe's first book, and its title poem proclaimed the arrival of an American Byron, singing, in a strangely melodious four-stress measure, the themes of pride, love, beauty, and death.

Poe's new freedom, however, was not to be easily won. There followed several crucial years during which he seemed to be pulled by different ambitions—toward a career in the Army, toward reconciliation with John Allan, toward fame as a poet and success as a writer of magazine fiction.

After the symbolic venture in Boston, he enlisted as a private in the Army under the name of Edgar A. Perry. The artillery battery to which he belonged was sent to Fort Moultrie on Sullivan's Island, in the harbor of Charleston, S. C., and to Fortress Monroe, in Old Point, Va. From the latter station he wrote to John Allan. "Richmond & the U States were too narrow a sphere & the world shall be my theatre."

Shortly after his promotion to the rank of regimental sergeant-major, he was partly reconciled with Allan on the occasion of Mrs. Allan's death, and through his help managed to be released from the Army and appointed to West Point. But they again quarreled, and Poe found West Point so little to his liking that he deliberately got himself court-martialed and discharged.

In Baltimore, looking up his father's people, he had found that his widowed aunt, Mrs. Maria Clemm, was eager to give him help with his clothes and sympathy for his aspirations. His second pamphlet, *Al Aaraaf, Tamerlane, and Minor Poems*, had been printed in that city in 1829. After the West Point experience and a visit to New York to see his third publication, *Poems*, through the press in 1831, he returned to Mrs. Clemm's household to add another burden to her meager budget. Baltimore was a spawning place for new periodicals. Poe hoped he could get himself out of debt by providing them and magazines elsewhere with the prose tales he was now beginning to produce in quantity, having been interested in dabbling with them ever since his college days. Then, also, there was the companionship of Mrs. Clemm's lovely child, Virginia, born in 1822, as well as the friendship of the prominent Baltimore lawyer, William Wirt, whose judgment of poetry Poe had learned to respect.

In 1831 he submitted five of his tales to a contest conducted by the *Philadelphia Saturday Courier*. He lost the contest, but the editors thought enough of his entries to accept them for publication. They appeared anonymously, and there is no proof that he was paid for them. The next year, however, he submitted six stories to a contest conducted by the *Baltimore Saturday Visitor*. With "MS. Found in a Bottle" he took the prize, and, more importantly, made the acquaintance of one of the judges, John P. Kennedy, another

Baltimore lawyer, who had already published one novel, *Swallow Barn*, who had heard of Poe from his friend, William Wirt, and who used his influence to get Poe his start in literary journalism on the *Southern Literary Messenger* back home in Richmond

The first number of this periodical had appeared in August, 1834, several months after John Allan's death. Its owner, T. W. White, a printer, had entrusted the destinies of his fledgling to two successive editors before he asked Poe, who was becoming a standby for critical reviews and stories, to join the staff as assistant editor. Poe immediately accepted the offer and was soon editor. On January 22, 1836, he wrote thus of his success to his friend Kennedy: "Mr. White is very liberal, and besides my salary of \$520 pays me liberally for extra work, so that I receive nearly \$800. Next year, that is at the commencement of the second volume, I am to get \$1000. Besides this I receive, from Publishers, nearly all new publications. My friends in Richmond have received me with open arms, and my reputation is extending—especially in the South. Contrast all this with those circumstances of absolute despair in which you found me, and you will see how great reason I have to be grateful to God—and to yourself."

The preceding October Poe had brought Virginia and Mrs. Clemm to Richmond to live with him at Mrs. Yarrington's boarding house. In this house, on May 16, 1836, his marriage to Virginia was performed. She was not yet fourteen, but on the marriage bond she was declared and witnessed under oath "to be of the full age of twenty-one years." Poe had finally won through, and found his world, although to make a living in it for himself and those dear to him and yet remain always true to his artist's conscience was to tax all his brilliant energies.

IV

The remaining thirteen years of his life are the story of how those energies poured themselves out prodigally in criticism, fiction, poetry, and philosophical speculation; how they continued to function despite worry over money and Virginia's illness and despite, even, the profound shock of her death; and how they were wasted by resort to drink and by transient sentimental fixations upon several emotionally susceptible literary ladies, and yet were still capable of almost their best until very near the mysterious, incredible, macabre end.

In January, 1837, Poe left the *Messenger* for a variety of reasons. White was awed by his abilities, but at the same time somewhat dissatisfied with his occasional drinking to excess and with his disinclination to accept any judgment but his own as to what should or should not be printed. Poe, for his part, was

violently disillusioned with White. "The drudgery was excessive, the salary was contemptible," he wrote to one of his relatives, ". . . while my best energies were wasted in the service of an illiterate and vulgar, although well meaning man. . . ."

The Poes, with the indispensable Mrs. Clemm, moved from Richmond to New York, where Poe's fourth book and his only story approaching the length of a novel, *The Narrative of Arthur Gordon Pym*, was published by Harpers in 1838. Failing to establish himself with any periodical in New York, Poe had better luck in Philadelphia, where he lived from the summer of 1838 to the spring of 1844. Here he was co-editor of the *Gentleman's Magazine* and later on the staff of *Graham's*, to which he contributed some of his finest criticism. It was likewise in Philadelphia that he wrote many of his greatest stories and published his first story collection, *Tales of the Grotesque and Arabesque*, in two volumes in 1839 (although the title page bore the date 1840), as well as the first pamphlet in a projected serial edition of his fiction under the general title of *Prose-Romances* in 1843.

Graham, his employer, was later to say of him: "For three or four years I knew him intimately, and for eighteen months saw him almost daily; much of the time writing or conversing at the same desk; knowing all his hopes, his fears, and little annoyances of life, as well as his high-hearted struggle with adverse fate—yet he was always the same polished gentleman—the quiet, unobtrusive, thoughtful scholar—the devoted husband—frugal in his personal expenses—punctual and unwearied in his industry—and the soul of honor, in all his transactions."

Something of his growing reputation as a writer may be gleaned from Longfellow's tribute to him in a letter: ". . . all that I have read from your pen has inspired me with a high idea of your power; and I think you are destined to stand among the first romance-writers of the country, if such be your aim."

In 1842 Poe resigned his post on *Graham's* primarily because he hoped to found his own periodical, which was to be called *The Penn Magazine: A Monthly Literary Journal* and for which he printed an elaborate prospectus. The project fell through, however; Virginia, in singing, ruptured a blood vessel, and grew increasingly worse in health; hack work was Poe's only recourse, and how he felt about writing what others wanted him to write he had stated eloquently to a friend on whose influence he had futilely relied to obtain some government sinecure at Washington: "To coin one's brain into silver, at the nod of a master, is to my thinking, the hardest task in the world."

In 1844 the Poes moved to New York City, where Poe worked for the *Evening Mirror*, and where he was for a short time editor and proprietor of the *Broadway Journal*, although he continued to publish in such periodicals as the *Democratic Review*, *Godey's Lady's Book*, *Graham's*, and the *Southern Literary*

Messenger. "The Raven," which appeared late in January, 1845, in both the *Evening Mirror* and the *American Review*, was widely copied and commented on; it was parodied; it became, in short, the poem of the month, the poem of the year, even the poem of a generation. Poe was quick to take advantage of the furore. In that same year he published a new edition of his *Tales* and brought out the volume, *The Raven and Other Poems*. And the next spring he printed in *Graham's* his essay, "The Philosophy of Composition," explaining to an avid public how he wrote "The Raven."

While in New York City, the Poes had moved often; they now settled in the country in a cottage at Fordham. One of their visitors, Mrs. Mary Gove, a believer in mesmerism, Swedenborg, phrenology, and homeopathy, described the place as follows as it appeared to her in the summer of 1846: "There was an acre or two of greensward, fenced in about the house, as smooth as velvet and as clean as the best carpet. There were some grand old cherry-trees in the yard, that threw a massive shade around them. The house had three rooms—a kitchen, a sitting-room, and a bed-chamber over the sitting-room. There was a piazza in front of the house that was a lovely place to sit in in summer, with the shade of cherry-trees before it. There was no cultivation, no flowers—nothing but the smooth greensward and the majestic trees. . ."

The same visitor gave thumbnail portraits of all members of the family. "Poe's voice," she wrote, "was melody itself. He always spoke low, even in a violent discussion, compelling his hearers to listen if they would know his opinion, his facts, fancies, or philosophy, or his weird imaginings."

Of Virginia, she had this vivid impression: "Mrs. Poe looked very young; she had large black eyes, and a pearly whiteness of complexion, which was a perfect pallor. Her pale face, her brilliant eyes, and her raven hair gave her an unearthly look. One felt that she was almost a disrobed spirit, and when she coughed it was made certain that she was rapidly passing away."

And Mrs. Clemm is brought to life as follows: "She was a tall, dignified old lady, with a most ladylike manner, and her black dress, though old and much worn, looked really elegant on her. She wore a widow's cap of the genuine pattern, and it suited exquisitely with her snow-white hair. Her features were large, and corresponded with her stature, and it seemed strange how such a stalwart and queenly woman could be the mother of her almost petite daughter . . . The mother seemed hale and strong, and appeared to be a sort of universal Providence for her strange children."

Virginia died of tuberculosis on January 30, 1847, and Poe suffered a severe collapse. What that death meant to him may best be seen in such of his poems as "Ulalume" (1847) and "Annabel Lee" (1849). But even more revealing than these poems is one of his letters, dated January 4, 1848, where her death is interpreted as a release from the havoc her long illness had wrought on his sensitive nature: "Six years ago, a wife, whom I loved as no

man ever loved before, ruptured a blood-vessel in singing. Her life was despaired of. I took leave of her forever & underwent all the agonies of her death. She recovered partially and I again hoped. At the end of a year the vessel broke again—I went through precisely the same scene Again in about a year afterward. Then again—again—again & even once again at varying intervals. Each time I felt all the agonies of her death—and at each accession of the disorder I loved her more dearly & clung to her life with more desperate pertinacity But I am constitutionally sensitive—nervous in a very unusual degree I became insane, with long intervals of horrible sanity. During these fits of absolute unconsciousness I drank, God only knows how often or how much. As a matter of course, my enemies referred the insanity to the drink rather than the drink to the insanity I had indeed, nearly abandoned all hope of a permanent cure when I found one in the *death* of my wife. This I can & do endure as becomes a man—it was the horrible never-ending oscillation between hope & despair which I could *not* longer have endured without total loss of reason. In the death of what was my life, then, I receive a new but—oh God! how melancholy an existence ”

During the period when he was recovering from the state of mind described in this letter, Poe completed his major excursion into philosophical speculation, *Eureka*. He read it as a public lecture before a small audience in New York in February, 1848; it appeared in book form the same year; he regarded it as the crowning intellectual as well as artistic achievement of his entire writing career.

He also became more and more involved in his Platonic friendships with women admirers. Virginia had encouraged the first of these, with the poetess, Mrs Frances Sargent Osgood, the attractive thirty-four-year-old wife of an artist. Now, with Virginia gone, Poe turned to Mrs Sarah Helen Whitman, a widow of forty-five living in Providence, R. I., who had been publishing magazine verse since 1829 Having composed “The Poetic Principle” as a possible lecture, Poe delivered it at Providence before an audience of approximately 2,000 people. Later he went to a convivial party given in his honor by some of the enthusiastic young men who had heard him. The aftermath was that his somewhat conditional engagement to be married to Mrs. Whitman was broken off by that lady and her mother. Poe found solace in chivalric devotion to the young matron, Mrs. Charles Richmond, and to Mrs Marie Louise Shew, and, finally, to the old sweetheart of his boyhood, Mrs. Sarah Royster Shelton, now a well-to-do widow.

In 1849, when he visited Richmond to raise money for the magazine which he still dreamed of establishing and which he now desired to call *The Stylus*, Mrs. Shelton heard him deliver his lecture on “The Poetic Principle.” In a letter which he persuaded her to write to Mrs. Clemm, she described the lecture as “very beautiful” and said Poe had “quite a full, and very fash-

ionable audience . . ." After repeating this lecture by request and concluding it as before with a reading of "The Raven," Poe intended to go to Philadelphia. He was then to proceed to New York City and to send for Mrs. Clemm to meet him there. According to Mrs. Shelton, whom it was his purpose to marry, he took leave of her on the evening of September 26. "He was very sad, and complained of being quite sick," she told Mrs. Clemm "I felt his pulse, and found he had considerable fever, and did not think it probable he would be able to start the next morning (Thursday) as he anticipated I felt so wretched about him all that night, that I went up early the next morning to inquire after him, when, much to my regret, he had left in the boat for Baltimore."

October 3 was election day in Baltimore. On that day one Joe Walker, a compositor on the *Baltimore Sun*, found a man lying in a semi-conscious condition outside Ryan's Fourth Ward polling place. Walker got out of him that his name was Edgar A. Poe and that he knew a Dr. Snodgrass, who lived not far away. Walker dispatched a message to the doctor, and about five o'clock that afternoon Snodgrass and one of Poe's relatives took Poe to the Washington College Hospital. He was completely unconscious, and when he recovered fell into a delirium which lasted until Saturday night. Then he began to cry out, "Reynolds! Reynolds! Reynolds!" He was apparently thinking of a J. N. Reynolds, of New York, famous in that day as an advocate and prime mover of an expedition to the South Pole.

In a review in *Graham's* in 1843 Poe had paid eloquent tribute to Reynolds and his expedition. In *Arthur Gordon Pym*, where the hero sails strange seas, he had borrowed material from Reynolds. In "MS. Found in a Bottle," the story which had launched Poe into literary journalism, he had written: "It is evident that we are hurrying onward to some exciting knowledge—some never to be imparted secret, whose attainment is destruction. Perhaps this current leads to the South Pole itself." Was that the reason Poe cried, "Reynolds! Reynolds! Reynolds!"—that night in the Baltimore hospital—before with a muttered "God help my poor soul!" he died Sunday morning, October 7, 1849?

Such, at least, is the way the poetic imagination sometimes works, as John Livingston Lowes has shown in his unusual book on Samuel Taylor Coleridge, *The Road to Xanadu*.

V

One of the values in studying Poe is that his achievement plays havoc with the pet distinctions that are often made between criticism and creation, classicism and romanticism. His critical and creative ability claim equal recognition. His criticism helps explain both his poetry and fiction, and vice versa.

In all phases of his work, imagination and reason collaborate in so curious and complex a fashion that at one moment he seems to be a classically minded romanticist, at another a romantically inclined classicist, if these terms are to be credited with any real meaning.

From his critical writing, for example, which included over 400 separate pieces, mostly book reviews and notices, may be drawn an aesthetics that combines the spirit of Aristotle with the spirit of Coleridge. In many of his poems there exists a peculiar contrast or tension between their rationally predicated structure and total effect, on the one hand, and their weirdly imaginative subject-matter and imagery, on the other, or in the clarity and economy of their wording versus the vague nadirs and zeniths of their emotive overtones, as they aspire or expire, in Walter Pater's phrase, toward "the condition of music." His arabesque tales have their moments of the Gothic sublime; his grotesque tales reflect a sometimes Voltairean sense of the ridiculous. In the resourceful personality of his detective, Dupin, as in the bewildering pages of *Eureka*, may be said to meet and blend the poet, the scientist, and the mathematician.

Today the most readable of Poe's critical pieces are those in which he formulates, as well as applies, his theory of poetry and his theory of the short story.

His conception of what a good poem should be is set forth most fully in his lecture, "The Poetic Principle." Although not written until near the end of his life and first published posthumously, this lecture contains substantially some of the same views he had expressed in his earliest discussion of poetry, the "Letter to B——," which serves as preface to the 1831 edition of his *Poems*. His views can best be understood as a reaction against vogues in poetry and poetic taste in the America of the first decades of the 19th Century.

Milton's *Paradise Lost* was widely read and admired. More recent long poems such as Joel Barlow's *The Columbiad* (1807) and Robert Pollok's *The Course of Time* (1827) commanded an audience. Criticism, both native and imported, spoke reverently of "sustained effort" as if it were one of the qualities a poem must display in order to deserve the highest praise. To Poe these were all manifestations of the same vogue. To show his detestation of it, he labeled it "the epic mania."

Sentimentalism and humanitarianism were potent forces in America, where they had become the emotional and ideological overflow and undercurrent of triumphant democracy, under the auspices of "New Light" religion. Popularized by enthusiastic advocates of progress, science was making headway in the land. Philosophy responded variously to the encroachments of science. The impact of sentimentalism, humanitarianism, science, and revitalized philosophy on the literature of the day was not by any means confined to prose. These forces invaded poetry in the form of emphasis on Duty and Truth; they led critics to insist that instruction, the communication of an inspiring moral, or "message,"

or "metre-making argument," was the real end and glory of a poem. To Poe, here was another vogue that needed some kind of counterblast. To convey his censure of it, he termed it "the heresy of the Didactic."

To combat "the epic mania," he advanced his striking dicta as to the proper length of a poem. To combat "the heresy of the Didactic," he developed his doctrine of the poem written to subserve but one main end—"the Human Aspiration for Supernal Beauty." The meaning of Supernal Beauty, its necessary connection with a "certain taint of sadness," the only relationship it can have to "the incitements of Passion, or the precepts of Duty, or even the lessons of Truth" in a poem's complex unity of effect—these are the matters he seeks to clarify.

Poe's "The Philosophy of Composition," telling how he wrote "The Raven," is valuable for its unorthodox version of the creative process. Instead of being inspired to communicate the nature and meaning of a compelling personal experience, Poe set out deliberately, he insists, to achieve an effect, and worked toward it as calculatingly as an engineer works out the construction of a bridge. Although Poe may have rationalized away the complexity of the actual process by which "The Raven" was written and may have underrated the rôle of his "unconscious" and its symbol-making, his analysis has the merits of debunking excessive emphasis on the inspirational passivity of the creative process and directing needed attention to the poet as an intelligent craftsman rather than an enraptured seer.

Before Poe the short story had flourished for decades in the American magazines, and most of its varieties had been either foreshadowed or actually developed. What was lacking was an adequate theory of the form that would define its end and scope and provide its practitioners with a better notion of how its artistry might be improved. In two reviews or notices of Hawthorne's *Twice-Told Tales* in *Graham's* for April and May, 1842, Poe took time out to expound such a theory. In commenting on proper length and on unity of effect in the short story, he applies to it two of the ideas that distinguish his theory of poetry, but shows wherein the range of effects in the prose tale is broader than in the poem. His other principles—originality, economy of means, and structural logic—were designed to correct the stereotyped themes and treatment, the excess verbiage, the sprawling lack of narrative symmetry which characterized the usual product of the magazines but which were so conspicuously transcended in the inimitable practice of Hawthorne.

To put a characteristic poem by Poe alongside one by Emerson or Whitman is a most illuminating exercise. Both Poe's "To Helen" and Emerson's "Each and All" are concerned with the subject of Beauty, but whereas Emerson develops the subject by presenting an interlinked set of aphoristic truths with illustrative material and ends with his personal experience of a supreme truth, Poe, from the first line to the last, is giving the reader a direct experience of

Beauty. Poe's "The City in the Sea" and Whitman's "Crossing Brooklyn Ferry" are both poems that have to do with a city and with water, with death and with immortality, but whereas Whitman is investing observed actuality with meaning, Poe conveys his meaning through suspension of our disbelief in a weird domain that lies beyond reality and is in process of symbolical convulsion.

Perspectives quite as valuable may be gained when a characteristic story by Poe is read in connection with one, say, by Hawthorne, or by Hemingway. Both Poe's "The Masque of the Red Death" and Hawthorne's "The Maypole of Merry Mount" are stories about masqueraders making merry before their doom overtakes them, but whereas Hawthorne is dramatizing an anecdote out of the history of New England for the purpose of evaluating two opposed ethical philosophies and of allegorizing life's dualism of jollity and gloom, Poe is primarily concerned with creating an effect of horror in the reader by first building up an exotic setting of ominous contrasts and then contriving a single shattering climactic episode. Poe's "The Cask of Amontillado" and Hemingway's "The Killers" are both stories of revenge, but whereas Hemingway's is "a slice of life" from the roaring 1920's, underscoring for us the decadence of a gangster-infested society, Poe's story unfolds, step by step, the execution of a perfect crime in a designed and dateless "scene" out of the Italy of melodrama with no discoverable social criticism in his mordant ironies

It would be a mistake, however, to conclude from such comparative study that Poe is primarily a technician who makes few intellectual demands on his readers, that his art at its best was never rooted in real experience and has little to offer in the way of a criticism of life. *Eureka*, wherein he seeks to unravel the "plot of God," makes intellectual demands of the severest kind upon its readers. Some of the concepts discussed in *Eureka* are assumed or implied or explicitly present in his poems and tales. Brooding over these concepts—often under the stimulus of incidents in his actual life—constituted the very real experience in which much of his art was rooted. There is implicit criticism of life in many of his most impressionistic poems and tales in that they leave the reader speculating on some of the fundamental problems of existence and of the self. The dualism which Poe seeks to resolve in *Eureka*—the dualism of unity versus diffusion, of the One and the Many—appears in much of his poetry as a contrast between two worlds—on the one hand, the world of order, permanence, perfection, timelessness, immortality, spirit; on the other, that of disorder, change, imperfection, time, death, matter. The subtle relations of spirit and matter, of soul and body, are involved in some of his greatest stories, such as "Ligeia" and "The Fall of the House of Usher." In the preface to the first collected edition of his tales, he thus refuted the charge that he was merely an imitator of the kind of "Germanism" associated with the Gothic romance: "If in many of my productions terror has been the thesis, I maintain that terror is not of Germany but of the soul—."

VI

Three of Poe's tales of ratiocination—"The Murders in the Rue Morgue" (1841), "The Mystery of Marie Rogêt" (1842-3), and "The Purloined Letter" (1844)—had the distinction of establishing the detective story as a genre of modern fiction and anticipating the main patterns and devices which have marked its later evolution by a host of writers, from Conan Doyle and Anna Katharine Green to Agatha Christie, Dashiell Hammett, and Raymond Chandler. There had been puzzle and mystery tales long before Poe, of course, but the story making use of a "detective" had not been invented, for the simple reason that there were as yet no "detectives" in actuality. In the early 1800's the "detective" came into existence when the police systems of cities such as Paris and London developed departments of criminal investigation. Memoirs of men in these departments were soon published. Poe happened to read those of François Eugène Vidocq, of the Paris Sûreté, issued in 1829. They inspired him to create his detective, Auguste Dupin, who is the master mind of all these stories. Each has its setting in Paris, although "The Mystery of Marie Rogêt" was based on an actual New York murder case, that of Mary Cecilia Rogers, in July, 1841. One of the foremost modern connoisseurs of the detective story, Howard Haycraft, who has written its history in *Murder for Pleasure*, ranks "The Purloined Letter" as the best of Poe's three originals. There is considerable likelihood that Poe's review of Dickens' *Barnaby Rudge* in *Graham's* for February, 1842, influenced Dickens' intentions in *The Mystery of Edwin Drood*, which would undoubtedly be one of the world's great detective stories had its author lived to finish it.

Most of Poe's earliest stories—those produced at Baltimore between 1831 and 1835—were originally done in a spirit of satirical burlesque. To be entitled *Tales of the Folio Club*, they were at first eleven in number, but were probably increased to sixteen. Each was conceived as the contribution of a member of this fictitious Club and was intended to parody either a well-known author or a literary clique or fad. Mr. Snap, the president of the Folio Club, was formerly in the service of the *Down-East Review*. Messrs. Convolvulus Gondola, De Rerum Naturâ, Solomon Seadrift, Horribile Dictu, Blackwood Blackwood, Rouge-et-Noir, and Chronologos Chronology were among the narrators. As a group of satirical burlesques, however, Poe was unable to get his *Tales of the Folio Club* accepted for publication. Consequently he toned them down, offered them to magazines separately as seriously conceived tales, and scored his first successes. What is important to realize is that, from the outset, satirical burlesque was as strong a motif in his writing of fiction as was the creating of horror or terror. One is reminded of Henry Fielding, Jane Austen, and Thackeray, all of whom got interested in serious fiction after parodying the popular fiction of their day. In their case, the critical spirit, which was, so to speak, the

animus of their first work, persisted in all they did. Poe, too, never lost his original motivation. From time to time he returned to the satirical sketch and strove for humor as one of the effects possible in the prose tale. Even in his most serious work, *Eureka*, the satirical and humorous Poe is very much in evidence in the opening pages. "The Literary Life of Thingum Bob, Esq." (1844) and "Some Words with a Mummy" (1845) represent the range of Poe's humor and satire while in the prime of his powers. In the latter piece, Poe's attitude toward democracy should not occasion surprise. In common with H. H. Brackenridge, James Fenimore Cooper, and many other good Americans before the Civil War, Poe feared lest the democratic principle of majority rule might lead to a tyranny of "the rascall many," under which the rights of the individual and of minorities would not be respected. Such distrust of one of the aspects of democracy is as old as Plato's *Republic*.

VII

No writer ever made a greater mistake in choosing a literary executor than did Poe. The Reverend Rufus W. Griswold, whom Poe requested to act in this capacity, was at that time the leading anthologist of American poetry. He was also an arch Philistine. He saw to it that an edition of Poe's works was ready shortly after his death, but he used Poe, in his memoir to this edition and elsewhere, as an awful object lesson to point the evils of intemperance. Not only did Griswold exaggerate Poe's vices, but he also invented some for him. Thus did the spirit of moralistic reform, one of the tendencies that Poe deplored and that was to continue running rampant in the decade after his death, seize upon him and, by distorting his character as a man, cast a shadow over his reputation as a writer.

From out that shadow, however, there was little danger that Poe would be lifted nevermore! George Graham, his former employer, and Sarah Helen Whitman, who had loved him, came forward in his defense. Charles Baudelaire, who in 1848 became the first of Poe's French translators, took Griswold to task. Modern Poe scholarship and criticism, under the leadership of Killis Campbell, James Southall Wilson, and Arthur Hobson Quinn, have gone a long way toward resurrecting the real Poe and doing justice to his mind and art.

Perhaps Professor Quinn has most effectively described the outcome: "His fame is now secure. The America in which he could find no adequate reward treasures every word he wrote, and in every city in which he lived, except the city of his birth, stands a lasting memorial to him. He has become a world artist and through the translations of his writings he speaks today to every civilized country. He has won this wide recognition by no persistent clamor of a cult, but by the royal right of preëminence. For today, nearly a hundred years since his death, he remains not only the one American, but also the one writer in the English language, who was at once foremost in criticism, supreme in fiction, and in poetry destined to be immortal."

[The most authoritative biography is Arthur Hobson Quinn's *Edgar Allan Poe. A Critical Biography* (New York, 1941) Others are Hervey Allen's *Israfel* (New York, 1926), Mary E. Phillips' *Edgar Allan Poe, the Man* (Philadelphia, 1926), James A. Harrison's *Life and Letters of Edgar Allan Poe* (New York, 1903) and George E. Woodberry's *The Life of Edgar Allan Poe* (Boston, 1909), each in two volumes, although *Israfel* is available in a one-volume edition, revised 1934. Killis Campbell's *The Mind of Poe* (Cambridge, 1933) is one of the most important contributions to Poe scholarship. Stimulating essays on various aspects of Poe's work are to be found in Paul Elmer More's *Shelburne Essays: First Series* (Boston, 1904) and *The Demon of the Absolute* (Princeton, 1928); James Southall Wilson's edition of *Tales of Edgar Allan Poe* (New York, 1927) in Modern Student's Library; Arthur Hobson Quinn's edition of *The Complete Poems and Stories of Edgar Allan Poe with Selections from His Critical Writings*, in two volumes, New York, 1946, Margaret Alterton's and Hardin Craig's *Poe* (New York, 1935) in American Writers Series; Norman Foerster's *American Criticism* (Boston, 1928); and H. W. Wells' *The American Way of Poetry* (New York, 1943). A destructive critique of Poe is included in Ivor Winters' *Maule's Curse* (Norfolk, Conn., 1938). F. O. Matthiessen's re-evaluation of Poe for the forthcoming *The Literary History of the United States* has been printed in *The Sewanee Review*, LIV (Spring, 1946) 175-205. For variations in the texts of Poe's poems, consult Killis Campbell's edition of *The Poems of Edgar Allan Poe* (Boston, 1917).]

SONNET—TO SCIENCE

[1829]

Science! true daughter of Old Time thou
art!
Who alterest all things with thy peering
eyes.
Why preyest thou thus upon the poet's
heart,
Vulture, whose wings are dull realities?
How should he love thee? or how deem
thee wise, 5
Who wouldst not leave him in his wander-
ing
To seek for treasure in the jewelled skies,
Albeit he soared with an undaunted wing?
Hast thou not dragged Diana from her
car?
And driven the Hamadryad from the
wood 10
To seek a shelter in some happier star?

Hast thou not torn the Naiad from her
flood,
The Elf from the green grass, and from
me
The summer dream beneath the tamarind
tree?

TO HELEN

[1831]

Helen, thy beauty is to me
Like those Nicéan¹ barks of yore,
That gently, o'er a perfumed sea,
The weary, way-worn wanderer bore 5
To his own native shore.
On desperate seas long wont to roam,
Thy hyacinth hair, thy classic face,
Thy Naiad airs have brought me home

¹ This adjective, used primarily for its sound, was probably suggested by the journey of the poet Catullus to Nicasa.

To the glory that was Greece,
And the grandeur that was Rome. 10

Lo! in yon brilliant window-niche
How statue-like I see thee stand,
The agate lamp within thy hand!
Ah, Psyche, from the regions which
Are Holy-Land! 15

LENORE
[1831]

Ah, broken is the golden bowl! the spirit
flown forever!
Let the bell toll!—a saintly soul floats on
the Stygian river;
And, Guy De Vere, hast *thou* no tear?—
weep now or never more!
See! on yon drear and rigid bier low lies
thy love, Lenore!
Come! let the burial rite be read—the
funeral song be sung!— 5
An anthem for the queenliest dead that
ever died so young—
A dirge for her the doubly dead in that
she died so young.

"Wretches! ye loved her for her wealth
and hated her for her pride,
And when she fell in feeble health, ye
blessed her—that she died!
How *shall* the ritual, then, be read—the
requiem how be sung 10
By you—by yours, the evil eye,—by yours,
the slanderous tongue
That did to death the innocence that died,
and died so young?"

Peccavimus; ² but rave not thus! and let a
Sabbath song
Go up to God so solemnly the dead may
feel no wrong!
The sweet Lenore hath "gone before," with
Hope, that flew beside, 15
Leaving thee wild for the dear child that
should have been thy bride—
For her, the fair and *debonair*, that now
so lowly lies,
The life upon her yellow hair but not
within her eyes—

The life still there, upon her hair—the
death upon her eyes.

"Avaunt! to-night my heart is light. No
dirge will I upraise, 20
But waft the angel on her flight with a
Paean of old days!
Let *no* bell toll, then,—lest her soul, amid
its hallowed mirth,
Should catch the note, as it doth float—
up from the damnèd Earth!
To friends above, from fiends below, the
indignant ghost is riven—
From Hell unto a high estate far up
within the Heaven— 25
From grief and groan, to a golden throne,
beside the King of Heaven."

THE CITY IN THE SEA
[1831]

Lo! Death has reared himself a throne
In a strange city lying alone
Far down within the dim West,
Where the good and the bad and the
worst and the best
Have gone to their eternal rest. 5
There shrines and palaces and towers
(Time-eaten towers that tremble not!)
Resemble nothing that is ours.
Around, by lifting winds forgot,
Resignedly beneath the sky 10
The melancholy waters lie.

No rays from the holy heaven come down
On the long night-time of that town;
But light from out the lurid sea
Streams up the turrets silently— 15
Gleams up the pinnacles far and free—
Up domes—up spires—up kingly halls—
Up fanes—up Babylon-like walls—
Up shadowy long-forgotten bowers
Of sculptured ivy and stone flowers— 20
Up many and many a marvellous shrine
Whose wreathèd friezes intertwine
The viol, the violet, and the vine.
Resignedly beneath the sky
The melancholy waters lie. 25

² We have sinned.

So blend the turrets and shadows there
That all seem pendulous in air,
While from a proud tower in the town
Death looks gigantically down.

There open fanes and gaping graves 30
Yawn level with the luminous waves;
But not the riches there that lie
In each idol's diamond eye—
Not the gaily-jewelled dead
Tempt the waters from their bed; 35
For no ripples curl, alas!
Along that wilderness of glass—
No swellings tell that winds may be
Upon some far-off happier sea—
No heavings hint that winds have been 40
On seas less hideously serene.

But lo, a stir is in the air!
The wave—there is a movement there!
As if the towers had thrust aside,
In slightly sinking, the dull tide— 45
As if their tops had feebly given
A void within the filmy Heaven.
The waves have now a redder glow—
The hours are breathing faint and low—
And when, amid no earthly moans, 50
Down, down that town shall settle hence,
Hell, rising from a thousand thrones,
Shall do it reverence.

THE SLEEPER

[1831]

At midnight, in the month of June,
I stand beneath the mystic moon.
An opiate vapour, dewy, dim,
Exhales from out her golden rim,
And, softly dripping, drop by drop, 5
Upon the quiet mountain-top,
Steals drowsily and musically
Into the universal valley.
The rosemary nods upon the grave;
The lily lolls upon the wave; 10
Wrapping the fog about its breast,
The ruin moulders into rest;
Looking like Lethe, see! the lake
A conscious slumber seems to take,

And would not, for the world, awake. 15
All Beauty sleeps!—and lo! where lies
(Her casement open to the skies)
Irene, with her Destinies!

O lady bright! can it be right—
This window open to the night? 20
The wanton airs, from the tree-top,
Laughingly through the lattice drop—
The bodiless airs, a wizard rout,
Flit through thy chamber in and out,
And wave the curtain canopy 25
So fitfully—so fearfully—
Above the closed and fringed lid
'Neath which thy slumb'ring soul lies hid,
That, o'er the floor and down the wall,
Like ghosts the shadows rise and fall! 30
O lady dear, hast thou no fear?
Why and what art thou dreaming here?
Sure thou art come o'er far-off seas,
A wonder to these garden trees!
Strange is thy pallor! strange thy dress! 35
Strange, above all, thy length of tress,
And this all solemn silentness!

The lady sleeps! Oh, may her sleep,
Which is enduring, so be deep!
Heaven have her in its sacred keep! 40
This chamber changed for one more holy,
This bed for one more melancholy,
I pray to God that she may lie
Forever with unopened eye,
While the dim sheeted ghosts go by! 45

My love, she sleeps! Oh, may her sleep,
As it is lasting, so be deep!
Soft may the worms about her creep!
Far in the forest, dim and old,
For her may some tall vault unfold— 50
Some vault that oft hath flung its black
And winged panels fluttering back,
Triumphant, o'er the crested palls,
Of her grand family funerals—
Some sepulchre, remote, alone, 55
Against whose portal she hath thrown,
In childhood, many an idle stone—
Some tomb from out whose sounding door
She ne'er shall force an echo more,
Thrilling to think, poor child of sin! 60
It was the dead who groaned within!

ISRAFEL
[1831]

In Heaven a spirit doth dwell
 "Whose heart-strings are a lute;"
 None sing so wildly well
 As the angel Israfil,
 And the giddy stars (so legends tell), 5
 Ceasing their hymns, attend the spell
 Of his voice, all mute.³

Tottering above
 In her highest noon,
 The enamoured moon 10
 Blushes with love,
 While, to listen, the red levin
 (With the rapid Pleiads, even,
 Which were seven)
 Pauses in Heaven. 15

And they say (the starry choir
 And the other listening things)
 That Israfil's fire
 Is owing to that lyre
 By which he sits and sings— 20
 The trembling living wire
 Of those unusual strings.

But the skies that angel trod,
 Where deep thoughts are a duty—
 Where Love's a grown-up God— 25
 Where the Houris glances are
 Imbued with all the beauty
 Which we worship in a star.

Therefore thou art not wrong,
 Israfil, who despisest 30
 An unimpassioned song;
 To thee the laurels belong,
 Best bard, because the wisest!
 Merrily live, and long!

The ecstasies above 35
 With thy burning measures suit—
 Thy grief, thy joy, thy hate, thy love,
 With the fervour of thy lute—
 Well may the stars be mute!

Yes, Heaven is thine; but this 40
 Is a world of sweets and sour;

Our flowers are merely—flowers,
 And the shadow of thy perfect bliss
 Is the sunshine of ours.

If I could dwell 45
 Where Israfil
 Hath dwelt, and he where I,
 He might not sing so wildly well
 A mortal melody,
 While a bolder note than this might 50
 swell
 From my lyre within the sky.

THE COLISEUM
[1845 (1833)]

Type of the antique Rome! Rich reliquary
 Of lofty contemplation left to Time
 By buried centuries of pomp and power!
 At length—at length—after so many days
 Of weary pilgrimage and burning thirst 5
 (Thirst for the springs of lore that in
 thee lie,) 15
 I kneel, an altered and an humble man,
 Amid thy shadows, and so drink within
 My very soul thy grandeur, gloom, and
 glory! 20

Vastness! and Age! and Memories of
 Eld! 10
 Silence! and Desolation! and dim Night!
 I feel ye now—I feel ye in your strength—
 O spells more sure than e'er Judæan king
 Taught in the gardens of Gethsemane!
 O charms more potent than the rapt 15
 Chaldee
 Ever drew down from out the quiet stars! ⁴
 Here, where a hero fell, a column falls!
 Here, where the mimic eagle glared in
 gold,
 A midnight vigil holds the swarthy bat!
 Here, where the dames of Rome their 20
 gilded hair

³ The angel Israfil is mentioned in the *Koran*; the quoted line has been traced to Thomas Moore's *Lalla Rookh* and Pierre Jean de Béranger's "Le Refus."

⁴ The references are to Christ and to Chaldean astrology.

Waved to the wind, now wave the reed and
thistle!

Here, where on golden throne the monarch
lolloped,

Glides, spectre-like, unto his marble home,
Lit by the wan light of the hornèd moon,
The swift and silent lizard of the stones! 25

But stay! these walls—these ivy-clad ar-
cades—

These mouldering plinths—these sad and
blackened shafts—

These vague entablatures—this crumbling
frieze—

These shattered cornices—this wreck—this
ruin—

These stones—alas! these gray stones—are
they all— 30

All of the famed, and the colossal left
By the corrosive Hours to Fate and me?

“Not all”—the Echoes answer me—“not
all!

Prophetic sounds and loud, arise forever
From us, and from all Ruin, unto the
wise, 35

As melody from Memnon to the Sun.⁵

We rule the hearts of mightiest men—we
rule

With a despotic sway all giant minds.

We are not impotent—we pallid stones.

Not all our power is gone—not all our
fame— 40

Not all the magic of our high renown—

Not all the wonder that encircles us—

Not all the mysteries that in us lie—

Not all the memories that hang upon

And cling around about us as a garment, 45

Clothing us in a robe of more than glory.”

TO ONE IN PARADISE

[1845 (1834)]

Thou wast all that to me, love, .

For which my soul did pine—

A green isle in the sea, love,

A fountain and a shrine,

All wreathed with fairy fruits and flow-
ers, 5

And all the flowers were mine.

Ah, dream too bright to last!

Ah, starry Hope! that didst arise
But to be overcast!

A voice from out the Future cries, 10
“On! on!”—but o’er the Past

(Dim gulf!) my spirit hovering lies
Mute, motionless, aghast!

For, alas! alas! with me

The light of Life is o’er! 15

No more—no more—no more—

(Such language holds the solemn sea
To the sands upon the shore)

Shall bloom the thunder-blasted tree,
Or the stricken eagle soar! 20

And all my days are trances,

And all my nightly dreams

Are where thy dark eye glances,

And where thy footstep gleams—

In what ethereal dances, 25

By what eternal streams.

THE RAVEN

[1845]

Once upon a midnight dreary, while I
pondered, weak and weary,

Over many a quaint and curious volume
of forgotten lore,

While I nodded, nearly napping, suddenly
there came a tapping,

As of some one gently rapping, rapping
at my chamber door.

“’Tis some visiter,” I muttered, “tapping
at my chamber door— 5

Only this, and nothing more.”

Ah, distinctly I remember it was in the
bleak December,

And each separate dying ember wrought
its ghost upon the floor.

Eagerly I wished the morrow;—vainly I
had sought to borrow

⁵ At Thebes, the statue of Amenhotep III, whom the Greeks called Memnon, was supposed to give forth musical sounds when touched by the sun’s first rays.

From my books surcease of sorrow—sorrow
for the lost Lenore— 10
For the rare and radiant maiden whom the
angels name Lenore—
Nameless here for evermore.

And the silken, sad, uncertain rustling of
each purple curtain
Thrilled me—filled me with fantastic terrors
never felt before;
So that now, to still the beating of my
heart, I stood repeating, 15
“’Tis some visiter entreating entrance at
my chamber door—
Some late visiter entreating entrance at
my chamber door;—
This it is and nothing more.”

Presently my soul grew stronger; hesitating
then no longer,
“Sir,” said I, “or Madam, truly your forgiveness
I implore; 20
But the fact is I was napping, and so
gently you came rapping,
And so faintly you came tapping, tapping
at my chamber door,
That I scarce was sure I heard you”—
here I opened wide the door;—
Darkness there, and nothing more.

Deep into that darkness peering, long I
stood there wondering, fearing, 25
Doubting, dreaming dreams no mortal ever
dared to dream before;
But the silence was unbroken, and the stillness
gave no token,
And the only word there spoken was the
whispered word, “Lenore!”
This I whispered, and an echo murmured
back the word, “Lenore!”
Merely this and nothing more.

Back into the chamber turning, all my soul
within me burning,
Soon I heard again a tapping somewhat
louder than before.
“Surely,” said I, “surely that is something
at my window lattice;
Let me see, then, what thereat is, and this
mystery explore—

Let my heart be still a moment and this
mystery explore;— 35
’Tis the wind and nothing more!”

Open here I flung the shutter, when, with
many a flirt and flutter,
In there stepped a stately raven of the
saintly days of yore;
Not the least obeisance made he, not an
instant stopped or stayed he;
But, with mien of lord or lady, perched
above my chamber door— 40
Perched upon a bust of Pallas just above
my chamber door—
Perched, and sat, and nothing more.

Then this ebony bird beguiling my sad
fancy into smiling,
By the grave and stern decorum of the
countenance it wore,
“Though thy crest be shorn and shaven,
thou,” I said, “art sure no craven, 45
Ghastly grim and ancient raven wandering
from the Nightly shore—
Tell me what thy lordly name is on the
Night’s Plutonian shore!”
Quoth the raven, “Nevermore.”

Much I marveled this ungainly fowl to
hear discourse so plainly,
Though its answer little meaning—little
relevancy bore; 50
For we cannot help agreeing that no living
human being
Ever yet was blessed with seeing bird
above his chamber door—
Bird or beast upon the sculptured bust
above his chamber door,
With such name as “Nevermore.”

But the raven, sitting lonely on the placid
bust, spoke only 55
That one word, as if his soul in that one
word he did outpour.
Nothing farther then he uttered—not a
feather then he fluttered—
Till I scarcely more than muttered, “Other
friends have flown before—
On the morrow *he* will leave me, as my
hopes have flown before.”
Then the bird said, “Nevermore.” 60

Startled at the stillness broken by reply
 so aptly spoken,
 "Doubtless," said I, "what it utters is its
 only stock and store
 Caught from some unhappy master whom
 unmerciful Disaster
 Followed fast and followed faster till his
 songs one burden bore—
 Till the dirges of his Hope that melan-
 choly burden bore 65
 Of 'Never—nevermore.'"

But the raven still beguiling all my sad
 soul into smiling,
 Straight I wheeled a cushioned seat in
 front of bird and bust and door;
 Then, upon the velvet sinking, I betook
 myself to linking
 Fancy unto fancy, thinking what this om-
 inous bird of yore— 70
 What this grim, ungainly, ghastly, gaunt,
 and ominous bird of yore
 Meant in croaking "Nevermore."

This I sat engaged in guessing, but no
 syllable expressing
 To the fowl whose fiery eyes now burned
 into my bosom's core;
 This and more I sat divining, with my
 head at ease reclining 75
 On the cushion's velvet lining that the
 lamplight gloated o'er,
 But whose velvet violet lining with the
 lamplight gloating o'er,
She shall press, ah, nevermore!

Then, methought, the air grew denser, per-
 fumed from an unseen censer
 Swung by angels whose faint foot-falls
 tinkled on the tufted floor. 80
 "Wretch," I cried, "thy God hath lent thee
 —by these angels he hath sent thee
 Respite—respite and nepenthe from thy
 memories of Lenore!
 Quaff, oh quaff this kind nepenthe and for-
 get this lost Lenore!"
 Quoth the raven, "Nevermore."

"Prophet!" said I, "thing of evil!—prophet
 still, if bird or devil!— 85

Whether Tempter sent, or whether tempest
 tossed thee here ashore,
 Desolate yet all undaunted, on this desert
 land enchanted—
 On this home by Horror haunted—tell me
 truly, I implore—
 Is there—~~is~~ there balm in Gilead?—tell
 me—tell me, I implore!"
 Quoth the raven, "Nevermore." 90

"Prophet!" said I, "thing of evil—prophet
 still, if bird or devil!
 By that Heaven that bends above us—by
 that God we both adore—
 Tell this soul with sorrow laden if, within
 the distant Aidenn,⁶
 It shall clasp a sainted maiden whom the
 angels name Lenore—
 Clasp a rare and radiant maiden whom
 the angels name Lenore." 95
 Quoth the raven, "Nevermore."

"Be that word our sign of parting, bird or
 fiend!" I shrieked, upstarting—
 "Get thee back into the tempest and the
 Night's Plutonian shore!
 Leave no black plume as a token of that
 lie thy soul hath spoken!
 Leave my loneliness unbroken!—quit the
 bust above my door! 100
 Take thy beak from out my heart, and take
 thy form from off my door!"
 Quoth the raven, "Nevermore."

And the raven, never fitting, still is sitting,
 still is sitting
 On the pallid bust of Pallas just above my
 chamber door;
 And his eyes have all the seeming of a
 demon's that is dreaming, 105
 And the lamplight o'er him streaming
 throws his shadow on the floor;⁷

⁶ Poe's spelling of Eden for the rhyme.

⁷ Poe explains in one of his letters:
 "My conception was that of the bracket
 candelabrum affixed against the wall, high
 up above the door and bust, as is often
 seen in the English palaces, and even in
 some of the better houses of New York."

And my soul from out that shadow that
 lies floating on the floor
 Shall be lifted—nevermore!

ULALUME—A BALLAD
 [1850 (1847)]

The skies they were ashen and sober;
 The leaves they were crispèd and sere—
 The leaves they were withering and sere;
 It was night in the lonesome October
 Of my most immemorial year; 5
 It was hard by the dim lake of Auber,
 In the misty mid region of Weir—
 It was down by the dank tarn of Auber,
 In the ghoul-haunted woodland of Weir.⁸

Here once, through an alley Titanic, 10
 Of cypress, I roamed with my Soul—
 Of cypress, with Psyche, my Soul.
 These were days when my heart was volcanic
 As the scoriac rivers that roll—
 As the lavas that restlessly roll 15
 Their sulphurous currents down Yaanek⁹
 In the ultimate chimes of the Pole—
 That groan as they roll down Mount
 Yaanek
 In the realms of the boreal pole.

Our talk had been serious and sober, 20
 But our thoughts they were palsied and
 sere—
 Our memories were treacherous and
 sere—
 For we knew not the month was October,
 And we marked not the night of the
 year—
 (Ah, night of all nights in the year!) 25
 We noted not the dim lake of Auber—
 (Though once we had journeyed down
 here)—
 Remembered not the dank tarn of Auber,
 Nor the ghoul-haunted woodland of
 Weir.

And now, as the night was senescent 30
 And star-dials pointed to morn—
 As the star-dials hinted of morn—
 At the end of our path a liquescent
 And nebulous lustre was born,

Out of which a miraculous crescent 35
 Arose with a duplicate horn—
 Astarte's bediamonded crescent
 Distinct with its duplicate horn.¹⁰

And I said—"She is warmer than Dian:
 She rolls through an ether of sighs— 40
 She revels in a region of sighs:
 She has seen that the tears are not dry on
 These cheeks, where the worm never dies,
 And has come past the stars of the Lion¹¹
 To point us the path to the skies— 45
 To the Lethean peace of the skies—
 Come up, in despite of the Lion,
 To shine on us with her bright eyes—
 Come up through the lair of the Lion,
 With love in her luminous eyes." 50

But Psyche, uplifting her finger,
 Said—"Sadly this star I mistrust—
 Her pallor I strangely mistrust:—
 Oh, hasten!—oh, let us not linger!
 Oh, fly!—let us fly!—for we must." 55
 In terror she spoke, letting sink her
 Wings till they trailed in the dust—
 In agony sobbed, letting sink her
 Plumes till they trailed in the dust—
 Till they sorrowfully trailed in the
 dust. 60

I replied—"This is nothing but dreaming:
 Let us on by this tremulous light!
 Let us bathe in this crystalline light!
 Its Sibyllic splendor is beaming
 With Hope and in Beauty to-night:— 65
 See!—it flickers up the sky through the
 night!
 Ah, we safely may trust to its gleaming,
 And be sure it will lead us aright—
 We safely may trust to a gleaming
 That cannot but guide us aright, 70
 Since it flickers up to Heaven through
 the night."

⁸ Imaginary geography.

⁹ More imaginary geography.

¹⁰ Astarte, the Phrygian moon goddess, as a symbol of voluptuous passion, is placed in contrast with the Greek and Roman moon goddess, Artemis or Diana, noted for her chastity.

¹¹ The constellation Leo.

Thus I pacified Psyche and kissed her,
 And tempted her out of her gloom—
 And conquered her scruples and gloom;
 And we passed to the end of the vista, 75
 But were stopped by the door of a
 tomb—

By the door of a legended tomb;
 And I said—"What is written, sweet sister,
 On the door of this legended tomb?"
 She replied—"Ulalume—Ulalume— 80
 'Tis the vault of thy lost Ulalume!"

Then my heart it grew ashen and sober
 As the leaves that were crispèd and
 sere—
 As the leaves that were withering and
 sere,

And I cried—"It was surely October 85
 On *this* very night of last year
 That I journeyed—I journeyed down
 here—

That I brought a dread burden down
 here—

On this night of all nights in the year,
 Ah, what demon has tempted me
 here? 90

Well I know, now, this dim lake of
 Auber—

This misty mid region of Weir—

Well I know, now, this dank tarn of Auber,
 This ghoulish-woodland of Weir."

[Said *we*, then—the two, then—"Ah, can
 it 95

Have been that the woodlandish ghouls,
 The pitiful, the merciful ghouls—

To bar up our way and to ban it
 From the secret that lies in these
 wolds—

From the thing that lies hidden in these
 wolds— 100

Had drawn up the spectre of a planet

From the limbo of lunary souls,

This sinfully scintillant planet

From the Hell of the planetary souls?"¹²

ELDORADO

[1850 (1849)]

Gaily bedight,
 • A gallant knight,

In sunshine and in shadow,
 Had journeyed long,
 Singing a song, 5
 In search of Eldorado.

But he grew old—
 This knight so bold—
 And o'er his heart a shadow
 Fell as he found 10
 No spot of ground
 That looked like Eldorado.

And, as his strength
 Failed him at length,
 He met a pilgrim shadow— 15
 "Shadow," said he,
 "Where can it be—
 This land of Eldorado?"

"Over the Mountains
 Of the Moon, 20
 Down the Valley of the Shadow,
 Ride, boldly ride,"
 The shade replied,—
 "If you seek for Eldorado!"

ANNABEL LEE

[1850 (1849)]

It was many and many a year ago,
 In a kingdom by the sea,
 That a maiden there lived whom you may
 know

By the name of Annabel Lee:
 And this maiden she lived with no other
 thought 5

Than to love and be loved by me.

She was a child and *I* was a child,
 In this kingdom by the sea;
 But we loved with a love that was more
 than love—

I and my Annabel Lee— 10
 With a love that the wingèd seraphs of
 heaven
 Coveted her and me.

¹² In *Works*, 1850, the last stanza is omitted; it had been included in the original publication in the *American Whig Review*.

And this was the reason that, long ago,
 In this kingdom by the sea,
 A wind blew out of a cloud, chilling 15
 My beautiful Annabel Lee—
 So that her highborn kinsmen came
 And bore her away from me,
 To shut her up in a sepulchre
 In this kingdom by the sea. 20

The angels, not half so happy in Heaven,
 Went envying her and me:—
 Yes, that was the reason (as all men know,
 In this kingdom by the sea)
 That the wind came out of the cloud by
 night 25
 Chilling and killing my Annabel Lee.

But our love it was stronger by far than
 the love
 Of those who were older than we—
 Of many far wiser than we—
 And neither the angels in Heaven above, 30
 Nor the demons down under the sea,
 Can ever dissever my soul from the soul
 Of the beautiful Annabel Lee:—

For the moon never beams, without bring-
 ing me dreams
 Of the beautiful Annabel Lee; 35
 And the stars never rise, but I feel the
 bright eyes
 Of the beautiful Annabel Lee;
 And so, all the night-tide, I lie down by
 the side
 Of my darling, my darling, my life and
 my bride
 In her sepulchre there by the sea— 40
 In her tomb by the sounding sea.

THE POETIC PRINCIPLE

[1850]

IN SPEAKING of the Poetic Principle, I have no design to be either thorough or profound. While discussing very much at random the essentiality of what we call Poetry, my principal purpose will be to cite for consideration some few of those minor English or American poems which

best suit my own taste, or which, upon my own fancy, have left the most definite impression. By "minor poems" I mean, of course, poems of little length. And here, in the beginning, permit me to say a few words in regard to a somewhat peculiar principle, which, whether rightfully or wrongfully, has always had its influence in my own critical estimate of the poem. I hold that a long poem does not exist. I maintain that the phrase, "a long poem," is simply a flat contradiction in terms.

I need scarcely observe that a poem deserves its title only inasmuch as it excites, by elevating the soul. The value of the poem is in the ratio of this elevating excitement. But all excitements are, through a psychal necessity, transient. That degree of excitement which would entitle a poem to be so called at all, cannot be sustained throughout a composition of any great length. After the lapse of half an hour, at the very utmost, it flags—fails—a revulsion ensues—and then the poem is, in effect, and in fact, no longer such.

There are, no doubt, many who have found difficulty in reconciling the critical dictum that the "Paradise Lost" is to be devoutly admired throughout, with the absolute impossibility of maintaining for it, during perusal, the amount of enthusiasm which that critical dictum would demand. This great work, in fact, is to be regarded as poetical only when, losing sight of that vital requisite in all works of Art, Unity, we view it merely as a series of minor poems. If, to preserve its Unity—its totality of effect or impression—we read it (as would be necessary) at a single sitting, the result is but a constant alternation of excitement and depression. After a passage of what we feel to be true poetry, there follows, inevitably, a passage of platitude which no critical pre-judgment can force us to admire; but if, upon completing the work, we read it again, omitting the first book—that is to say, commencing with the second—we shall be surprised at now finding that admirable which we before condemned—that damnable which we had pre-

viously so much admired. It follows from all this that the ultimate, aggregate, or absolute effect of even the best epic under the sun, is a nullity—and this is precisely the fact.

In regard to the *Iliad*, we have, if not positive proof, at least very good reason, for believing it intended as a series of lyrics; but, granting the epic intention, I can say only that the work is based in an imperfect sense of Art. The modern epic is, of the supposititious ancient model, but an inconsiderate and blindfold imitation. But the day of these artistic anomalies is over. If, at any time, any very long poem *were* popular in reality, which I doubt, it is at least clear that no very long poem will ever be popular again.

That the extent of a poetical work is, *ceteris paribus*,¹ the measure of its merit, seems undoubtedly, when we thus state it, a proposition sufficiently absurd—yet we are indebted for it to the Quarterly Reviews. Surely there can be nothing in mere *size*, abstractly considered—there can be nothing in mere *bulk*, so far as a volume is concerned, which has so continuously elicited admiration from these saturnine pamphlets! A mountain, to be sure, by the mere sentiment of physical magnitude which it conveys, *does* impress us with a sense of the sublime—but no man is impressed after *this* fashion by the material grandeur of even “*The Columbiad*.”² Even the Quarterlies have not instructed us to be so impressed by it. *As yet*, they have not *insisted* on our estimating Lamartine by the cubic foot, or Pollok by the pound³—but what else are we to *infer* from their continued prating about “sustained effort”? If, by “sustained effort,” any little gentleman has accomplished an epic, let us frankly commend him for the effort—if this indeed be a thing commendable—but let us forbear praising the epic on the effort’s account. It is to be hoped that common sense, in the time to come, will prefer deciding upon a work of art rather by the impression it makes, by the effect it produces, than by the time it took to

impress the effect, or by the amount of “sustained effort” which had been found necessary in effecting the impression. The fact is, that perseverance is one thing and genius quite another—nor can all the Quarterlies in Christendom confound them. By and by, this proposition, with many which I have just been urging, will be received as self-evident. In the mean time, by being generally condemned as falsities, they will not be essentially damaged as truths.

On the other hand, it is clear that a poem may be improperly brief. Undue brevity degenerates into mere epigrammatism. A *very* short poem, while now and then producing a brilliant or vivid, never produces a profound or enduring effect. There must be the steady pressing down of the stamp upon the wax. De Béranger has wrought innumerable things, pungent and spirit-stirring; but in general they have been too imponderous to stamp themselves deeply into the public attention, and thus, as so many feathers of fancy, have been blown aloft only to be whistled down the wind.⁴

A remarkable instance of the effect of undue brevity in depressing a poem—in keeping it out of the popular view—is afforded by the following exquisite little Serenade:⁵

I arise from dreams of thee
In the first sweet sleep of night,

¹ Other things being equal.

² Joel Barlow (1754-1812), one of “the Connecticut wits,” was the author of *The Columbiad* (1807), an epic in ten books.

³ Alphonse de Lamartine (1790-1827) was one of the French romantic poets; Robert Pollok (1798?-1827), a Scottish poet, wrote *The Course of Time*, in two volumes (1827).

⁴ Pierre Jean de Béranger (1780-1857) was the author of *Chansons*, collections of songs published in 1815, 1821, 1825, 1828, and 1833.

⁵ In Shelley’s *Poetical Works* (1839), this poem is entitled “Lines to an Indian Air.”

When the winds are breathing low,
 And the stars are shining bright;
 I arise from dreams of thee,
 And a spirit in my feet
 Has led me—who knows how?—
 To thy chamber-window, sweet!

The wandering airs, they faint
 On the dark, the silent stream—
 The champak odors fail
 Like sweet thoughts in a dream;
 The nightingale's complaint,
 It dies upon her heart,
 As I must die on thine,
 O, beloved as thou art!

O, lift me from the grass!
 I die, I faint, I fail!
 Let thy love in kisses rain
 On my lips and eyelids pale.
 My cheek is cold and white, alas!
 My heart beats loud and fast:
 Oh! press it close to thine again,
 Where it will break at last!

Very few perhaps are familiar with these lines—yet no less a poet than Shelley is their author. Their warm, yet delicate and ethereal imagination will be appreciated by all—but by none so thoroughly as by him who has himself arisen from sweet dreams of one beloved to bathe in the aromatic air of a southern midsummer night.

One of the finest poems by Willis, the very best in my opinion which he has ever written, has no doubt, through this same defect of undue brevity, been kept back from its proper position, not less in the critical than in the popular view.⁶

The shadows lay along Broadway,
 'Twas near the twilight-tide—
 And slowly there a lady fair
 Was walking in her pride.
 Alone walk'd she; but, viewlessly,
 Walk'd spirits at her side.

Peace charm'd the street beneath her feet,
 And Honour charm'd the air;

And all astir looked kind on her,
 And call'd her good and fair—
 For all God ever gave to her
 She kept with chary care.

She kept with care her beauties rare
 From lovers warm and true—
 For her heart was cold to all but gold,
 And the rich came not to woo—
 But honour'd well are charms to sell,
 If priests the selling do.

Now walking there was one more fair—
 A slight girl, hly-pale;
 And she had unseen company
 To make the spirit quail—
 'Twixt Want and Scorn she walk'd forlorn,
 And nothing could avail.

No mercy now can clear her brow
 For this world's peace to pray;
 For, as love's wild prayer dissolved in air,
 Her woman's heart gave way!—
 But the sin forgiven by Christ in Heaven
 By man is cursed away!

In this composition we find it difficult to recognize the Willis who has written so many mere "verses of society." The lines are not only richly ideal, but full of energy; while they breathe an earnestness, an evident sincerity of sentiment, for which we look in vain throughout all the other works of this author.

While the epic mania—while the idea that, to merit in poetry, prolixity is indispensable—has for some years past been gradually dying out of the public mind by mere dint of its own absurdity, we find it succeeded by a heresy too palpably false to be long tolerated, but one which, in the brief period it has already endured, may be said to have accomplished more in the

⁶ Nathaniel Parker Willis (1806-1867) was one of Poe's friends and a popular poet and essayist. This poem is entitled "Unseen Spirits" in his *Poems* (1850). A tribute to Poe appears in his *Hurry-Graphs* (1851), pp. 240-250.

corruption of our Poetical Literature than all its other enemies combined. I allude to the heresy of *The Didactic*. It has been assumed, tacitly and avowedly, directly and indirectly, that the ultimate object of all Poetry is Truth. Every poem, it is said, should inculcate a moral, and by this moral is the poetical merit of the work to be adjudged. We Americans especially have patronized this happy idea, and we Bostonians very especially have developed it in full. We have taken it into our heads that to write a poem simply for the poem's sake, and to acknowledge such to have been our design, would be to confess ourselves radically wanting in the true Poetic dignity and force:—but the simple fact is, that would we but permit ourselves to look into our own souls, we should immediately there discover that under the sun there neither exists nor *can* exist any work more thoroughly dignified, more supremely noble than this very poem, this poem *per se*, this poem which is a poem and nothing more, this poem written solely for the poem's sake.

With as deep a reverence for the True as ever inspired the bosom of man, I would nevertheless limit, in some measure, its modes of inculcation. I would limit to enforce them. I would not enfeeble them by dissipation. The demands of Truth are severe. She has no sympathy with the myrtles. All *that* which is so indispensable in Song is precisely all *that* with which *she* has nothing whatever to do. It is but making her a flaunting paradox to wreath her in gems and flowers. In enforcing a truth, we need severity rather than efflorescence of language. We must be simple, precise, terse. We must be cool, calm, unpassioned. In a word, we must be in that mood which, as nearly as possible, is the exact converse of the poetical. *He* must be blind indeed who does not perceive the radical and chasmal differences between the truthful and the poetical modes of inculcation. He must be theory-mad beyond redemption who, in spite of these differences, shall still persist in attempting

to reconcile the obstinate oils and waters of Poetry and Truth.

Dividing the world of mind into its three most immediately obvious distinctions, we have the Pure Intellect, Taste, and the Moral Sense. I place Taste in the middle because it is just this position which it occupies in the mind. It holds intimate relations with either extreme, but from the Moral Sense is separated by so faint a difference that Aristotle has not hesitated to place some of its operations among the virtues themselves. Nevertheless, we find the *offices* of the trio marked with a sufficient distinction. Just as the Intellect concerns itself with Truth, so Taste informs us of the Beautiful, while the Moral Sense is regardful of Duty. Of this latter, while Conscience teaches the obligation, and Reason the expediency, Taste contents herself with displaying the charms, waging war upon Vice solely on the ground of her deformity, her disproportion, her animosity to the fitting, to the appropriate, to the harmonious, in a word, to Beauty.

An immortal instinct deep within the spirit of man is thus plainly a sense of the Beautiful. This it is which administers to his delight in the manifold forms, and sounds, and odors, and sentiments, amid which he exists. And just as the lily is repeated in the lake, or the eyes of Amaryllis in the mirror, so is the mere oral or written repetition of these forms, and sounds, and colors, and odors, and sentiments, a duplicate source of delight. But this mere repetition is not poetry. He who shall simply sing, with however glowing enthusiasm, or with however vivid a truth of description, of the sights, and sounds, and odors, and colors, and sentiments, which greet *him* in common with all mankind—he, I say, has yet failed to prove his divine title. There is still a something in the distance which he has been unable to attain. We have still a thirst unquenchable, to allay which he has not shown us the crystal springs. This thirst belongs to the immortality of Man. It is at once a consequence and an indication of

his perennial existence. It is the desire of the moth for the star. It is no mere appreciation of the Beauty before us—but a wild effort to reach the Beauty above. Inspired by an ecstatic prescience of the glories beyond the grave, we struggle by multiform combinations among the things and thoughts of Time to attain a portion of that Loveliness whose very elements, perhaps, appertain to eternity alone. And thus when by Poetry—or when by Music, the most entrancing of the Poetic moods—we find ourselves melted into tears, we weep then—not as the Abbate Gravina⁷ supposes—through excess of pleasure, but through a certain, petulant, impatient sorrow at our inability to grasp *now*, wholly, here on earth, at once and forever, those divine and rapturous joys, of which *through* the poem or *through* the music, we attain to but brief and indeterminate glimpses.

The struggle to apprehend the supernal Loveliness—this struggle, on the part of souls fittingly constituted—has given to the world all *that* which it (the world) has ever been enabled at once to understand and to *feel* as poetic.

The Poetic Sentiment, of course, may develop itself in various modes—in Painting, in Sculpture, in Architecture, in the Dance—very especially in Music—and very peculiarly, and with a wide field, in the composition of the Landscape Garden. Our present theme, however, has regard only to its manifestation in words. And here let me speak briefly on the topic of rhythm. Contenting myself with the certainty that Music, in its various modes of metre, rhythm, and rhyme, is of so vast a moment in Poetry as never to be wisely rejected—is so vitally important an adjunct that he is simply silly who declines its assistance—I will not now pause to maintain its absolute essentiality. It is in Music, perhaps, that the soul most nearly attains the great end for which, when inspired by the Poetic Sentiment, it struggles—the creation of supernal Beauty. It *may* be, indeed, that here this sublime end is, now

and then, attained in *fact*. We are often made to feel, with a shivering delight, that from an earthly harp are stricken notes which *cannot* have been unfamiliar to the angels. And thus there can be little doubt that in the union of Poetry with Music in its popular sense, we shall find the widest field for the Poetic development. The old Bards and Minnesingers had advantages which we do not possess—and Thomas Moore, singing his own songs, was, in the most legitimate manner, perfecting them as poems.⁸

To recapitulate, then:—I would define, in brief, the Poetry of words as *The Rhythmical Creation of Beauty*. Its sole arbiter is Taste. With the Intellect or with the Conscience, it has only collateral relations. Unless incidentally, it has no concern whatever either with Duty or with Truth.

A few words, however, in explanation. *That* pleasure which is at once the most pure, the most elevating, and the most intense, is derived, I maintain, from the contemplation of the Beautiful. In the contemplation of Beauty we alone find it possible to attain that pleasurable elevation, or excitement, *of the soul*, which we recognize as the Poetic Sentiment, and which is so easily distinguished from Truth, which is the satisfaction of the Reason, or from Passion, which is the excitement of the heart. I make Beauty, therefore,—using the word as inclusive of the sublime,—I make Beauty the province of the poem, simply because it is an obvious rule of Art that effects should be made to spring as directly as possible from their causes:—no one as yet having been weak enough to deny that the peculiar elevation in question is at least *most readily* attainable in the poem. It by no means follows, however, that the incitements of Passion,

⁷ Giovanna Vincenzo Gravina (1664-1718), an Italian critic, wrote *Della ragion poetica libri due* (1718), a treatise on poetry.

⁸ Thomas Moore (1779-1852), the Irish poet, was very popular in the United States.

or the precepts of Duty, or even the lessons of Truth, may not be introduced into a poem, and with advantage, for they may subserve incidentally, in various ways, the general purposes of the work—but the true artist will always contrive to tone them down in proper subjection to that *Beauty* which is the atmosphere and the real essence of the poem

I cannot better introduce the few poems which I shall present for your consideration, than by the citation of the Poem to Mr Longfellow's "Waif"

The day is done, and the darkness
Falls from the wings of Night,
As a feather is wafted downward
From an eagle in his flight

I see the lights of the village
Gleam through the rain and the mist,
And a feeling of sadness comes o'er me,
That my soul cannot resist,

A feeling of sadness and longing,
That is not akin to pain,
And resembles sorrow only
As the mist resembles the rain

Come, read to me some poem,
Some simple and heartfelt lay,
That shall soothe this restless feeling,
And banish the thoughts of day

Not from the grand old masters,
Not from the bards sublime,
Whose distant footsteps echo
Through the corridors of Time

For, like strains of martial music,
Their mighty thoughts suggest
Life's endless toil and endeavor,
And to-night I long for rest

Read from some humbler poet,
Whose songs gushed from his heart,
As showers from the clouds of summer,
Or tears from the eyelids start;

Who through long days of labor,

And nights devoid of ease,
Still heard in his soul the music
Of wonderful melodies

Such songs have power to quiet
The restless pulse of care,
And come like the benediction
That follows after prayer

Then read from the treasured volume
The poem of thy choice,
And lend to the rhyme of the poet
The beauty of thy voice

And the night shall be filled with music,
And the cares, that infest the day,
Shall fold their tents, like the Arabs,
And as silently steal away

With no great range of imagination, these lines have been justly admired for their delicacy of expression. Some of the images are very effective. Nothing can be better than

The bards sublime
Whose distant footsteps echo
Down the corridors of Time

The idea of the last quatrain is also very effective. The poem, on the whole, however, is chiefly to be admired for the graceful *insouciance* of its metre, so well in accordance with the character of the sentiments, and especially for the *ease* of the general manner. This "ease" or naturalness, in a literary style, it has long been the fashion to regard as ease in appearance alone—as a point of really difficult attainment. But not so—a natural manner is difficult only to him who should never meddle with it—to the unnatural. It is but the result of writing with the understanding, or with the instinct, that *the tone*, in composition, should always be that which the mass of mankind would adopt—and must perpetually vary, of course, with the occasion. The author who, after the fashion of the "North American Review," should be upon *all* occasions merely

"quiet," must necessarily upon *many* occasions be simply silly, or stupid, and has no more right to be considered "easy" or "natural" than a Cockney exquisite, or than the sleeping Beauty in the wax-works

Among the minor poems of Bryant none has so much impressed me as the one which he entitles "June" I quote only a portion of it

There, through the long, long summer hours,

The golden light should lie,
And thick young herbs and groups of flowers

Stand in their beauty by
The oriole should build and tell
His love-tale, close beside my cell,

The idle butterfly
Should rest him there, and there be heard
The housewife-bee and humming bird

And what if cheerful shouts at noon
Come, from the village sent,
Or songs of maids, beneath the moon,
With fairy laughter blent?

And what if, in the evening light,
Betrothed lovers walk in sight
Of my low monument?
I would the lovely scene around
Might know no sadder sight nor sound

I know, I know I should not see
The season's glorious show,
Nor would its brightness shine for me,
Nor its wild music flow,
But if, around my place of sleep,
The friends I love should come to weep,
They might not haste to go
Soft airs, and song, and light and bloom
Should keep them lingering by my tomb

These to their softened hearts should bear
The thought of what has been,
And speak of one who cannot share
The gladness of the scene,
Whose part, in all the pomp that fills
The circuit of the summer hills,
Is—that his grave is green,

And deeply would their hearts rejoice
To hear again his living voice

The rhythmical flow here is even voluptuous—nothing could be more melodious. The poem has always affected me in a remarkable manner. The intense melancholy which seems to well up, perforce, to the surface of all the poet's cheerful sayings about his grave, we find thrilling us to the soul—while there is the truest poetic elevation in the thrill. The impression left is one of a pleasurable sadness. And if, in the remaining compositions which I shall introduce to you, there be more or less of a similar tone always apparent, let me remind you that (how or why we know not) this certain taint of sadness is inseparably connected with all the higher manifestations of true Beauty. It is, nevertheless,

A feeling of sadness and longing
That is not akin to pain,
And resembles sorrow only
As the mist resembles the rain.⁹

The taint of which I speak is clearly perceptible even in a poem so full of brilliancy and spirit as the "Health" of Edward Coate Pinckney¹⁰

I fill this cup to one made up
Of loveliness alone,
A woman, of her gentle sex
The seeming paragon,
To whom the better elements
And kindly stars have given
A form so fair, that, like the air,
'Tis less of earth than heaven

Her every tone is music's own,
Like those of morning birds,
And something more than melody
Dwells ever in her words,
The coinage of her heart are they,

⁹ See p. 462

¹⁰ A Maryland poet (1802-1828), who imitated Thomas Moore

And from her lips each flows
As one may see the burden'd bee
Forth issue from the rose.

Affections are as thoughts to her,
The measures of her hours,
Her feelings have the fragraney,
The freshness of young flowers,
And lovely passions, changing oft,
So fill her, she appears
The image of themselves by turns,—
The idol of past years!

Of her bright face one glance will trace
A picture on the brain,
And of her voice in echoing hearts
A sound must long remain,
But memory, such as mine of her,
So very much endears,
When death is nigh, my latest sigh
Will not be life's but hers

I fill this cup to one made up
Of loveliness alone,
A woman, of her gentle sex
The seeming paragon—
Her health! and would on earth there stood
Some more of such a frame,
That life might be all poetry,
And weariness a name

It was the misfortune of Mr Pinckney to have been born too far south. Had he been a New Englander, it is probable that he would have been ranked as the first of American lyrists, by that magnanimous cabal which has so long controlled the destinies of American Letters, in conducting the thing called "The North American Review." The poem just cited is especially beautiful, but the poetic elevation which it induces, we must refer chiefly to our sympathy in the poet's enthusiasm. We pardon his hyperboles for the evident earnestness with which they are uttered.

It was by no means my design, however, to expatiate upon the *merits* of what I should read you. These will necessarily speak for themselves. Boccacini, in his

"Advertisements from Parnassus," tells us that Zoilus once presented Apollo a very caustic criticism upon a very admirable book—whereupon the god asked him for the beauties of the work.¹¹ He replied that he only busied himself about the errors. On hearing this, Apollo, handing him a sack of unwinnowed wheat, bade him pick out *all the chaff* for his reward.

Now this fable answers very well as a hit at the critics—but I am by no means sure that the god was in the right. I am by no means certain that the true limits of the critical duty are not grossly misunderstood. Excellence, in a poem especially, may be considered in the light of an axiom, which need only be properly *put*, to become self-evident. It is *not* excellence if it require to be demonstrated as such—and thus to point out too particularly the merits of a work of Art, is to admit that they are *not* merits altogether.

Among the "Melodies" of Thomas Moore is one whose distinguished character as a poem proper seems to have been singularly left out of view. I allude to his lines beginning—"Come, rest in this bosom." The intense energy of their expression is not surpassed by anything in Byron. There are two of the lines in which a sentiment is conveyed that embodies the *all in all* of the divine passion of love—a sentiment which, perhaps, has found its echo in more, and in more passionate, human hearts than any other single sentiment ever embodied in words.

Come, rest in this bosom, my own stricken
dear,
Though the herd have fled from thee, thy
home is still here,
Here still is the smile, that no cloud can
o'ercast,
And a heart and a hand all thy own to
the last

Oh! what was love made for, if 'tis not the
same

¹¹ Trajano Boccalini (1556-1613) was an Italian satirist.

Through joy and through torment, through
glory and shame?
I know not, I ask not, if guilt's in that
heart,
I but know that I love thee, whatever thou
art

Thou hast call'd me thy Angel in moments
of bliss,
And thy Angel I'll be, 'mid the horrors of
this,—
Through the furnace, unshrinking, thy steps
to pursue,
And shield thee, and save thee,—or perish
there too!

It has been the fashion of late days to deny Moore imagination, while granting him fancy—a distinction originating with Coleridge¹²—than whom no man more fully comprehended the great powers of Moore. The fact is, that the fancy of this poet so far predominates over all his other faculties, and over the fancy of all other men, as to have induced, very naturally, the idea that he is fanciful *only*. But never was there a greater mistake. Never was a grosser wrong done the fame of a true poet. In the compass of the English language I can call to mind no poem more profoundly—more weirdly *imaginative*, in the best sense, than the lines commencing—“I would I were by that dim lake”—which are the composition of Thomas Moore. I regret that I am unable to remember them.¹³

One of the noblest—and, speaking of fancy, one of the most singularly fanciful of modern poets, was Thomas Hood¹⁴. His “Fair Ines” had always for me an inexpressible charm.

O saw ye not fair Ines?
She's gone into the West,
To dazzle when the sun is down,
And rob the world of rest
She took our daylight with her,
The smiles that we love best,
With morning blushes on her cheek,
And pearls upon her breast.

O turn again, fair Ines,
Before the fall of night,
For fear the Moon should shine alone,
And stars univall'd bright,
And blessed will the lover be
That walks beneath their light,
And breathes the love against thy cheek
I dare not even write!

Would I had been, fair Ines,
That gallant cavalier,
Who rode so gaily by thy side,
And whisper'd thee so near!
Were there no bonny dames at home,
Or no true lovers here,
That he should cross the seas to win
The dearest of the dear?

I saw thee, lovely Ines,
Descend along the shore,
With bands of noble gentlemen,
And banners wav'd before,
And gentle youth and maidens gay,
And snowy plumes they wore,
It would have been a beauteous dream,
If it had been no more!

Alas, alas, fair Ines,
She went away with song,
With Music waiting on her steps,
And shoutings of the throng,
But some were sad, and felt no mirth,
But only Music's wrong,
In sounds that sang Farewell, Farewell,
To her you've loved so long.

Farewell, farewell, fair Ines,
That vessel never bore
So fair a lady on its deck,
Nor danced so light before,—
Alas for pleasure on the sea,
And sorrow on the shore!
The smile that blest one lover's heart
Has broken many more!

¹² This distinction is made in Coleridge's *Biographia Literaria* (1817), Ch. XIII.

¹³ Poe refers to one of Moore's *Irish Melodies*, to be found in the Oxford edition of his *Poetical Works*, p. 226.

¹⁴ This English poet (1799-1845) was noted for his humor, his sentiment, his social conscience, and his metrical facility.

"The Haunted House," by the same author, is one of the truest poems ever written, one of the *truest*, one of the most unexceptionable, one of the most thoroughly artistic, both in its theme and in its execution. It is, moreover, powerfully ideal—imaginative. I regret that its length renders it unsuitable for the purposes of this Lecture. In place of it, permit me to offer the universally appreciated "Bridge of Sighs."

One more Unfortunate,
Weary of breath,
Rashly importunate,
Gone to her death!

Take her up tenderly,
Lift her with care,—
Fashion'd so slenderly,
Young, and so fair!

Look at her garments
Clinging like cerements,
Whilst the wave constantly
Drips from her clothing,
Take her up instantly,
Loving, not loathing—

Touch her not scornfully,
Think of her mournfully,
Gently and humanly,
Not of the stains of her,
All that remains of her
Now is pure womanly

Make no deep scrutiny
Into her mutiny
Rash and undutiful,
Past all dishonor,
Death has left on her
Only the beautiful

Still, for all slips of hers,
One of Eve's family—
Wipe those poor lips of hers
Oozing so clammy
Loop up her tresses
Escaped from the comb,
Her fair auburn tresses,

Whilst wonderment guesses
Where was her home?

Who was her father?
Who was her mother?
Had she a sister?
Had she a brother?
Or was there a dearer one
Still, and a nearer one
Yet, than all other?

Alas! for the rarity
Of Christian charity
Under the sun!
Oh! it was pitiful!
Near a whole city full,
Home she had none

Sisterly, brotherly,
Fatherly, motherly
Feelings had changed
Love, by harsh evidence,
Thrown from its eminence,
Even God's providence
Seeming estranged

Where the lamps quiver
So far in the river,
With many a light
From window and casement,
From garret to basement,
She stood, with amazement,
Houseless by night

The bleak wind of March
Made her tremble and shiver,
But not the dark arch,
Or the black flowing river
Mad from life's history,
Glad to death's mystery,
Swift to be hurl'd—
Anywhere, anywhere
Out of the world!

In she plunged boldly,
No matter how coldly
The rough river ran,—
Over the brink of it,
Picture it,—think of it,
Dissolute Man!

Lave in it, drink of it
Then, if you can!

Take her up tenderly,
Lift her with care,
Fashion'd so slenderly,
Young, and so fair!

Ere her limbs frigidly
Stiffen too rigidly,
Decently,—kindly,—
Smooth, and compose them,
And her eyes, close them,
Staring so blindly!

Dreadfully staring
Through muddy impurity,
As when with the daring
Last look of despairing
Fixed on futurity

Perishing gloomily,
Spurred by contumely,
Cold inhumanity,
Burning insanity,
Into her rest,—
Cross her hands humbly,
As if praying dumbly,
Over her breast!
Owning her weakness,
Her evil behaviour,
And leaving, with meekness,
Her sins to her Savior!

The vigor of this poem is no less remarkable than its pathos. The versification, although carrying the fanciful to the very verge of the fantastic, is nevertheless admirably adapted to the wild insanity which is the thesis of the poem.

Among the minor poems of Lord Byron is one which has never received from the critics the praise which it undoubtedly deserves.¹⁵

Though the day of my destiny's over,
And the star of my fate hath declined,
Thy soft heart refused to discover
The faults which so many could find,
Though thy soul with my grief was acquainted,

It shrunk not to share it with me,
And the love which my spirit hath painted
It never hath found but in *thee*

Then when nature around me is smiling,
The last smile which answers to mine,
I do not believe it beguiling,
Because it reminds me of thine,
And when winds are at war with the ocean,
As the breasts I believed in with me,
If their billows excite an emotion,
It is that they bear me from *thee*

Though the rock of my last hope is shivered,
And its fragments are sunk in the wave,
Though I feel that my soul is delivered
To pain—it shall not be its slave
There is many a pang to pursue me
They may crush, but they shall not condemn—
They may torture, but shall not subdue me—
'Tis of *thee* that I think—not of them

Though human, thou didst not deceive me,
Though woman, thou didst not forsake me,
Though loved, thou forborest to grieve me,
Though slandered, thou never couldst shake,—
Though trusted, thou didst not disclaim me,
Though parted, it was not to fly,
Though watchful, 'twas not to defame me,
Nor mute, that the world might believe

Yet I blame not the world, nor despise it,
Nor the war of the many with one—
If my soul was not fitted to prize it,
'Twas folly not sooner to shun
And if dearly that error hath cost me,
And more than I once could foresee,
I have found that whatever it lost me,
It could not deprive me of *thee*

From the wreck of the past, which hath
perished,

¹⁵ "Stanzas to Augusta," in the *Prisoner of Chillon* volume of 1816

Thus much I at least may recall,
 It hath taught me that which I most cher-
 ished,
 Deserved to be dearest of all
 In the desert a fountain is springing,
 In the wide waste there still is a tree,
 And a bird in the solitude singing,
 Which speaks to my spirit of *thee*

Although the rhythm here is one of the most difficult, the versification could scarcely be improved. No nobler *theme* ever engaged the pen of poet. It is the soul-elevating idea that no man can consider himself entitled to complain of Fate while, in his adversity, he still retains the unwavering love of woman.

From Alfred Tennyson—although in perfect sincerity I regard him as the noblest poet that ever lived—I have left myself time to cite only a very brief specimen. I call him, and think *him* the noblest of poets—not because the impressions he produces are at *all* times the most profound—not because the poetical excitement which he induces is at *all* times the most intense—but because it is at all times the most ethereal—in other words, the most elevating and most pure. What poet is so little of the earth, earthy? What I am about to read is from his last long poem, “The Princess”.¹⁶

Tears, idle tears, I know not what they mean,
 Tears from the depth of some divine despair
 Rise in the heart, and gather to the eyes,
 In looking on the happy Autumn-fields,
 And thinking of the days that are no more

Fresh as the first beam glittering on a sail,
 That brings our friends up from the underworld,
 Sad as the last which reddens over one
 • That sinks with all we love below the verge,
 So sad, so fresh, the days that are no more

Ah, sad and strange as in dark summer dawns
 The earliest pipe of half-awaken'd birds
 To dying ears, when unto dying eyes
 The casement slowly grows a glimmering square,
 So sad, so strange, the days that are no more

Dear as remember'd kisses after death,
 And sweet as those by hopeless fancy feign'd
 On lips that are for others, deep as love,
 Deep as first love, and wild with all regret,
 O Death in Life, the days that are no more

Thus, although in a very cursory and imperfect manner, I have endeavoured to convey to you my conception of the Poetic Principle. It has been my purpose to suggest that, while this Principle itself is strictly and simply the Human Aspiration for Supernal Beauty, the manifestation of the Principle is always found in an *elevating excitement of the Soul*, quite independent of that passion which is the intoxication of the Heart, or of that truth which is the satisfaction of the Reason. For in regard to Passion, alas! its tendency is to degrade rather than to elevate the Soul. Love, on the contrary—Love—the true, the divine Eros—the Uranian as distinguished from the Dionæan Venus—is unquestionably the purest and truest of all poetical themes.¹⁷ And in regard to Truth—if, to be sure, through the attainment of a truth we are led to perceive a harmony where none was apparent before, we experience at once the true poetical effect—but this effect is referable to the harmony alone, and not in the least degree to the

¹⁶ *The Princess* was published in 1847.

¹⁷ From the foam surrounding the limbs of Uranus, the heavenly husband of Gæa or Earth, sprang Aphrodite, another myth made Aphrodite or Venus the daughter of Jupiter and Dione. Poe arbitrarily identifies the first Venus with spiritual love, the second with more earthly love. These contrasts figure in both “Ulalume” and “Ligeia.”

truth which merely served to render the harmony manifest

We shall reach, however, more immediately a distinct conception of what the true Poetry is, by mere reference to a few of the simple elements which induce in the Poet himself the true poetical effect. He recognizes the ambrosia which nourishes his soul, in the bright orbs that shine in Heaven—in the volutes of the flower—in the clustering of low shrubberies—in the waving of the grain-fields—in the slanting of tall Eastern trees—in the blue distance of mountains—in the grouping of clouds—in the twinkling of half-hidden brooks—in the gleaming of silver rivers—in the repose of sequestered lakes—in the star-mirroring depths of lonely wells. He perceives it in the songs of birds—in the harp of Aeolus—in the sighing of the night-wind—in the repining voice of the forest—in the surf that complains to the shore—in the fresh breath of the woods—in the scent of the violet—in the voluptuous perfume of the hyacinth—in the suggestive odor that comes to him at eventide from far-distant, undiscovered islands, over dim oceans, illimitable and unexplored. He owns it in all noble thoughts—in all unworldly motives—in all holy impulses—in all chivalrous, generous, and self-sacrificing deeds. He feels it in the beauty of woman—in the grace of her step—in the lustre of her eye—in the melody of her voice—in her soft laughter—in her sigh—in the harmony of the rustling of her robes. He deeply feels it in her winning endearments—in her burning enthusiasms—in her gentle charities—in her meek and devotional endurances—but above all—ah, far above all—he kneels to it, he worships it in the faith, in the purity, in the strength, in the altogether divine majesty—of her *love*.

Let me conclude by the recitation of yet another brief poem—one very different in character from any that I have before quoted. It is by Motherwell, and is called "The Song of the Cavalier."¹⁸ With our modern and altogether rational ideas of the absurdity and impiety of warfare, we are

not precisely in that frame of mind best adapted to sympathize with the sentiments, and thus to appreciate the real excellence of the poem. To do this fully we must identify ourselves in fancy with the soul of the old cavalier.

Then mounte' then mounte, brave gallants,
all,

And don your helmes amaine
Deathe's couriers, Fame and Honour, call
Us to the field againe

No shrewish tears shall fill our eye
When the sword-hilt's in our hand,—
Heart-whole we'll part, and no whit sighe

For the fayrest of the land,
Let piping swaine, and craven wight,

Thus weepe and puling crye,
Our business is like men to fight,
And hero-like to die'

HAWTHORNE'S TWICE-TOLD TALES¹ [1842]

I

WE HAVE always regarded the *Tale* (using this word in its popular acceptation) as affording the best prose opportunity for display of the highest talent. It has peculiar advantages which the novel does not admit. It is, of course, a far finer field than the essay. It has even points of superiority over the poem. An accident has deprived us, this month, of our customary space for review, and thus nipped in the bud a design long cherished of treating this subject in detail, taking Mr. Hawthorne's volumes as a text. In May we shall endeavor to carry out our intention. At present we are forced to be brief.

With rare exception—in the case of Mr.

¹⁸ William Motherwell (1797-1829) was a Scottish poet.

¹ This selection combines two notices of Hawthorne's *Twice-Told Tales* in the April and May, 1842, issues of *Graham's Magazine*.

Irving's "Tales of a Traveller" and a few other works of a like cast—we have had no American tales of high merit. We have had no skilful compositions—nothing which could bear examination as works of art. Of twattle called tale-writing we have had, perhaps, more than enough. We have had a superabundance of the Rosa-Matilda effusions—gilt-edged paper all *couleur de rose*—a full allowance of cut-and-thrust blue-blazing melodramaticisms, a nauseating surfeit of low miniature copying of low life, much in the manner, and with about half the merit, of the Dutch herrings and decayed cheeses of Van Tuyssel—of all this *ehou jam satis!*²

Mr Hawthorne's volumes appear to us misnamed in two respects. In the first place they should not have been called "Twice-Told Tales"—for this is a title which will not bear *repetition*. If in the first collected edition they were twice-told, of course now they are thrice told. May we live to hear them told a hundred times! In the second place, these compositions are by no means *all* "Tales." The most of them are essays properly so called. It would have been wise in their author to have modified his title, so as to have had reference to all included. This point could have been easily arranged.

But under whatever titular blunders we receive this book, it is most cordially welcome. We have seen no prose composition by any American which can compare with *some* of these articles in the higher merits, or indeed in the lower, while there is not a single piece which would do dishonor to the best of the British essayists.

"The Rill from the Town Pump" which, through the *ad captandum*³ nature of its title, has attracted more of public notice than any other of Mr Hawthorne's compositions, is perhaps, the *least* meritorious. Among the best, we may briefly mention "The Hollow of the Three Hills," "The Minister's Black Veil," "Wakefield," "Mr Higginbotham's Catastrophe," "Fancy's Show-Box;" "Dr Heidegger's Experiment," "David Swan," "The Wedding Knell," and "The White Old Maid." It is

remarkable that all these, with one exception, are from the first volume.

The style of Mr Hawthorne is purity itself. His *tone* is singularly effective—wild, plaintive, thoughtful, and in full accordance with his themes. We have only to object that there is insufficient diversity in these themes themselves, or rather in their character. His *originality* both of incident and of reflection is very remarkable, and this trait alone would ensure him at least *our* warmest regard and commendation. We speak here chiefly of the tales, the essays are not so markedly novel. Upon the whole we look upon him as one of the few men of indisputable genius to whom our country has as yet given birth. As such, it will be our delight to do him honor, and lest, in these undigested and cursory remarks, we should appear to do him *more* honor than is his due, we postpone all farther comment until a more favorable opportunity.

II

We said a few hurried words about Mr Hawthorne in our last number, with the design of speaking more fully in the present. We are still, however, pressed for room, and must necessarily discuss his volumes more briefly and more at random than their high merits deserve.

The book professes to be a collection of *tales*, yet is, in two respects, misnamed. These pieces are now in their third republication, and, of course, are thrice-told. Moreover, they are by no means *all* tales, either in the ordinary or in the legitimate understanding of the term. Many of them are pure essays, for example, "Sights from a Steeple," "Sunday at Home," "Little Annie's Ramble," "A Rill from the Town

² Rosa-Matilda and Van Tuyssel are satiric names invented by Poe to ridicule respectively the sentimentalism of current magazine writers and the realism of fiction and sketches suggesting the method of Dutch painting. The Latin phrase means *alas, now enough!*

³ "Taking" or "Catchy."

Pump," "The Toll-Gatherer's Day," "The Haunted Mind," "The Sister Years," "Snow-Flakes," "Night Sketches," and "Foot-Prints on the Sea-Shore." We mention these matters chiefly on account of their discrepancy with that marked precision and finish by which the body of the work is distinguished.

Of the essays just named, we must be content to speak in brief. They are each and all beautiful, without being characterized by the polish and adaptation so visible in the tales proper. A painter would at once note their leading or predominant feature, and style it *repose*. There is no attempt at effect. All is quiet, thoughtful, subdued. Yet this repose may exist simultaneously with high originality of thought, and Mr Hawthorne has demonstrated the fact. At every turn we meet with novel combinations, yet these combinations never surpass the limits of the quiet. We are soothed as we read, and withal is a calm astonishment that ideas so apparently obvious have never occurred or been presented to us before. Herein our author differs materially from Lamb or Hunt or Hazlitt⁴—who, with vivid originality of manner and expression, have less of the true novelty of thought than is generally supposed, and whose originality, at best, has an uneasy and meretricious quaintness, replete with startling effects unfounded in nature, and inducing trains of reflection which lead to no satisfactory result. The Essays of Hawthorne have much of the character of Irving, with more of originality, and less of finish, while, compared with the Spectator, they have a vast superiority at all points. The Spectator, Mr Irving, and Mr Hawthorne have in common that tranquil and subdued manner which we have chosen to denominate *repose*, but, in the case of the two former, this repose is attained rather by the absence of novel combination, or of originality, than otherwise, and consists chiefly in the calm, quiet, unostentatious expression of commonplace thoughts, in an unambitious, unadulterated Saxon. In them, by strong effort, we are made to

conceive the absence of all. In the essays before us the absence of effort is too obvious to be mistaken, and a strong undercurrent of *suggestion* runs continuously beneath the upper stream of the tranquil thesis. In short, these effusions of Mr Hawthorne are the product of a truly imaginative intellect, restrained, and in some measure repressed, by fastidiousness of taste, by constitutional melancholy, and by indolence.

But it is of his tales that we desire principally to speak. The tale proper, in our opinion, affords unquestionably the fairest field for the exercise of the loftiest talent, which can be afforded by the wide domains of mere prose. Were we bidden to say how the highest genius could be most advantageously employed for the best display of its own powers, we should answer, without hesitation—in the composition of a rhymed poem, not to exceed in length what might be perused in an hour. Within this limit alone can the highest order of true poetry exist. We need only here say, upon this topic, that, in almost all classes of composition, the unity of effect or impression is a point of the greatest importance. It is clear, moreover, that this unity cannot be thoroughly preserved in productions whose perusal cannot be completed at one sitting. We may continue the reading of a prose composition, from the very nature of prose itself, much longer than we can persevere, to any good purpose, in the perusal of a poem. This latter, if truly fulfilling the demands of the poetic sentiment, induces an exaltation of the soul which cannot be long sustained. All high excitements are necessarily transient. Thus a long poem is a paradox. And, without unity of impression, the deepest effects cannot be brought about. Epics were the offspring of an imperfect sense of Art, and their reign is no more. A poem *too* brief may produce

⁴ Charles Lamb (1775-1834), Leigh Hunt (1784-1859), and William Hazlitt (1778-1830) helped develop the familiar essay as an important *genre* of English literature.

a vivid, but never an intense or enduring impression Without a certain continuity of effort—without a certain duration or repetition of purpose—the soul is never deeply moved There must be the dropping of the water upon the rock De Béranger has wrought brilliant things—pungent and spirit-stirring—but, like all immassive bodies, they lack *momentum*, and thus fail to satisfy the Poetic Sentiment They sparkle and excite, but, from want of continuity, fail deeply to impress Extreme brevity will degenerate into epigrammatism, but the sin of extreme length is even more unpardonable *In medio tutissimus ibis*⁵

Were we called upon, however, to designate that class of composition which, next to such a poem as we have suggested, should best fulfil the demands of high genius—should offer it the most advantageous field of exertion—we should unhesitatingly speak of the prose tale, as Mr Hawthorne has here exemplified it We allude to the short prose narrative, requiring from a half-hour to one or two hours in its perusal The ordinary novel is objectionable, from its length, for reasons already stated in substance As it cannot be read at one sitting, it deprives itself, of course, of the immense force derivable from *totality* Worldly interests intervening during the pauses of perusal, modify, annul, or counteract, in a greater or less degree, the impressions of the book But simple cessation in reading would, of itself, be sufficient to destroy the true unity In the brief tale, however, the author is enabled to carry out the fulness of his intention, be it what it may During the hour of perusal the soul of the reader is at the writer's control There are no external or extrinsic influences—resulting from weariness or interruption

A skilful literary artist has constructed a tale. If wise, he has not fashioned his thoughts to accommodate his incidents, but having conceived, with deliberate care, a certain unique or single *effect* to be wrought out, he then invents such incidents—he then combines such events as

may best aid him in establishing this pre-conceived effect If his very initial sentence tend not to the outbringing of this effect, then he has failed in his first step In the whole composition there should be no word written, of which the tendency, direct or indirect, is not to the one pre-established design And by such means, with such care and skill, a picture is at length painted which leaves in the mind of him who contemplates it with a kindred art, a sense of the fullest satisfaction The idea of the tale has been presented unblemished, because undisturbed and this is an end unattainable by the novel Undue brevity is just as exceptionable here as in the poem, but undue length is yet more to be avoided

We have said that the tale has a point of superiority even over the poem In fact, while the *rhythm* of this latter is an essential aid in the development of the poem's highest idea—the idea of the Beautiful—the artificialities of this rhythm are an inseparable bar to the development of all points of thought or expression which have their basis in *Truth* But Truth is often, and in very great degree, the aim of the tale Some of the finest tales are tales of ratiocination Thus the field of this species of composition, if not in so elevated a region on the mountain of Mind, is a table-land of far vaster extent than the domain of the mere poem Its products are never so rich, but infinitely more numerous, and more appreciable by the mass of mankind The writer of the prose tale, in short, may bring to his theme a vast variety of modes or inflections of thought and expression—(the ratiocinative, for example, the sarcastic, or the humorous) which are not only antagonistical to the nature of the poem, but absolutely forbidden by one of its most peculiar and indispensable adjuncts, we allude, of course, to rhythm It may be added here, *par parenthèse*, that the author who aims at the purely beautiful in a prose tale is

⁵ You will be most safe in the middle way

laboring at a great disadvantage For Beauty can be better treated in the poem Not so with terror, or passion, or horror, or a multitude of such other points And here it will be seen how full of prejudice are the usual animadversions against those *tales of effect*, many fine examples of which were found in the earlier numbers of Blackwood The impressions produced were wrought in a legitimate sphere of action, and constituted a legitimate although sometimes an exaggerated interest They were relished by every man of genius although there were found many men of genius who condemned them without just ground The true critic will but demand that the design intended be accomplished, to the fullest extent, by the means most advantageously applicable

We have very few American tales of real merit—we may say, indeed, none, with the exception of "The Tales of a Traveller" of Washington Irving, and these "Twice-Told Tales" of Mr Hawthorne Some of the pieces of Mr John Neal abound in vigor and originality, but, in general, his compositions of this class are excessively diffuse, extravagant, and indicative of an imperfect sentiment of Art⁶ Articles at random are, now and then, met with in our periodicals which might be advantageously compared with the best effusions of the British Magazines, but, upon the whole, we are far behind our progenitors in this department of literature

Of Mr Hawthorne's tales we would say, emphatically, that they belong to the highest region of Art—an Art subservient to genius of a very lofty order We had supposed, with good reason for so supposing, that he had been thrust into his present position by one of the impudent *cliques* which beset our literature, and whose pretensions it is our full purpose to expose at the earliest opportunity, but we have been most agreeably mistaken We know of few compositions which the critic can more honestly commend than these "Twice-Told Tales" As Americans, we feel proud of the book

Mr Hawthorne's distinctive trait is invention, creation, imagination, originality—a trait which, in the literature of fiction, is positively worth all the rest But the nature of the originality, so far as regards its manifestation in letters, is but imperfectly understood The inventive or original mind as frequently displays itself in novelty of *tone* as in novelty of matter Mr Hawthorne is original at *all* points

It would be a matter of some difficulty to designate the best of these tales, we repeat that, without exception, they are beautiful "Wakefield" is remarkable for the skill with which an old idea—a well-known incident—is worked up or discussed A man of whims conceives the purpose of quitting his wife and residing *incognito*, for twenty years, in her immediate neighborhood Something of this kind actually happened in London The force of Mr Hawthorne's tale lies in the analysis of the motives which must or might have impelled the husband to such folly, in the first instance, with the possible causes of his perseverance Upon this thesis a sketch of singular power has been constructed

"The Wedding Knell" is full of the boldest imagination—an imagination fully controlled by taste The most captious critic could find no flaw in this production

"The Minister's Black Veil" is a masterly composition, of which the sole defect is that to the rabble its exquisite skill will be *caviare* The *obvious* meaning of this article will be found to smother its insinuated one The *moral* put into the mouth of the dying minister will be supposed to convey the *true* import of the narrative, and that a crime of dark dye (having reference to the "young lady") has been committed, is a point which only minds congenial with that of the author will perceive

"Mr Higginbotham's Catastrophe" is

⁶ John Neal (1793-1876) was the author of *Keep Cool* (1817), *Logan* (1822), *Seventy Six* (1823), *Randolph* (1823), *Errata* (1823), *Brother Jonathan* (1825), *Rachel Dyer* (1828), *Authorship* (1830), *The Down-Easters* (1833)

vividly original, and managed most dexterously

"Dr Heidegger's Experiment" is exceedingly well imagined, and executed with surpassing ability. The artist breathes in every line of it.

"The White Old Maid" is objectionable even more than the "Minister's Black Veil," on the score of its mysticism. Even with the thoughtful and analytic, there will be much trouble in penetrating its entire import.

"The Hollow of the Three Hills" we would quote in full had we space,—not as evincing higher talent than any of the other pieces, but as affording an excellent example of the author's peculiar ability. The subject is commonplace. A witch subjects the Distant and the Past to the view of a mourner. It has been the fashion to describe, in such cases, a mirror in which the images of the absent appear, or a cloud of smoke is made to arise, and thence the figures are gradually unfolded. Mr Hawthorne has wonderfully heightened his effect by making the ear, in place of the eye, the medium by which the fantasy is conveyed. The head of the mourner is enveloped in the cloak of the witch, and within its magic folds there arise sounds which have an all-sufficient intelligence. Throughout this article also, the artist is conspicuous—not more in positive than in negative merits. Not only is all done that should be done, but (what perhaps is an end with more difficulty attained) there is nothing done which should not be. Every word *tells*, and there is not a word which does *not* tell.

In the way of objection we have scarcely a word to say of these tales. There is, perhaps, a somewhat too general or prevalent tone—a tone of melancholy and mysticism. The subjects are insufficiently varied. There is not so much of *versatility* evinced as we might well be warranted in expecting from the high powers of Mr Hawthorne. But beyond these trivial exceptions we have really none to make. The style is purity itself. Force abounds. High imagination

gleams from every page. Mr Hawthorne is a man of the truest genius. We only regret that the limits of our Magazine will not permit us to pay him that full tribute of commendation, which, under other circumstances, we should be so eager to pay.

THE PHILOSOPHY OF COMPOSITION [1846]

CHARLES DICKENS, in a note now lying before me, alluding to an examination I once made of the mechanism of "Barnaby Rudge," says—"By the way, are you aware that Godwin wrote his 'Caleb Williams' backwards? He first involved his hero in a web of difficulties, forming the second volume, and then, for the first, cast about him for some mode of accounting for what had been done."¹

I cannot think this the *precise* mode of procedure on the part of Godwin—and indeed what he himself acknowledges, is not altogether in accordance with Mr Dickens' idea—but the author of "Caleb Williams" was too good an artist not to perceive the advantage derivable from at least a somewhat similar process. Nothing is more clear than that every plot, worth the name, must be elaborated to its *dénouement* before any thing be attempted with the pen. It is only with the *dénouement* constantly in view that we can give a plot its indispensable air of consequence, or causation, by making the incidents, and especially the tone at all points, tend to the development of the intention.

There is a radical error, I think, in the

¹ In an article in the Philadelphia *Saturday Evening Post*, May 1, 1841, Poe forecast the outcome of *Barnaby Rudge* on the basis of its earlier installments, he reviewed the novel for *Graham's Magazine*, February, 1842. William Godwin (1756-1836) pioneered in the English sociological problem novel with *Caleb Williams* (1794), which dramatized some of the revolutionary ideas found in his *Enquiry Concerning Political Justice* (1793).

usual mode of constructing a story Either history affords a thesis—or one is suggested by an incident of the day—or, at best, the author sets himself to work in the combination of striking events to form merely the basis of his narrative—designing, generally, to fill in with description, dialogue, or autorial comment, whatever crevices of fact, or action, may, from page to page, render themselves apparent

I prefer commencing with the consideration of an *effect* Keeping originality *always* in view—for he is false to himself who ventures to dispense with so obvious and so easily attainable a source of interest—I say to myself, in the first place, “Of the innumerable effects, or impressions, of which the heart, the intellect, or (more generally) the soul is susceptible, what one shall I, on the present occasion, select?” Having chosen a novel, first, and secondly a vivid effect, I consider whether it can be best wrought by incident or tone—whether by ordinary incidents and peculiar tone, or the converse, or by peculiarity both of incident and tone—afterward looking about me (or rather within) for such combinations of event, or tone, as shall best aid me in the construction of the effect

I have often thought how interesting a magazine paper might be written by any author who would—that it to say, who could—detail, step by step, the processes by which any one of his compositions attained its ultimate point of completion Why such a paper has never been given to the world, I am much at a loss to say—but, perhaps, the autorial vanity has had more to do with the omission than any one other cause Most writers—poets in especial—prefer having it understood that they compose by a species of fine frenzy—an ecstatic intuition—and would positively shudder at letting the public take a peep behind the scenes, at the elaborate and vacillating crudities of thought—at the true purposes seized only at the last moment—at the innumerable glimpses of idea that arrived not at the maturity of full view—at the fully matured fancies discarded in

despair as unmanageable—at the cautious selections and rejections—at the painful erasures and interpolations—in a word, at the wheels and pinions—the tackle for scene-shifting—the step-ladders and demon-traps—the cock’s feathers, the red paint and the black patches, which, in ninety-nine cases out of a hundred, constitute the properties of the literary *hustler*

I am aware, on the other hand, that the case is by no means common, in which an author is at all in condition to retrace the steps by which his conclusions have been attained In general, suggestions, having arisen pell-mell, are pursued and forgotten in a similar manner

For my own part, I have neither sympathy with the repugnance alluded to, nor, at any time, the least difficulty in recalling to mind the progressive steps of any of my compositions, and, since the interest of an analysis, or reconstruction, such as I have considered a *desideratum*, is quite independent of any real or fancied interest in the thing analyzed, it will not be regarded as a breach of decorum on my part to show the *modus operandi* by which some one of my own works was put together I select “The Raven” as most generally known It is my design to render it manifest that no one point in its composition is referrible either to accident or intuition—that the work proceeded, step by step, to its completion with the precision and rigid consequence of a mathematical problem

Let us dismiss, as irrelevant to the poem, *per se*, the circumstance—or say the necessity—which, in the first place, gave rise to the intention of composing a poem that should suit at once the popular and the critical taste

We commence, then, with this intention

The initial consideration was that of extent If any literary work is too long to be read at one sitting, we must be content to dispense with the immensely important effect derivable from unity of impression—for, if two sittings be required, the affairs of the world interfere, and every thing like totality is at once destroyed But since,

ceteris paribus, no poet can afford to dispense with *any thing* that may advance his design, it but remains to be seen whether there is, in extent, any advantage to counterbalance the loss of unity which attends it Here I say no, at once What we term a long poem is, in fact, merely a succession of brief ones—that is to say, of brief poetical effects It is needless to demonstrate that a poem is such, only inasmuch as it intensely excites, by elevating, the soul, and all intense excitements are, through a psychal necessity, brief For this reason, at least one half of the “Paradise Lost” is essentially prose—a succession of poetical excitements interspersed, *inevitably*, with corresponding depressions—the whole being deprived, through the extremeness of its length, of the vastly important artistic element, totality, or unity, of effect

It appears evident, then, that there is a distinct limit, as regards length, to all works of literary art—the limit of a single sitting—and that, although in certain classes of prose composition, such as “Robinson Crusoe,” (demanding no unity,) this limit may be advantageously overpassed, it can never properly be overpassed in a poem Within this limit, the extent of a poem may be made to bear mathematical relation to its merit—in other words, to the excitement or elevation—again, in other words, to the degree of the true poetical effect which it is capable of inducing, for it is clear that the brevity must be in direct ratio of the intensity of the intended effect—this, with one proviso—that a certain degree of duration is absolutely requisite for the production of any effect at all

Holding in view these considerations, as well as that degree of excitement which I deemed not above the popular, while not below the critical, taste, I reached at once what I conceived the proper *length* for my intended poem—a length of about one hundred lines It is, in fact, a hundred and eight.

My next thought concerned the choice of an impression, or effect, to be conveyed

and here I may as well observe that, throughout the construction, I kept steadily in view the design of rendering the work *universally* appreciable I should be carried too far out of my immediate topic were I to demonstrate a point upon which I have repeatedly insisted, and which, with the poetical, stands not in the slightest need of demonstration—the point, I mean, that Beauty is the sole legitimate province of the poem A few words, however, in elucidation of my real meaning, which some of my friends have evinced a disposition to misrepresent That pleasure which is at once the most intense, the most elevating, and the most pure, is, I believe, found in the contemplation of the beautiful When, indeed, men speak of Beauty, they mean, precisely, not a quality, as is supposed, but an effect—they refer, in short, just to that intense and pure elevation of *soul*—not of intellect, or of heart—upon which I have commented, and which is experienced in consequence of contemplating “the beautiful” Now I designate Beauty as the province of the poem, merely because it is an obvious rule of Art that effects should be made to spring from direct causes—that objects should be attained through means best adapted for their attainment—no one as yet having been weak enough to deny that the peculiar elevation alluded to, is *most readily* attained in the poem Now the object Truth, or the satisfaction of the intellect, and the object Passion, or the excitement of the heart, are, although attainable, to a certain extent, in poetry, far more readily attainable in prose Truth, in fact, demands a precision, and Passion a *homeliness* (the truly passionate will comprehend me) which are absolutely antagonistic to that Beauty which, I maintain, is the excitement, or pleasurable elevation, of the soul It by no means follows from any thing here said, that passion, or even truth, may not be introduced, and even profitably introduced, into a poem—for they may serve in elucidation, or aid the general effect, as do discords in music, by contrast—but the

true artist will always contrive, first, to tone them into proper subservience to the predominant aim, and, secondly, to envelop them, as far as possible, in that Beauty which is the atmosphere and the essence of the poem

Regarding, then, Beauty as my province, my next question referred to the *tone* of its highest manifestation—and all experience has shown that this tone is one of *sadness*. Beauty of whatever kind, in its supreme development, invariably excites the sensitive soul to tears. Melancholy is thus the most legitimate of all the poetical tones

The length, the province, and the tone, being thus determined, I betook myself to ordinary induction, with the view of obtaining some artistic piquancy which might serve me as a key-note in the construction of the poem—some pivot upon which the whole structure might turn. In carefully thinking over all the usual artistic effects—or more properly *points*, in the theatrical sense—I did not fail to perceive immediately that no one had been so universally employed as that of the *refrain*. The universality of its employment sufficed to assure me of its intrinsic value, and spared me the necessity of submitting it to analysis. I considered it, however, with regard to its susceptibility of improvement, and soon saw it to be in a primitive condition. As commonly used, the *refrain*, or burden, not only is limited to lyric verse, but depends for its impression upon the force of monotone—both in sound and thought. The pleasure is deduced solely from the sense of identity—of repetition. I resolved to diversify and so heighten the effect, by adhering, in general, to the monotone of sound, while I continually varied that of thought: that is to say, I determined to produce continuously novel effects, by the variation of the *application* of the *refrain*—the *refrain* itself remaining, for the most part, unvaried.

These points being settled, I next betought me of the *nature* of my *refrain*. Since its application was to be repeatedly

varied, it was clear that the *refrain* itself must be brief, for there would have been an insurmountable difficulty in frequent variations of application in any sentence of length. In proportion to the brevity of the sentence, would, of course, be the facility of the variation. This led me at once to a single word as the best *refrain*.

The question now arose as to the *character* of the word. Having made up my mind to a *refrain*, the division of the poem into stanzas, was, of course, a corollary: the *refrain* forming the close to each stanza. That such a close, to have force, must be sonorous and susceptible of protracted emphasis, admitted no doubt; and these considerations inevitably led me to the long *o* as the most sonorous vowel, in connection with *r* as the most producible consonant.

The sound of the *refrain* being thus determined, it became necessary to select a word embodying this sound, and at the same time in the fullest possible keeping with that melancholy which I had predetermined as the tone of the poem. In such a search it would have been absolutely impossible to overlook the word "Nevermore." In fact, it was the very first which presented itself.

The next *desideratum* was a pretext for the continuous use of the one word "nevermore." In observing the difficulty which I at once found in inventing a sufficiently plausible reason for its continuous repetition, I did not fail to perceive that this difficulty arose solely from the pre-assumption that the word was to be so continuously or monotonously spoken by a *human* being—I did not fail to perceive, in short, that the difficulty lay in the reconciliation of this monotony with the exercise of reason on the part of the creature repeating the word. Here, then, immediately arose the idea of a *nonreasoning* creature capable of speech, and, very naturally, a parrot, in the first instance, suggested itself, but was superseded forthwith by a Raven, as equally capable of speech, and infinitely more in keeping with the intended *tone*.

I had now gone so far as the conception of a Raven—the bird of ill omen—monotonously repeating the one word, “Nevermore,” at the conclusion of each stanza, in a poem of melancholy tone, and in length about one hundred lines. Now, never losing sight of the object *supremeness*, or perfection, at all points, I have asked myself—“Of all melancholy topics, what, according to the *universal* understanding of mankind, is the *most* melancholy?” Death—was the obvious reply. “And when,” I said, “is the most melancholy of topics most poetical?” From what I have already explained at some length, the answer, here, also, is obvious—“When it most closely allies itself to *Beauty* the death, then, of a beautiful woman is, unquestionably, the most poetical topic in the world—and equally is it beyond doubt that the lips best suited for such topic are those of a bereaved lover.”

I had now to combine the two ideas, of a lover lamenting his deceased mistress and a Raven continuously repeating the word “Nevermore”—I had to combine these, bearing in mind my design of varying, at every turn, the *application* of the word repeated, but the only intelligible mode of such combination is that of imagining the Raven employing the word in answer to the queries of the lover. And here it was that I saw at once the opportunity afforded for the effect on which I had been depending—that is to say, the effect of the *variation of application*. I saw that I could make the first query propounded by the lover—the first query to which the Raven should reply “Nevermore”—that I could make this first query a commonplace one—the second less so—the third still less, and so on—until at length the lover, startled from his original *nonchalance* by the melancholy character of the word itself—by its frequent repetition—and by a consideration of the ominous reputation of the fowl that uttered it—is at length excited to superstition, and wildly propounds queries of a far different character—queries whose solution he has passionately at heart—propounds them half in superstition and

half in that species of despair which delights in self-torture—propounds them not altogether because he believes in the prophetic or demoniac character of the bird (which, reason assures him, is merely repeating a lesson learned by rote) but because he experiences a frenzied pleasure in so modeling his questions as to receive from the *expected* “Nevermore” the most delicious because the most intolerable of sorrow. Perceiving the opportunity thus afforded me—or, more strictly, thus forced upon me in the progress of the construction—I first established in mind the climax, or concluding query—that query to which “Nevermore” should be in the last place an answer—that query in reply to which this word “Nevermore” should involve the utmost conceivable amount of sorrow and despair.

Here then the poem may be said to have its beginning—at the end, where all works of art should begin—for it was here, at this point of my preconsiderations, that I first put pen to paper in the composition of the stanza.

“Prophet,” said I, “thing of evil! prophet
still if bird or devil!
By that heaven that bends above us—by
that God we both adore,
Tell this soul with sorrow laden, if within
the distant Aidenn,
It shall clasp a sainted maiden whom the
angels name Lenore—
Clasp a rare and radiant maiden whom the
angels name Lenore.”
Quote the raven “Nevermore.”

I composed this stanza, at this point, first that, by establishing the climax, I might the better vary and graduate, as regards seriousness and importance, the preceding queries of the lover—and, secondly, that I might definitely settle the rhythm, the metre, and the length and general arrangement of the stanza—as well as graduate the stanzas which were to precede, so that none of them might surpass this in rhythmical effect. Had I been able, in the subsequent composition, to construct more vigorous stanzas, I should, without

scruple, have purposely enfeebled them, so as not to interfere with the climacteric effect

And here I may as well say a few words of the versification. My first object (as usual) was originality. The extent to which this has been neglected, in versification, is one of the most unaccountable things in the world. Admitting that there is little possibility of variety in mere *rhythm*, it is still clear that the possible varieties of metre and stanza are absolutely infinite—and yet, *for centuries, no man, in verse, has ever done, or ever seemed to think of doing, an original thing*. The fact is, that originality (unless in minds of very unusual force) is by no means a matter, as some suppose, of impulse or intuition. In general, to be found, it must be elaborately sought, and although a positive merit of the highest class, demands in its attainment less of invention than negation.

Of course, I pretend to no originality in either the rhythm or metre of the "Raven." The former is trochaic—the latter is octameter acatalectic, alternating with heptameter catalectic repeated in the *refrain* of the fifth verse, and terminating with tetrameter catalectic. Less pedantically—the feet employed throughout (trochees) consist of a long syllable followed by a short: the first line of the stanza consists of eight of these feet—the second of seven and a half (in effect two-thirds)—the third of eight—the fourth of seven and a half—the fifth the same—the sixth three and a half. Now, each of these lines, taken individually, has been employed before, and what originality the "Raven" has, is in their *combination into stanza*, nothing even remotely approaching this combination has ever been attempted. The effect of this originality of combination is aided by other unusual, and some altogether novel effects, arising from an extension of the application of the principles of rhyme and alliteration.

The next point to be considered was the mode of bringing together the lover and the Raven—and the first branch of this

consideration was the *locale*. For this the most natural suggestion might seem to be a forest, or the fields—but it has always appeared to me that a close *circumscription of space* is absolutely necessary to the effect of insulated incident—it has the force of a frame to a picture. It has an indisputable moral power in keeping concentrated the attention, and, of course, must not be confounded with mere unity of place.

I determined, then, to place the lover in his chamber—in a chamber rendered sacred to him by memories of her who had frequented it. The room is represented as richly furnished—this in mere pursuance of the ideas I have already explained on the subject of Beauty, as the sole true poetical thesis.

The *locale* being thus determined, I had now to introduce the bird—and the thought of introducing him through the window, was inevitable. The idea of making the lover suppose, in the first instance, that the flapping of the wings of the bird against the shutter, is a "tapping" at the door, originated in a wish to increase, by prolonging, the reader's curiosity, and in a desire to admit the incidental effect arising from the lover's throwing open the door, finding all dark, and thence adopting the half-fancy that it was the spirit of his mistress that knocked.

I made the night tempestuous, first, to account for the Raven's seeking admission, and secondly, for the effect of contrast with the (physical) serenity within the chamber.

I made the bird alight on the bust of Pallas, also for the effect of contrast between the marble and the plumage—it being understood that the bust was absolutely *suggested* by the bird—the bust of *Pallas* being chosen, first, as most in keeping with the scholarship of the lover, and, secondly, for the sonorousness of the word, *Pallas*, itself.

About the middle of the poem, also, I have availed myself of the force of contrast, with a view of deepening the ultimate impression. For example, an air of

the fantastic—approaching as nearly to the ludicrous as was admissible—is given to the Raven's entrance. He comes in "with many a flirt and flutter"

Not the *least* obeisance made he—not a moment stopped or stayed he,
But with *mien of lord or lady*, perched
above my chamber door

In the two stanzas which follow, the design is more obviously carried out—

Then this ebony bird beguiling my sad
fancy into smiling
By the *grave and stern decorum of the*
countenance it wore,
"Though thy *crest be shorn and shaven,*
thou," I said, "art sure no craven,
Ghastly grim and ancient Raven wander-
ing from the nightly shore—
Tell me what thy lordly name is on the
Night's Plutonian shore?"
Quoth the Raven "Nevermore"

Much I marvelled *this ungainly fowl* to
hear discourse so plainly,
Though its answer little meaning—little
relevancy bore,
For we cannot help agreeing that no living
human being
Ever yet was blessed with seeing bird above
his chamber door—
Bird or beast upon the sculptured bust
above his chamber door,
With such name as "Nevermore."

The effect of the *dénouement* being thus provided for, I immediately drop the fantastic for a tone of the most profound seriousness—this tone commencing in the stanza directly following the one last quoted, with the line,

But the Raven, sitting lonely on that placid
bust, spoke only, etc

From this epoch the lover no longer jests—no longer sees any thing even of the fantastic in the Raven's demeanor. He speaks of him as a "grim, ungainly, ghastly, gaunt, and ominous bird of yore," and feels the "fiery eyes" burning into his "bosom's core." This revolution of thought, or fancy, on the lover's part, is intended

to induce a similar one on the part of the reader—to bring the mind into a proper frame for the *dénouement*—which is now brought about as rapidly and as *directly* as possible

With the *dénouement* proper—with the Raven's reply, "Nevermore," to the lover's final demand if he shall meet his mistress in another world—the poem, in its obvious phase, that of a simple narrative, may be said to have its completion. So far, every thing is within the limits of the accountable—of the real. A raven, having learned by rote the single word "Nevermore," and having escaped from the custody of its owner, is driven at midnight, through the violence of a storm, to seek admission at a window from which a light still gleams—the chamber-window of a student, occupied half in poring over a volume, half in dreaming of a beloved mistress deceased. The casement being thrown open at the fluttering of the bird's wings, the bird itself perches on the most convenient seat out of the immediate reach of the student, who, amused by the incident and the oddity of the visitor's demeanor, demands of it, in jest and without looking for a reply, its name. The raven addressed, answers with its customary word, "Nevermore"—a word which finds immediate echo in the melancholy heart of the student, who, giving utterance aloud to certain thoughts suggested by the occasion, is again startled by the fowl's repetition of "Nevermore." The student now guesses the state of the case, but is impelled, as I have before explained, by the human thirst for self-torture, and in part by superstition, to propound such queries to the bird as will bring him, the lover, the most of the luxury of sorrow, through the anticipated answer "Nevermore." With the indulgence to the extreme, of this self-torture, the narration, in what I have termed its first or obvious phase, has a natural termination, and so far there has been no overstepping of the limits of the real.

But in subjects so handled, however skilfully, or with however vivid an array of

incident, there is always a certain hardness or nakedness, which repels the artistical eye. Two things are invariably required—first, some amount of complexity, or more properly, adaptation, and, secondly, some amount of suggestiveness—some under current, however indefinite, of meaning. It is this latter, in especial, which imparts to a work of art so much of that *richness* (to borrow from colloquy a forcible term) which we are too fond of confounding with the *ideal*. It is the *excess* of the suggested meaning—it is the rendering this the upper instead of the under current of the theme—which turns into prose (and that of the very flattest kind) the so called poetry of the so called transcendentalists.

Holding these opinions, I added the two concluding stanzas of the poem—their suggestiveness being thus made to pervade all the narrative which has preceded them. The under-current of meaning is rendered first apparent in the lines—

“Take thy beak from out *my heart*, and
take thy form from off my door!”
Quoth the Raven “Nevermore!”

It will be observed that the words, “from out my heart,” involve the first metaphorical expression in the poem. They, with the answer, “Nevermore,” dispose the mind to seek a moral in all that has been previously narrated. The reader begins now to regard the Raven as emblematical—but it is not until the very last line of the very last stanza, that the intention of making him emblematical of *Mournful and Never-ending Remembrance* is permitted distinctly to be seen.

And the Raven, never flitting, still is sitting, still is sitting,
On the pallid bust of Pallas just above my chamber door,
And his eyes have all the seeming of a demon's that is dreaming,
And the lamplight o'er him streaming
throws his shadow on the floor,
And my soul from out that shadow that lies floating on the floor
Shall be lifted—nevermore

LIGEIA

[1840 (1838)]

And the will therein lieth, which dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by nature of its intentness. Man doth not yield himself to the angels, nor unto death utterly, save only through the weakness of his feeble will.

JOSEPH GLANVILL¹

I CANNOT, for my soul, remember how, when, or even precisely where, I first became acquainted with the Lady Ligeia. Long years have since elapsed, and my memory is feeble through much suffering. Or, perhaps, I cannot *now* bring these points to mind, because, in truth, the character of my beloved, her rare learning, her singular yet placid cast of beauty, and the thrilling and enthralling eloquence of her low, musical language, made their way into my heart by paces so steadily and stealthily progressive that they have been unnoticed and unknown. Yet I believe that I met her first and most frequently in some large, old, decaying city near the Rhine. Of her family—I have surely heard her speak—that it is of a remotely ancient date cannot be doubted. Ligeia! Buried in studies of a nature more than all else adapted to deaden impressions of the outward world, it is by that sweet word alone—by Ligeia—that I bring before mine eyes in fancy the image of her who is no more. And now, while I write, a recollection flashes upon me that I have *never known* the paternal name of her who was my friend and my betrothed, and who became the partner of my studies, and finally the wife of my bosom. Was it a playful charge on the part of my Ligeia? or was it a test of my strength of affection that I should institute no inquiries upon this point? or was it rather a caprice of my own—a

¹ This Cambridge Platonist, 1636-1680, may have written the passage quoted as epigraph, but it has not been located in his extant works.

wildly romantic offering on the shrine of the most passionate devotion? I but indistinctly recall the fact itself—what wonder that I have utterly forgotten the circumstances which originated or attended it? And, indeed, if ever that spirit which is entitled *Romance*—if ever she, the wan and the misty-winged *Ashtophet* of idolatrous Egypt, presided, as they tell, over marriages ill-omened, then most surely she presided over mine.²

There is one dear topic, however, on which my memory fails me not. It is the person of *Ligeia*. In stature she was tall, somewhat slender, and in her latter days, even emaciated. I would in vain attempt to portray the majesty, the quiet ease, of her demeanor, or the incomprehensible lightness and elasticity of her footfall. She came and departed like a shadow. I was never made aware of her entrance into my closed study, save by the dear music of her low sweet voice, as she placed her delicate hand upon my shoulder. In beauty of face no maiden ever equalled her. It was the radiance of an opium dream—an airy and spirit-lifting vision more wildly divine than the fantasies which hovered about the slumbering souls of the daughters of Delos.³ Yet her features were not of that regular mould which we have been falsely taught to worship in the classical labors of the heathen. "There is no exquisite beauty," says Bacon, Lord Verulam, speaking truly of all the forms and *genera* of beauty, "without some *strangeness* in the proportions." Yet, although I saw that the features of *Ligeia* were not of a classic regularity, although I perceived that her loveliness was indeed "exquisite," and felt that there was much of "strangeness" pervading it, yet I have tried in vain to detect the irregularity, and to trace home my own perception of "the strange." I examined the contour of the lofty and pale forehead—it was faultless—how cold indeed that word when applied to a majesty so divine!—the skin rivaling the purest ivory; the commanding extent and repose, the gentle prominence of the regions above the tem-

ples, and then the raven-black, the glossy, the luxuriant and naturally-curling tresses, setting forth the full force of the Homeric epithet, "hyacinthine!" I looked at the delicate outlines of the nose—and nowhere but in the graceful medallions of the Hebrews had I beheld a similar perfection. There was the same luxurious smoothness of surface, the same scarcely perceptible tendency to the aquiline, the same harmoniously curved nostrils speaking the free spirit. I regarded the sweet mouth. Here was indeed the triumph of all things heavenly—the magnificent turn of the short upper lip—the soft, voluptuous slumber of the under—the dimples which sported, and the color which spoke—the teeth glancing back, with a brilliancy almost startling, every ray of the holy light which fell upon them in her serene, and placid, yet most exultingly radiant of all smiles. I scrutinized the formation of the chin—and here, too, I found the gentleness of breadth, the softness and the majesty, the fulness and the spirituality, of the Greek,—the contour which the god Apollo revealed but in a dream, to Cleomenes, the son of the Athenian.⁴ And then I peered into the large eyes of *Ligeia*.

For eyes we have no models in the remotely antique. It might have been, too, that in these eyes of my beloved lay the secret to which Lord Verulam alludes. They were, I must believe, far larger than the ordinary eyes of our race. They were even far fuller than the fullest of the Gazelle eyes of the tribe of the valley of Nourjahad.⁵ Yet it was only at intervals—in moments

² The reference is to Ashtoreth, or Ashtaroeth, an oriental name for Astarte, goddess of fertility.

³ On the island of Delos, Greek maidens brought offerings to the temple of Artemis.

⁴ The Venus of Medici was ascribed to Cleomenes, son of Apollodorus, the Athenian. Poe conceives of him as inspired by Apollo.

⁵ Mrs. Frances Sheridan (1724-1766) wrote the novel, *The History of Nourjahad* (1767). Poe's reference is to its exotic setting.

of intense excitement—that this peculiarity became more than slightly noticeable in Ligeia. And at such moments was her beauty—in my heated fancy thus it appeared perhaps—the beauty of beings either above or apart from the earth—the beauty of the fabulous Hour of the Turk. The color of the orbs was the most brilliant of black, and far over them hung jetty lashes of great length. The brows, slightly irregular in outline, had the same hue. The “strangeness,” however, which I found in the eyes was of a nature distinct from the formation, or the color, or the brilliancy of the features, and must, after all, be referred to the *expression*. Ah, word of no meaning! behind whose vast latitude of mere sound we intrench our ignorance of so much of the spiritual. The expression of the eyes of Ligeia! How, for long hours have I pondered upon it! How have I, through the whole of a midsummer night, struggled to fathom it! What was it—that something more profound than the well of Democritus⁶—which lay far within the pupils of my beloved? What *was* it? I was possessed with a passion to discover. Those eyes! those large, those shining, those divine orbs! they became to me twin stars of Leda, and I to them devoutest of astrologers.⁷ Not for a moment was the unfathomable meaning of their glance, by day or by night, absent from my soul.

There is no point, among the many incomprehensible anomalies of the science of mind, more thrillingly exciting than the fact—never, I believe, noticed in the schools—that in our endeavors to recall to memory something long forgotten we often find ourselves *upon the very verge* of remembrance without being able, in the end, to remember. And thus how frequently, in my intense scrutiny of Ligeia’s eyes, have I felt approaching the full knowledge of their expression—felt it approaching—yet not quite be mine—and so at length entirely depart. And (strange, oh strangest mystery of all!) I found, in the commonest objects of the universe, a circle of analogies to that expression. I mean to say

that, subsequently to the period when Ligeia’s beauty passed into my spirit, there dwelling as in a shrine, I derived, from many existences in the material world, a sentiment such as I felt always aroused within me by her large and luminous orbs. Yet not the more could I define that sentiment, or analyze, or even steadily view it. I recognized it, let me repeat, sometimes in the commonest objects of the universe. It has flashed upon me in the survey of a rapidly-growing vine—in the contemplation of a moth, a butterfly, a chrysalis, a stream of running water. I have felt it in the ocean, in the falling of a meteor. I have felt it in the glances of unusually aged people. And there are one or two stars in heaven—(one especially, a star of the sixth magnitude, double and changeable, to be found near the large star in Lyra) in a telescopic scrutiny of which I have been made aware of the feeling I have been filled with it by certain sounds from stringed instruments, and not unfrequently by passages from books. Among innumerable other instances, I well remember something in a volume of Joseph Glanvill, which (perhaps merely from its quaintness—who shall say?) never failed to inspire me with the sentiment,—“And the will therein beth, which dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by nature of its intentness. Man doth not yield him to the angels, nor unto death utterly, but only through the weakness of his feeble will.”

Length of years, and subsequent reflection, have enabled me to trace, indeed, some remote connexion between this passage in the old English moralist and a portion of the character of Ligeia. An *intensity* in thought, action, or speech, was possibly, in her, a result, or at least an

⁶ The Greek philosopher Democritus, fifth century B. C., said that truth lay in a deep well.

⁷ Castor and Pollux, sons of Leda and Zeus, provided names for the two brightest stars in the constellation Gemini.

index, of that gigantic volition which, during our long intercourse, failed to give other and more immediate evidence of its existence. Of all the women whom I have ever known she, the outwardly calm, the ever-placid Ligeia, was the most violently a prey to the tumultuous vultures of stern passion. And of such passion I could form no estimate, save by the miraculous expansion of those eyes which at once so delighted and appalled me, by the almost magical melody, modulation, distinctness and placidity of her very low voice, and by the fierce energy (rendered doubly effective by contrast with her manner of utterance) of the words which she habitually uttered.

I have spoken of the learning of Ligeia—it was immense—such as I have never known in woman. In the classical tongues was she deeply proficient, and as far as my own acquaintance extended in regard to the modern dialects of Europe, I have never known her at fault. Indeed upon any theme of the most admired, because simply the most abstruse of the boasted erudition of the academy, have I *ever* found Ligeia at fault? How singularly, how thrillingly, this one point in the nature of my wife has forced itself, at this late period only, upon my attention! I said her knowledge was such as I had never known in woman. Where breathes the man who, like her, has traversed, and successfully, *all* the wide areas of moral, natural, and mathematical science? I saw not then what I now clearly perceive, that the acquisitions of Ligeia were gigantic, were astounding—yet I was sufficiently aware of her infinite supremacy to resign myself, with a child-like confidence, to her guidance through the chaotic world of metaphysical investigation at which I was most busily occupied during the earlier years of our marriage. With how vast a triumph—with how vivid a delight—with how much of all that is ethereal in hope—did I *feel*, as she bent over me in studies but little sought for—but less known—that delicious vista by slow but perceptible degrees expanding before me, down whose long, gorgeous, and all un-

trodden path, I might at length pass onward to the goal of a wisdom too divinely precious not to be forbidden!

How poignant, then, must have been the grief with which, after some years, I beheld my well-grounded expectations take wings to themselves and flee away! Without Ligeia I was but as a child groping benighted. Her presence, her readings alone, rendered vividly luminous the many mysteries of the transcendentalism in which we were immersed. Letters, lambent and golden, grew duller than Saturnian lead, wanting the radiant lustre of her eyes. And now those eyes shone less and less frequently upon the pages over which I pored. Ligeia grew ill. The wild eyes blazed with a too—too glorious effulgence, the pale fingers became of the transparent waxen hue of the grave—and the blue veins upon the lofty forehead swelled and sunk impetuously with the tides of the most gentle emotion. I saw that she must die—and I struggled desperately in spirit with the grim Azrael.⁸ And the struggles of the passionate wife were, to my astonishment, even more energetic than my own. There had been much in her stern nature to impress me with the belief that, to her, death would have come without its terrors—but not so. Words are impotent to convey any just idea of the fierceness of resistance with which she wrestled with the dark shadow. I groaned in anguish at the pitiable spectacle I would have soothed—I would have reasoned, but in the intensity of her wild desire for life—for life—*but* for life, solace and reason were alike the uttermost of folly. Yet not for an instant, amid the most convulsive writhings of her fierce spirit, was shaken the external placidity of her demeanor. Her voice grew more gentle—grew more low—yet I would not wish to dwell upon the wild meaning of the quietly-uttered words. My brain reeled as I hearkened entranced, to a melody more than mortal—to assumptions and aspirations which mortality had never before known.

⁸ The Hebrew angel of death.

That she loved me, I should not have doubted, and I might have been easily aware that, in a bosom such as hers, love would have reigned no ordinary passion. But in death only, was I fully impressed with the strength of her affection. For long hours, detaining my hand, would she pour out before me the overflowing of a heart whose more than passionate devotion amounted to idolatry. How had I deserved to be so blessed by such confessions?—how had I deserved to be so cursed with the removal of my beloved in the hour of her making them? But upon this subject I cannot bear to dilate. Let me say only, that in Ligeia's more than womanly abandonment to a love, alas! all unmerited, all unworthily bestowed, I at length recognized the principle of her longing with so wildly earnest a desire for the life which was now fleeing so rapidly away. It is this wild longing—it is this eager vehemence of desire for life—*but* for life—that I have no power to portray—no utterance capable of expressing.

[At high noon of the night in which she departed, beckoning me, peremptorily, to her side, she bade me repeat certain verses composed by herself not many days before.⁹ I obeyed her. They were these

Lo! 'tis a gala night
Within the lonesome latter years!
An angel throng, bewinged, bedight
In veils, and drowned in tears,
Sit in a theatre, to see
A play of hopes and fears,
While the orchestra breathes fitfully
The music of the spheres

Mimes, in the form of God on high,
Mutter and mumble low,
And hither and thither fly,
Mere puppets they, who come and go
At bidding of vast formless things
That shift the scenery to and fro,
Flapping from out their condor wings
Invisible Wo!

That motley drama!—oh, be sure
It shall not be forgot!
With its Phantom chased for evermore,
By a crowd that seize it not,
Through a circle that ever returneth in
To the self-same spot,
And much of Madness, and more of Sin
And horror, the soul of the plot!

But see, amid the mimic rout
A crawling shape intrude!
A blood-red thing that writhes from out
The scenic solitude!
It writhes!—it writhes!—with mortal
pangs
The mimes become its food,
And seraphs sob at vermin fangs
In human gore imbued

Out—out are the lights—out all!
And over each quivering form,
The curtain, a funeral pall,
Comes down with the rush of a storm—
While the angels, all pallid and wan,
Uprising, unveiling, affirm
That the play is the tragedy, "Man,"
And its hero the Conqueror Worm

"O God!" half shrieked Ligeia, leaping to her feet and extending her arms aloft with a spasmodic movement, as I made an end of these lines—"O God! O Divine Father!—shall these things be undeviatingly so?—shall this conqueror be not once conquered? Are we not part and parcel in Thee? Who—who knoweth the mysteries of the will with its vigor? Man doth not yield him to the angels, *nor unto death utterly*, save only through the weakness of his feeble will."

And now, as if exhausted with emotion, she suffered her white arms to fall, and returned solemnly to her bed of death. And as she breathed her last sighs, there came mingled with them a low murmur from her lips. I bent to them my ear and distin-

⁹ Poe published this poem under the title, "The Conqueror Worm," in *Graham's Magazine*, January, 1843.

guished, again, the concluding words of the passage in Glanvill—"*Man doth not yield him to the angels, nor unto death utterly, save only through the weakness of his feeble will*"¹⁰

She died—and I, crushed into the very dust with sorrow, could no longer endure the lonely desolation of my dwelling in the dim and decaying city by the Rhine. I had no lack of what the world terms wealth—Ligeia had brought me far more, very far more, than ordinarily falls to the lot of mortals. After a few months, therefore, of weary and aimless wandering, I purchased, and put in some repair, an abbey, which I shall not name, in one of the wildest and least frequented portions of fair England. The gloomy and dreary grandeur of the building, the almost savage aspect of the domain, the many melancholy and time-honored memories connected with both, had much in unison with the feelings of utter abandonment which had driven me into that remote and unsocial region of the country. Yet although the external abbey, with its verdant decay hanging about it, suffered but little alteration, I gave way, with a child-like perversity, and perchance with a faint hope of alleviating my sorrows, to a display of more than regal magnificence within. For such follies even in childhood I had imbibed a taste, and now they came back to me as if in the dotage of grief. Alas, I feel how much even of incipient madness might have been discovered in the gorgeous and fantastic draperies, in the solemn carvings of Egypt, in the wild cornices and furniture, in the bedlam patterns of the carpets of tufted gold! I had become a bounden slave in the trammels of opium, and my labors and my orders had taken a coloring from my dreams. But these absurdities I must not pause to detail. Let me speak only of that one chamber, ever accursed, whither, in a moment of mental alienation, I led from the altar as my bride—as the successor of the unforgotten Ligeia—the fair-haired and blue-eyed Lady Rowena Trevanion, of Tremaigne.

There is no individual portion of the architecture and decoration of that bridal chamber which is not now visibly before me. Where were the souls of the haughty family of the bride, when, through thirst of gold, they permitted to pass the threshold of an apartment so bedecked, a maiden and a daughter so beloved? I have said that I minutely remember the details of the chamber—yet I am sadly forgetful on topics of deep moment—and here there was no system, no keeping, in the fantastic display, to take hold upon the memory. The room lay in a high turret of the castellated abbey, was pentagonal in shape, and of capacious size. Occupying the whole southern face of the pentagon was the sole window—an immense sheet of unbroken glass from Venice—a single pane, and tinted of a leaden hue, so that the rays of either the sun or moon, passing through it, fell with a ghastly lustre upon the objects within. Over the upper portion of this huge window, extended the trellis-work of an aged vine, which clambered up the massy walls of the turret. The ceiling, of gloomy-looking oak, was excessively lofty, vaulted, and elaborately fretted with the wildest and most grotesque specimens of a semi-Gothic, semi-Druidical device. From out the most central recess of this melancholy vaulting, depended, by a single chain of gold, with long links, a huge censer of the same metal, Sarracenic in pattern, and with many perforations so contrived that there withied in and out of them, as if endowed with a serpent vitality, a continual succession of parti-colored fires. Some few ottomans and golden candelabra of Eastern figure were in various stations about—and there was the couch, too, the bridal couch, of an Indian model, and low, and sculptured of solid ebony, with a canopy above. In each of the angles of the chamber, stood on end a gigantic sarcophagus of black granite, from the tombs of the kings over against Luxor, with then

¹⁰ Passages enclosed in brackets did not appear in the original publication of "Ligeia" in the *American Museum*.

aged lids full of immemorial sculpture. But in the draping of the apartment lay, alas! the chief fantasy of all. The lofty walls—gigantic in height—even unproportionably so, were hung from summit to foot, in vast folds, with a heavy and massive-looking tapestry—tapestry of a material which was found alike as a carpet on the floor, as a covering for the ottomans and the ebony bed, as a canopy for the bed, and as the gorgeous volutes of the curtains which partially shaded the window. The material was the richest cloth of gold. It was spotted all over, at irregular intervals, with arabesque figures, about a foot in diameter, and wrought upon the cloth in patterns of the most jetty black. But these figures partook of the true character of the arabesque only when regarded from a single point of view. By a contrivance now common, and indeed traceable to a very remote period of antiquity, they were made changeable in aspect. To one entering the room they bore the appearance of simple monstrosities, but upon a farther advance, this appearance gradually departed, and, step by step, as the visitor moved his station in the chamber, he saw himself surrounded by an endless succession of the ghastly forms which belong to the superstition of the Northman, or arise in the guilty slumbers of the monk. The phantasmagoric effect was vastly heightened by the artificial introduction of a strong continual current of wind behind the draperies—giving a hideous and uneasy animation to the whole.

In halls such as these—in a bridal chamber such as this—I passed, with the Lady of Tremaine, the unhallowed hours of the first month of our marriage—passed them with but little disquietude. That my wife dreaded the fierce moodiness of my temper—that she shunned me, and loved me but little—I could not help perceiving—but it gave me rather pleasure than otherwise. I loathed her with a hatred belonging more to demon than to man. My memory flew back, (oh, with what intensity of regret!) to Ligeia, the beloved, the beautiful, the

entombed. I revelled in recollections of her purity, of her wisdom, of her lofty, her ethereal nature, of her passionate, her idolatrous love. Now, then, did my spirit fully and freely burn with more than all the fires of her own. In the excitement of my opium dreams (for I was habitually fettered in the iron shackles of the drug) I would call aloud upon her name, during the silence of the night, or among the sheltered recesses of the glens by day, as if, through the wild eagerness, the solemn passion, the consuming ardor of my longing for the departed Ligeia I could restore her to the pathway she had abandoned upon the earth.

About the commencement of the second month of the marriage, the Lady Rowena was attacked with sudden illness from which her recovery was slow. The fever which consumed her rendered her nights uneasy, and, in her perturbed state of half-slumber, she spoke of sounds, and of motions, in and about the chamber of the turret, which had no origin save in the distemper of her fancy, or, perhaps, in the phantasmic influences of the chamber itself. She became at length convalescent—finally well. Yet but a brief period elapsed, ere a second more violent disorder again threw her upon a bed of suffering—and from this attack her frame, at all times feeble, never altogether recovered. Her illnesses were, after this epoch, of alarming character, and of more alarming recurrence, defying alike the knowledge and the great exertions of her medical men. With the increase of the chronic disease, which had thus, apparently, taken too sure hold upon her constitution to be eradicated by human means, I could not fail to observe a similar increase in the nervous irritation of her temperament, and in her excitability by trivial causes of fear. Indeed reason seemed fast tottering from her throne. She spoke again, and now more frequently and pertinaciously, of the sounds, of the slight sounds, and of the unusual motions among the tapestries, to which she had formerly alluded.

One night, near the closing in of September, she pressed this distressing subject with more than usual emphasis upon my attention. She had just awakened from an unquiet slumber, and I had been watching, with feelings half of anxiety, half of vague terror, the workings of her emaciated countenance. I sat by the side of her ebony bed, upon one of the ottomans of India. She partly arose, and spoke, in an earnest low whisper, of sounds which she *then* heard, but which I could not hear, of motions which she *then* saw, but which I could not perceive. The wind was rushing hurriedly behind the tapestries, and I wished to show her (what, let me confess it, I could not *all* believe) that those faint, almost inarticulate breathings, and the very gentle variations of the figures upon the wall, were but the natural effects of that customary rushing of the wind. But a deadly pallor, overspreading her face, had proved to me that my exertions to reassure her would be fruitless. She appeared to be fainting, and no attendants were within call. I remembered where was deposited a decanter of light wine which had been ordered by her physicians, and hastened across the chamber to procure it. But, as I stepped beneath the light of the censer, two circumstances of a startling nature attracted my attention. I had felt that some palpable object had passed lightly by my person, and I saw that there lay a faint, indefinite shadow upon the golden carpet, in the very middle of the rich lustre thrown from the censer. But I was wild with the excitement of an immoderate dose of opium, and heeded these things but little, nor spoke of them to Rowena. Having found the wine, I recrossed the chamber, and poured out a gobletful, which I held to the lips of the fainting lady. She had now partially recovered, however, and took, herself, the vessel, while I sank upon an ottoman near me, with eyes riveted upon her person. It was then that I became distinctly aware of a gentle foot-fall upon the carpet, and near the couch; and, in a second thereafter, as Rowena was in the

act of raising the wine to her lips, I saw, or may have dreamed that I saw, fall within the goblet, as if from some invisible spring in the atmosphere of the room, three or four large drops of a brilliant and ruby-colored fluid. If this I saw—not so Rowena. She swallowed the wine unhesitatingly, and I forbore to speak to her of a circumstance which must, after all, I considered, have been but the suggestion of a vivid imagination, rendered morbidly active by the terror of the lady, by the opium, and by the hour.

Yet—I cannot conceal it from myself—after this period, a rapid change for the worst took place in the disorder of my wife, so that, on the third subsequent night, the hands of her menials prepared her for the tomb, and on the fourth, I sat alone, with her shrouded body, in that fantastic chamber which had received her as my bride. Wild visions, opium-engendered, flitted shadow-like before me. I gazed with unquiet eye upon the sarcophagi in the angles of the room, upon the varying figures of the drapery, and upon the withering of the parti-colored fires in the censer overhead. My eyes then fell, as I called to mind the circumstances of a former night, to the spot beneath the glare of the censer where I had seen the faint traces of the shadow. It was there, however, no longer, and breathing with greater freedom, I turned my glances to the pallid and rigid figure upon the bed. Then rushed upon me a thousand memories of Ligeia—and then came back upon my heart, with the turbulent violence of a flood, the whole of that unutterable woe with which I had regarded *her* thus enshrouded. The night waned, and still, with a bosom full of bitter thoughts of the one only and supremely beloved, I remained gazing upon the body of Rowena.

It might have been midnight, or perhaps earlier, or later, for I had taken no note of time, when a sob, low, gentle, but very distinct, startled me from my reverie. I *felt* that it came from the bed of ebony—the bed of death. I listened in an agony of superstitious terror—but there was no rep-

etition of the sound, I strained my vision to detect any motion in the corpse, but there was not the slightest perceptible. Yet I could not have been deceived. I *had* heard the noise, however faint, and my soul was awakened within me, as I resolutely and perseveringly kept my attention riveted upon the body. Many minutes elapsed before any circumstance occurred tending to throw light upon the mystery. At length it became evident that a slight, a very faint, and barely noticeable tinge of color had flushed up within the cheeks, and along the sunken small veins of the eyelids. Through a species of unutterable horror and awe, for which the language of mortality has no sufficiently energetic expression, I felt my brain reel, my heart cease to beat, my limbs grow rigid where I sat. Yet a sense of duty finally operated to restore my self-possession. I could no longer doubt that we had been precipitate in our preparations for interment—that Rowena still lived. It was necessary that some immediate exertion be made, yet the turret was altogether apart from the portion of the abbey tenanted by the servants—there were none within call,—I had no means of summoning them to my aid without leaving the room for many minutes—and this I could not venture to do. I therefore struggled alone in my endeavors to call back the spirit still hovering. In a short period it was certain, however, that a relapse had taken place, the color disappeared from both eyelid and cheek, leaving a wanness even more than that of marble, the lips became doubly shrivelled and pinched up in the ghastly expression of death, a repulsive clamminess and coldness overspread rapidly the surface of the body, and all the usual rigorous stiffness immediately supervened. I fell back with a shudder upon the couch from which I had been so startlingly aroused, and again gave myself up to passionate waking visions of Ligeia.

An hour thus elapsed when, (could it be possible?) I was a second time aware of some vague sound issuing from the

region of the bed. I listened—in extremity of horror. The sound came again—it was a sigh. Rushing to the corpse, I saw—distinctly saw—a tremor upon the lips. In a minute after, they slightly relaxed, disclosing a bright line of the pearly teeth. Amazement now struggled in my bosom with the profound awe which had hitherto reigned therein alone. I felt that my vision grew dim, that my reason wandered, and it was only by a convulsive effort that I at length succeeded in nerving myself to the task which duty thus, once more, had pointed out. There was now a partial glow upon the forehead and upon the cheek and throat—a perceptible warmth pervaded the whole frame—there was even a slight pulsation at the heart. The lady lived, and with redoubled ardor I betook myself to the task of restoration. I chafed and bathed the temples and the hands, and used every exertion which experience, and no little medical reading, could suggest. But in vain. Suddenly, the color fled, the pulsation ceased, the lips resumed the expression of the dead, and, in an instant afterwards, the whole body took upon itself the icy chilliness, the livid hue, the intense rigidity, the sunken outline, and each and all of the loathsome peculiarities of that which has been, for many days, a tenant of the tomb.

And again I sunk into visions of Ligeia—and again, (what marvel that I shudder while I write?) *again* there reached my ears a low sob from the region of the ebony bed. But why shall I minutely detail the unspeakable horrors of that night? Why shall I pause to relate how, time after time, until near the period of the gray dawn, this hideous drama of revivification was repeated, and how each terrific relapse was only into a sterner and apparently more irredeemable death, [how each agony wore the aspect of a struggle with some invisible foe, and how each struggle was succeeded by I know not what of wild change in the personal appearance of the corpse?] Let me hurry to a conclusion.

The greater part of the fearful night

had worn away, and the corpse of Rowena once again stirred—and now more vigorously than hitherto, although arousing from a dissolution more appalling in its utter hopelessness than any I had long ceased to struggle or to move, and remained sitting rigidly upon the ottoman, a helpless prey to a whirl of violent emotions, of which extreme awe was perhaps the least terrible, the least consuming. The corpse, I repeat, stirred, and now more vigorously than before. The hues of life flushed up with unwonted energy into the countenance—the limbs relaxed—and, save that the eyelids were yet pressed heavily together, and that the bandages and draperies of the grave still imparted their charnel character to the figure, I might have dreamed that Rowena had indeed shaken off, utterly, the fetters of Death. But if this idea was not, even then, altogether adopted, I could, at least, doubt no longer, when, arising from the bed, tottering, with feeble steps, with closed eyes, and with the manner of one bewildered in a dream, the Lady of Tremaine advanced boldly and palpably into the middle of the apartment.

I trembled not—I stirred not—for a crowd of unutterable fancies connected with the air, the demeanor of the figure, rushing hurriedly through my brain, had paralyzed, had chilled me into stone. I stirred not—but gazed upon the apparition. There was a mad disorder in my thoughts—a tumult unappeasable. Could it, indeed, be the *living* Rowena who confronted me? [Could it indeed be Rowena *at all*—the fair-haired, the blue-eyed Lady Rowena Trevanion of Tremaine?] Why, *why*, should I doubt it? The bandage lay heavily about the mouth—but then it was the mouth of the breathing Lady of Tremaine. And the cheeks—there were the roses as in her noon of life—yes, these were indeed the fair cheeks of the living Lady of Tremaine. And the chin, with its dimples, as in health, was it not hers?—but *had she then grown taller since her malady?* What inexpressible madness seized me with that thought? One bound,

and I had reached her feet! Shrink-
ing from my touch, she let fall from her head, unloosened, the ghastly cerements which had confined it, and there streamed forth, into the rushing atmosphere of the chamber, huge masses of long and dishevelled hair. *It was blacker than the raven wings of the midnight!* And now the eyes opened of the figure which stood before me. “Here then, at least,” I shrieked aloud, “can I never—can I never be mistaken—these are the full, and the black, and the wild eyes—of the lady—of the Lady Ligeia!”

THE FALL OF THE HOUSE OF USHER [1840 (1839)]

Son cœur est un luth suspendu,
Sitôt qu'on le touche il résonne¹

DE BÉRANGER

DURING the whole of a dull, dark, and soundless day in the autumn of the year, when the clouds hung oppressively low in the heavens, I had been passing alone, on horseback, through a singularly dreary tract of country, and at length found myself, as the shades of the evening drew on, within view of the melancholy House of Usher. I know not how it was—but, with the first glimpse of the building, a sense of insufferable gloom pervaded my spirit. I say insufferable, for the feeling was unrelieved by any of that half-pleasurable, because poetic, sentiment with which the mind usually receives even the sternest natural images of the desolate or terrible. I looked upon the scene before me—upon the mere house, and the simple landscape features of the domain—upon the bleak walls—upon the vacant eye-like windows—upon a few rank sedges—and upon a few white trunks of decayed trees—with an utter depression of soul which I can compare to no earthly sensation more properly than to the after-dream of the reveller

¹ From “Le Refus,” meaning “His heart is a suspended lute, as soon as it is touched, it resounds.”

upon opium—the bitter lapse into everyday life—the hideous dropping off of the veil. There was an iciness, a sinking, a sickening of the heart—an unredeemed dreariness of thought which no goading of the imagination could torture into aught of the sublime. What was it—I paused to think—what was it that so unnerved me in the contemplation of the House of Usher? It was a mystery all insoluble, nor could I grapple with the shadowy fancies that crowded upon me as I pondered. I was forced to fall back upon the unsatisfactory conclusion, that while, beyond doubt, there are combinations of very simple natural objects which have the power of thus affecting us, still the analysis of this power lies among considerations beyond our depth. It was possible, I reflected, that a mere different arrangement of the particulars of the scene, of the details of the picture, would be sufficient to modify, or perhaps to annihilate its capacity for sorrowful impression, and, acting upon this idea, I reined my horse to the precipitous brink of a black and lurid tarn that lay in unruffled lustre by the dwelling, and gazed down—but with a shudder even more thrilling than before—upon the remodelled and inverted images of the gray sedge, and the ghastly tree-stems, and the vacant and eye-like windows.

Nevertheless, in this mansion of gloom I now proposed to myself a sojourn of some weeks. Its proprietor, Roderick Usher, had been one of my boon companions in boyhood, but many years had elapsed since our last meeting. A letter, however, had lately reached me in a distant part of the country—a letter from him—which, in its wildly importunate nature, had admitted of no other than a personal reply. The MS. gave evidence of nervous agitation. The writer spoke of acute bodily illness—of a mental disorder which oppressed him—and of an earnest desire to see me, as his best and indeed his only personal friend, with a view of attempting, by the cheerfulness of my society, some alleviation of his malady. It was the manner in which

all this, and much more, was said—it was the apparent *heart* that went with his request—which allowed me no room for hesitation, and I accordingly obeyed forthwith what I still considered a very singular summons.

Although, as boys, we had been even intimate associates, yet I really knew little of my friend. His reserve had been always excessive and habitual. I was aware, however, that his very ancient family had been noted, time out of mind, for a peculiar sensibility of temperament, displaying itself, through long ages, in many works of exalted art, and manifested, of late, in repeated deeds of munificent yet unobtrusive charity, as well as in a passionate devotion to the intricacies, perhaps even more than to the orthodox and easily recognizable beauties, of musical science. I had learned, too, the very remarkable fact, that the stem of the Usher race, all time-honored as it was, had put forth at no period, any enduring branch, in other words, that the entire family lay in the direct line of descent, and had always, with very trifling and very temporary variation, so lain. It was this deficiency, I considered, while running over in thought the perfect keeping of the character of the premises with the accredited character of the people, and while speculating upon the possible influence which the one, in the long lapse of centuries, might have exercised upon the other—it was this deficiency, perhaps, of collateral issue, and the consequent undeviating transmission, from sire to son of the patrimony with the name, which had, at length, so identified the two as to merge the original title of the estate in the quant and equivocal appellation of the “House of Usher”—an appellation which seemed to include, in the minds of the peasantry who used it, both the family and the family mansion.

I have said that the sole effect of my somewhat childish experiment—that of looking down within the tarn—had been to deepen the first singular impression. There can be no doubt that the conscious-

ness of the rapid increase of my superstition—for why should I not so term it?—served mainly to accelerate the increase itself. Such, I have long known, is the paradoxical law of all sentiments having terror as a basis. And it might have been for this reason only, that, when I again uplifted my eyes to the house itself, from its image in the pool, there grew in my mind a strange fancy—a fancy so ridiculous, indeed, that I but mention it to show the vivid force of the sensations which oppressed me. I had so worked upon my imagination as really to believe that about the whole mansion and domain there hung an atmosphere peculiar to themselves and their immediate vicinity—an atmosphere which had no affinity with the air of heaven, but which had reeked up from the decayed trees, and the gray wall, and the silent tarn—a pestilent and mystic vapor, dull, sluggish, faintly discernible, and leaden-hued.

Shaking off from my spirit what *must* have been a dream, I scanned more narrowly the real aspect of the building. Its principal feature seemed to be that of an excessive antiquity. The discoloration of ages had been great. Minute fungi overspread the whole exterior, hanging in a fine tangled web-work from the eaves. Yet all this was apart from any extraordinary dilapidation. No portion of the masonry had fallen, and there appeared to be a wild inconsistency between its still perfect adaptation of parts, and the crumbling condition of the individual stones. In this there was much that reminded me of the specious totality of old wood-work which has rotted for long years in some neglected vault, with no disturbance from the breath of the external air. Beyond this indication of extensive decay, however, the fabric gave little token of instability. Perhaps the eye of a scrutinizing observer might have discovered a barely perceptible fissure, which, extending from the roof of the building in front, made its way down the wall in a zigzag direction, until it became lost in the sullen waters of the tarn.

Noticing these things, I rode over a short causeway to the house. A servant in waiting took my horse, and I entered the Gothic archway of the hall. A valet, of stealthy step, thence conducted me, in silence, through many dark and intricate passages in my progress to the *studio* of his master. Much that I encountered on the way contributed, I know not how, to heighten the vague sentiments of which I have already spoken. While the objects around me—while the carvings of the ceilings, the sombre tapestries of the walls, the ebon blackness of the floors, and the phantasmagoric armorial trophies which rattled as I strode, were but matters to which, or to such as which, I have been accustomed from my infancy—while I hesitated not to acknowledge how familiar was all this—I still wondered to find how unfamiliar were the fancies which ordinary images were stirring up. On one of the staircases, I met the physician of the family. His countenance, I thought, wore a mingled expression of low cunning and perplexity. He accosted me with trepidation and passed on. The valet now threw open a door and ushered me into the presence of his master.

The room in which I found myself was very large and lofty. The windows were long, narrow, and pointed, and at so vast a distance from the black oaken floor as to be altogether inaccessible from within. Feeble gleams of encrimsoned light made their way through the trellised panes, and served to render sufficiently distinct the more prominent objects around, the eye, however, struggled in vain to reach the remoter angles of the chamber, or the recesses of the vaulted and fretted ceiling. Dark draperies hung upon the walls. The general furniture was profuse, comfortless, antique, and tattered. Many books and musical instruments lay scattered about, but failed to give any vitality to the scene. I felt that I breathed an atmosphere of sorrow. An air of stern, deep, and irredeemable gloom hung over and pervaded all.

Upon my entrance, Usher arose from a

sofa on which he had been lying at full length, and greeted me with a vivacious warmth which had much in it, I at first thought, of an overdone cordiality—of the constrained effort of the *ennuyé*² man of the world. A glance, however, at his countenance, convinced me of his perfect sincerity. We sat down, and for some moments, while he spoke not, I gazed upon him with a feeling half of pity, half of awe. Surely, man had never before so terribly altered, in so brief a period, as had Roderick Usher! It was with difficulty that I could bring myself to admit the identity of the wan being before me with the companion of my early boyhood. Yet the character of his face had been at all times remarkable. A cadaverousness of complexion, an eye large, liquid, and luminous beyond comparison, lips somewhat thin and very pallid, but of a surpassingly beautiful curve, a nose of a delicate Hebrew model, but with a breadth of nostril unusual in similar formations, a finely moulded chin, speaking, in its want of prominence, of a want of moral energy, hair of a more than web-like softness and tenuity, these features, with an inordinate expansion above the regions of the temple, made up altogether a countenance not easily to be forgotten. And now in the mere exaggeration of the prevailing character of these features, and of the expression they were wont to convey, lay so much of change that I doubted to whom I spoke. The now ghastly pallor of the skin, and the now miraculous lustre of the eye, above all things startled and even awed me. The silken hair, too, had been suffered to grow all unheeded, and as, in its wild gossamer texture, it floated rather than fell about the face, I could not, even with effort, connect its Arabian expression with any idea of simple humanity.

In the manner of my friend I was at once struck with an incoherence—an inconsistency, and I soon found this to arise from a series of feeble and futile struggles to overcome an habitual trepidancy—an excessive nervous agitation. For

something of this nature I had indeed been prepared, no less by his letter, than by reminiscences of certain boyish traits, and by conclusions deduced from his peculiar physical conformation and temperament. His action was alternately vivacious and sullen. His voice varied rapidly from a tremulous indecision (when the animal spirits seemed utterly in abeyance) to that species of energetic concision—that abrupt, weighty, unhurried, and hollow-sounding enunciation—that leaden, self-balanced and perfectly modulated guttural utterance, which may be observed in the lost drunkard, or the ir reclaimable eater of opium, during the periods of his most intense excitement.

It was thus that he spoke of the object of my visit, of his earnest desire to see me, and of the solace he expected me to afford him. He entered, at some length, into what he conceived to be the nature of his malady. It was, he said, a constitutional and a family evil, and one for which he despaired to find a remedy—a mere nervous affection, he immediately added, which would undoubtedly soon pass off. It displayed itself in a host of unnatural sensations. Some of these, as he detailed them, interested and bewildered me, although, perhaps, the terms, and the general manner of the narration had their weight. He suffered much from a morbid acuteness of the senses, the most insipid food was alone endurable, he could wear only garments of certain texture, the odors of all flowers were oppressive, his eyes were tortured by even a faint light, and there were but peculiar sounds, and these from stringed instruments, which did not inspire him with horror.

To an anomalous species of terror I found him a bounden slave. "I shall perish," said he, "I *must* perish in this deplorable folly. Thus, thus, and not otherwise, shall I be lost. I dread the events of the future, not in themselves, but in their results. I shudder at the thought of any,

² Bored

even the most trivial, incident, which may operate upon this intolerable agitation of soul I have, indeed, no abhorrence of danger, except in its absolute effect—in terror. In this unweaved—in this pitiable condition—I feel that the period will sooner or later arrive when I must abandon life and reason together, in some struggle with the grim phantasm, FEAR.”

I learned, moreover, at intervals, and through broken and equivocal hints, another singular feature of his mental condition. He was enchained by certain superstitious impressions in regard to the dwelling which he tenanted, and whence, for many years, he had never ventured forth—in regard to an influence whose supposititious force was conveyed in terms too shadowy here to be restated—an influence which some peculiarities in the mere form and substance of his family mansion, had, by dint of long sufferance, he said, obtained over his spirit—an effect which the *physique* of the gray walls and turrets, and of the dim tarn into which they all looked down, had, at length, brought about upon the *morale* of his existence.

He admitted, however, although with hesitation, that much of the peculiar gloom which thus afflicted him could be traced to a more natural and far more palpable origin—to the severe and long-continued illness—indeed to the evidently approaching dissolution—of a tenderly beloved sister—his sole companion for long years—his last and only relative on earth. “Her decease,” he said, with a bitterness which I can never forget, “would leave him (him the hopeless and the frail) the last of the ancient race of the Ushers.” While he spoke, the lady Madeline (for so was she called) passed slowly through a remote portion of the apartment, and, without having noticed my presence, disappeared. I regarded her with an utter astonishment not unmingled with dread—and yet I found it impossible to account for such feelings. A sensation of stupor oppressed me, as my eyes followed her retreating steps. When a door, at length, closed upon her, my

glance sought instinctively and eagerly the countenance of the brother—but he had buried his face in his hands, and I could only perceive that a far more than ordinary wanness had overspread the emaciated fingers through which trickled many passionate tears.

The disease of the lady Madeline had long baffled the skill of her physicians. A settled apathy, a gradual wasting away of the person, and frequent although transient affections of a partially cataleptical character, were the unusual diagnosis. Hitherto she had steadily borne up against the pressure of her malady, and had not betaken herself finally to bed, but, on the closing in of the evening of my arrival at the house, she succumbed (as her brother told me at night with inexpressible agitation) to the prostrating power of the destroyer, and I learned that the glimpse I had obtained of her person would thus probably be the last I should obtain—that the lady, at least while living, would be seen by me no more.

For several days ensuing, her name was unmentioned by either Usher or myself and during this period I was busied in earnest endeavors to alleviate the melancholy of my friend. We painted and read together, or I listened, as if in a dream, to the wild improvisations of his speaking guitar. And thus, as a closer and still closer intimacy admitted me more unreservedly into the recesses of his spirit, the more bitterly did I perceive the futility of all attempt at cheering a mind from which darkness, as if an inherent positive quality, poured forth upon all objects of the moral and physical universe, in one unceasing radiation of gloom.

I shall ever bear about me a memory of the many solemn hours I thus spent alone with the master of the House of Usher. Yet I should fail in any attempt to convey an idea of the exact character of the studies, or of the occupations, in which he involved me, or led me the way. An excited and highly distempered ideality threw a sulphureous lustre over all. His long im-

provised diges will ring forever in my ears Among other things, I hold painfully in mind a certain singular perversion and unification of the wild air of the last waltz of Von Weber.³ From the paintings over which his elaborate fancy brooded, and which grew, touch by touch, into vaguenesses at which I shuddered the more thrillingly, because I shuddered knowing not why,—from these paintings (vivid as their images now are before me) I would in vain endeavor to educe more than a small portion which should lie within the compass of merely written words. By the utter simplicity, by the nakedness of his designs, he arrested and overawed attention. If ever mortal painted an idea, that mortal was Roderick Usher. For me at least, in the circumstances then surrounding me, there arose out of the pure abstractions which the hypochondriac contrived to throw upon his canvas, an intensity of intolerable awe, no shadow of which felt I ever yet in the contemplation of the certainly glowing yet too concrete reveries of Fuseli.⁴

One of the phantasmagoric conceptions of my friend, partaking not so rigidly of the spirit of abstraction, may be shadowed forth, although feebly, in words. A small picture presented the interior of an immensely long and rectangular vault or tunnel, with low walls, smooth, white, and without interruption or device. Certain accessory points of the design served well to convey the idea that this excavation lay at an exceeding depth below the surface of the earth. No outlet was observed in any portion of its vast extent, and no torch, or other artificial source of light was discernible, yet a flood of intense rays rolled throughout, and bathed the whole in a ghastly and inappropriate splendor.

I have just spoken of that morbid condition of the auditory nerve which rendered all music intolerable to the sufferer, with the exception of certain effects of stringed instruments. It was, perhaps, the narrow limits to which he thus confined himself upon the guitar, which gave birth, in great

measure, to the fantastic character of his performances. But the fervid *facility* of his *impromptus* could not be so accounted for. They must have been, and were, in the notes, as well as in the words of his wild fantasias (for he not unfrequently accompanied himself with rhymed verbal improvisations), the result of that intense mental collectedness and concentration to which I have previously alluded as observable only in particular moments of the highest artificial excitement. The words of one of these rhapsodies I have easily remembered. I was, perhaps, the more forcibly impressed with it, as he gave it, because, in the under or mystic current of its meaning, I fancied that I perceived, and for the first time, a full consciousness on the part of Usher, of the tottering of his lofty reason upon her throne. The verses, which were entitled "The Haunted Palace," ran very nearly, if not accurately, thus —

I

In the greenest of our valleys,
By good angels tenanted,
Once a fair and stately palace—
Radiant palace—reared its head
In the monarch Thought's dominion—
It stood there!
Never seraph spread a pinion
Over fabric half so fair

II

Banners yellow, glorious, golden,
On its roof did float and flow,
(This—all this—was in the olden
Time long ago)
And every gentle air that dallied,
In that sweet day,
Along the ramparts plumed and pallid,
A winged odor went away.

³ Karl Maria von Weber (1786-1826), one of the great romantic musicians

⁴ J. H. Fuseli (1741-1825), painter of "The Nightmare" and Shakespearean illustrator

III

Wanderers in that happy valley
 Through two luminous windows saw
 Spirits moving musically
 To a lute's well-tuned law,
 Round about a throne, where sitting
 (Porphyrogene!)⁵
 In state his glory well befitting,
 The ruler of the realm was seen

IV

And all with pearl and ruby glowing
 Was the fair palace door,
 Through which came flowing, flowing,
 flowing
 And sparkling evermore,
 A troop of Echoes whose sweet duty
 Was but to sing,
 In voices of surpassing beauty,
 The wit and wisdom of their king

V

But evil things, in robes of sorrow,
 Assailed the monarch's high estate,
 (Ah, let us mourn, for never morrow
 Shall dawn upon him, desolate!)
 And, round about his home, the glory
 That blushed and bloomed
 Is but a dim-remembered story
 Of the old time entombed

VI

And travellers now within that valley,
 Through the red-litten windows, see
 Vast forms that move fantastically
 To a discordant melody,
 While, like a rapid ghastly river,
 Through the pale door,
 A hideous throng rush out forever,
 And laugh—but smile no more⁶

I well remember that suggestions arising from this ballad, led us into a train of thought wherein there became manifest an opinion of Usher's which I mention not so much on account of its novelty, (for

other men have thought thus,) as on account of the pertinacity with which he maintained it. This opinion, in its general form, was that of the sentence of all vegetable things. But, in his disordered fancy, the idea had assumed a more daring character, and trespassed, under certain conditions, upon the kingdom of inorganization. I lack words to express the full extent, or the earnest *abandon* of his persuasion. The belief, however, was connected (as I have previously hinted) with the gray stones of the home of his forefathers. The conditions of the sentence had been here, he imagined, fulfilled in the method of collocation of these stones—in the order of their arrangement, as well as in that of the many *fungi* which overspread them, and of the decayed trees which stood around—above all, in the long undisturbed endurance of this arrangement, and in its reduplication in the still waters of the tarn. Its evidence—the evidence of the sentence—was to be seen, he said, (and I here started as he spoke,) in the gradual yet certain condensation of an atmosphere of their own about the waters and the walls. The result was discoverable, he added, in that silent, yet importunate and terrible influence which for centuries had moulded the destinies of his family, and which made *him* what I now saw him—what he was. Such opinions need no comment, and I will make none.

Our books—the books which, for years, had formed no small portion of the mental existence of the invalid—were, as might be supposed, in strict keeping with this character of phantasm. We pored together over such works as the *Vervet* and *Chartreuse of Gresset*, the *Belphegor* of *Machiavelli*, the *Heaven and Hell* of *Swedenborg*, the *Subterranean Voyage* of *Nicholas Klimm* by *Holberg*, the *Chiromancy* of *Robert Flud*, of *Jean D'Indigné*, and of *De la Chambre*, the *Journey into the Blue*

⁵ Born to the purple

⁶ Under the title of "The Haunted Palace," Poe contributed this poem to the *Baltimore American Museum*, April, 1839.

Distance of Tieck, and the City of the Sun of Campanella. One favorite volume was a small octavo edition of the *Directorium Inquisitorium*, by the Dominican Eymeric de Gironne, and there were passages in Pomponius Mela, about the old African Satyrs and Oegipans,⁷ over which Usher would sit dreaming for hours. His chief delight, however, was found in the perusal of an exceedingly rare and curious book in quarto Gothic—the manual of a forgotten church—the *Vigiliae Mortuorum secundum Chorum Ecclesiae Maguntinae*.⁸

I could not help thinking of the wild ritual of this work, and of its probable influence upon the hypochondriac, when, one evening, having informed me abruptly that the lady Madeline was no more, he stated his intention of preserving her corpse for a fortnight, (previously to its final interment,) in one of the numerous vaults within the main walls of the building. The worldly reason, however, assigned for this singular proceeding, was one which I did not feel at liberty to dispute. The brother had been led to his resolution (so he told me) by consideration of the unusual character of the malady of the deceased, of certain obtrusive and eager inquiries on the part of her medical men, and of the remote and exposed situation of the burial-ground of the family. I will not deny that when I called to mind the sinister countenance of the person whom I met upon the staircase, on the day of my arrival at the house, I had no desire to oppose what I regarded as at best but a harmless, and by no means an unnatural, precaution.

At the request of Usher, I personally aided him in the arrangements for the temporary entombment. The body having been encoffined, we two alone bore it to its rest. The vault in which we placed it (and which had been so long unopened that our torches, half smothered in its oppressive atmosphere, gave us little opportunity for investigation) was small, damp, and entirely without means of admission for light, lying, at great depth, immediately

beneath that portion of the building in which was my own sleeping apartment. It had been used, apparently, in remote feudal times, for the worst purposes of a donjon-keep, and, in later days as a place of deposit for powder, or some other highly combustible substance, as a portion of its floor, and the whole interior of a long archway through which we reached it, were carefully sheathed with copper. The door, of massive iron, had been, also, similarly protected. Its immense weight caused an unusually sharp grating sound, as it moved upon its hinges.

Having deposited our mournful burden upon tressels within this region of horror, we partially turned aside the yet unscrewed lid of the coffin, and looked upon the face of the tenant. A striking similitude between the brother and sister now first arrested my attention, and Usher, divining, perhaps, my thoughts, murmured out some few words from which I learned that the deceased and himself had been twins, and that sympathies of a scarcely intelligible nature had always existed between them. Our glances, however, rested not long upon the dead—for we could not regard her unawed. The disease which had thus entombed

⁷ Men shaped like goats.

⁸ The references are to *Van-vert* and *Ma Chartreuse*, poems by Jean Baptiste Gresset (1709-1777), *Belphegor*, a novel by Niccolò Macchiavelli (1469-1527), *Heaven and Hell*, originally published in Latin, by the Swedish mystic, Emanuel Swedenborg (1688-1772), *The Subterranean Voyage of Nicholas Klimm*, an imaginary voyage by Ludwig Holberg (1684-1754), the *Clavis philosophiae et alchymiae Fluddanae* of Robert Fludd (1574-1637), *Chnomantra* (1522) by Joannes Indagine, *Discours sur les Principes de la Chiromancie* (1653), by Marin Cureau de la Chambre (1594-1669), an unidentified work by Ludwig Tieck (1773-1853), *The City of the Sun*, a Latin work by Thomas Campanella (1568-1639), *Directorium inquisitorium* by Nicholas Eymeric de Gironne (1320-1399), the geography of Pomponius Mela (first century A. D.), and probably a manual by one Johann Schoiffer concerning the "vigils of the dead."

the lady in the maturity of youth, had left, as usual in all maladies of a strictly cataleptical character, the mockery of a faint blush upon the bosom and the face, and that suspiciously lingering smile upon the lip which is so terrible in death. We replaced and screwed down the lid, and, having secured the door of iron, made our way, with toil, into the scarcely less gloomy apartments of the upper portion of the house.

And now, some days of bitter grief having elapsed, an observable change came over the features of the mental disorder of my friend. His ordinary manner had vanished. His ordinary occupations were neglected or forgotten. He roamed from chamber to chamber with hurried, unequal, and objectless step. The pallor of his countenance had assumed, if possible, a more ghastly hue—but the luminousness of his eye had utterly gone out. The once occasional huskiness of his tone was heard no more, and a tremulous quaver, as if of extreme terror, habitually characterized his utterance. There were times, indeed, when I thought his unceasingly agitated mind was laboring with some oppressive secret, to divulge which he struggled for the necessary courage. At times, again, I was obliged to resolve all into the mere inexplicable vagaries of madness, for I beheld him gazing upon vacancy for long hours, in an attitude of the profoundest attention, as if listening to some imaginary sound. It was no wonder that his condition terrified—that it infected me. I felt creeping upon me, by slow yet certain degrees, the wild influences of his own fantastic yet impressive superstitions.

It was, especially, upon retiring to bed late in the night of the seventh or eighth day after the placing of the lady Madeline within the donjon, that I experienced the full power of such feelings. Sleep came not near my couch—while the hours waned and waned away. I struggled to reason off the nervousness which had dommon over me. I endeavored to believe that much, if not all of what I felt, was due to the

bewildering influence of the gloomy furniture of the room—of the dark and tattered draperies, which, tortured into motion by the breath of a rising tempest, swayed fitfully to and fro upon the walls, and rustled uneasily about the decorations of the bed. But my efforts were fruitless. An unexpressible tremor gradually pervaded my frame, and, at length, there sat upon my very heart an incubus of utterly causeless alarm. Shaking this off with a gasp and a struggle, I uplifted myself upon the pillows, and, peering earnestly within the intense darkness of the chamber, hearkened—I know not why, except that an instinctive spirit prompted me—to certain low and indefinite sounds which came, through the pauses of the storm, at long intervals, I knew not whence. Overpowered by an intense sentiment of horror, unaccountable yet unendurable, I threw on my clothes with haste (for I felt that I should sleep no more during the night), and endeavored to arouse myself from the pitiable condition into which I had fallen, by pacing rapidly to and fro through the apartment.

I had taken but few turns in this manner, when a light step on an adjoining staircase arrested my attention. I presently recognized it as that of Usher. In an instant afterward he rapped with a gentle touch at my door, and entered, bearing a lamp. His countenance was, as usual, cadaverously wan—but, moreover, there was a species of mad hilarity in his eyes—an evidently restrained *hysteria* in his whole demeanor. His air appalled me—but anything was preferable to the solitude which I had so long endured, and I even welcomed his presence as a relief.

“And you have not seen it?” he said abruptly, after having stared about him for some moments in silence—“you have not then seen it?—but, stay! you shall.” Thus speaking, and having carefully shaded his lamp, he hurried to one of the casements, and threw it freely open to the storm.

The impetuous fury of the entering gust nearly lifted us from our feet. It was, in-

deed, a tempestuous yet sternly beautiful night, and one wildly singular in its terror and its beauty. A whirlwind had apparently collected its force in our vicinity, for there were frequent and violent alterations in the direction of the wind, and the exceeding density of the clouds (which hung so low as to press upon the turrets of the house) did not prevent our perceiving the life-like velocity with which they flew careering from all points against each other, without passing away into the distance. I say that even their exceeding density did not prevent our perceiving this—yet we had no glimpse of the moon or stars—not was there any flashing forth of the lightning. But the under surfaces of the huge masses of agitated vapor, as well as all terrestrial objects immediately around us, were glowing in the unnatural light of a faintly luminous and distinctly visible gaseous exhalation which hung about and enshrouded the mansion.

"You must not—you shall not behold this!" said I, shudderingly, to Usher, as I led him with a gentle violence, from the window to a seat. "These appearances, which bewilder you, are merely electrical phenomena not uncommon—or it may be that they have their ghastly origin in the rank miasma of the tarn. Let us close this casement,—the air is chilling and dangerous to your frame. Here is one of your favorite romances. I will read, and you shall listen,—and so we will pass away this terrible night together."

The antique volume which I had taken up was the "Mad Trist" of Sir Launcelot Canning, but I had called it a favorite of Usher's more in sad jest than in earnest, for, in truth, there is little in its uncouth and unimaginative prolixity which could have had interest for the lofty and spiritual ideality of my friend.⁹ It was, however, the only book immediately at hand; and I indulged a vague hope that the excitement which now agitated the hypochondriac, might find relief (for the history of mental disorder is full of similar anomalies) even in the extremeness of the folly which I

should read. Could I have judged, indeed, by the wild overstrained air of vivacity with which he hearkened, or apparently hearkened, to the words of the tale, I might well have congratulated myself upon the success of my design.

I had arrived at that well-known portion of the story where Ethelred, the hero of the Trist, having sought in vain for peaceable admission into the dwelling of the hermit, proceeds to make good an entrance by force. Here, it will be remembered, the words of the narrative run thus:

"And Ethelred, who was by nature of a doughty heart, and who was now mighty withal, on account of the powerfulness of the wine which he had drunken, waited no longer to hold parley with the hermit, who, in sooth, was of an obstinate and malicious turn, but, feeling the ram upon his shoulders, and fearing the rising of the tempest, uplifted his mace outright, and, with blows, made quickly room in the plankings of the door for his gauntleted hand, and now pulling therewith sturdily, he so cracked, and ripped, and tore all asunder, that the noise of the dry and hollow-sounding wood alarummed and reverberated throughout the forest."

At the termination of this sentence I started, and for a moment, paused, for it appeared to me (although I at once concluded that my excited fancy had deceived me)—it appeared to me that, from some very remote portion of the mansion, there came, indistinctly, to my ears, what might have been, in its exact similarity of character, the echo (but a stifled and dull one certainly) of the very cracking and ripping sound which Sir Launcelot had so particularly described. It was, beyond doubt, the coincidence alone which had arrested my attention, for, amid the rattling of the sashes of the casements, and the ordinary commingled noises of the still increasing storm, the sound, in itself, had nothing, surely, which should have interested or disturbed me. I continued the story.

⁹ Both the book and the author are Poe's inventions.

"But the good champion Ethelred, now entering within the door, was sore enraged and amazed to perceive no signal of the maleficent hermit, but, in the stead thereof, a dragon of a scaly and prodigious demeanor, and of a fiery tongue, which sat in guard before a palace of gold, with a floor of silver, and upon the wall there hung a shield of shining brass with this legend enwritten—

Who entereth herein, a conqueror hath bin,
Who slayeth the dragon, the shield he shall
win,

And Ethelred uplifted his mace, and struck upon the head of the dragon, which fell before him, and gave up his pesty breath, with a shriek so horrid and harsh, and withal so piercing, that Ethelred had fain to close his ears with his hands against the dreadful noise of it, the like whereof was never before heard."

Here again I paused abruptly, and now with a feeling of wild amazement—for there could be no doubt whatever that, in this instance, I did actually hear (although from what direction it proceeded I found it impossible to say) a low and apparently distant, but harsh, protracted, and most unusual screaming or grating sound—the exact counterpart of what my fancy had already conjured up for the dragon's unnatural shriek as described by the romancer.

Oppressed, as I certainly was, upon the occurrence of this second and most extraordinary coincidence, by a thousand conflicting sensations, in which wonder and extreme terror were predominant, I still retained sufficient presence of mind to avoid exciting, by any observation, the sensitive nervousness of my companion. I was by no means certain that he had noticed the sounds in question, although, assuredly, a strange alteration had, during the last few minutes, taken place in his demeanor. From a position fronting my own, he had gradually brought round his chair, so as to sit with his face to the door of the chamber, and thus I could but partially perceive his features, although I saw that his lips trembled as if he were mur-

muring inaudibly. His head had dropped upon his breast—yet I knew that he was not asleep, from the wide and rigid opening of the eye as I caught a glance of it in profile. The motion of his body, too, was at variance with this idea—for he rocked from side to side with a gentle yet constant and uniform sway. Having rapidly taken notice of all this, I resumed the narrative of Sir Launcelot, which thus proceeded

"And now, the champion, having escaped from the terrible fury of the dragon, bethinking himself of the brazen shield, and of the breaking up of the enchantment which was upon it, removed the carcass from out of the way before him, and approached valorously over the silver pavement of the castle to where the shield was upon the wall, which in sooth tarried not for his full coming, but fell down at his feet upon the silver floor, with a mighty great and terrible ringing sound."

No sooner had these syllables passed my lips, than—as if a shield of brass had indeed, at the moment, fallen heavily upon a floor of silver—I became aware of a distinct, hollow, metallic, and clangorous yet apparently muffled reverberation. Completely unnerved, I leaped to my feet, but the measured rocking movement of Usher was undisturbed. I rushed to the chair in which he sat. His eyes were bent fixedly before him, and throughout his whole countenance there reigned a stony rigidity. But, as I placed my hand upon his shoulder, there came a strong shudder over his whole person, a sickly smile quivered about his lips, and I saw that he spoke in a low, hurried, and gibbering murmur, as if unconscious of my presence. Bending closely over him, I at length drank in the hideous import of his words.

"Not hear it?—yes, I hear it, and *have* heard it. Long—long—long—many minutes, many hours, many days, have I heard it—yet I dared not—oh, pity me, miserable wretch that I am!—I dared not—I *dared* not speak! *We have put her living in the tomb!*" Said I not that my senses were

acute? I *now* tell you that I heard her first feeble movements in the hollow coffin I heard them—many, many days ago—yet I dared not—I *dared not speak!* And now—to-night—Ethelred—ha! ha!—the breaking of the hermit's door, and the death-cry of the dragon, and the clangor of the shield!—say, rather, the rending of her coffin, and the grating of the iron hinges of her prison, and her struggles within the coppered archway of the vault! Oh, whither shall I fly? Will she not be here anon? Is she not hurrying to upbraid me for my haste? Have I not heard her footstep on the stair? Do I not distinguish that heavy and horrible beating of her heart? Madman!"—here he sprang furiously to his feet, and shrieked out his syllables, as if in the effort he were giving up his soul—"Madman! I tell you that she now stands without the door!"

As if in the superhuman energy of his utterance there had been found the potency of a spell, the huge antique pannels to which the speaker pointed, threw slowly back, upon the instant, their ponderous and ebony jaws. It was the work of the rushing gust—but then without those doors there *did* stand the lofty and enshrouded figure of the Lady Madeline of Usher. There was blood upon her white robes, and the evidence of some bitter struggle upon every portion of her emaciated frame. For a moment she remained trembling and reeling to and fro upon the threshold—then, with a low moaning cry, fell heavily inward upon the person of her brother, and in her violent and now final death-agonies, bore him to the floor a corpse, and a victim to the terrors he had anticipated.

From that chamber, and from that mansion, I fled aghast. The storm was still abroad in all its wrath as I found myself crossing the old causeway. Suddenly there shot along the path a wild light, and I turned to see whence a gleam so unusual could have issued, for the vast house and its shadows were alone behind me. The radiance was that of the full, setting, and blood-red moon, which now shone vividly

through that once barely-discernible fissure, of which I have before spoken as extending from the roof of the building, in a zigzag direction, to the base. While I gazed, this fissure rapidly widened—there came a fierce breath of the whirlwind—the entire orb of the satellite burst at once upon my sight—my brain reeled as I saw the mighty walls rushing asunder—there was a long tumultuous shouting sound like the voice of a thousand waters—and the deep and dank tarn at my feet closed sullenly and silently over the fragments of the "*House of Usher*"

WILLIAM WILSON

[1840 (1839)]

What say of it? what say CONSCIENCE
grim,
That spectre in my path?

—Chamberlain's *Pharonnida*¹

LET me call myself, for the present, William Wilson. The fair page now lying before me need not be sullied with my real appellation. This has been already too much an object for the scorn—for the horror—for the detestation of my race. To the uttermost regions of the globe have not the indignant winds bruited its unparalleled infamy? Oh, outcast of all outcasts most abandoned!—to the earth art thou not for ever dead? to its honors, to its flowers, to its golden aspirations?—and a cloud, dense, dismal, and limitless, does it not hang eternally between thy hopes and heaven?

I would not, if I could, here or to-day, embody a record of my later years of unspeakable misery and unpardonable crime. This epoch—these later years—took unto themselves a sudden elevation in turpitude, whose origin alone it is my present purpose to assign. Men usually grow base by degrees. From me, in an instant, all virtue

¹ William Chamberlayne (1619-1689) was one of the minor Caroline poets. His *Pharonnida* was published in 1659.

dropped bodily as a mantle From comparatively trivial wickedness I passed, with the stride of a giant, into more than the enormities of an Elah-Gabalus² What chance—what one event brought this evil thing to pass, bear with me while I relate Death approaches, and the shadow which foreruns him has thrown a softening influence over my spirit I long, in passing through the dim valley, for the sympathy—I had nearly said for the pity—of my fellow men I would fain have them believe that I have been, in some measure, the slave of circumstances beyond human control I would wish them to seek out for me, in the details I am about to give, some little oasis of *fataality* amid a wilderness of error I would have them allow—what they cannot refrain from allowing—that, although temptation may have ere while existed as great, man was never *thus*, at least, tempted before—certainly, never *thus* fell And is it therefore that he has never thus suffered? Have I not indeed been living in a dream? And am I not now dying a victim to the horror and the mystery of the wildest of all sublunary visions?

I am the descendant of a race whose imaginative and easily excitable temperament has at all times rendered them remarkable, and, in my earliest infancy, I gave evidence of having fully inherited the family character As I advanced in years it was more strongly developed, becoming, for many reasons, a cause of serious disquietude to my friends, and of positive injury to myself I grew self-willed, addicted to the wildest caprices, and a prey to the most ungovernable passions Weakminded, and beset with constitutional infirmities akin to my own, my parents could do but little to check the evil propensities which distinguished me Some feeble and ill-directed efforts resulted in complete failure on their part, and, of course, in total triumph on mine. Thenceforward my voice was a household law, and at an age when few children have abandoned their leading-strings, I was left to

the guidance of my own will, and became, in all but name, the master of my own actions

My earliest recollections of a school-life are connected with a large, rambling, Elizabethan house, in a misty-looking village of England, where were a vast number of gigantic and gnarled trees, and where all the houses were excessively ancient In truth, it was a dream-like and spirit-soothing place, that venerable old town At this moment, in fancy, I feel the refreshing chilliness of its deeply-shadowed avenues, inhale the fragrance of its thousand shrubberies, and thrill anew with undefinable delight, at the deep hollow note of the church-bell, breaking, each hour, with sullen and sudden roar, upon the stillness of the dusky atmosphere in which the fretted Gothic steeple lay imbedded and asleep

It gives me, perhaps, as much of pleasure as I can now in any manner experience, to dwell upon minute recollections of the school and its concerns Steeped in misery as I am—misery, alas! only too real—I shall be pardoned for seeking relief, however slight and temporary, in the weakness of a few rambling details These, moreover, utterly trivial, and even ridiculous in themselves, assume, to my fancy, adventitious importance, as connected with a period and a locality when and where I recognize the first ambiguous motions of the destiny which afterward so fully overshadowed me Let me then remember

The house, I have said, was old and irregular The grounds were extensive, and a high and solid brick wall, topped with a bed of mortar and broken glass, encompassed the whole This prison-like rampart formed the limit of our domain, beyond it we saw but thrice a week—once every Saturday afternoon, when, attended by two ushers, we were permitted to take brief walks in a body through some of the

² Poe's variant for Hellogabalus, the adopted name of the infamous Roman emperor Varius Avitus Bassianus (204-222 A. D.)

neighboring fields—and twice during Sunday, when we were paraded in the same formal manner to the morning and evening service in the one church of the village. Of this church the principal of our school was pastor. With how deep a spirit of wonder and perplexity was I wont to regard him from our remote pew in the gallery, as, with step solemn and slow, he ascended the pulpit! This reverend man, with countenance so demurely benign, with robes so glossy and so clerically flowing, with wig so minutely powdered, so rigid and so vast,—could this be he who, of late, with sour visage, and in snuffy habiliments, administered, ferule in hand, the Draconian Laws of the academy?³ Oh, gigantic paradox, too utterly monstrous for solution!

At an angle of the ponderous wall frowned a more ponderous gate. It was riveted and studded with iron bolts, and surmounted with jagged iron spikes. What impressions of deep awe did it inspire! It was never opened save for the three periodical egressions and ingressions already mentioned; then, in every creak of its mighty hinges, we found a plenitude of mystery—a world of matter for solemn remark, or for more solemn meditation.

The extensive enclosure was irregular in form, having many capacious recesses. Of these, three or four of the largest constituted the playground. It was level, and covered with fine hard gravel. I well remember it had no trees, nor benches, nor any thing similar within it. Of course it was in the rear of the house. In front lay a small parterre, planted with box and other shrubs, but through this sacred division we passed only upon rare occasions indeed—such as a first advent to school or final departure thence, or perhaps, when a parent or friend having called for us, we joyfully took our way home for the Christmas or Midsummer holidays.

But the house!—how quaint an old building was this!—to me how veritable a palace of enchantment! There was really no end to its windings—to its incompre-

hensible subdivisions. It was difficult, at any given time, to say with certainty upon which of its two stories one happened to be. From each room to every other there were sure to be found three or four steps either in ascent or descent. Then the lateral branches were innumerable—inconceivable—and so returning in upon themselves, that our most exact ideas in regard to the whole mansion were not very far different from those with which we pondered upon infinity. During the five years of my residence here, I was never able to ascertain with precision, in what remote locality lay the little sleeping apartment assigned to myself and some eighteen or twenty other scholars.

The school-room was the largest in the house—I could not help thinking, in the world. It was very long, narrow, and dismally low, with pointed Gothic windows and a ceiling of oak. In a remote and terror-inspiring angle was a square enclosure of eight or ten feet, comprising the *sanctum*, “during hours,” of our principal, the Reverend Dr. Bransby. It was a solid structure, with massy door, sooner than open which in the absence of the “Domine,” we would all have willingly perished by the *peine forte et dure*.⁴ In other angles were two other similar boxes, far less revered, indeed, but still greatly matters of awe. One of these was the pulpit of the “classical” usher, one of the “English and mathematical.” Interspersed about the room, crossing and recrossing in endless irregularity, were innumerable benches and desks, black, ancient, and time-worn, piled desperately with much be-thumbed books, and so bescamed with initial letters, names at full length, grotesque figures, and other multiplied efforts of the knife, as to have entirely lost what little of original form might have been. Then portion in days long departed. A huge

³ The Athenian archon Draco framed about 621 B. C. a code of laws prescribing the death penalty for most offenses.

⁴ The worst of afflictions or violent and severe pain.

bucket with water stood at one extremity of the room, and a clock of stupendous dimensions at the other

Encompassed by the massy walls of this venerable academy, I passed, yet not in tedium or disgust, the years of the third lustrum of my life. The teeming brain of childhood requires no external world of incident to occupy or amuse it, and the apparently dismal monotony of a school was replete with more intense excitement than my riper youth has derived from luxury, or my full manhood from crime. Yet I must believe that my first mental development had in it much of the uncommon—even much of the *outré*. Upon mankind at large the events of very early existence rarely leave in mature age any definite impression. All is gray shadow—a weak and irregular remembrance—an indistinct regathering of feeble pleasures and phantasmagoric pains. With me this is not so. In childhood I must have felt with the energy of a man what I now find stamped upon memory in lines as vivid, as deep, and as durable as the *exergues* of the Carthaginian medals.⁵

Yet in fact—in the fact of the world's view—how little was there to remember! The morning's awakening, the nightly summons to bed, the counings, the recitations, the periodical half-holidays, and perambulations, the play-ground, with its broils, its pastimes, its intrigues;—these, by a mental sorcery long forgotten, were made to involve a wilderness of sensation, a world of rich incident, an universe of varied emotion, of excitement, the most passionate and spirit-stirring “*Oh, le bon temps, que ce siècle de fer!*”⁶

In truth, the ardor, the enthusiasm, and the imperiousness of my disposition, soon rendered me a marked character among my schoolmates, and by slow, but natural gradations, gave me an ascendancy over all not greatly older than myself,—over all with a single exception. This exception was found in the person of a scholar, who, although no relation, bore the same Christian and surname as myself,—a circum-

stance, in fact, little remarkable, for notwithstanding a noble descent, mine was one of those every-day appellations which seem, by prescriptive right, to have been, time out of mind, the common property of the mob. In this narrative I have therefore designated myself as William Wilson,—a fictitious title not very dissimilar to the real Mr. namesake alone, of those who in school phraseology constituted “our set,” presumed to compete with me in the studies of the class—in the sports and broils of the playground—to refuse implicit belief in my assertions, and submission to my will—indeed, to interfere with my arbitrary dictation in any respect whatsoever. If there is on earth a supreme and unqualified despotism, it is the despotism of a master-mind in boyhood over the less energetic spirits of its companions.

Wilson's rebellion was to me a source of the greatest embarrassment, the more so as, in spite of the bravado with which in public I made a point of treating him and his pretensions, I secretly felt that I feared him, and could not help thinking the equality which he maintained so easily with myself, a proof of his true superiority, since not to be overcome cost me a perpetual struggle. Yet this superiority—even this equality—was in truth acknowledged by no one but myself, our associates, by some unaccountable blindness, seemed not even to suspect it. Indeed, his competition, his resistance, and especially his impertinent and dogged interference with my purposes, were not more pointed than private. He appeared to be destitute alike of the ambition which urged, and of the passionate energy of mind which enabled me to excel. In

⁵ The reference is to the segments beneath the base lines of the subjects on these antique medals.

⁶ “Oh, the good time, before this age of iron!” The source of this quotation has not been located. Unlike geologists and archaeologists, poets have often followed classical precedent in imaging a golden age long antedating the degenerate iron age.

his rivalry he might have been supposed actuated solely by a whimsical desire to thwart, astonish, or mortify myself, although there were times when I could not help observing, with a feeling made up of wonder, abasement, and pique, that he mingled with his injuries, his insults, or his contradictions, a certain most inappropriate, and assuredly most unwelcome *affectationateness* of manner. I could only conceive this singular behavior to arise from a consummate self-conceit assuming the vulgar airs of patronage and protection.

Perhaps it was this latter trait in Wilson's conduct, conjoined with our identity of name, and the mere accident of our having entered the school upon the same day, which set afloat the notion that we were brothers, among the senior classes in the academy. These do not usually inquire with much strictness into the affairs of their juniors. I have before said, or should have said, that Wilson was not, in a most remote degree, connected with my family. But assuredly if we *had* been brothers we must have been twins, for, after leaving Dr. Bransby's, I casually learned that my namesake was born on the nineteenth of January, 1813—and this is a somewhat remarkable coincidence, for the day is precisely that of my own nativity.

It may seem strange that in spite of the continual anxiety occasioned me by the rivalry of Wilson, and his intolerable spirit of contradiction, I could not bring myself to hate him altogether. We had, to be sure, nearly every day a quarrel in which, yielding me publicly the palm of victory, he, in some manner, contrived to make me feel that it was he who had deserved it, yet a sense of pride on my part, and a veritable dignity on his own, kept us always upon what are called "speaking terms," while there were many points of strong congeniality in our tempers, operating to awake in me a sentiment which our position alone, perhaps, prevented from ripening into friendship. It is difficult, indeed, to define, or even to describe, my real feelings toward him. They formed a

motley and heterogeneous admixture,—some petulant animosity, which was not yet hatred, some esteem, more respect, much fear, with a world of uneasy curiosity. To the moralist it will be necessary to say, in addition, that Wilson and myself were the most inseparable of companions.

It was no doubt the anomalous state of affairs existing between us, which turned all my attacks upon him, (and there were many, either open or covert) into the channel of banter or practical joke (giving pain while assuming the aspect of mere fun) rather than into a more serious and determined hostility. But my endeavors on this head were by no means uniformly successful, even when my plans were the most wittily concocted, for my namesake had much about him, in character, of that unassuming and quiet austerity which, while enjoying the poignancy of its own jokes, has no heel of Achilles in itself, and absolutely refuses to be laughed at. I could find, indeed, but one vulnerable point, and that, lying in a personal peculiarity, arising, perhaps, from constitutional disease, would have been spared by any antagonist less at his wit's end than myself,—my rival had a weakness in the faucial⁷ or guttural organs, which precluded him from raising his voice at any time *above a very low whisper*. Of this defect I did not fail to take what poor advantage lay in my power.

Wilson's retaliations in kind were many, and there was one form of his practical wit that disturbed me beyond measure. How his sagacity first discovered at all that so petty a thing would vex me, is a question I never could solve, but having discovered, he habitually practised the annoyance. I had always felt aversion to my uncourtly patronymic, and its very common, if not plebeian prænomen. The words were venom in my ears, and when, upon the day of my arrival, a second William Wilson came also to the academy, I felt angry with him for bearing the name, and doubly disgusted

⁷ Pertaining to the fauces or passage from the mouth to the pharynx.

with the name because a stranger bore it, who would be the cause of its twofold repetition, who would be constantly in my presence, and whose concerns, in the ordinary routine of the school business, must inevitably, on account of the detestable coincidence, be often confounded with my own.

The feeling of vexation thus engendered grew stronger with every circumstance tending to show resemblance, moral or physical, between my rival and myself. I had not then discovered the remarkable fact that we were of the same age, but I saw that we were of the same height, and I perceived that we were even singularly alike in general contour of person and outline of feature. I was galled, too, by the rumor touching a relationship, which had grown current in the upper forms. In a word, nothing could more seriously disturb me, (although I scrupulously concealed such disturbance,) than any allusion to a similarity of mind, person, or condition existing between us. But, in truth, I had no reason to believe that (with the exception of the matter of relationship, and in the case of Wilson himself,) this similarity had ever been made a subject of comment, or even observed at all by our school-fellows. That *he* observed it in all its bearings, and as fixedly as I, was apparent, but that he could discover in such circumstances so fruitful a field of annoyance, can only be attributed, as I said before, to his more than ordinary penetration.

His cue, which was to perfect an imitation of myself, lay both in words and in actions, and most admirably did he play his part. My dress it was an easy matter to copy, my gait and general manner were without difficulty appropriated, in spite of his constitutional defect, even my voice did not escape him. My louder tones were, of course, unattempted, but then the key,—it was identical; *and his singular whisper, it grew the very echo of my own*.

How greatly this most exquisite portraiture harassed me (for it could not justly be termed a caricature), I will not now

venture to describe. I had but one consolation—in the fact that the imitation, apparently, was noticed by myself alone, and that I had to endure only the knowing and strangely sarcastic smiles of my namesake himself. Satisfied with having produced in my bosom the intended effect, he seemed to chuckle in secret over the sting he had inflicted, and was characteristically disregarding of the public applause which the success of his witty endeavors might have so easily elicited. That the school, indeed, did not feel his design, perceive its accomplishment, and participate in his sneer, was, for many anxious months, a riddle I could not resolve. Perhaps the *gradation* of his copy rendered it not readily perceptible, or, more possibly, I owed my security to the mastery and of the copyist, who, disdaining the letter (which in a painting is all the obtuse can see), gave but the full spirit of his original for my individual contemplation and chagrin.

I have already more than once spoken of the disgusting air of patronage which he assumed toward me, and of his frequent officious interference with my will. This interference often took the ungracious character of advice, advice not openly given, but hinted or insinuated. I received it with a repugnance which gained strength as I grew in years. Yet, at this distant day, let me do him the simple justice to acknowledge that I can recall no occasion when the suggestions of my rival were on the side of those errors or follies so usual to his immature age and seeming inexperience, that his moral sense, at least, if not his general talents and worldly wisdom, was far keener than my own, and that I might, to-day, have been a better and thus a happier man, had I less frequently rejected the counsels embodied in those meaning whispers which I then but too cordially hated and too bitterly despised.

As it was I at length grew restive in the extreme under his distasteful supervision, and daily resented more and more openly, what I considered his intolerable

arrogance I have said that, in the first years of our connection as schoolmates, my feelings in regard to him might have been easily ripened into friendship, but, in the latter months of my residence at the academy, although the intrusion of his ordinary manner had, beyond doubt, in some measure, abated, my sentiments, in nearly similar proportion, partook very much of positive hatred. Upon one occasion he saw this, I think, and afterward avoided, or made a show of avoiding me.

It was about the same period, if I remember aright, that, in an altercation of violence with him, in which he was more than usually thrown off his guard, and spoke and acted with an openness of demeanor rather foreign to his nature, I discovered, or fancied I discovered, in his accent, in his air, and general appearance, a something which first startled, and then deeply interested me, by bringing to mind dim visions of my earliest infancy—wild, confused, and thronging memories of a time when memory herself was yet unborn. I cannot better describe the sensation which oppressed me, than by saying that I could with difficulty shake off the belief of my having been acquainted with the being who stood before me, at some epoch very long ago—some point of the past even infinitely remote. The delusion, however, faded rapidly as it came, and I mention it at all but to define the day of the last conversation I there held with my singular namesake.

The huge old house, with its countless sub-divisions, had several large chambers communicating with each other, where slept the greater number of the students. There were, however (as must necessarily happen in a building so awkwardly planned), many little nooks or recesses, the odds and ends of the structure, and these the economic ingenuity of Dr Bransby had also fitted up as dormitories, although, being the merest closets, they were capable of accommodating but a single individual. One of these small apartments was occupied by Wilson.

One night, about the close of my fifth year at the school, and immediately after the altercation just mentioned, finding every one wrapped in sleep, I arose from bed, and, lamp in hand, stole through a wilderness of narrow passages, from my own bedroom to that of my rival. I had long been plotting one of those ill-natured pieces of practical wit at his expense in which I had hitherto been so uniformly unsuccessful. It was my intention, now, to put my scheme in operation, and I resolved to make him feel the whole extent of the malice with which I was imbued. Having reached his closet, I noiselessly entered, leaving the lamp, with a shade over it, on the outside. I advanced a step and listened to the sound of his tranquil breathing. Assured of his being asleep, I returned, took the light, and with it again approached the bed. Close curtains were around it, which, in the prosecution of my plan, I slowly and quietly withdrew, when the bright rays fell vividly upon the sleeper, and my eyes at the same moment, upon his countenance I looked,—and a numbness, an iciness of feeling instantly pervaded my frame. My breast heaved, my knees tottered, my whole spirit became possessed with an abject yet intolerable horror. Gasping for breath, I lowered the lamp in still nearer proximity to the face. Were these—*these* the lineaments of William Wilson? I saw, indeed, that they were his, but I shook as if with a fit of the ague, in fancying they were not. What *was* there about them to confound me in this manner? I gazed,—while my brain reeled with a multitude of incoherent thoughts. Not thus he appeared—assuredly not *thus*—in the vivacity of his waking hours. The same name! the same contour of person! the same day of arrival at the academy! And then his dogged and meaningless imitation of my gait, my voice, my habits, and my manner! Was it, in truth, within the bounds of human possibility, that *what I now saw* was the result, merely, of the habitual practice of this sarcastic imitation? Awe-stricken, and with

a creeping shudder, I extinguished the lamp, passed silently from the chamber, and left, at once, the halls of that old academy, never to enter them again.

After a lapse of some months, spent at home in mere idleness, I found myself a student at Eton. The brief interval had been sufficient to enfeeble my remembrance of the events at Dr. Briansby's, or at least to effect a material change in the nature of the feelings with which I remembered them. The truth—the tragedy—of the drama was no more. I could now find room to doubt the evidence of my senses, and seldom called up the subject at all but with wonder at the extent of human credulity, and a smile at the vivid force of the imagination which I hereditarily possessed. Neither was this species of skepticism likely to be diminished by the character of the life I led at Eton. The vortex of thoughtless folly into which I there so immediately and so recklessly plunged, washed away all but the froth of my past hours, engulfed at once every solid or serious impression, and left to memory only the veriest levities of a former existence.

I do not wish, however, to trace the course of my miserable profligacy here—a profligacy which set at defiance the laws, while it eluded the vigilance of the institution. Three years of folly, passed without profit, had but given me rooted habits of vice, and added, in a somewhat unusual degree, to my bodily stature, when, after a week of soulless dissipation, I invited a small party of the most dissolute students to a secret carousal in my chambers. We met at a late hour of the night, for our debaucheries were to be faithfully protracted until morning. The wine flowed freely, and there were not wanting other and perhaps more dangerous seductions, so that the gray dawn had already faintly appeared in the east while our delirious extravagance was at its height. Madly flushed with cards and intoxication, I was in the act of insisting upon a toast of more than wonted profanity, when my at-

tention was suddenly diverted by the violent, although partial, unclosing of the door of the apartment, and by the eager voice of a servant from without. He said that some person, apparently in great haste, demanded to speak with me in the hall.

Wildly excited with wine, the unexpected interruption rather delighted than surprised me. I staggered forward at once, and a few steps brought me to the vestibule of the building. In this low and small room there hung no lamp, and now no light at all was admitted, save that of the exceedingly feeble dawn which made its way through the semi-circular window. As I put my foot over the threshold, I became aware of the figure of a youth about my own height, and habited in a white kerseymere morning frock, cut in the novel fashion of the one I myself wore at the moment. This the faint light enabled me to perceive, but the features of his face I could not distinguish. Upon my entering, he strode hurriedly up to me, and, seizing me by the arm with a gesture of petulant impatience, whispered the words "William Wilson" in my ear.

I grew perfectly sober in an instant.

There was that in the manner of the stranger, and in the tremulous shake of his uplifted finger, as he held it between my eyes and the light, which filled me with unqualified amazement, but it was not this which had so violently moved me. It was the pregnancy of solemn admonition in the singular, low, hissing utterance, and, above all, it was the character, the tone, *the key*, of those few, simple, and familiar, yet *whispered* syllables, which came with a thousand thronging memories of by-gone days, and struck upon my soul with the shock of a galvanic battery. Ere I could recover the use of my senses he was gone.

Although this event failed not of a vivid effect upon my disordered imagination, yet was it evanescent as vivid. For some weeks, indeed, I busied myself in earnest enquiry, or was wrapped in a cloud of morbid spec-

ulation I did not pretend to disguise from my perception the identity of the singular individual who thus perseveringly interfered with my affairs, and harassed me with his insinuated counsel. But who and what was this Wilson?—and whence came he?—and what were his purposes? Upon neither of these points could I be satisfied—merely ascertaining, in regard to him, that a sudden accident in his family had caused his removal from Dr Bransby's academy on the afternoon of the day in which I myself had eloped. But in a brief period I ceased to think upon the subject, my attention being all absorbed in a contemplated departure for Oxford. Thither I soon went, the uncalculating vanity of my parents furnishing me with an outfit and annual establishment, which would enable me to indulge at will in the luxury already so dear to my heart—to vie in profuseness of expenditure with the haughtiest heirs of the wealthiest earldoms in Great Britain.

Excited by such appliances to vice, my constitutional temperament broke forth with redoubled ardor, and I spurned even the common restraints of decency in the mad infatuation of my revels. But it were absurd to pause in the detail of my extravagance. Let it suffice, that among spendthrifts I out-Heroded Herod,⁸ and that, giving name to a multitude of novel follies, I added no brief appendix to the long catalogue of vices then usual in the most dissolute university of Europe.

It could hardly be credited, however, that I had, even here, so utterly fallen from the gentlemanly estate, as to seek acquaintance with the vilest arts of the gambler by profession, and, having become an adept in his despicable science, to practice it habitually as a means of increasing my already enormous income at the expense of the weak-minded among my fellow-collegians. Such, nevertheless, was the fact. And the very enormity of this offence against all manly and honorable sentiment proved, beyond doubt, the main if not the sole reason of the impunity with

which it was committed. Who, indeed, among my most abandoned associates, would not rather have disputed the clearest evidence of his senses, than have suspected of such courses, the gay, the frank, the generous William Wilson—the noblest and most liberal commoner at Oxford—him whose follies (said his parasites) were but the follies of youth and unbridled fancy—whose errors but mimable whim—whose darkest vice but a careless and dashing extravagance?

I had been now two years successfully busied in this way, when there came to the university a young *parvenu* nobleman, Glendenning—rich, said report, as Herodes Atticus⁹—his riches, too, as easily acquired. I soon found him of weak intellect, and, of course, marked him as a fitting subject for my skill. I frequently engaged him in play, and contrived, with the gambler's usual art, to let him win considerable sums, the more effectually to entangle him in my snares. At length, my schemes being ripe, I met him (with the full intention that this meeting should be final and decisive) at the chambers of a fellow-commoner (Mr Preston), equally intimate with both, but who, to do him justice, entertained not even a remote suspicion of my design. To give to this a better coloring, I had contrived to have assembled a party of some eight or ten, and was solicitously careful that the introduction of cards should appear accidental, and originate in the proposal of my contemplated dupe himself. To be brief upon a vile topic, none of the

⁸ This phrase, meaning to exceed in violence or extravagance, owes its currency to *Hamlet*, Act I, sc. ii, where Hamlet, in his speech to the players, refers to the bombastic stock Herod of the mystery plays.

⁹ The reference is probably to Herod Antipas, wealthy tetrarch of Galilee (2 B. C. — 39 A. D.), son of Herod the Great, the procurator of Judea. He acquired his wealth not only from his father but also from his marriage to an Arabian princess whom he deserted for Herodias, his brother's wife.

low finesse was omitted, so customary upon similar occasions, that it is a just matter for wonder how any are still found so besotted as to fall its victim.

We had protracted our sitting far into the night, and I had at length effected the manœuvre of getting Glendenning as my sole antagonist. The game, too, was my favorite *écarté*¹⁰. The rest of the company, interested in the extent of our play, had abandoned their own cards, and were standing around us as spectators. The *parvenu*, who had been induced by my artifices in the early part of the evening, to drink deeply, now shuffled, dealt, or played, with a wild nervousness of manner for which his intoxication, I thought, might partially, but could not altogether account. In a very short period he had become my debtor to a large amount, when, having taken a long draught of port, he did precisely what I had been coolly anticipating—he proposed to double our already extravagant stakes. With a well-feigned show of reluctance, and not until after my repeated refusal had seduced him into some angry words which gave a color of *pique* to my compliance, did I finally comply. The result, of course, did but prove how entirely the play was in my toils: in less than an hour he had quadrupled his debt. For some time his countenance had been losing the florid tinge lent it by the wine, but now, to my astonishment, I perceived that it had grown to a pallor truly fearful. I say, to my astonishment, Glendenning had been represented to my eager inquiries as immeasurably wealthy, and the sums which he had as yet lost, although in themselves vast, could not, I supposed, very seriously annoy, much less so violently affect him. That he was overcome by the wine just swallowed, was the idea which most readily presented itself, and, rather with a view to the preservation of my own character in the eyes of my associates, than from any less interested motive, I was about to insist, peremptorily, upon a discontinuance of the play, when some expressions at my elbow from among the company, and an

ejaculation evincing utter despair on the part of Glendenning, gave me to understand that I had effected his total ruin under circumstances which, rendering him an object for the pity of all, should have protected him from the ill offices even of a fiend.

What now might have been my conduct it is difficult to say. The pitiable condition of my dupe had thrown an air of embarrassed gloom over all, and, for some moments, a profound silence was maintained, during which I could not help feeling my cheeks tingle with the many burning glances of scorn or reproach cast upon me by the less abandoned of the party. I will even own that an intolerable weight of anxiety was for a brief instant lifted from my bosom by the sudden and extraordinary interruption which ensued. The wide, heavy folding doors of the apartment were all at once thrown open, to their full extent, with a vigorous and rushing impetuosity that extinguished, as if by magic, every candle in the room. Their light, in dying, enabled us just to perceive that a stranger had entered, about my own height, and closely muffled in a cloak. The darkness, however, was not total, and we could only *feel* that he was standing in our midst. Before any one of us could recover from the extreme astonishment into which this rudeness had thrown all, we heard the voice of the intruder.

"Gentlemen," he said, in a low, distinct, and never-to-be-forgotten *whisper* which thrilled to the very marrow of my bones, "Gentlemen, I make an apology for this behavior, because in thus behaving, I am fulfilling a duty. You are, beyond doubt, uninformed of the true character of the person who has to-night won at *écarté* a large sum of money from Lord Glendenning. I will therefore put you upon an expeditious and decisive plan of obtaining this very necessary information. Please to examine, at your leisure, the inner linings of the cuff of his left sleeve, and the sev-

¹⁰ Card-game played by two only.

cial little packages which may be found in the somewhat capacious pockets of his embroidered morning wrapper”

While he spoke, so profound was the stillness that one might have heard a pin drop upon the floor. In ceasing, he departed at once and as abruptly as he had entered. Can I—shall I describe my sensations? Must I say that I felt all the horrors of the damned? Most assuredly I had little time for reflection. Many hands roughly seized me upon the spot, and lights were immediately reproduced. A search ensued. In the lining of my sleeve were found all the court cards essential in *écarte*, and in the pockets of my wrapper, a number of packs, fac-similes of those used at our sittings, with the single exception that mine were of the species called, technically, *arrondées*, the honors being slightly convex at the ends, the lower cards slightly convex at the sides. In this disposition, the dupe who cuts, as customary, at the length of the pack, will invariably find that he cuts his antagonist an honor, while the gambler, cutting at the breadth, will, as certainly, cut nothing for his victim which may count in the records of the game.

Any burst of indignation upon this discovery would have affected me less than the silent contempt, or the sarcastic composure, with which it was received.

“Mr. Wilson,” said our host, stooping to remove from beneath his feet an exceedingly luxurious cloak of rare furs, “Mr. Wilson, this is your property” (The weather was cold, and, upon quitting my own room, I had thrown a cloak over my dressing wrapper, putting it off upon reaching the scene of play.) “I presume it is supererogatory to seek here (eyeing the folds of the garment with a bitter smile) for any farther evidence of your skill. Indeed, we have had enough. You will see the necessity, I hope, of quitting Oxford—at all events, of quitting instantly my chambers.”

Abased, humbled to the dust as I then was, it is probable that I should have resented this galling language by immediate

personal violence, had not my whole attention been at the moment arrested by a fact of the most startling character. The cloak which I had worn was of a rare description of fur, how rare, how extravagantly costly, I shall not venture to say. Its fashion, too, was of my own fantastic invention, for I was fastidious to an absurd degree of coxcombry, in matters of this frivolous nature. When, therefore, Mr. Preston reached me that which he had picked up upon the floor, and near the folding-doors of the apartment, it was with an astonishment nearly bordering upon terror, that I perceived my own already hanging on my arm, (where I had no doubt unwittingly placed it,) and that the one presented me was but its exact counterpart in every, in even the minutest possible particular. The singular being who had so disastrously exposed me, had been muffled, I remembered, in a cloak, and none had been worn at all by any of the members of our party, with the exception of myself. Retaining some presence of mind, I took the one offered me by Preston, placed it, unnoticed, over my own, left the apartment with a resolute scowl of defiance, and, next morning ere dawn of day, commenced a hurried journey from Oxford to the continent, in a perfect agony of horror and of shame.

I fled in vain. My evil destiny pursued me as it in exultation, and proved, indeed, that the exercise of its mysterious dominion had as yet only begun. Scarcely had I set foot in Paris, ere I had fresh evidence of the detestable interest taken by this Wilson in my concerns. Years flew, while I experienced no relief. Villain!—at Rome, with how untimely, yet with how spectral an officiousness, stepped he in between me and my ambition! at Vienna, too—at Berlin—and at Moscow! Where, in truth, had I *not* bitter cause to curse him within my heart? From his inscrutable tyranny did I at length flee, pained-stricken, as from a pestilence, and to the very ends of the earth *I fled in vain.*

And again, and again, in secret com-

munion with my own spirit, would I demand the questions "Who is he?—whence came he?—and what are his objects?" But no answer was there found. And now I scrutinized, with a minute scrutiny, the forms, and the methods, and the leading traits of his impertinent supervision. But even here there was very little upon which to base a conjecture. It was noticeable, indeed, that, in no one of the multiplied instances in which he had of late crossed my path, had he so crossed it except to frustrate those schemes, or to disturb those actions, which, if fully carried out, might have resulted in bitter mischief. Poor justification this, in truth, for an authority so imperiously assumed! Poor indemnity for natural rights of self-agency so pertinaciously, so insultingly denied!

I had also been forced to notice that my tormentor, for a very long period of time, (while scrupulously and with miraculous dexterity maintaining his whim of an identity of apparel with myself,) had so contrived it, in the execution of his varied interference with my will, that I saw not, at any moment, the features of his face. Be Wilson what he might, *this*, at least, was but the veriest of affectation, or of folly. Could he, for an instant, have supposed that, in my admonisher at Eton—in the destroyer of my honor at Oxford,—in him who thwarted my ambition at Rome, my revenge at Paris, my passionate love at Naples, or what he falsely termed my avarice in Egypt,—that in this, my arch-enemy and evil genius, I could fail to recognize the William Wilson of my school-boy days,—the name-sake, the companion, the rival—the hated and dreaded rival at Dr Bransby's? Impossible!—But let me hasten to the last eventful scene of the drama.

Thus far I had succumbed supinely to this imperious domination. The sentiment of deep awe with which I habitually regarded the elevated character, the majestic wisdom, the apparent omnipresence and omnipotence of Wilson, added to a feeling of even terror, with which certain other

traits in his nature and assumptions inspired me, had operated, hitherto, to impress me with an idea of my own utter weakness and helplessness, and to suggest an implicit, although bitterly reluctant submission to his arbitrary will. But, of late days, I had given myself up entirely to wine, and its maddening influence upon my hereditary temper rendered me more and more impatient of control. I began to murmur,—to hesitate,—to resist. And was it only fancy which induced me to believe that, with the increase of my own firmness, that of my tormentor underwent a proportional diminution? Be this as it may, I now began to feel the inspiration of a burning hope, and at length nurtured in my secret thoughts a stern and desperate resolution that I would submit no longer to be enslaved.

It was at Rome, during the Carnival of 18—, that I attended a masquerade in the palazzo of the Neapolitan Duke Di Broglio. I had indulged more freely than usual in the excesses of the wine-table, and now the suffocating atmosphere of the crowded rooms irritated me beyond endurance. The difficulty, too, of forcing my way through the mazes of the company contributed not a little to the ruffling of my temper, for I was anxiously seeking (let me not say with what unworthy motive) the young, the gay, the beautiful wife of the aged and doting Di Broglio. With a too unscrupulous confidence she had previously communicated to me the secret of the costume in which she would be habited, and now, having caught a glimpse of her person, I was hurrying to make my way into her presence. At this moment I felt a light hand placed upon my shoulder, and that ever-remembered, low, damnable *whisper* within my ear.

In an absolute frenzy of wrath, I turned at once upon him who had thus interrupted me, and seized him violently by the collar. He was attired, as I had expected, in a costume altogether similar to my own, wearing a Spanish cloak of blue velvet, begirt about the waist with a crimson belt

sustaining a rapier. A mask of black silk entirely covered his face.

"Scoundrel!" I said, in a voice husky with rage, while every syllable I uttered seemed as new fuel to my fury, "scoundrel! impostor! accused villain! you shall not—you *shall not* dog me unto death! Follow me, or I stab you where you stand!"—and I broke my way from the ball-room into a small ante-chamber adjoining, dragging him unresistingly with me as I went.

Upon entering, I thrust him furiously from me. He staggered against the wall, while I closed the door with an oath, and commanded him to draw. He hesitated but for an instant, then, with a slight sigh, drew in silence, and put himself upon his defence.

The contest was brief indeed. I was frantic with every species of wild excitement, and felt within my single arm the energy and power of a multitude. In a few seconds I forced him by sheer strength against the wainscoting, and thus, getting him at mercy, plunged my sword, with brute ferocity, repeatedly through and through his bosom.

At that instant some person tried the latch of the door. I hastened to prevent an intrusion, and then immediately returned to my dying antagonist. But what human language can adequately portray *that* astonishment, *that* horror which possessed me at the spectacle then presented to view? The brief moment in which I averted my eyes had been sufficient to produce, apparently, a material change in the arrangements of the upper or farther end of the room. A large murmur,—so at first it seemed to me in my confusion—now stood where none had been perceptible before, and as I stepped up to it in extremity of terror, mine own image, but with features all pale and dabbled in blood, advanced to meet me with a feeble and tottering gait.

Thus it appeared, I say, but was not. It was my antagonist—it was Wilson, who then stood before me in the agonies of his

dissolution. His mask and cloak lay, where he had thrown them, upon the floor. Not a thread in all his raiment—not a line in all the marked and singular lineaments of his face which was not, even in the most absolute identity, *mine own!*

It was Wilson, but he spoke no longer in a whisper, and I could have fancied that I myself was speaking while he said.

"You have conquered, and I yield. Yet henceforward art thou also dead—dead to the World, to Heaven, and to Hope! In me didst thou exist—and, in my death, see by this image, which is thine own, how utterly thou hast murdered thyself."

THE MASQUE OF THE RED DEATH [1850 (1842)]

THE "RED DEATH" had long devastated the country. No pestilence had ever been so fatal, or so hideous. Blood was its Avatar and its seal—the redness and the horror of blood. There were sharp pains, and sudden dizziness, and then profuse bleeding at the pores, with dissolution. The scarlet stains upon the body and especially upon the face of the victim, were the pest ban which shut him out from the aid and from the sympathy of his fellowmen. And the whole seizure, progress and termination of the disease, were the incidents of half an hour.

But the Prince Prospero was happy and dauntless and sagacious. When his dominions were half depopulated, he summoned to his presence a thousand hale and light-hearted friends from among the knights and dames of his court, and with these retired to the deep seclusion of one of his castellated abbeys. This was an extensive and magnificent structure, the creation of the prince's own eccentric yet august taste. A strong and lofty wall girdled it in. This wall had gates of iron. The courtiers, having entered, brought furnaces and massy hammers and welded the bolts. They resolved to leave means neither of ingress or egress to the sudden impulses of despair

or of frenzy from within. The abbey was amply provisioned. With such precautions the courtiers might bid defiance to contagion. The external world could take care of itself. In the meantime it was folly to grieve, or to think. The prince had provided all the appliances of pleasure. There were buffoons, there were improvisatori, there were ballet-dancers, there were musicians, there was Beauty, there was wine. All these and security were within. Without was the "Red Death."

It was toward the close of the fifth or sixth month of his seclusion, and while the pestilence raged most furiously abroad, that the Prince Prospero entertained his thousand friends at a masked ball of the most unusual magnificence.

It was a voluptuous scene, that masquerade. But first let me tell of the rooms in which it was held. There were seven—an imperial suite. In many palaces, however, such suites form a long and straight vista, while the folding doors slide back nearly to the walls on either hand, so that the view of the whole extent is scarcely impeded. Here the case was very different, as might have been expected from the duke's love of the *bizarre*. The apartments were so irregularly disposed that the vision embraced but little more than one at a time. There was a sharp turn at every twenty or thirty yards, and at each turn a novel effect. To the right and left, in the middle of each wall, a tall and narrow Gothic window looked out upon a closed corridor which pursued the windings of the suite. These windows were of stained glass whose color varied in accordance with the prevailing hue of the decorations of the chamber into which it opened. That at the eastern extremity was hung, for example, in blue—and vividly blue were its windows. The second chamber was purple in its ornaments and tapestries, and here the panes were purple. The third was green throughout, and so were the casements. The fourth was furnished and lighted with orange—the fifth with white—the sixth with violet. The seventh apartment was

closely shrouded in black velvet tapestries that hung all over the ceiling and down the walls, falling in heavy folds upon a carpet of the same material and hue. But in this chamber only, the color of the windows failed to correspond with the decorations. The panes here were scarlet—a deep blood color. Now in no one of the seven apartments was there any lamp or candelabrum, amid the profusion of golden ornaments that lay scattered to and fro or depended from the roof. There was no light of any kind emanating from lamp or candle within the suite of chambers. But in the corridors that followed the suite, there stood, opposite to each window, a heavy tripod, bearing a brazier of fire that projected its rays through the tinted glass and so glaringly illumined the room. And thus were produced a multitude of gaudy and fantastic appearances. But in the western or black chamber the effect of the firelight that streamed upon the dark hangings through the blood-tinted panes, was ghastly in the extreme, and produced so wild a look upon the countenances of those who entered, that there were few of the company bold enough to set foot within its precincts at all.

It was in this apartment, also, that there stood against the western wall, a gigantic clock of ebony. Its pendulum swung to and fro with a dull, heavy, monotonous clang, and when the minute-hand made the circuit of the face, and the hour was to be stricken, there came from the brazen lungs of the clock a sound which was clear and loud and deep and exceedingly musical, but of so peculiar a note and emphasis that, at each lapse of an hour, the musicians of the orchestra were constrained to pause, momentarily, in their performance, to hearken to the sound, and thus the waltzers perforce ceased their evolutions, and there was a brief disconcert of the whole gay company, and, while the chimes of the clock yet rang, it was observed that the giddiest grew pale, and the more aged and sedate passed their hands over their brows as if in confused reverie or meditation. But

when the echoes had fully ceased, a light laughter at once pervaded the assembly, the musicians looked at each other and smiled as if at their own nervousness and folly, and made whispering vows, each to the other, that the next chiming of the clock should produce in them no similar emotion, and then, after the lapse of sixty minutes (which embrace three thousand and six hundred seconds of the Time that flies,) there came yet another chiming of the clock, and then were the same disconcert and tremulousness and meditation as before.

But, in spite of these things, it was a gay and magnificent revel. The tastes of the duke were peculiar. He had a fine eye for colors and effects. He disregarded the *decora*¹ of mere fashion. His plans were bold and fiery, and his conceptions glowed with barbaric lustre. There are some who would have thought him mad. His followers felt that he was not. It was necessary to hear and see and touch him to be *sure* that he was not.

He had directed, in great part, the movable embellishments of the seven chambers, upon occasion of this great *fête*, and it was his own guiding taste which had given character to the masqueraders. Be sure they were grotesque. There were much glare and glitter and piquancy and phantasm—much of what has been since seen in “*Hernani*”². There were arabesque figures with unsuited limbs and appointments. There were delirious fancies such as the madman fashions. There was much of the beautiful, much of the wanton, much of the *bizarre*, something of the terrible, and not a little of that which might have excited disgust. To and fro in the seven chambers there stalked, in fact, a multitude of dreams. And these—the dreams—writhed in and about, taking hue from the rooms, and causing the wild music of the orchestra to seem as the echo of their steps. And, anon, there strikes the ebony clock which stands in the hall of the velvet. And then, for a moment, all is still, and all is silent save the voice of the clock,

The dreams are stiff-frozen as they stand. But the echoes of the chime die away—they have endured but an instant—and a light, half-subdued laughter floats after them as they depart. And now again the music swells, and the dreams live, and writhe to and fro more merrily than ever, taking hue from the many tinted windows through which stream the rays from the tripods. But to the chamber which lies most westwardly of the seven, there are now none of the maskers who venture, for the night is waning away, and there flows a ruddier light through the blood-colored panes, and the blackness of the sable drapery appalls, and to him whose foot falls upon the sable carpet, there comes from the near clock of ebony a muffled peal more solemnly emphatic than any which reaches *their* ears who indulge in the more remote gayeties of the other apartments.

But these other apartments were densely crowded, and in them beat feverishly the heart of life. And the revel went whirlingly on, until at length there commenced the sounding of midnight upon the clock. And then the music ceased, as I have told, and the evolutions of the waltzers were quieted, and there was an uneasy cessation of all things as before. But now there were twelve strokes to be sounded by the bell of the clock, and thus it happened, perhaps, that more of thought crept, with more of time, into the meditations of the thoughtful among those who revelled. And thus, too, it happened, perhaps, that before the last echoes of the last chime had utterly sunk into silence, there were many individuals in the crowd who had found leisure to become aware of the presence of a masked figure which had arrested the attention of no single individual before. And the rumor of this new presence having spread itself whisperingly around, there

¹ Decorations

² Victor Hugo's *Hernani* (1830) began the vogue of romanticism in the French theater.

arose at length from the whole company, a buzz, or murmur, expressive of disapprobation and surprise—then, finally, of terror, of horror, and of disgust.

In an assembly of phantasms such as I have painted, it may well be supposed that no ordinary appearance could have excited such sensation. In truth the masquerade license of the night was nearly unlimited, but the figure in question had out-Heroded Herod,³ and gone beyond the bounds of even the prince's indefinite decorum. There are chords in the hearts of the most reckless which cannot be touched without emotion. Even with the utterly lost, to whom life and death are equally jests, there are matters of which no jest can be made. The whole company, indeed, seemed now deeply to feel that in the costume and bearing of the stranger neither wit nor propriety existed. The figure was tall and gaunt, and shrouded from head to foot in the habiliments of the grave. The mask which concealed the visage was made so nearly to resemble the countenance of a stiffened corpse that the closest scrutiny must have had difficulty in detecting the cheat. And yet all this might have been endured, if not approved, by the mad revellers around. But the mummer had gone so far as to assume the type of the Red Death. His vesture was dabbled in *blood*—and his broad brow, with all the features of the face, was besprinkled with the scarlet horror.

When the eyes of Prince Prospero fell upon this spectral image (which with a slow and solemn movement, as if more fully to sustain its *rôle*, stalked to and fro among the waltzers) he was seen to be convulsed, in the first moment, with a strong shudder either of terror or distaste, but, in the next, his brow reddened with rage.

"Who dares?" he demanded hoarsely of the courtiers who stood near him—"who dares insult us with this blasphemous mockery? Seize him and unmask him—that we may know whom we have to hang at sunrise, from the battlements!"

It was in the eastern or blue chamber in which stood the Prince Prospero as he uttered these words. They rang throughout the seven rooms loudly and clearly—for the prince was a bold and robust man, and the music had become hushed at the waving of his hand.

It was in the blue room where stood the prince, with a group of pale courtiers by his side. At first, as he spoke, there was a slight rushing movement of this group in the direction of the intruder, who at the moment was also near at hand, and now, with deliberate and stately step, made closer approach to the speaker. But from a certain nameless awe with which the mad assumptions of the mummer had inspired the whole party, there were found none who put forth hand to seize him, so that, unimpeded, he passed within a yard of the prince's person, and, while the vast assembly, as if with one impulse, shrank from the centres of the rooms to the walls, he made his way uninterruptedly, but with the same solemn and measured step which had distinguished him from the first, through the blue chamber to the purple—through the purple to the green—through the green to the orange—through this again to the white—and even thence to the violet, ere a decided movement had been made to arrest him. It was then, however, that the Prince Prospero, maddening with rage and the shame of his own momentary cowardice, rushed hurriedly through the six chambers, while none followed him on account of a deadly terror that had seized upon all. He bore aloft a drawn dagger, and had approached, in rapid impetuosity, to within three or four feet of the retreating figure, when the latter, having attained the extremity of the velvet apartment, turned suddenly and confronted his pursuer. There was a sharp cry—and the dagger dropped gleaming upon the sable carpet, upon which, instantly afterwards, fell prostrate in death the Prince Prospero. Then, summoning the wild courage of

³ See Note 8 for "William Wilson," p. 509.

despair, a throng of the revellers at once threw themselves into the black apartment, and, seizing the mummer, whose tall figure stood erect and motionless within the shadow of the ebony clock, gasped in unutterable horror at finding the grave-cerements and corpse-like mask which they handled with so violent a rudeness, untenanted by any tangible form

And now was acknowledged the presence of the Red Death. He had come like a thief in the night. And one by one dropped the revellers in the blood-bedewed halls of their revel, and died each in the despairing posture of his fall. And the life of the ebony clock went out with that of the last of the gay. And the flames of the tripods expired. And Darkness and Decay and the Red Death held illimitable dominion over all.

THE CASK OF AMONTILLADO [1850 (1846)]

THE THOUSAND injuries of Fortunato I had borne as I best could, but when he ventured upon insult, I vowed revenge. You, who so well know the nature of my soul, will not suppose, however, that I gave utterance to a threat. *At length* I would be avenged: this was a point definitively settled—but the very definitiveness with which it was resolved precluded the idea of risk. I must not only punish, but punish with impunity. A wrong is unredressed when retribution overtakes its redresser. It is equally unredressed when the avenger fails to make himself felt as such to him who has done the wrong.

It must be understood that neither by word nor deed had I given Fortunato cause to doubt my good will. I continued, as was my wont, to smile in his face, and he did not perceive that my smile *now* was at the thought of his immolation.

He had a weak point—this Fortunato—although in other regards he was a man to be respected and even feared. He prided himself on his connoisseurship in wine.

Few Italians have the true virtuoso spirit. For the most part their enthusiasm is adopted to suit the time and opportunity—to practice imposture upon the British and Austrian *millionaires*. In painting and gemmary, Fortunato, like his countrymen, was a quack—but in the matter of old wines he was sincere. In this respect I did not differ from him materially,—I was skilful in the Italian vintages myself, and bought largely whenever I could.

It was about dusk, one evening during the supreme madness of the carnival season, that I encountered my friend. He accosted me with excessive warmth, for he had been drinking much. The man wore motley. He had on a tight-fitting parti-striped dress, and his head was surmounted by the conical cap and bells. I was so pleased to see him that I thought I should never have done wringing his hand.

I said to him—"My dear Fortunato, you are luckily met. How remarkably well you are looking to-day. But I have received a pipe¹ of what passes for Amontillado, and I have my doubts."

"How?" said he. "Amontillado? A pipe? Impossible! And in the middle of the carnival!"

"I have my doubts," I replied, "and I was silly enough to pay the full Amontillado price without consulting you in the matter. You were not to be found, and I was fearful of losing a bargain."

"Amontillado!"

"I have my doubts."

"Amontillado!"

"And I must satisfy them."

"Amontillado!"

"As you are engaged, I am on my way to Luchresi. If any one has a critical turn, it is he. He will tell me—"

"Luchresi cannot tell Amontillado from Sherry."

"And yet some fools will have it that his taste is a match for your own."

"Come, let us go."

"Whither?"

¹ Small barrel

"To your vaults "

"My friend, no, I will not impose upon your good nature I perceive you have an engagement Luchresi—"

"I have no engagement,—come "

"My friend, no It is not the engagement, but the severe cold with which I perceive you are afflicted The vaults are insufferably damp They are incrustated with nitre "

"Let us go, nevertheless The cold is merely nothing Amontillado! You have been imposed upon And as for Luchresi, he cannot distinguish Sherry from Amontillado "

Thus speaking, Fortunato possessed himself of my arm Putting on a mask of black silk, and drawing a *roquelaure*² closely about my person, I suffered him to hurry me to my palazzo

There were no attendants at home, they had absconded to make merry in honour of the time I had told them that I should not return until the morning, and had given them explicit orders not to stir from the house These orders were sufficient, I well knew, to insure their immediate disappearance, one and all, as soon as my back was turned

I took from their sconces two flambeaus, and giving one to Fortunato, bowed him through several suites of rooms to the archway that led into the vaults I passed down a long and winding staircase, requesting him to be cautious as he followed We came at length to the foot of the descent, and stood together on the damp ground of the catacombs of the Montresors

The gait of my friend was unsteady, and the bells upon his cap jingled as he strode

"The pipe," said he

"It is farther on," said I, "but observe the white web-work which gleams from these cavern walls "

He turned towards me, and looked into my eyes with two filmy orbs that distilled the rheum of intoxication

"Nitre?" he asked at length

"Nitre," I replied "How long have you had that cough?"

"Ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh!—ugh! ugh! ugh!"

My poor friend found it impossible to reply for many minutes

"It is nothing," he said, at last

"Come," I said, with decision, "we will go back, your health is precious You are rich, respected, admired, beloved, you are happy, as once I was You are a man to be missed For me it is no matter We will go back, you will be ill, and I cannot be responsible Besides, there is Luchresi—"

"Enough," he said, "the cough is a mere nothing, it will not kill me I shall not die of a cough "

"True—true," I replied, "and, indeed, I had no intention of alarming you unnecessarily—but you should use all proper caution A draught of this Medoc will defend us from the damps "

Here I knocked off the neck of a bottle which I drew from a long row of its fellows that lay upon the mould

"Drink," I said, presenting him the wine

He raised it to his lips with a leer He paused and nodded to me familiarly, while his bells jingled

"I drink," he said, "to the buried that repose around us "

"And I to your long life "

He again took my arm, and we proceeded

"These vaults," he said, "are extensive "

"The Montresors," I replied, "were a great and numerous family "

"I forget your arms "

"A huge human foot d'or, in a field azure, the foot crushes a serpent rampant whose fangs are embedded in the heel "

"And the motto?"

"*Nemo me impune lacessit.*"³

"Good!" he said

The wine sparkled in his eyes and the bells jingled My own fancy grew warm with the Medoc We had passed through long walls of piled skeletons, with casks

² Short cloak

³ "No one attacks me with impunity," a motto on the royal arms of Scotland

and puncheons intermingling, into the inmost recesses of the catacombs I paused again, and thus time I made bold to seize Fortunato by an arm above the elbow

"The nitre!" I said, "see, it increases. It hangs like moss upon the vaults. We are below the river's bed. The drops of moisture trickle among the bones. Come, we will go back ere it is too late. Your cough—"

"It is nothing," he said, "let us go on. But first, another draught of the Medoc."

I broke and reached him a flagon of De Grâve. He emptied it at a breath. His eyes flashed with a fierce light. He laughed and threw the bottle upwards with a gesticulation I did not understand.

I looked at him in surprise. He repeated the movement—a grotesque one.

"You do not comprehend?" he said.

"Not I," I replied.

"Then you are not of the brotherhood?"

"How?"

"You are not of the masons?"

"Yes, yes," I said, "yes, yes."

"You? Impossible! A mason?"

"A mason," I replied.

"A sign," he said, "a sign."

"It is this," I answered, producing from beneath the folds of my *roquelaure*, a trowel.

"You jest," he exclaimed, recoiling a few paces. "But let us proceed to the Amontillado."

"Be it so," I said, replacing the tool beneath the cloak, and again offering him my arm. He leaned upon it heavily. We continued our route in search of the Amontillado. We passed through a range of low arches, descended, passed on, and, descending again, arrived at a deep crypt, in which the foulness of the air caused our flambeaus rather to glow than flame.

At the most remote end of the crypt there appeared another less spacious. Its walls had been lined with human remains, piled to the vault overhead, in the fashion of the great catacombs of Paris. Three sides of this interior crypt were still ornamented in this manner. From the fourth

side the bones had been thrown down, and lay promiscuously upon the earth, forming at one point a mound of some size. Within the wall thus exposed by the displacing of the bones, we perceived a still interior crypt or recess, in depth about four feet, in width three, in height six or seven. It seemed to have been constructed for no especial use within itself, but formed merely the interval between two of the colossal supports of the roof of the catacombs, and was backed by one of their circumscribing walls of solid granite.

It was in vain that Fortunato, uplifting his dull torch, endeavoured to pry into the depth of the recess. Its termination the feeble light did not enable us to see.

"Proceed," I said, "herein is the Amontillado. As for Luchresi—"

"He is an ignoramus," interrupted my friend, as he stepped unsteadily forward, while I followed immediately at his heels. In an instant he had reached the extremity of the niche, and finding his progress arrested by the rock, stood stupidly bewildered. A moment more and I had fettered him to the granite. In its surface were two iron staples, distant from each other about two feet, horizontally. From one of these depended a short chain, from the other a padlock. Throwing the links about his waist, it was but the work of a few seconds to secure it. He was too much astounded to resist. Withdrawing the key, I stepped back from the recess.

"Pass your hand," I said, "over the wall, you cannot help feeling the nitre. Indeed it is *very* damp. Once more let me *implore* you to return. No? Then I must positively leave you. But I must first render you all the little attentions in my power."

"The Amontillado!" ejaculated my friend, not yet recovered from his astonishment.

"True," I replied, "the Amontillado."

As I said these words I busied myself among the pile of bones of which I have before spoken. Throwing them aside, I soon uncovered a quantity of building

stone and mortar. With these materials and with the aid of my trowel, I began vigorously to wall up the entrance of the niche.

I had scarcely laid the first tier of the masonry when I discovered that the intoxication of Fortunato had in a great measure worn off. The earliest indication I had of this was a low moaning cry from the depth of the recess. It was *not* the cry of a drunken man. There was then a long and obstinate silence. I laid the second tier, and the third, and the fourth, and then I heard the furious vibrations of the chain. The noise lasted for several minutes, during which, that I might hearken to it with the more satisfaction, I ceased my labours and sat down upon the bones. When at last the clanking subsided, I resumed the trowel, and finished without interruption the fifth, the sixth, and the seventh tier. The wall was now nearly upon a level with my breast. I again paused, and holding the flambeaus over the mason work, threw a few feeble rays upon the figure within.

A succession of loud and shrill screams, bursting suddenly from the throat of the chained form, seemed to thrust me violently back. For a brief moment I hesitated, I trembled. Unsheathing my rapier, I began to grope with it about the recess, but the thought of an instant reassured me. I placed my hand upon the solid fabric of the catacombs, and felt satisfied. I reapproached the wall, I replied to the yells of him who clamoured. I re-echoed, I aided, I surpassed them in volume and in strength. I did this, and the clamor grew still.

It was now midnight, and my task was drawing to a close. I had completed the eighth, the ninth, and the tenth tier. I had finished a portion of the last and the eleventh, there remained but a single stone to be fitted and plastered in. I struggled with its weight, I placed it partially in its destined position. But now there came from out the niche a low laugh that erected the hairs upon my head. It was succeeded by a sad voice, which I had difficulty in recognizing as that of the noble Fortunato. The voice said—

"Ha! ha! ha!—he! he! he!—a very good joke, indeed—an excellent jest. We will have many a rich laugh about it at the palazzo—he! he! he!—over our wine—he! he! he!"

"The Amontillado!" I said.

"He! he! he!—he! he! he!—yes, the Amontillado. But is it not getting late? Will not they be awaiting us at the palazzo, the Lady Fortunato and the rest? Let us be gone!"

"Yes," I said, "let us be gone!"

"For the love of God, Montresor!"

"Yes," I said, "for the love of God!"

But to these words I hearkened in vain for a reply. I grew impatient. I called aloud—

"Fortunato!"

No answer. I called again—

"Fortunato!"

No answer still. I thrust a torch through the remaining aperture and let it fall within. There came forth in return only a jingling of the bells. My heart grew sick, it was the dampness of the catacombs that made it so. I hastened to make an end of my labour. I forced the last stone into its position, I plastered it up. Against the new masonry I re-erected the old rampart of bones. For the half of a century no mortal has disturbed them. *In pace requiescat*⁴

THE PURLOINED LETTER [1845 (1844)]

Nil sapientiae odiosius acumine nimio
SENECA¹

AT PARIS, just after dark one gusty evening in the autumn of 18—, I was enjoying the two-fold luxury of meditation and a meerschaum, in company with my friend C. Auguste Dupin, in his little back library, or book-closet, *au troisième, No*

⁴ May he rest in peace.

¹ The epigraph, "Nothing is more distasteful to good sense than too much subtlety," is from Lucius Annaeus Seneca (3 B. C. — 65 A. D.).

33, Rue Dunôt, Faubourg St Germain² For one hour at least we had maintained a profound silence, while each, to any casual observer, might have seemed intently and exclusively occupied with the curling eddies of smoke that oppressed the atmosphere of the chamber. For myself, however, I was mentally discussing certain topics which had formed matter for conversation between us at an earlier period of the evening, I mean the affair of the Rue Morgue, and the mystery attending the murder of Marie Rogêt.³ I looked upon it, therefore, as something of a coincidence, when the door of our apartment was thrown open and admitted our old acquaintance, Monsieur G——, the Prefect of the Parisian police.

We gave him a hearty welcome, for there was nearly half as much of the entertaining as of the contemptible about the man, and we had not seen him for several years. We had been sitting in the dark, and Dupin now arose for the purpose of lighting a lamp, but sat down again, without doing so, upon G's saying that he had called to consult us, or rather to ask the opinion of my friend, about some official business which had occasioned a great deal of trouble.

"If it is any point requiring reflection," observed Dupin, as he forbore to enkindle the wick, "we shall examine it to better purpose in the dark."

"That is another of your odd notions," said the Prefect, who had a fashion of calling everything "odd" that was beyond his comprehension, and thus lived amid an absolute legion of "oddities."

"Very true," said Dupin, as he supplied his visitor with a pipe, and rolled towards him a comfortable chair.

"And what is the difficulty now?" I asked. "Nothing more in the assassination way, I hope?"

"Oh no, nothing of that nature. The fact is, the business is *very* simple indeed, and I make no doubt that we can manage it sufficiently well ourselves, but then I thought Dupin would like to hear the

details of it, because it is so excessively *odd*."

"Simple and odd," said Dupin.

"Why, yes, and not exactly that, either. The fact is, we have all been a good deal puzzled because the affair is so simple, and yet baffles us altogether."

"Perhaps it is the very simplicity of the thing which puts you at fault," said my friend.

"What nonsense you *do* talk!" replied the Prefect, laughing heartily.

"Perhaps the mystery is a little *too* plain," said Dupin.

"Oh, good heavens! who ever heard of such an idea?"

"A little *too* self-evident."

"Ha! ha! ha!—ha! ha! ha!—ho! ho! ho!" roared our visitor, profoundly amused, "oh, Dupin, you will be the death of me yet!"

"And what, after all, is the matter on hand?" I asked.

"Why, I will tell you," replied the Prefect, as he gave a long, steady, and contemplative puff, and settled himself in his chair. "I will tell you in a few words, but, before I begin, let me caution you that this is an affair demanding the greatest secrecy, and that I should most probably lose the position I now hold, were it known that I confided it to any one."

"Proceed," said I.

"Or not," said Dupin.

"Well, then, I have received personal information, from a very high quarter, that a certain document of the last importance, has been purloined from the royal apartments. The individual who purloined it is known, this beyond a doubt, he was seen to take it. It is known, also, that it still remains in his possession."

"How is this known?" asked Dupin.

"It is clearly inferred," replied the Prefect.

² On the third floor at No 33, Dunôt Street, in the ward of St Germain.

³ A reference to Poe's earlier stories of Dupin's exploits, "The Murders in the Rue Morgue" and "The Mystery of Marie Rogêt."

fect, "from the nature of the document, and from the non-appearance of certain results which would at once arise from its passing out of the robber's possession,—that is to say, from his employing it as he must design in the end to employ it"

"Be a little more explicit," I said

"Well, I may venture so far as to say that the paper gives its holder a certain power in a certain quarter where such power is immensely valuable" The Prefect was fond of the cant of diplomacy

"Still I do not quite understand," said Dupin

"No? Well, the disclosure of the document to a third person, who shall be nameless, would bring in question the honor of a personage of most exalted station, and this fact gives the holder of the document an ascendancy over the illustrious personage whose honor and peace are so jeopardized"

"But this ascendancy," I interposed, "would depend upon the robber's knowledge of the loser's knowledge of the robber Who would dare——"

"The thief," said G, "is the Minister D——, who dares all things, those unbecoming as well as those becoming a man The method of the theft was not less ingenious than bold The document in question—a letter, to be frank—had been received by the personage robbed while alone in the royal *boudoir* During its perusal she was suddenly interrupted by the entrance of the other exalted personage from whom especially it was her wish to conceal it After a hurried and vain endeavor to thrust it in a drawer, she was forced to place it, open as it was, upon a table The address, however, was uppermost, and, the contents thus unexposed, the letter escaped notice * At this juncture enters the Minister D—— His lynx eye immediately perceives the paper, recognizes the handwriting of the address, observes the confusion of the personage addressed, and fathoms her secret After some business transactions, hurried through in his ordinary manner, he produces a

letter somewhat similar to the one in question, opens it, pretends to read it, and then places it in close juxtaposition to the other Again he converses, for some fifteen minutes, upon the public affairs At length, in taking leave, he takes also from the table the letter to which he had no claim Its rightful owner saw, but, of course, dared not call attention to the act, in the presence of the third personage who stood at her elbow The Minister decamped, leaving his own letter—one of no importance—upon the table"

"Here, then," said Dupin to me, "you have precisely what you demand to make the ascendancy complete—the robber's knowledge of the loser's knowledge of the robber"

"Yes," replied the Prefect, "and the power thus attained has, for some months past, been wielded, for political purposes, to a very dangerous extent The personage robbed is more thoroughly convinced, every day, of the necessity of reclaiming her letter But this, of course, cannot be done openly In fine, driven to despair, she has committed the matter to me"

"Than whom," said Dupin, amid a perfect whirlwind of smoke, "no more sagacious agent could, I suppose, be desired, or even imagined"

"You flatter me," replied the Prefect, "but it is possible that some such opinion may have been entertained"

"It is clear," said I, "as you observe, that the letter is still in possession of the minister, since it is thus possession, and not any employment of the letter, which bestows the power With the employment the power departs"

"True," said G, "and upon this conviction I proceeded My first care was to make thorough search of the minister's hotel, and here my chief embarrassment lay in the necessity of searching without

* At this time letters were not inclosed in envelopes, but folded so they could be sealed with the blank side of the sheet left for the address

his knowledge. Beyond all things, I have been warned of the danger which would result from giving him reason to suspect our design."

"But," said I, "you are quite *au fait*⁵ in these investigations. The Parisian police have done this thing often before."

"O, yes, and for this reason I did not despair. The habits of the minister gave me, too, a great advantage. He is frequently absent from home all night. His servants are by no means numerous. They sleep at a distance from their master's apartment, and, being chiefly Neapolitans, are readily made drunk. I have keys, as you know, with which I can open any chamber or cabinet in Paris. For three months a night has not passed, during the greater part of which I have not been engaged, personally, in ransacking the D—— Hotel. My honor is interested, and, to mention a great secret, the reward is enormous. So I did not abandon the search until I had become fully satisfied that the thief is a more astute man than myself. I fancy that I have investigated every nook and corner of the premises in which it is possible that the paper can be concealed."

"But is it not possible," I suggested, "that although the letter may be in possession of the minister, as it unquestionably is, he may have concealed it elsewhere than upon his own premises?"

"This is barely possible," said Dupin. "The present peculiar condition of affairs at court, and especially of those intrigues in which D—— is known to be involved, would render the instant availability of the document—its susceptibility of being produced at a moment's notice—a point of nearly equal importance with its possession."

"Its susceptibility of being produced?" said I.

"That is to say, of being *destroyed*," said Dupin.

"True," I observed, "the paper is clearly then upon the premises. As for its being upon the person of the minister, we may

consider that as out of the question."

"Entirely," said the Prefect. "He has been twice waylaid, as if by footpads, and his person rigorously searched under my own inspection."

"You might have spared yourself this trouble," said Dupin. "D——, I presume, is not altogether a fool, and, if not, must have anticipated these waylayings, as a matter of course."

"Not *altogether* a fool," said G., "but then he's a poet, which I take to be only one remove from a fool."

"True," said Dupin, after a long and thoughtful whiff from his meerschaum, "although I have been guilty of certain doggerel myself."

"Suppose you detail," said I, "the particulars of your search?"

"Why, the fact is, we took our time, and we searched *every where*. I have had long experience in these affairs. I took the entire building, room by room, devoting the nights of a whole week to each. We examined, first, the furniture of each apartment. We opened every possible drawer, and I presume you know that, to a properly trained police agent, such a thing as a *secret* drawer is impossible. Any man is a dolt who permits a 'secret' drawer to escape him in a search of this kind. The thing is so plain. There is a certain amount of bulk—of space—to be accounted for in every cabinet. Then we have accurate rules. The fiftieth part of a line could not escape us. After the cabinets we took the chairs. The cushions we probed with the fine long needles you have seen me employ. From the tables we removed the tops."

"Why so?"

"Sometimes the top of a table, or other similarly arranged piece of furniture, is removed by the person wishing to conceal an article, then the leg is excavated, the article deposited within the cavity, and the top replaced. The bottoms and tops of bed-posts are employed in the same way."

⁵ Experienced or "in the know."

"But could not the cavity be detected by sounding?" I asked

"By no means, if, when the article is deposited, a sufficient wadding of cotton be placed around it. Besides, in our case, we were obliged to proceed without noise."

"But you could not have removed—you could not have taken to pieces *all* articles of furniture in which it would have been possible to make a deposit in the manner you mention. A letter may be compressed into a thin spiral roll, not differing much in shape or bulk from a large knitting-needle, and in this form it might be inserted into the rung of a chair, for example. You did not take to pieces all the chairs?"

"Certainly not, but we did better—we examined the rungs of every chair in the hotel, and, indeed, the jointings of every description of furniture, by the aid of a most powerful microscope. Had there been any traces of recent disturbance we should not have failed to detect it instantly. A single grain of gimlet-dust, for example, would have been as obvious as an apple. Any disorder in the glueing—any unusual gaping in the joints—would have sufficed to insure detection."

"I presume you looked to the mirrors, between the boards and the plates, and you probed the beds and the bed-clothes, as well as the curtains and carpets."

"That of course, and when we had absolutely completed every particle of the furniture in this way, then we examined the house itself. We divided its entire surface into compartments, which we numbered, so that none might be missed, then we scrutinized each individual square inch throughout the premises, including the two houses immediately adjoining, with the microscope, as before."

"The two houses adjoining!" I exclaimed, "you must have had a great deal of trouble."

"We had, but the reward offered is prodigious."

"You include the *grounds* about the houses?"

"All the grounds are paved with brick.

They gave us comparatively little trouble. We examined the moss between the bricks, and found it undisturbed."

"You looked among D——'s papers, of course, and into the books of the library?"

"Certainly, we opened every package and parcel, we not only opened every book, but we turned over every leaf in each volume, not contenting ourselves with a mere shake, according to the fashion of some of our police officers. We also measured the thickness of every book-cover, with the most accurate admeasurement, and applied to each the most jealous scrutiny of the microscope. Had any of the bindings been recently meddled with, it would have been utterly impossible that the fact should have escaped observation. Some five or six volumes, just from the hands of the binder, we carefully probed, longitudinally, with the needles."

"You explored the floors beneath the carpets?"

"Beyond doubt. We removed every carpet, and examined the boards with the microscope."

"And the paper on the walls?"

"Yes."

"You looked into the cellars?"

"We did."

"Then," I said, "you have been making a miscalculation, and the letter is *not* upon the premises, as you suppose."

"I fear you are right there," said the Prefect. "And now, Dupin, what would you advise me to do?"

"To make a thorough re-search of the premises."

"That is absolutely needless," replied G——. "I am not more sure that I breathe than I am that the letter is not at the Hotel."

"I have no better advice to give you," said Dupin. "You have, of course, an accurate description of the letter?"

"Oh yes!"—And here the Prefect, producing a memorandum-book, proceeded to read aloud a minute account of the internal, and especially of the external appearance of the missing document. Soon after fin-

ishing the perusal of this description, he took his departure, more entirely depressed in spirits than I had ever known the good gentleman before

In about a month afterwards he paid us another visit, and found us occupied very nearly as before. He took a pipe and a chair and entered into some ordinary conversation. At length I said,—

"Well, but G——, what of the purloined letter? I presume you have at last made up your mind that there is no such thing as overreaching the Minister?"

"Confound him, say I—yes, I made the re-examination, however, as Dupin suggested—but it was all labor lost, as I knew it would be."

"How much was the reward offered, did you say?" asked Dupin.

"Why, a very great deal—a *very* liberal reward—I don't like to say how much, precisely, but one thing I *will* say, that I wouldn't mind giving my individual check for fifty thousand francs to any one who could obtain me that letter. The fact is, it is becoming of more and more importance every day, and the reward has been lately doubled. If it were trebled, however, I could do no more than I have done."

"Why, yes," said Dupin, drawlingly, between the whiffs of his meerschaum, "I really—think, G——, you have not exerted yourself—to the utmost in this matter. You might—do a little more, I think, eh?"

"How?—in what way?"

"Why—puff, puff—you might—puff, puff—employ counsel in the matter, eh?—puff, puff, puff. Do you remember the story they tell of Abernethy?"⁶

"No hang Abernethy!"

"To be sure! hang him and welcome. But, once upon a time, a certain rich miser conceived the design of sponging upon this Abernethy for a medical opinion. Getting up, for this purpose, an ordinary conversation in a private company, he insinuated his case to the physician, as that of an imaginary individual.

"We will suppose," said the miser, "that his symptoms are such and such, now,

doctor, what would *you* have directed him to take?"

"Take!" said Abernethy, "why, take *advice*, to be sure."

"But," said the Prefect, a little discomposed, "I am *perfectly* willing to take advice, and to pay for it I would *really* give fifty thousand francs to any one who would aid me in the matter."

"In that case," replied Dupin, opening a drawer, and producing a check-book, "you may as well fill me up a check for the amount mentioned. When you have signed it, I will hand you the letter."

I was astounded. The Prefect appeared absolutely thunder-stricken. For some minutes he remained speechless and motionless, looking incredulously at my friend with open mouth, and eyes that seemed starting from their sockets, then, apparently recovering himself in some measure, he seized a pen, and after several pauses and vacant stares, finally filled up and signed a check for fifty thousand francs, and handed it across the table to Dupin. The latter examined it carefully and deposited it in his pocket-book, then, unlocking an *escritoire*,⁷ took thence a letter and gave it to the Prefect. This functionary grasped it in a perfect agony of joy, opened it with a trembling hand, cast a rapid glance at its contents, and then, scrambling and struggling to the door, rushed at length uncereemoniously from the room and from the house, without having uttered a syllable since Dupin had requested him to fill up the check.

When he had gone, my friend entered into some explanations.

"The Parisian police," he said, "are exceedingly able in their way. They are persevering, ingenious, cunning, and thoroughly versed in the knowledge which their duties seem chiefly to demand. Thus, when G—— detailed to us his mode of searching the premises at the Hotel D——, I felt

⁶ Dr. John Abernethy (1764-1831), a British physician.

⁷ Writing-desk.

entire confidence in his having made a satisfactory investigation—so far as his labors extended ”

“So far as his labors extended?” said I

“Yes,” said Dupin “The measures adopted were not only the best of their kind, but carried out to absolute perfection Had the letter been deposited within the range of their search, these fellows would, beyond a question, have found it ”

I merely laughed—but he seemed quite serious in all that he said

“The measures, then,” he continued, “were good in their kind, and well executed, their defect lay in their being inapplicable to the case, and to the man A certain set of highly ingenious resources are, with the Prefect, a sort of Procrustean bed,⁸ to which he forcibly adapts his designs But he perpetually errs by being too deep or too shallow, for the matter in hand, and many a schoolboy is a better reasoner than he I knew one about eight years of age, whose success at guessing in the game of ‘even and odd’ attracted universal admiration This game is simple, and is played with marbles One player holds in his hand a number of these toys, and demands of another whether that number is even or odd If the guess is right, the guesser wins one, if wrong, he loses one The boy to whom I allude won all the marbles of the school Of course he had some principle of guessing, and this lay in mere observation and admeasurement of the astuteness of his opponents For example, an arriant simpleton is his opponent, and, holding up his closed hand, asks, ‘are they even or odd?’ Our schoolboy replies, ‘odd,’ and loses, but upon the second trial he wins, for he then says to himself, ‘the simpleton had them even upon the first trial, and his amount of cunning is just sufficient to make him have them odd upon the second, I will therefore guess odd,’—he guesses odd, and wins Now, with a simpleton a degree above the first, he would have reasoned thus ‘This fellow finds that in the first instance I guessed odd, and, in the second, he will propose to

himself, upon the first impulse, a simple variation from even to odd, as did the first simpleton, but then a second thought will suggest that this is too simple a variation, and finally he will decide upon putting it even as before I will therefore guess even,’—he guesses even, and wins Now this mode of reasoning in the schoolboy, whom his fellows termed ‘lucky,’—what, in its last analysis, is it?”

“It is merely,” I said, “an identification of the reasoner’s intellect with that of his opponent ”

“It is,” said Dupin, “and, upon inquiring of the boy by what means he effected the *thorough* identification in which his success consisted, I received answer as follows ‘When I wish to find out how wise, or how stupid, or how good, or how wicked is any one, or what are his thoughts at the moment, I fashion the expression of my face, as accurately as possible, in accordance with the expression of his, and then wait to see what thoughts or sentiments arise in my mind or heart, as if to match or correspond with the expression’ This response of the schoolboy lies at the bottom of all the spurious profundity which has been attributed to Rochefoucauld, to La Bougivre, to Machiavelli, and to Campanella ”⁹

“And the identification,” I said, “of the reasoner’s intellect with that of his opponent, depends, if I understand you aright, upon the accuracy with which the opponent’s intellect is admeasured ”

“For its practical value it depends upon this,” replied Dupin, “and the Prefect

⁸ In Greek mythology Procrustes or the Stretcher tied all travellers who stopped with him upon an iron bedstead When they were too short to fit the bed, he stretched their limbs, when the limbs were too long for the bed, he cut them off even with it

⁹ François de la Rochefoucauld (1613-1680) wrote *Maximes* (1665), Machiavelli, *The Prince* (1513), Campanella, *The City in the Sun* (1643) La Bougivre has not been identified

and his cohort fail so frequently, first, by default of this identification, and, secondly, by ill-admeasurement, or rather through non-admeasurement, of the intellect with which they are engaged. They consider only their *own* ideas of ingenuity, and, in searching for anything hidden, advert only to the modes in which *they* would have hidden it. They are right in this much—that their own ingenuity is a faithful representative of that of *the mass*, but when the cunning of the individual felon is diverse in character from their own, the felon foils them, of course. This always happens when it is above their own, and very usually when it is below. They have no variation of principle in their investigations, at best, when urged by some unusual emergency—by some extraordinary reward—they extend or exaggerate their old modes of *practice*, without touching their principles. What, for example, in this case of D—, has been done to vary the principle of action? What is all this boring, and probing, and sounding, and scrutinizing with the microscope, and dividing the surface of the building into registered square inches—what is it all but an exaggeration of the *application* of the one principle or set of principles of search, which are based upon the one set of notions regarding human ingenuity, to which the Prefect, in the long routine of his duty, has been accustomed? Do you not see he has taken it for granted that *all* men proceed to conceal a letter,—not exactly in a gimlet-hole bored in a chair-leg—but, at least, in *some* out-of-the-way hole or corner suggested by the same tenor of thought which would urge a man to secrete a letter in a gimlet-hole bored in a chair-leg? And do you not see also, that such *recherchés*¹⁰ nooks for concealment are adapted only for ordinary occasions, and would be adopted only by ordinary intellects, for, in all cases of concealment, a disposal of the article concealed—a disposal of it in this *recherché* manner,—is, in the very first instance, presumable and presumed; and thus its discovery depends, not at all

upon the acumen, but altogether upon the mere care, patience, and determination of the seekers, and where the case is of importance—or, what amounts to the same thing in the police eyes, when the reward is of magnitude—the qualities in question have *never* been known to fail. You will now understand what I meant in suggesting that, had the purloined letter been hidden anywhere within the limits of the Prefect's examination—in other words, had the principle of its concealment been comprehended within the principles of the Prefect—its discovery would have been a matter altogether beyond question. This functionary however, has been thoroughly mystified, and the remote source of his defeat lies in the supposition that the Minister is a fool, because he has acquired renown as a poet. All fools are poets, thus the Prefect *feels*, and he is merely guilty of a *non distributio medii*¹¹ in thence inferring that all poets are fools.”

“But is this really the poet?” I asked. “There are two brothers, I know, and both have attained reputation in letters. The Minister I believe has written learnedly on the Differential Calculus. He is a mathematician, and no poet.”

“You are mistaken, I know him well, he is both. As poet *and* mathematician, he would reason well, as mere mathematician, he could not have reasoned at all, and thus would have been at the mercy of the Prefect.”

“You surprise me,” I said, “by these opinions, which have been contradicted by the voice of the world. You do not mean to set at naught the well-digested idea of centuries? The mathematical reason has long been regarded as *the reason par excellence*.”

“*Il y a à parier,*” replied Dupin, quoting from Chamfort, “*que toute idée publique, toute convention reçue, est une sottise, car elle a convenue au plus grand*

¹⁰ Out-of-the-way or far-fetched

¹¹ Undistributed middle term, a prime fallacy in syllogistic reasoning.

nombre'¹² The mathematicians, grant you, have done their best to promulgate the popular error to which you allude, and which is none the less an error for its promulgation as truth. With an art worthy a better cause, for example, they have insinuated the term 'analysis' into application to algebra. The French are the originators of this particular deception, but if a term is of any importance—if words derive any value from applicability—then 'analysis' conveys 'algebra' about as much as, in Latin, '*ambitus*' implies 'ambition,' '*religio*' 'religion,' or '*homines honesti*' a set of *honorable men*."

"You have a quarrel on hand, I see," said I, "with some of the algebraists of Paris, but proceed."

"I dispute the availability, and thus the value, of that reason which is cultivated in any special form other than the abstractly logical. I dispute, in particular, the reason educated by mathematical study. The mathematics are the science of form and quantity, mathematical reasoning is merely logic applied to observation upon form and quantity. The great error lies in supposing that even the truths of what is called *pure algebra*, are abstract or general truths. And this error is so egregious that I am confounded at the universality with which it has been received. Mathematical axioms are *not* axioms of general truth. What is true of *relation*—of form and quantity—is often grossly false in regard to morals, for example. In this latter science it is very usually *untrue* that the aggregated parts are equal to the whole. In chemistry also the axiom fails. In the consideration of motive it fails, for two motives, each of a given value, have not, necessarily, a value when united, equal to the sum of their values apart. There are numerous other mathematical truths which are only truths within the limits of *relation*. But the mathematician argues, from his *finite truths*, through habit, as if they were of an absolutely general applicability—as the world indeed imagines them to be. Bryant, in his very learned 'Mythology,' mentions

an analogous source of error, when he says that 'although the Pagan fables are not believed, yet we forget ourselves continually, and make inferences from them as existing realities.'¹³ With the algebraists, however, who are Pagans themselves, the 'Pagan fables' *are* believed, and the inferences are made, not so much through lapse of memory, as through an unaccountable adding of the brains. In short, I never yet encountered the mere mathematician who could be trusted out of equal roots, or one who did not clandestinely hold it as a point of his faith that $x^2 + px$ was absolutely and unconditionally equal to q . Say to one of these gentlemen, by way of experiment, if you please, that you believe occasions may occur where $x^2 + px$ is *not* altogether equal to q , and, having made him understand what you mean, get out of his reach as speedily as convenient, for, beyond doubt, he will endeavor to knock you down.

"I mean to say," continued Dupin, while I merely laughed at his last observations, "that if the Minister had been no more than a mathematician, the Prefect would have been under no necessity of giving me this check. I knew him, however, as both mathematician and poet, and my measures were adapted to his capacity, with reference to the circumstances by which he was surrounded. I knew him as a courtier, too, and as a bold *intrigant*. Such a man, I considered, could not fail to be aware of the ordinary police modes of action. He could not have failed to anticipate—and events have proved that he did not fail to anticipate—the waylayings to which he was subjected. He must have foreseen, I reflected, the secret investigations of his

¹² Dupin quotes from *Maximes et Pensées* by Sébastien Roch Nicolas Chamfort (1741-1794). "The odds are that every public idea, every accepted convention is a piece of folly since it is agreed to by the majority."

¹³ Dupin quotes from *A New System, or, An Analysis of Ancient Mythology*, 3 vols (1774-76), by Jacob Bryant (1715-1804).

premises His frequent absences from home at night, which were hailed by the Prefect as certain aids to his success, I regarded only as *ruses*, to afford opportunity for thorough search to the police, and thus the sooner to impress them with the conviction to which G——, in fact, did finally arrive—the conviction that the letter was not upon the premises I felt, also, that the whole train of thought, which I was at some pains in detailing to you just now, concerning the invariable principle of political action in searches for articles concealed—I felt that this whole train of thought would necessarily pass through the mind of the Minister. It would imperatively lead him to despise all the ordinary *nooks* of concealment. He could not, I reflected, be so weak as not to see that the most intricate and remote recess of his hotel would be as open as his commonest closets to the eyes, to the probes, to the gimlets, and to the microscopes of the Prefect. I saw, in fine, that he would be driven, as a matter of course, to *simplicity*, if not deliberately induced to it as a matter of choice. You will remember, perhaps, how desperately the Prefect laughed when I suggested, upon our first interview, that it was just possible this mystery troubled him so much on account of its being so *very* self-evident.”

“Yes,” said I, “I remember his merriment well. I really thought he would have fallen into convulsions.”

“The material world,” continued Dupin, “abounds with very strict analogies to the immaterial, and thus some color of truth has been given to the rhetorical dogma, that metaphor, or simile, may be made to strengthen an argument, as well as to embellish a description. The principle of the *vis inertiae*,¹⁴ for example, seems to be identical in physics and metaphysics. It is not more true in the former, that a large body is with more difficulty set in motion than a smaller one, and that its subsequent *momentum* is commensurate with this difficulty, than it is, in the latter, that intellects of the vaster capacity, while

more forcible, more constant, and more eventful in their movements than those of inferior grade, are yet the less readily moved, and more embarrassed and full of hesitation in the first few steps of their progress. Again, have you ever noticed which of the street signs, over the shop doors, are the most attractive of attention?”

“I have never given the matter a thought,” I said.

“There is a game of puzzles,” he resumed, “which is played upon a map. One party playing requires another to find a given word—the name of town, river, state or empire—any word, in short, upon the motley and perplexed surface of the chart. A novice in the game generally seeks to embarrass his opponents by giving them the most minutely lettered names, but the adept selects such words as stretch, in large characters, from one end of the chart to the other. These, like the overlargely lettered signs and placards of the street, escape observation by dint of being excessively obvious, and here the physical oversight is precisely analogous with the moral inapprehension by which the intellect suffers to pass unnoticed those considerations which are too obtrusively and too palpably self-evident. But this is a point, it appears, somewhat above or beneath the understanding of the Prefect. He never once thought it probable, or possible, that the Minister had deposited the letter immediately beneath the nose of the whole world, by way of best preventing any portion of that world from perceiving it.

“But the more I reflected upon the daring, dashing, and discriminating ingenuity of D——, upon the fact that the document must always have been *at hand*, if he intended to use it to good purpose, and upon the decisive evidence, obtained by the Prefect, that it was not hidden within the limits of that dignitary’s ordinary search—the more satisfied I became that,

¹⁴ Force of inertia

to conceal this letter, the Minister had resorted to the comprehensive and sagacious expedient of not attempting to conceal it at all

"Full of these ideas, I prepared myself with a pair of green spectacles, and called one fine morning, quite by accident, at the Ministerial hotel I found D—— at home, yawning, lounging, and dawdling, as usual, and pretending to be in the last extremity of *ennui*. He is, perhaps, the most really energetic human being now alive—but that is only when nobody sees him

"To be even with him, I complained of my weak eyes, and lamented the necessity of the spectacles, under cover of which I cautiously and thoroughly surveyed the apartment, while seemingly intent only upon the conversation of my host

"I paid especial attention to a large writing-table near which he sat, and upon which lay confusedly, some miscellaneous letters and other papers, with one or two musical instruments and a few books. Here, however, after a long and very deliberate scrutiny, I saw nothing to excite particular suspicion

"At length my eyes, in going the circuit of the room, fell upon a tumperry filigree card-rack of paste-board, that hung dangling by a dirty blue ribbon from a little brass knob just beneath the middle of the mantel-piece. In this rack, which had three or four compartments, were five or six visiting cards and a solitary letter. This last was much soiled and crumpled. It was torn nearly in two, across the middle—as if a design, in the first instance, to tear it entirely up as worthless, had been altered, or stayed, in the second. It had a large black seal, bearing the D—— cipher *very* conspicuously, and was addressed, in a diminutive female hand, to D——, the minister, himself. It was thrust carelessly, and even, as it seemed, contemptuously, into one of the upper divisions of the rack

"No sooner had I glanced at this letter, than I concluded it to be that of which

I was in search. To be sure, it was, to all appearance, radically different from the one of which the Prefect had read us so minute a description. Here the seal was large and black, with the D—— cipher, there it was small and red, with the dual arms of the S—— family. Here, the address, to the Minister, was diminutive and feminine, there the superscription, to a certain royal personage, was markedly bold and decided, the size alone formed a point of correspondence. But, then, the *radicalness* of these differences, which was excessive, the dirt, the soiled and torn condition of the paper, so inconsistent with the *true* methodical habits of D——, and so suggestive of a design to delude the beholder into an idea of the worthlessness of the document, these things, together with the hyperobtrusive situation of this document, full in the view of every visitor, and thus exactly in accordance with the conclusions to which I had previously arrived, these things, I say, were strongly corroborative of suspicion, in one who came with the intention to suspect

"I protracted my visit as long as possible, and, while I maintained a most animated discussion with the Minister, on a topic which I knew well had never failed to interest and excite him, I kept my attention really riveted upon the letter. In this examination, I committed to memory its external appearance and arrangement in the rack, and also fell, at length, upon a discovery which set at rest whatever trivial doubt I might have entertained. In scrutinizing the edges of the paper, I observed them to be more *chafed* than seemed necessary. They presented the *broken* appearance which is manifested when a stiff paper, having been once folded and pressed with a folder, is refolded in a reversed direction, in the same creases or edges which had formed the original fold. This discovery was sufficient. It was clear to me that the letter had been turned, as a glove, inside out, re-directed, and re-sealed. I bade the Minister good morning,

and took my departure at once, leaving a gold snuff-box upon the table

"The next morning I called for the snuff-box, when we resumed, quite eagerly, the conversation of the preceding day. While thus engaged, however, a loud report, as if of a pistol, was heard immediately beneath the windows of the hotel, and was succeeded by a series of fearful screams, and the shoutings of a mob. D— rushed to a casement, threw it open, and looked out. In the meantime, I stepped to the card-rack, took the letter, put it in my pocket, and replaced it by a *fac-simile*, (so far as regards externals,) which I had carefully prepared at my lodgings, imitating the D— cipher, very readily, by means of a seal formed of bread.

"The disturbance in the street had been occasioned by the frantic behavior of a man with a musket. He had fired it among a crowd of women and children. It proved, however, to have been without ball, and the fellow was suffered to go his way as a lunatic or a drunkard. When he had gone, D— came from the window, whither I had followed him immediately upon securing the object in view. Soon afterwards I bade him farewell. The pretended lunatic was a man in my own pay."

"But what purpose had you," I asked, "in replacing the letter by a *fac-simile*? Would it not have been better, at the first visit, to have seized it openly, and departed?"

"D—," replied Dupin, "is a desperate man, and a man of nerve. His hotel, too, is not without attendants devoted to his interests. Had I made the wild attempt you suggest, I might never have left the Ministerial presence alive. The good people of Paris might have heard of me no more. But I had an object apart from these considerations. You know my political prepossessions. In this matter, I act as a partisan of the lady concerned. For eighteen months the Minister has had her in his power. She has now him in hers—since, being unaware that the letter is not in his

possession, he will proceed with his exertions as if it was. Thus will he inevitably commit himself, at once, to his political destruction. His downfall, too, will not be more precipitate than awkward. It is all very well to talk about the *facilis descensus Avernus*, but in all kinds of climbing, as Catalani said of singing, it is far more easy to get up than to come down.¹⁵ In the present instance I have no sympathy—at least no pity—for him who descends. He is that *monstrum horrendum*,¹⁶ an unprincipled man of genius. I confess, however, that I should like very well to know the precise character of his thoughts, when, being defied by her whom the Prefect terms 'a certain personage,' he is reduced to opening the letter which I left for him in the card-rack."

"How? did you put anything particular in it?"

"Why—it did not seem altogether right to leave the interior blank—that would have been insulting. D—, at Vienna once, did me an evil turn, which I told him quite good-humoredly, that I should remember. So, as I knew he would feel some curiosity in regard to the identity of the person who had outwitted him, I thought it a pity not to give him a clew. He is well acquainted with my MS, and I just copied into the middle of the blank sheet the words—

'— Un dessein si funeste,
S'il n'est digne d'Atrée, est digne de
Thyeste'

They are to be found in Crébillon's *Atrée*."¹⁷

¹⁵ Dupin alludes (1) to Virgil's *Aeneid*, VI, V 125 "easy [is] the descent to Avernus [Hell]" and (2) to the operatic singer, Angelica Catalani (1780-1849).

¹⁶ Horrid monstrosity.

¹⁷ Dupin's quotation, "A plan so fatal is worthy of Thyestes, if it is not worthy of Atreus," is from the French classical tragedy *Atrée* (1707), by Prosper Jolyot de Crébillon (1674-1762), Atreus' revenge on Thyestes was that of a villain upon a villain.

THE LITERARY LIFE OF THINGUM
BOB, ESQ

LATE EDITOR OF THE "GOOSE-THURUMFOODLE"

By Himself

[1856 (1844)]

I AM now growing in years, and—since I understand that Shakespeare and Mr Emmons¹ are deceased—it is not impossible that I may even die. It has occurred to me, therefore, that I may as well retire from the field of Letters and repose upon my laurels. But I am ambitious of signaling my abdication of the literary sceptre by some important bequest to posterity, and, perhaps, I cannot do a better thing than just pen for it an account of my earlier career. My name, indeed, has been so long and so constantly before the public eye, that I am not only willing to admit the naturalness of the interest which it has everywhere excited, but ready to satisfy the extreme curiosity which it has inspired. In fact, it is no more than the duty of him who achieves greatness to leave behind him, in his ascent, such landmarks as may guide others to be great. I propose, therefore, in the present paper (which I had some idea of calling "Memoranda to Serve for the Literary History of America") to give a detail of those important, yet feeble and tottering, first steps, by which, at length, I attained the high road to the pinnacle of human renown.

Of one's *very* remote ancestors it is superfluous to say much. My father, Thomas Bob, Esq, stood for many years at the summit of his profession, which was that of a merchant-barber, in the city of Smug. His warehouse was the resort of all the principal people of the place, and especially of the editorial corps—a body which inspires all about it with profound veneration and awe. For my own part, I regarded them as gods, and drank in with avidity the rich wit and wisdom which continuously flowed from their august

mouths during the process of what is styled "lather." My first moment of positive inspiration must be dated from that ever-memorable epoch, when the brilliant conductor of the *Gad-Fly*, in the intervals of the important process just mentioned, recited aloud, before a conclave of our apprentices, an inimitable poem in honor of the "Only Genuine Oil-of-Bob" (so called from its talented inventor, my father), and for which effusion the editor of the *Fly* was remunerated with a regal liberality by the firm of Thomas Bob & Company, merchant-barbers.

The genius of the stanzas to the "Oil-of-Bob" first breathed into me, I say, the divine *afflatus*. I resolved at once to become a great man, and to commence by becoming a great poet. That very evening I fell upon my knees at the feet of my father.

"Father," I said, "pardon me!—but I have a soul above lather. It is my firm intention to cut the shop. I would be an editor—I would be a poet—I would pen stanzas to the 'Oil-of-Bob.' Pardon me and aid me to be great!"

"My dear Thingum," replied my father, (I had been christened Thingum after a wealthy relative so surnamed,) "My dear Thingum," he said, raising me from my knees by the ears—"Thingum, my boy, you're a trump, and take after your father in having a soul. You have an immense head, too, and it must hold a great many brains. This I have long seen, and therefore had thoughts of making you a lawyer. The business, however, has grown ungentle, and that of politician don't pay. Upon the whole you judge wisely;—the trade of editor is best—and if you can be a poet at the same time,—as most of the editors are, by the by,—why, you will kill two birds with one stone. To encourage you in the beginning of things, I will allow you a

¹ Whether Poe refers to Richard Emmons (1788-1839), author of the lengthy epic, *The Freedomad* (1827), or to Nathanael Emmons (1745-1840), a theologian noted for his long life, is uncertain.

garret, pen, ink, and paper, a rhyming dictionary, and a copy of the *Gad-Flu* I suppose you would scarcely demand any more"

"I would be an ungrateful villain if I did," I replied with enthusiasm "Your generosity is boundless I will repay it by making you the father of a genius"

Thus ended my conference with the best of men, and immediately upon its termination I betook myself with zeal to my poetical labors, as upon these, chiefly, I founded my hopes of ultimate elevation to the editorial chair

In my first attempts at composition I found the stanzas to "The Oil-of-Bob" rather a drawback than otherwise Their splendor more dazzled than enlightened me The contemplation of their excellence tended, naturally, to discourage me by comparison with my own abortions, so that for a long time I labored in vain At length there came into my head one of those exquisitely original ideas which now and then *will* permeate the brain of a man of genius It was this—or, rather, thus was it carried into execution From the rubbish of an old book-stall, in a very remote corner of the town, I got together several antique and altogether unknown or forgotten volumes The bookseller sold them to me for a song From one of these, which purported to be a translation of one Dante's "Inferno," I copied with remarkable neatness a long passage about a man named Ugolino, who had a parcel of brats From another, which contained a good many old plays by some person whose name I forget, I extracted in the same manner, and with the same care, a great number of lines about "angels" and "ministers saying grace," and "goblins damned," and more besides of that sort From a third, which was the composition of some blind man or other, either a Greek or a Choctaw—I cannot be at the pains of remembering every trifle exactly,—I took about fifty verses beginning with "Achilles' wrath," and "grease," and something else From a fourth, which I recollect was also

the work of a blind man, I selected a page or two all about "hail" and "holy light", and, although a blind man has no business to write about light, still the verses were sufficiently good in their way²

Having made fair copies of these poems, I signed every one of them "Oppodeldoc" (a fine sonorous name), and, doing each up nicely in a separate envelope, I dispatched one to each of the four principal magazines, with a request for speedy insertion and prompt pay The result of this well-conceived plan, however, (the success of which would have saved me much trouble in after-life,) served to convince me that some editors are not to be bamboozled, and gave the *coup-de-grace* (as they say in France) to my nascent hopes (as they say in the city of the transcendentials)

The fact is, that each and every one of the magazines in question gave Mr "Oppodeldoc" a complete using-up, in the "Monthly Notices to Correspondents." The *Hum-Drum* gave him a dressing after this fashion

"Oppodeldoc" (whoever he is) has sent us a long *tirade* concerning a bedlamite whom he styles "Ugolino," who had a great many children that should have been all whipped and sent to bed without their suppers The whole affair is exceedingly tame—not to say *flat* "Oppodeldoc" (whoever he is) is entirely devoid of imagination—and imagination, in our humble opinion, is not only the soul of POESY, but also its very heart "Oppodeldoc" (whoever he is) has the audacity to demand of us, for his twattle, a "speedy insertion and prompt pay" We neither insert nor purchase any stuff of the sort There can be no doubt, however, that he would meet with a ready sale for all the balderdash he can scribble, at the office of either the *Rowdy-Dow*, the *Lollipop*, or the *Goosetherumfoodle*

² Thingum Bob's cribbings are from Dante's *Inferno*, Canto XXXIII, where Count Ugolino describes how he and his sons were famished in the Tower of Pisa at the command of Archbishop Ruggieri, from Shakespeare's *Hamlet*, Act I, sc IV, from the opening lines of Homer's *Iliad*, and from the opening lines of Book III of Milton's *Paradise Lost*.

All this, it must be acknowledged, was very severe upon "Oppodeldoc,"—but the unkindest cut was putting the word POESY in SMALL CAPS. In those five pre-eminent letters what a world of bitterness is there not involved.

But "Oppodeldoc" was punished with equal severity in the *Rowdy-Dow*, which spoke thus:

We have received a most singular and insolent communication from a person (whoever he is) signing himself "Oppodeldoc,"—thus desecrating the greatness of the illustrious Roman emperor so named. Accompanying the letter of "Oppodeldoc" (whoever he is) we find sundry lines of most disgusting and unmeaning rant about "angels and ministers of grace,"—rant such as no madman short of a Nat Lee,³ or an "Oppodeldoc," could possibly perpetrate. And for this trash of trash, we are modestly requested to "pay promptly." No, sir—no! We pay for nothing of that sort. Apply to the *Hum-Drum*, the *Lollipop*, or the *Goosetherumfoodle*. These *periodicals* will undoubtedly accept any literary offal you may send them—and as undoubtedly *promise* to pay for it.

This was bitter indeed upon poor "Oppodeldoc", but, in this instance, the weight of the satire falls upon the *Hum-Drum*, the *Lollipop*, and the *Goosetherumfoodle*, who are pungently styled "*periodicals*"—in Italics, too—a thing that must have cut them to the heart.

Scarcely less savage was the *Lollipop*, which thus discoursed:

Some *individual*, who rejoices in the appellation "Oppodeldoc," (to what low uses are the names of the illustrious dead too often applied!) has enclosed us some fifty or sixty *verses* commencing after this fashion:

'Achilles' wrath, to Greece the direful
spring
Of woes unnumbered, &c, &c., &c., &c.'

"Oppodeldoc" (whoever he is) is respectfully informed that there is not a printer's devil in our office who is not in the daily habit of composing better *lines*. Those of "Oppodeldoc" will not *scan*. "Oppodeldoc" should learn to *count*. But why he should

have conceived the idea that *we* (of all others, *we*!) would disgrace our pages with his ineffable nonsense is utterly beyond comprehension. Why, the absurd twattle is scarcely good enough for the *Hum-Drum*, the *Rowdy-Dow*, the *Goosetherumfoodle*,—things that are in the practice of publishing "Mother Goose's Melodies" as original lyrics. And "Oppodeldoc" (whoever he is) has even the assurance to demand *pay* for this drivel. Does "Oppodeldoc" (whoever he is) know—is he aware that we could not be paid to insert it?

As I perused this I felt myself growing gradually smaller and smaller, and when I came to the point at which the editor sneered at the poem as "*verses*," there was little more than an ounce of me left. As for "Oppodeldoc," I began to experience *compassion* for the poor fellow. But the *Goosetherumfoodle* showed, if possible, less mercy than the *Lollipop*. It was the *Goosetherumfoodle* that said—

A wretched poetaster, who signs himself "Oppodeldoc," is silly enough to fancy that *we* will print and *pay* for a medley of incoherent and ungrammatical bombast which he has transmitted to us, and which commences with the following most *intelligible* line:

'Hail, Holy Light! Offspring of Heaven,
first born.'

We say, "most *intelligible*" "Oppodeldoc" (whoever he is) will be kind enough to tell us, perhaps, how "*hail*" can be "*holy light*." We always regarded it as *frozen rain*. Will he inform us, also, how frozen rain can be, at one and the same time, both "*holy light*" (whatever that is) and an "*offspring*"?—which latter term (if we understand any thing about English) is only employed, with propriety, in reference to small babies of about six weeks old. But it is preposterous to descend upon such absurdity—although "Oppodeldoc" (whoever he is) has the unparalleled effrontery to suppose that we will not only "*insert*" his ignorant ravings, but (absolutely) *pay* for them!

Now this is fine—it is rich!—and we have half a mind to punish this young scribbler for his egotism by really publishing his

³ The reference is to the minor English dramatist, Nathaniel Lee (1653?-1692).

effusion *verbatim et literatim*, as he has written it We could inflict no punishment so severe, and we *would* inflict it, but for the boredom which we should cause our readers in so doing

Let "Oppodeldoc" (whoever he is) send any future *composition* of like character to the *Hum-Drum*, the *Lollipop*, or the *Rowdy-Dow* They will "insert" it They "insert" every month just such stuff Send it to *them* WE are not to be insulted with impunity

This made an end of me, and as for the *Hum-Drum*, the *Rowdy-Dow*, and the *Lollipop*, I never could comprehend how they survived it The putting *them* in the smallest possible *mnion*,⁴ (that was the rub—thereby insinuating their lowness—their baseness), while WE stood looking down upon them in gigantic capitals!—oh it was *too* bitter!—it was wormwood—it was gall Had I been either of these periodicals I would have spared no pains to have the *Goosetherumfoddle* prosecuted It might have been done under the Act for the "Prevention of Cruelty to Animals" As for Oppodeldoc (whoever he was) I had by this time lost all patience with the fellow, and sympathized with him no longer He was a fool, beyond doubt, (whoever he was,) and got not a kick more than he deserved.

The result of my experiment with the old books convinced me, in the first place, that "honesty is the best policy," and, in the second, that if I could not write better than Mr Dante, and the two blind men, and the rest of the old set, it would, at least, be a difficult matter to write worse I took heart, therefore, and determined to prosecute the "entirely original" (as they say on the covers of the magazines), at whatever cost of study and pains I again placed before my eyes, as a model, the brilliant stanzas on "The Oil-of-Bob" by the editor of the *Gad-Fly* and resolved to construct an ode on the same sublime theme, in rivalry of what had already been done.

With my first line I had no material difficulty. It ran thus·

"To pen an Ode upon the 'Oil-of-Bob' "

Having carefully looked out, however, all the legitimate rhymes to "Bob," I found it impossible to proceed In this dilemma I had recourse to paternal aid, and, after some hours of mature thought, my father and myself thus constructed the poem

*"To pen an Ode upon the 'Oil-of-Bob'
Is all sorts of a job
(Signed) SNOB "*

To be sure, this composition was of no very great length,—but I "have yet to learn," as they say in the *Edinburgh Review*, that the mere extent of a literary work has anything to do with its merit As for the Quarterly cant about "sustained effort," it is impossible to see the sense of it Upon the whole, therefore, I was satisfied with the success of my maiden attempt, and now the only question regarded the disposal I should make of it My father suggested that I should send it to the *Gad-Fly*,—but there were two reasons which operated to prevent me from so doing I dreaded the jealousy of the editor—and I had ascertained that he did not pay for original contributions I therefore, after due deliberation, consigned the article to the more dignified pages of the *Lollipop* and waited the event in anxiety, but with resignation

In the very next published number I had the proud satisfaction of seeing my poem printed at length, as the leading article, with the following significant words, prefixed in italics and between brackets

[We call the attention of our readers to the subjoined admirable stanzas on "The Oil-of-Bob." We need say nothing of their sublimity, or of their pathos—it is impossible to peruse them without tears Those who have been nauseated with a sad dose on the same august topic from the goose-quill of the editor of the "Gad-Fly," will do well to compare the two compositions

P S—We are consumed with anxiety to probe the mystery which envelops the

⁴ A style of type

evident pseudonym "Snob" May we hope for a personal interview?]

All this was scarcely more than justice, but it was, I confess, rather more than I had expected—I acknowledged this, be it observed, to the everlasting disgrace of my country and of mankind I lost no time, however, in calling upon the editor of the *Lollipop* and had the good fortune to find this gentleman at home He saluted me with an air of profound respect, slightly blended with a fatherly and patronizing admiration, wrought in him, no doubt, by my appearance of extreme youth and inexperience Begging me to be seated, he entered at once upon the subject of my poem,—but modesty will ever forbid me to repeat the thousand compliments which he lavished upon me The eulogies of Mr Crab (such was the editor's name) were, however, by no means fulsomely indiscriminate He analyzed my composition with much freedom and great ability—not hesitating to point out a few trivial defects—a circumstance which elevated him highly in my esteem The *Gad-Fly* was, of course, brought upon the *tapis*, and I hope never to be subjected to a criticism so searching, or to rebukes so withering, as were bestowed by Mr Crab upon that unhappy effusion I had been accustomed to regard the editor of the *Gad-Fly* as something superhuman, but Mr Crab soon disabused me of that idea He set the literary as well as the personal character of the Fly (so Mr C satirically designated the rival editor), in its true light He, the Fly, was very little better than he should be He had written infamous things He was a penny-a-liner, and a buffoon He was a villain. He had composed a tragedy which set the whole country in a guffaw, and a farce which deluged the universe in tears Besides all this, he had the impudence to pen what he meant for a lampoon upon himself (Mr Crab), and the temerity to style him "an ass" Should I at any time wish to express my opinion of Mr Fly, the pages of the *Lollipop*, Mr

Crab assured me, were at my unlimited disposal In the meantime, as it was very certain that I would be attacked in the Fly for my attempt at composing a rival poem on the "Oil-of-Bob," he (Mr Crab) would take it upon himself to attend, pointedly, to my private and personal interests If I were not made a man of at once, it should not be the fault of himself (Mr Crab)

Mr Crab having now paused in his discourse (the latter portion of which I found it impossible to comprehend), I ventured to suggest something about the remuneration which I had been taught to expect for my poem, by an announcement on the cover of the *Lollipop*, declaring that it (the *Lollipop*) "insisted upon being permitted to pay exorbitant prices for all accepted contributions,—frequently expending more money for a single brief poem than the whole annual cost of the *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle* combined"

As I mentioned the word "remuneration," Mr Crab first opened his eyes, and then his mouth, to quite a remarkable extent, causing his personal appearance to resemble that of a highly agitated elderly duck in the act of quacking, and in this condition he remained (ever and anon pressing his hands tightly to his forehead, as if in a state of desperate bewilderment) until I had nearly made an end of what I had to say

Upon my conclusion, he sank back into his seat, as if much overcome, letting his arms fall lifelessly by his side, but keeping his mouth still rigorously open, after the fashion of the duck While I remained in speechless astonishment at behavior so alarming, he suddenly leaped to his feet and made a rush at the bell-rope, but just as he reached this, he appeared to have altered his intention, whatever it was, for he dived under a table and immediately reappeared with a cudgel This he was in the act of uplifting (for what purpose I am at a loss to imagine), when all at once, there came a benign smile over his features, and he sank placidly back in his chair.

"Mr Bob," he said, (for I had sent up my card before ascending myself,) "Mr Bob, you are a young man, I presume—very?"

I assented, adding that I had not yet concluded my third lustrum

"Ah!" he replied, "very good! I see how it is—say no more! Touching this matter of compensation, what you observe is very just,—in fact it is excessively so. But ah—ah—the *first* contribution—the *first*, I say—it is never the magazine custom to pay for,—you comprehend, eh? The truth is, we are usually the *recipients* in such case" [Mr Crab smiled blandly as he emphasized the word "*recipients*"] "For the most part, we are *paid* for the insertion of a maiden attempt—especially in verse. In the second place, Mr Bob, the magazine rule is never to disburse what we term in France the *argent comptant* ⁵—I have no doubt you understand. In a quarter or two after publication of the article—or in a year or two—we make no objection to giving our note at nine months, provided, always, that we can so arrange our affairs as to be quite certain of a 'burst up' in six. I really *do* hope, Mr Bob, that you will look upon this explanation as satisfactory." Here Mr Crab concluded, and the tears stood in his eyes.

Grieved to the soul at having been, however innocently, the cause of pain to so eminent and so sensitive a man, I hastened to apologize, and to reassure him, by expressing my perfect coincidence with his views, as well as my entire appreciation of the delicacy of his position. Having done all this in a neat speech, I took leave.

One fine morning, very shortly afterward, "I awoke and found myself famous." ⁶ The extent of my renown will be best estimated by reference to the editorial opinions of the day. These opinions, it will be seen, were embodied in critical notices of the number of the *Lollipop* containing my poem, and are perfectly satisfactory, conclusive, and clear with the exception, perhaps, of the hieroglyphical marks, "*Sep*

15—1 *t*," appended to each of the critiques ⁷

The *Owl*, a journal of profound sagacity, and well known for the deliberate gravity of its literary decisions—the *Owl*, I say, spoke as follows

The *Lollipop*! The October number of this delicious magazine surpasses its predecessors, and sets competition at defiance. In the beauty of its typography and paper—in the number and excellence of its steel plates—as well as in the literary merit of its contributions—the *Lollipop* compares with its slow-paced rivals as Hyperion with Satyr. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle*, excel, it is true, in braggadocio, but in all other points, give us the *Lollipop*! How this celebrated journal can sustain its evidently tremendous expenses, is more than we can understand. To be sure, it has a circulation of 100,000, and its subscription list has increased one fourth during the last month, but, on the other hand, the sums it disburses constantly for contributions are inconceivable. It is reported that Mr Slyass received no less than thirty-seven and a half cents for his inimitable paper on "Pigs." With Mr CRAB, as editor, and with such names upon the list of contributors as SNOB and Slyass, there can be no such word as "fail" for the *Lollipop*. Go and subscribe. *Sep 15—1 t*

I must say that I was gratified with this high-toned notice from a paper so respectable as the *Owl*. The placing my name—that is to say, my *nom de guerre*—in priority of station to that of the great Slyass, was a compliment as happy as I felt it to be deserved.

My attention was next arrested by these paragraphs in the *Toad*—a print highly distinguished for its uprightness and independence—for its entire freedom from sycophancy and subservience to the givers of dinners.

⁵ Cash

⁶ Lord Byron remarked, concerning the publication and reception of the first two cantos of his *Childe Harold's Pilgrimage* in 1812 "I awoke one morning and found myself famous."

⁷ These instructions to the printer—to insert 1 time on September 15—mark the notices as advertisements.

The *Lollipop* for October is out in advance of all its contemporaries, and infinitely surpasses them, of course, in the splendor of its embellishments, as well as in the richness of its contents. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goose-the-rumfuddle* excel, we admit, in biaggadocio, but, in all other points, give us the *Lollipop*. How this celebrated magazine can sustain its evidently tremendous expenses is more than we can understand. To be sure, it has a circulation of 200,000, and its subscription list has increased one third during the last fortnight, but, on the other hand, the sums it disburses, monthly, for contributions, are fearfully great. We learn that Mr Mumblethump received no less than fifty cents for his late "Monody in a Mud-Puddle."

Among the original contributors to the present number we notice (besides the eminent editor, Mr CRAB), such men as SNOB, SLYASS, and Mumblethump. Apart from the editorial matter, the most valuable paper, nevertheless, is, we think, a poetical gem by Snob, on the "Oil-of-Bob,"—but our readers must not suppose from the title of this incomparable *bijou*, that it bears any similitude to some balderdash on the same subject by a certain contemptible individual whose name is unmentionable to ears polite. The present poem "On the Oil-of-Bob," has excited universal anxiety and curiosity in respect to the owner of the evident pseudonym, "Snob,"—a curiosity which, happily, we have it in our power to satisfy. "Snob" is the *nom de plume* of Mr Thingum Bob, of this city,—a relative of the great Mr Thingum (after whom he is named), and otherwise connected with the most illustrious families of the State. His father, Thomas Bob, Esq., is an opulent merchant in Smug.

Sep 15—1 t

This generous approbation touched me to the heart—the more especially as it emanated from a source so avowedly—so proverbially pure as the *Toad*. The word "balderdash," as applied to the "Oil-of-Bob" of the *Fly*, I considered singularly pungent and appropriate. The words "gem" and "*bijou*," however, used in reference to my composition, struck me as being, in some degree, feeble. They seemed to me to be deficient in force. They were not sufficiently *prononcés* (as we have it in France).

I had hardly finished reading the *Toad*, when a friend placed in my hands a copy of the *Mole*, a daily, enjoying high reputation for the keenness of its perception about matters in general, and for the open, honest, above-ground style of its editorials. The *Mole* spoke of the *Lollipop* as follows:

We have just received the *Lollipop* for October, and must say that never before have we perused any single number of any periodical which afforded us a felicity so supreme. We speak advisedly. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goose-the-rumfuddle* must look well to their laurels. These prints, no doubt, surpass every thing in loudness of pretension, but, in all other points, give us the *Lollipop*! How this celebrated magazine can sustain its evidently tremendous expenses, is more than we can comprehend. To be sure, it has a circulation of 300,000, and its subscription list has increased one half within the last week, but then the sum it disburses, monthly, for contributions, is astonishingly enormous. We have it upon good authority that Mr Fatquack received no less than sixty-two cents and a half for his late domestic *nouvellette*, the "Dish-Clout."

The contributors to the number before us are Mr CRAB (the eminent editor), SNOB, Mumblethump, Fatquack, and others, but, after the immitable compositions of the editor himself, we prefer a diamond-like effusion from the pen of a rising poet who writes over the signature "Snob"—a *nom de guerre* which we predict will one day extinguish the radiance of "Boz" & "SNOB," we learn, is a Mr THINGUM BOB, Esq., sole heir of a wealthy merchant of this city, Thomas Bob, Esq., and a near relative of the distinguished Mr Thingum. The title of Mr B's admirable poem is the "Oil-of-Bob"—a somewhat unfortunate name, by-the-by, as some contemptible vagabond connected with the penny press has already disgusted the town with a great deal of drivel upon the same topic. There will be no danger, however, of confounding the compositions.

Sept 15—1 t

The generous approbation of so clear-sighted a journal as the *Mole* penetrated my soul with delight. The only objection

* The reference is to Dickens' *Sketches by Boz* (1835 and 1836).

which occurred to me was, that the terms "contemptible vagabond" might have been better written "*odious* and contemptible *wretch, villain, and vagabond*" This would have sounded more gracefully, I think "Diamond-like," also, was scarcely, it will be admitted, of sufficient intensity to express what the *Mole* evidently *thought* of the brilliancy of the "Oil-of-Bob"

On the same afternoon in which I saw these notices in the *Owl*, the *Toad*, and the *Mole*, I happened to meet with a copy of the *Daddy-Long-Legs*, a periodical proverbial for the extreme extent of its understanding And it was the *Daddy-Long-Legs* which spoke thus

The *Lollipop!* This gorgeous magazine is already before the public for October The question of pre-eminence is forever put to rest, and hereafter it will be excessively preposterous in the *Hum-Drum*, the *Rowdy-Dow*, or the *Goosetherumfuddle* to make any further spasmodic attempts at competition These journals may excel the *Lollipop* in outcry, but, in all other points, give us the *Lollipop!* How this celebrated magazine can sustain its evidently tremendous expenses, is past comprehension To be sure it has a circulation of precisely half a million, and its subscription list has increased seventy-five per cent within the last couple of days, but then the sums it disburses, monthly, for contributions, are scarcely credible, we are cognizant of the fact, that Mademoiselle Cribalittle received no less than eighty-seven cents and a half for her late valuable Revolutionary tale, entitled "The York-Town Katy-Did, and the Bunker-Hill Katy-Didn't"

The most able papers in the present number are, of course, those furnished by the editor (the eminent Mr CRAB), but there are numerous magnificent contributions from such names as SNOB, Mademoiselle Cribalittle, Slyass, Mrs Fibalittle, Mumblethumb, Mrs Squibalittle, and last, though not least, Fatquack The world may well be challenged to produce so rich a galaxy of genius

The poem over the signature "SNOB" is, we find, attracting universal commendation, and, we are constrained to say, deserves, if possible, even more applause than it has received The "Oil-of-Bob" is the title of this masterpiece of eloquence and art One or two of our readers may have a

very faint, although sufficiently disgusting recollection of a poem (?) similarly entitled, the perpetration of a miserable penny-a-liner, mendicant, and cut-throat, connected in the capacity of scullion, we believe, with one of the indecent prints about the purheus of the city, we beg them, for God's sake, not to confound the compositions The author of the "Oil-of-Bob," is, we hear, THINGUM BOB, Esq, a gentleman of high genius, and a scholar "Snob" is merely a *nom de guerre*

Sep 15—1 t

I could scarcely restrain my indignation while I perused the concluding portions of this diatribe It was clear to me that the yea-nay manner—not to say the gentleness,—the positive forbearance—with which the *Daddy-Long-Legs* spoke of that pig, the editor of the *Gad-Fly*,—it was evident to me, I say, that this gentleness of speech could proceed from nothing else than a partiality for the *Fly*—whom it was clearly the intention of the *Daddy-Long-Legs* to elevate into reputation at my expense Any one, indeed, might perceive, with half an eye, that, had the real design of the *Daddy* been what it wished to appear, it (the *Daddy*) might have expressed itself in terms more direct, more pungent, and altogether more to the purpose The words "penny-a-liner," "mendicant," "scullion," and "cut-throat," were epithets so intentionally inexpressive and equivocal, as to be worse than nothing when applied to the author of the very worst stanzas ever penned by one of the human race We all know what is meant by "damning with faint praise,"⁹ and, on the other hand, who could fail seeing through the covert purpose of the *Daddy*,—that of glorifying with feeble abuse?

What the *Daddy* chose to say to the *Fly*, however, was no business of mine What it said of myself *was*. After the noble manner in which the *Owl*, the *Toad*, the *Mole*, had expressed themselves in re-

⁹ The phrase is based on line 201 in Pope's "Epistle to Dr Arbuthnot" (1735) "Damn with faint praise, assent with civil leer"

spect to my ability, it was rather too much to be coolly spoken of by a thing like the *Daddy-Long-Legs*, as merely "a gentleman of high genius and a scholar" Gentleman indeed! I made up my mind at once either to get a written apology from the *Daddy-Long-Legs*, or to call it out!¹⁰

Full of this purpose, I looked about me to find a friend whom I could entrust with a message to his *Daddyship*, and as the editor of the *Lollipop* had given me marked tokens of regard, I at length concluded to seek assistance upon the present occasion

I have never yet been able to account, in a manner satisfactory to my own understanding, for the *very* peculiar countenance and demeanor with which Mr Crab listened to me, as I unfolded to him my design He again went through the scene of the bell-rope and cudgel, and did not omit the duck At one period I thought he really intended to quack His fit, nevertheless, finally subsided as before, and he began to act and speak in a rational way He declined bearing the cartel,¹¹ however, and in fact, dissuaded me from sending it at all, but was candid enough to admit the *Daddy-Long-Legs* had been disgracefully in the wrong—more especially in what related to the epithets "gentleman and scholar"

Toward the end of this interview with Mr Crab, who really appeared to take a paternal interest in my welfare, he suggested to me that I might turn an honest penny, and at the same time, advance my reputation, by occasionally playing Thomas Hawk for the *Lollipop*

I begged Mr Crab to inform me who was Mr Thomas Hawk, and how it was expected that I should play him

Here Mr Crab again "made great eyes" (as we say in Germany), but at length, recovering himself from a profound attack of astonishment, he assured me that he employed the words "Thomas Hawk" to avoid the colloquialism, Tommy, which was low—but that the true idea was Tommy Hawk—or tomahawk—and that by "play-

ing tomahawk" he referred to scalping, brow-beating, and otherwise using up the herd of poor-devil authois

I assured my pation that, if this was all, I was perfectly resigned to the task of playing Thomas Hawk Hereupon Mr Crab desired me to use up the editor of the *Gad-Fly* forthwith, in the fiercest style within the scope of my ability, and as a specimen of my powers This I did, upon the spot, in a review of the original "Oil-of-Bob," occupying thirty-six pages of the *Lollipop* I found playing Thomas Hawk, indeed, a far less onerous occupation than poetizing, for I went upon *system* altogether, and thus it was easy to do the thing thoroughly well My practice was this I bought auction copies (cheap) of "Lord Brougham's speeches," "Cobbett's Complete Works," the "New Slang-Syllabus," the "Whole Art of Snubbing," "Prentice's Billingsgate" (folio edition), and "Lewis G Clarke on Tongue"¹² These works I cut up thoroughly with a curry-comb, and then, throwing the shreds into a sieve, sifted out carefully all that might be thought decent (a mere trifle), reserving the hard phrases, which I threw into a large tin pepper-caster with longitudinal holes, so that an entire sentence could get through without material injury The admixture was then ready for use When called upon to play Thomas Hawk, I anointed a sheet of foolscap with the white of a gander's egg, then, shredding the thing to be reviewed as I had previously shredded the book—only with more care, so as to get every word separate—I threw

¹⁰ Challenge to a duel

¹¹ A written formal challenge to a duel

¹² Henry Brougham (1778-1868) was one of the founders of the *Edinburgh Review* and a prominent British statesman, William Cobbett (1762-1835) was a political writer in both England and America, the last two works listed were probably intended as satirical references to journalists of Poe's time—George D Prentice (1802-1870), noted for his caustic political writing, and Lewis Gaylord Clark (1810-1873), noted for his gossip column and platitudes

the latter sheds in with the former, screwed on the lid of the castor, gave it a shake, and so dusted out the mixture upon the egged foolscap, where it stuck. The effect was beautiful to behold. It was captivating. Indeed, the reviews I brought to pass by this simple expedient have never been approached, and were the wonder of the world. At first, through bashfulness—the result of inexperience—I was a little put out by a certain inconsistency—a certain air of the *bizarre* (as we say in France), worn by the composition as a whole. All the phrases did not *fit* (as we say in the Anglo-Saxon). Many were quite awry. Some, even, were upsidedown, and there were none of them which were not in some measure, injured in regard to effect, by this latter species of accident, when it occurred—with the exception of Mr. Lewis Clarke's paragraphs, which were so vigorous and altogether stout, that they seemed not particularly disconcerted by any extreme of position, but looked equally happy and satisfactory, whether on their heads, or on their heels.

What became of the editor of the *Gad-fly* after the publication of my criticism on his "Oil-of-Bob," it is somewhat difficult to determine. The most reasonable conclusion is, that he wept himself to death. At all events he disappeared instantaneously from the face of the earth, and no man has seen even the ghost of him since.

This matter having been properly accomplished, and the Furies appeased, I grew at once into high favor with Mr. Crab. He took me into his confidence, gave me a permanent situation as Thomas Hawk of the *Lollipop*, and, as for the present, he could afford me no salary, allowed me to profit, at discretion, by his advice.

"My dear Thingum," said he to me one day after dinner, "I respect your abilities and love you as a son. You shall be my heir. When I die I will bequeath you the *Lollipop*. In the meantime I will make a man of you—I *will*—provided always that you follow my counsel. The first thing to do is to get rid of the old bore."

"Boar?" said I inquiringly—"pig, eh?—*aper?*" (as we say in Latin)—"who?—where?"

"Your father," said he.

"Precisely," I replied,—"*pig*."

"You have your fortune to make, Thingum," resumed Mr. Crab, "and that governor of yours is a millstone about your neck. We must cut him at once." [Here I took out my knife.] "We must cut him," continued Mr. Crab, "decidedly and forever. He won't do—he *won't*. Upon second thoughts, you had better kick him, or cane him, or something of that kind."

"What do you say," I suggested modestly, "to my kicking him in the first instance, caning him afterward, and winding up by tweaking his nose?"

Mr. Crab looked at me musingly for some moments, and then answered:

"I think, Mr. Bob, that what you propose would answer sufficiently well—indeed remarkably well—that is to say, as far as it went—but barbers are exceedingly hard to cut, and I think, upon the whole, that, having performed upon Thomas Bob the operations you suggest, it would be advisable to blacken, with your fists, both his eyes, very carefully and thoroughly, to prevent his ever seeing you again in fashionable promenades. After doing this, I really do not perceive that you can do any more. However—it might be just as well to roll him once or twice in the gutter, and then put him in charge of the police. Any time the next morning you can call at the watch-house and swear an assault."

I was much affected by the kindness of feeling toward me personally, which was evinced in this excellent advice of Mr. Crab, and I did not fail to profit by it forthwith. The result was, that I got rid of the old bore, and began to feel a little independent and gentleman-like. The want of money, however, was, for a few weeks, a source of some discomfort, but at length, by carefully putting to use my two eyes, and observing how matters went just in front of my nose, I perceived how the thing was to be brought about. I say

"thing"—be it observed—for they tell me the Latin for it is *rem*. By the way, talking of Latin, can any one tell me the meaning of *quocumque*—or what is the meaning of *modo*?¹³

My plan was exceedingly simple. I bought, for a song, a sixteenth of the *Snapping-Turtle*—that was all. The thing was *done*, and I put money in my purse. There were some trivial arrangements afterward, to be sure, but these formed no portion of the plan. They were a consequence—a result. For example, I bought pen, ink, and paper, and put them into furious activity. Having thus completed a Magazine article, I gave it, for appellation, "*FOL LOL, by the Author of 'THE OIL-OF-BOB,'*" and enveloped it to the *Goosetherumfoodle*. That journal, however, having pronounced it "twattle" in the "Monthly Notices to Correspondents," I reheaded the paper "*'Hey-Diddle-Diddle,'* by THINGUM BOB, Esq., Author of the Ode on 'The Oil-of-Bob,' and Editor of the *Snapping-Turtle*." With this amendment, I re-enclosed it to the *Goosetherumfoodle*, and, while I awaited a reply, published daily, in the *Turtle*, six columns of what may be termed philosophical and analytical investigation of the literary merits of the *Goosetherumfoodle*, as well as of the personal character of the editor of the *Goosetherumfoodle*. At the end of a week the *Goosetherumfoodle* discovered that it had, by some odd mistake, "confounded a stupid article, headed, '*Hey-Diddle-Diddle,'* and composed by some unknown ignoramus, with a gem of resplendent lustre similarly entitled, the work of Thingum Bob, Esq., the celebrated author of '*The Oil-of-Bob*.'" The *Goosetherumfoodle* deeply "regretted this very natural accident," and promised, moreover, an insertion of the *genuine* "*Hey-Diddle-Diddle*" in the very next number of the Magazine.

The fact is, I *thought*—I *really* thought—I thought at the time—I thought *then*—and have no reason for thinking otherwise *now*—that the *Goosetherumfoodle* *did* make a mistake. With the best intentions

in the world, I never knew any thing that made as many singular mistakes as the *Goosetherumfoodle*. From that day I took a liking to the *Goosetherumfoodle*, and the result was I soon saw into the very depths of its literary merits, and did not fail to expatiate upon them, in the *Turtle*, whenever a fitting opportunity occurred. And it is to be regarded as a very peculiar coincidence—as one of those positively *remarkable* coincidences which set a man to serious thinking—that just such a total revolution of opinion—just such entire *bouleversement*¹⁴ (as we say in French),—just such thorough *topsyturveness* (if I may be permitted to employ a rather forcible term of the Choctaws), as happened, *pro* and *con*, between myself on the one part, and the *Goosetherumfoodle* on the other, did actually again happen, in a brief period afterwards, and with precisely similar circumstances, in the case of myself and the *Rowdy-Dow*, and in the case of myself and the *Hum-Drum*.

Thus it was that, by a master-stroke of genius, I at length consummated my triumphs by "putting money in my purse," and thus may be said really and fairly to have commenced that brilliant and eventful career which rendered me illustrious, and which now enables me to say with Chateaubriand "I have made history"—"*J'ai fait l'histoire*"¹⁵

I have indeed "made history." From the bright epoch which I now record, my actions—my works—are the property of mankind. They are familiar to the world. It is, then, needless for me to detail how, soaring rapidly, I fell heir to the *Lollipop*—how I merged this journal in the *Hum-Drum*—how again I made purchase of the

¹³ These are Latin adverbs, meaning respectively *whithersoever* and *only* or *but*.

¹⁴ Overthrow or overturning.

¹⁵ François René de Chateaubriand (1768-1848), in an effort to discover the Northwest Passage, became a student of the American Indian, as a writer he concerned himself with Christianity, politics, and "the noble savage."

Rowdy-Dow, thus combining the three periodicals—how lastly, I effected a bargain for the sole remaining rival, and united all the literature of the country in one magnificent Magazine known everywhere as the

*Rowdy-Dow, Lollipop, Hum-Drum,
and
Goosetherumfoodle*

Yes, I have made history My fame is universal It extends to the uttermost ends of the earth You cannot take up a common newspaper in which you shall not see some allusion to the immortal THINGUM BOB It is Mr Thingum Bob said so, and Mr Thingum Bob wrote this, and Mr Thingum Bob did that But I am meek and expire with an humble heart After all, what is it?—this indescribable something which men will persist in terming “genius”? I agree with Buffon—with Hogarth—it is but *diligence* after all¹⁶

Look at *me*!—how I labored—how I toiled—how I wrote! Ye Gods, did I not write? I knew not the word “ease” By day I adhered to my desk, and at night, a pale student, I consumed the midnight oil You should have seen me—you *should* I leaned to the right I leaned to the left I sat forward I sat backward I sat *tête baissée* (as they have it in the Kickapoo),¹⁷ bowing my head close to the alabaster page And, through all, I—*wrote* Through joy and through sorrow, I—*wrote* Through hunger and through thirst, I—*wrote* Through good report and through ill report, I—*wrote* Through sunshine and through moonshine, I—*wrote* What I wrote it is unnecessary to say The *style*—that *was the thing* I caught it from Fatquack—whizz!—fizz!—and I am giving you a specimen of it now

SOME WORDS WITH A MUMMY [1850 (1845)]

THE *symposium* of the preceding evening had been a little too much for my

nerves I had a wretched headache, and was desperately drowsy Instead of going out, therefore, to spend the evening, as I had proposed, it occurred to me that I could not do a wiser thing than just eat a mouthful of supper and go immediately to bed

A *light* supper, of course I am exceedingly fond of Welsh-rabbit More than a pound at once, however, may not at all times be advisable Still, there can be no material objection to two And really between two and three, there is merely a single unit of difference I ventured, perhaps, upon four My wife will have it five,—but, clearly, she has confounded two very distinct affairs The abstract number, five, I am willing to admit, but, concretely, it has reference to bottles of Brown Stout, without which, in the way of condiment, Welsh-rabbit is to be eschewed

Having thus concluded a frugal meal, and donned my nightcap, with the sincere hope of enjoying it till noon the next day, I placed my head upon the pillow, and, through the aid of a capital conscience, fell into a profound slumber forthwith

But when were the hopes of humanity fulfilled? I could not have completed my third snore when there came a furious ringing at the street-door bell, and then an impatient thumping at the knocker, which awakened me at once In a minute afterward, and while I was still rubbing my eyes, my wife thrust in my face a note, from my old friend, Doctor Ponnonner It ran thus

Come to me, by all means, my dear good friend, as soon as you receive this Come and help us to rejoice At last, by long persevering diplomacy, I have gained the

¹⁶ Georges de Buffon (1707-1788) in his *Discours sur le style* (1753) expressed the view that “Genius is patience” The English painter and engraver William Hogarth (1697-1764) remarked, “Genius is nothing but labour and diligence”

¹⁷ With bowed head, Kickapoo refers to an Indian dialect

assent of the Directors of the City Museum, to my examination of the Mummy—you know the one I mean I have permission to unswathe it and open it, if desirable A few friends only will be present—you, of course The Mummy is now at my house, and we shall begin to unroll it at eleven to-night

Yours ever,
PONNONNER

By the time I had reached the "Ponnonner," it struck me that I was as wide awake as a man need be I leaped out of bed in an ecstasy, overthrowing all in my way, dressed myself with a rapidity truly marvellous, and set off, at the top of my speed, for the doctor's

There I found a very eager company assembled They had been awaiting me with much impatience, the Mummy was extended upon the dining-table, and the moment I entered its examination was commenced

It was one of a pair brought, several years previously, by Captain Arthur Sabretash, a cousin of Ponnonner's, from a tomb near Elethias, in the Lybian mountains, a considerable distance above Thebes on the Nile The grottoes at this point, although less magnificent than the Theban sepulchres, are of higher interest, on account of affording more numerous illustrations of the private life of the Egyptians The chamber from which our specimen was taken, was said to be very rich in such illustrations—the walls being completely covered with fresco paintings and bas-reliefs, while statues, vases, and mosaic work of rich patterns, indicated the vast wealth of the deceased.

The treasure had been deposited in the museum precisely in the same condition in which Captain Sabretash had found it—that is to say, the coffin had not been disturbed. For eight years it had thus stood, subject only externally to public inspection. We had now, therefore, the complete Mummy at our disposal, and to those who are aware how very rarely the unransacked antique reaches our shores, it will be evi-

dent at once that we had great reason to congratulate ourselves upon our good fortune

Approaching the table, I saw on it a large box, or case, nearly seven feet long, and perhaps three feet wide, by two feet and a half deep It was oblong—not coffin-shaped The material was at first supposed to be the wood of the sycamore (*platanus*), but, upon cutting into it, we found it to be pasteboard, or, more properly, *papier mache*, composed of papyrus It was thickly ornamented with paintings, representing funeral scenes, and other mournful subjects—interspersed among which, in every variety of position, were certain series of hieroglyphical characters, intended, no doubt, for the name of the departed By good luck, Mr Gliddon formed one of our party,¹ and he had no difficulty in translating the letters, which were simply phonetic, and represented the word *Allamstakeo*

We had some difficulty in getting this case open without injury, but, having at length accomplished the task, we came to a second, coffin-shaped, and very considerably less in size than the exterior one, but resembling it precisely in every other respect The interval between the two was filled with resin, which had, in some degree, defaced the colors of the interior box

Upon opening this latter (which we did quite easily), we arrived at a third case, also coffin-shaped, and varying from the second one in no particular, except in that of its material, which was cedar, and still emitted the peculiar and highly aromatic odor of that wood Between the second and the third case there was no interval—the one fitting accurately within the other

Removing the third case, we discovered and took out the body itself We had expected to find it, as usual, enveloped in frequent rolls, or bandages, of linen, but, in place of these, we found a sort of sheath, made of papyrus, and coated with

¹ George Robins Gliddon (1809-1857), American orientalist

a layer of plaster, thickly gilt and painted. The paintings represented subjects connected with the various supposed duties of the soul, and its presentation to different divinities, with numerous identical human figures, intended, very probably, as portraits of the persons embalmed. Extending from head to foot was a columnar, or perpendicular, inscription, in phonetic hieroglyphics, giving again his name and titles, and the names and titles of his relations.

Around the neck thus unsheathed, was a collar of cylindrical glass beads, diverse in color, and so arranged as to form images of deities, of the scarabeus, etc., with the winged globe. Around the small of the waist was a similar collar or belt.

Stripping off the papyrus, we found the flesh in excellent preservation, with no perceptible odor. The color was reddish. The skin was hard, smooth, and glossy. The teeth and hair were in good condition. The eyes (it seemed) had been removed, and glass ones substituted, which were very beautiful and wonderfully life-like, with the exception of somewhat too determined a stare. The fingers and the nails were brilliantly gilded.

Mr. Gliddon was of opinion, from the redness of the epidermis, that the embalment had been effected altogether by asphaltum, but, on scraping the surface with a steel instrument, and throwing into the fire some of the powder thus obtained, the flavor of camphor and other sweet-scented gums became apparent.

We searched the corpse very carefully for the usual openings through which the entrails are extracted, but, to our surprise, we could discover none. No member of the party was at that period aware that entire or unopened mummies are not infrequently met. The brain it was customary to withdraw through the nose, the intestines through an incision in the side, the body was then shaved, washed, and salted, then laid aside for several weeks, when the operation of embalming, properly so called, began.

As no trace of an opening could be

found, Doctor Ponnouner was preparing his instruments for dissection, when I observed that it was then past two o'clock. Hereupon it was agreed to postpone the internal examination until the next evening, and we were about to separate for the present, when some one suggested an experiment or two with the voltaic pile.

The application of electricity to a Mummy three or four thousand years old at the least, was an idea, if not very sage, still sufficiently original, and we all caught it at once. About one tenth in earnest and nine tenths in jest, we arranged a battery in the Doctor's study, and conveyed thither the Egyptian.

It was only after much trouble that we succeeded in laying bare some portions of the temporal muscle which appeared of less stony rigidity than other parts of the frame, but which, as we had anticipated, of course, gave no indication of galvanic susceptibility when brought in contact with the wire. This, the first trial, indeed, seemed decisive, and, with a hearty laugh at our own absurdity, we were bidding each other good night, when my eyes, happening to fall upon those of the Mummy, were there immediately riveted in amazement. My brief glance, in fact, had sufficed to assure me that the orbs which we had all supposed to be glass, and which were originally noticeable for a certain wild stare, were now so far covered by the lids, that only a small portion of the *tunica albuginea*² remained visible.

With a shout I called attention to the fact, and it became immediately obvious to all.

I cannot say that I was *alarmed* at the phenomenon, because "alarmed" is, in my case, not exactly the word. It is possible, however, that, but for the Brown Stout, I might have been a little nervous. As for the rest of the company, they really made no attempt at concealing the downright fright which possessed them. Doctor Ponnouner was a man to be pitied. Mr. Gliddon, by

² The white of the eye.

some peculiar process, rendered himself invisible Mr Silk Buckingham, I fancy, will scarcely be so bold as to deny that he made his way, upon all fours, under the table³

After the first shock of astonishment, however, we resolved, as a matter of course, upon further experiment forthwith. Our operations were now directed against the great toe of the right foot. We made an incision over the outside of the exterior *os sesamoides pollicis pedis*,⁴ and thus got at the root of the *abductor* muscle. Readjusting the battery, we now applied the fluid to the bisected nerves—when, with a movement of exceeding life-likeness, the Mummy first drew up its right knee so as to bring it nearly in contact with the abdomen, and then, straightening the limb with inconceivable force, bestowed a kick upon Doctor Ponnonner, which had the effect of discharging that gentleman, like an arrow from a catapult, through a window into the street below.

We rushed out *en masse* to bring in the mangled remains of the victim, but had the happiness to meet him upon the staircase, coming up in an unaccountable hurry, brimful of the most ardent philosophy, and more than ever impressed with the necessity of prosecuting our experiment with vigor and with zeal.

It was by his advice, accordingly, that we made, upon the spot, a profound incision into the tip of the subject's nose, while the Doctor himself, laying violent hands upon it, pulled it into vehement contact with the wire.

Morally and physically—figuratively and literally—was the effect electric. In the first place, the corpse opened its eyes and winked very rapidly for several minutes, as does Mr Barnes in the pantomime,⁵ in the second place, it sneezed, in the third, it sat upon end; in the fourth, it shook its fist in Doctor Ponnonner's face, in the fifth, turning to Messieurs Ghddon and Buckingham, it addressed them, in very capital Egyptian, thus:

"I must say, gentlemen, that I am as

much surprised as I am mortified at your behavior. Of Doctor Ponnonner nothing better was to be expected. He is a poor little fat fool who *knows* no better. I pity and forgive him. But you, Mr Ghddon—and you, Silk—who have travelled and resided in Egypt until one might imagine you to the manor born—you, I say, who have been so much among us that you speak Egyptian fully as well, I think, as you write your mother-tongue—you, whom I have always been led to regard as the firm friend of the mummies—I really did anticipate more gentlemanly conduct from you. What am I to think of your standing quietly by and seeing me thus unhand-somely used? What am I to suppose by your permitting Tom, Dick, and Harry to strip me of my coffins, and my clothes, in this wretchedly cold climate? In what light (to come to the point) am I to regard your aiding and abetting that miserable little villain, Doctor Ponnonner, in pulling me by the nose?"

It will be taken for granted, no doubt, that upon hearing this speech under the circumstances, we all either made for the door, or fell into violent hysterics, or went off in a general swoon. One of these three things was, I say, to be expected. Indeed each and all of these lines of conduct might have been very plausibly pursued. And, upon my word, I am at a loss to know how or why it was that we pursued neither the one nor the other. But, perhaps, the true reason is to be sought in the spirit of the age, which proceeds by the rule of contraries altogether, and is now usually admitted as the solution of every thing in the way of paradox and impossibility. Or, perhaps, after all, it was only the Mummy's

³ Poe probably intended this character to suggest James Silk Buckingham (1786-1855), English orientalist, who visited the United States 1838-1840.

⁴ The sesamoid bone of the big toe.

⁵ A reference to W. A. Barnes, a pantomimist of Poe's day on the New York stage.

exceedingly natural and matter-of-course air that divested his words of the terrible. However this may be, the facts are clear, and no member of our party betrayed any very particular trepidation, or seemed to consider that any thing had gone very especially wrong.

For my part I was convinced it was all right, and merely stepped aside, out of the range of the Egyptian's fist. Doctor Ponnonner thrust his hands into his breeches pockets, looked hard at the Mummy, and grew excessively red in the face. Mr Gliddon stroked his whiskers and drew up the collar of his shirt. Mr Buckingham hung down his head, and put his right thumb into the left corner of his mouth.

The Egyptian regarded him with a severe countenance for some minutes and at length, with a sneer, said

"Why don't you speak, Mr Buckingham? Did you hear what I asked you or not? Do take your thumb out of your mouth!"

Mr Buckingham, hereupon, gave a slight start, took his right thumb out of the left corner of his mouth, and, by way of indemnification, inserted his left thumb in the right corner of the aperture above-mentioned.

Not being able to get an answer from Mr B, the figure turned peevishly to Mr Gliddon, and, in a peremptory tone, demanded in general terms what we all meant.

Mr Gliddon replied at great length, in phonetics, and but for the deficiency of American printing-offices in hieroglyphical type, it would afford me much pleasure to record here, in the original, the whole of his very excellent speech.

I may as well take this occasion to remark, that all the subsequent conversation in which the Mummy took a part, was carried on in primitive Egyptian, through the medium (so far as concerned myself and other untravelled members of the company)—through the medium, I say, of Messieurs Gliddon and Buckingham, as interpreters. These gentlemen spoke the mother tongue

of the mummy with inimitable fluency and grace, but I could not help observing that (owing, no doubt, to the introduction of images entirely modern, and, of course, entirely novel to the stranger) the two travellers were reduced, occasionally, to the employment of sensible forms for the purpose of conveying a particular meaning. Mr Gliddon, at one period, for example, could not make the Egyptian comprehend the term "politics," until he sketched upon the wall, with a bit of charcoal, a little carbuncle-nosed gentleman, out at elbows, standing upon a stump, with his left leg drawn back, right arm thrown forward, with his fist shut, the eyes rolled up toward Heaven, and the mouth open at an angle of ninety degrees. Just in the same way Mr Buckingham failed to convey the absolutely modern idea "wig," until (at Doctor Ponnonner's suggestion) he grew very pale in the face, and consented to take off his own.

It will be readily understood that Mr Gliddon's discourse turned chiefly upon the vast benefits accruing to science from the unrolling and disembowelling of mummies, apologizing, upon this score, for any disturbance that might have been occasioned *him*, in particular, the individual Mummy called Allamistakeo, and concluding with a mere hint (for it could scarcely be considered more) that, as these little matters were now explained, it might be as well to proceed with the investigation intended. Here Doctor Ponnonner made ready his instruments.

In regard to the latter suggestions of the orator, it appears that Allamistakeo had certain scruples of conscience, the nature of which I did not distinctly learn; but he expressed himself satisfied with the apologies tendered, and, getting down from the table, shook hands with the company all round.

When this ceremony was at an end, we immediately busied ourselves in repairing the damages which our subject had sustained from the scalpel. We sewed up the wound in his temple, bandaged his foot,

and applied a square inch of black plaster to the tip of his nose

It was now observed that the Count (this was the title, it seems, of Allamistakeo) had a slight fit of shivering—no doubt from the cold. The Doctor immediately repaired to his wardrobe, and soon returned with a black dress coat, made in Jennings' best manner,⁶ a pair of sky-blue plaid pantaloons with straps, a pink gingham *chemise*, a flapped vest of brocade, a white sack overcoat, a walking cane with a hook, a hat with no brim, patent-leather boots, straw-colored kid gloves, an eyeglass, a pair of whiskers, and a waterfall cravat. Owing to the disparity of size between the Count and the Doctor (the proportion being as two to one), there was some little difficulty in adjusting these habiliments upon the person of the Egyptian, but when all was arranged, he might have been said to be dressed. Mr. Gliddon, therefore, gave him his arm, and led him to a comfortable chair by the fire, while the Doctor rang the bell upon the spot and ordered a supply of cigars and wine.

The conversation soon grew animated. Much curiosity was, of course, expressed in regard to the somewhat remarkable fact of Allamistakeo's still remaining alive.

"I should have thought," observed Mr. Buckingham, "that it is high time you were dead."

"Why," replied the Count, very much astonished, "I am little more than seven hundred years old! My father lived a thousand, and was by no means in his dotage when he died."

Here ensued a brisk series of questions and computations, by means of which it became evident that the antiquity of the Mummy had been grossly misjudged. It had been five thousand and fifty years and some months since he had been consigned to the catacombs at Eleithias.

"But my remark," resumed Mr. Buckingham, "had no reference to your age at the period of interment; (I am willing to grant, in fact, that you are still a young man), and my allusion was to the im-

mensity of time during which, by your own showing, you must have been done up in asphaltum."

"In what?" said the Count.

"In asphaltum," persisted Mr. B.

"Ah, yes, I have some faint notion of what you mean, it might be made to answer, no doubt,—but in my time we employed scarcely any thing else than the Bichloride of Mercury."

"But what we are especially at a loss to understand," said Doctor Ponnonger, "is how it happens that, having been dead and buried in Egypt five thousand years ago, you are here to-day all alive and looking so delightfully well."

"Had I been, as you say, *dead*," replied the Count, "it is more than probable that dead I should still be, for I perceive you are yet in the infancy of Galvanism,⁷ and cannot accomplish with it what was a common thing among us in the old days. But the fact is, I fell into catalepsy, and it was considered by my best friends that I was either dead or should be, they accordingly embalmed me at once—I presume you are aware of the chief principle of the embalming process?"

"Why, not altogether."

"Ah, I perceive,—a deplorable condition of ignorance! Well, I cannot enter into details just now, but it is necessary to explain that to embalm (properly speaking), in Egypt, was to arrest indefinitely *all* the animal functions subjected to the process. I use the word 'animal' in its widest sense, as including the physical not more than the moral and *vital* being. I repeat that the leading principle of embalment consisted, with us, in the immediately arresting, and holding in perpetual *abeyance*, *all* the animal functions subjected to the process. To be brief, in whatever condition the individual was, at the period of embalment, in that condition he remained. Now, as it is my good

⁶ Probably a contemporary tailor.

⁷ Luigi or Aloisio Galvani (1737-1798) was the founder of this science of electrical currents.

fortune to be of the blood of the Scarabæus, I was embalmed *alive*, as you see me at present"

"The blood of the Scarabæus!" exclaimed Doctor Ponnouner

"Yes The Scarabæus was the *insignum*, or the 'arms,' of a very distinguished and very rare patrician family To be 'of the blood of the Scarabæus,' is merely to be one of that family of which the Scarabæus is the *insignum* I speak figuratively"

"But what has this to do with your being alive?"

"Why, it is the general custom in Egypt to deprive a corpse, before embalmment, of its bowels and brains, the race of the Scarabæi alone did not coincide with the custom Had I not been a Scarabæus, therefore, I should have been without bowels and brains, and without either it is inconvenient to live"

"I perceive that," said Mr Buckingham, "and I presume that all the *entire* mummies that come to hand are of the race of Scarabæi"

"Beyond doubt"

"I thought," said Mr Ghaddon, very meekly, "that the Scarabæus was one of the Egyptian gods"

"One of the Egyptian *what*?" exclaimed the Mummy, starting to its feet

"Gods!" repeated the traveller

"Mr Ghaddon, I really am astonished to hear you talk in this style," said the Count, resuming his chair "No nation upon the face of the earth has ever acknowledged more than one *god* The Scarabæus, the Ibis, etc., were with us (as similar creatures have been with others) the symbols, or *media*, through which we offered worship to the Creator too august to be more directly approached"

There was here a pause At length the colloquy was renewed by Doctor Ponnouner.

"It is not improbable, then, from what you have explained," said he, "that among the catacombs near the Nile there may exist other mummies of the Scarabæus tribe, in a condition of vitality."

"There can be no question of it," replied the Count, "all the Scarabæi embalmed accidentally while alive, are alive Even some of those *purposely* so embalmed, may have been overlooked by their executors, and still remain in the tomb"

"Will you be kind enough to explain," I said, "what you mean by 'purposely so embalmed'?"

"With great pleasure," answered the Mummy, after surveying me leisurely through his eyeglass—for it was the first time I had ventured to address him a direct question

"With great pleasure," he said "The usual duration of man's life, in my time, was about eight hundred years Few men died, unless by most extraordinary accident, before the age of six hundred, few lived longer than a decade of centuries, but eight were considered the natural term After the discovery of the embalming principle, as I have already described it to you, it occurred to our philosophers that a laudable curiosity might be gratified, and, at the same time, the interests of science much advanced, by living this natural term in instalments In the case of history, indeed, experience demonstrated that something of this kind was indispensable An historian, for example, having attained the age of five hundred, would write a book with great labor and then get himself carefully embalmed, leaving instructions to his executors *pro tem*, that they should cause him to be revived after the lapse of a certain period—say five or six hundred years Resuming existence at the expiration of this time, he would invariably find his great work converted into a species of haphazard note-book—that is to say, into a kind of literary arena for the conflicting guesses, riddles, and personal squabbles of whole herds of exasperated commentators These guesses, etc., which passed under the name of annotations, or emendations, were found so completely to have enveloped, distorted, and overwhelmed the text, that the author had to go about with a lantern to discover his own book When discovered,

it was never worth the trouble of the search. After rewriting it throughout, it was regarded as the bounden duty of the historian to set himself to work immediately in correcting, from his own private knowledge and experience, the traditions of the day concerning the epoch at which he had originally lived. Now this process of rescription and personal rectification, pursued by various individual sages from time to time, had the effect of preventing our history from degenerating into absolute fable."

"I beg your pardon," said Doctor Ponnonner at this point, laying his hand gently upon the arm of the Egyptian—"I beg your pardon, sir, but may I presume to interrupt you for one moment?"

"By all means, sir," replied the Count, drawing up

"I merely wished to ask you a question," said the Doctor. "You mentioned the historian's personal correction of *traditions* respecting his own epoch. Pray, sir, upon an average, what proportion of these Kabbala were usually found to be right?"

"The Kabbala, as you properly term them, sir, were generally discovered to be precisely on a par with the facts recorded in the un-re-written histories themselves,—that is to say, not one individual iota of either was ever known, under any circumstances, to be not totally and radically wrong."

"But since it is quite clear," resumed the Doctor, "that at least five thousand years have elapsed since your entombment, I take it for granted that your histories at that period, if not your traditions, were sufficiently explicit on that one topic of universal interest, the Creation, which took place, as I presume you are aware, only about ten centuries before."

"Sir!" said the Count Allamistakeo

The Doctor repeated his remarks, but it was only after much additional explanation that the foreigner could be made to comprehend them. The latter at length said, hesitatingly

"The ideas you have suggested are to me,

I confess, utterly novel. During my time I never knew any one to entertain so singular a fancy as that the universe (or this world if you will have it so) ever had a beginning at all. I remember once, and once only, hearing something remotely hinted, by a man of many speculations, concerning the origin of the *human race*, and by this individual, the very word *Adam* (or Red Earth), which you make use of, was employed. He employed it, however, in a general sense, with reference to the spontaneous germination from rank soil (just as a thousand of the lower *genera* of creatures are germinated),—the spontaneous germination, I say, of five vast hordes of men, simultaneously upspringing in five distinct and nearly equal divisions of the globe."

Here, in general, the company shrugged their shoulders, and one or two of us touched our foreheads with a very significant air. Mr. Silk Buckingham, first glancing slightly at the oociput and then at the sinciput of Allamistakeo, spoke as follows

"The long duration of human life in your time, together with the occasional practice of passing it, as you have explained, in instalments, must have had, indeed, a strong tendency to the general development and conglomeration of knowledge. I presume, therefore, that we are to attribute the marked inferiority of the old Egyptians in all particulars of science, when compared with the moderns, and more especially with the Yankees, altogether to the superior solidity of the Egyptian skull."

"I confess again," replied the Count, with much suavity, "that I am somewhat at a loss to comprehend you, pray, to what particulars of science do you allude?"

Here our whole party, joining voices, detailed, at great length, the assumptions of phrenology and the marvels of animal magnetism.

Having heard us to an end, the Count proceeded to relate a few anecdotes, which rendered it evident that prototypes of Gall and Spurzheim had flourished and faded

in Egypt so long ago as to have been nearly forgotten, and that the manœuvres of Mesmer were really very contemptible tricks when put in collation with the positive miracles of the Theban *savans*, who created lice and a great many other similar things.⁸

I here asked the Count if his people were able to calculate eclipses. He smiled rather contemptuously, and said they were.

This put me a little out, but I began to make other inquiries in regard to his astronomical knowledge, when a member of the company, who had never as yet opened his mouth, whispered in my ear, that for information on this head, I had better consult Ptolemy (whoever Ptolemy is), as well as one Plutarch *de facie lunæ*.⁹

I then questioned the Mummy about burning-glasses and lenses, and, in general, about the manufacture of glass, but I had not made an end of my inquiries before the silent member again touched me quietly on the elbow, and begged me for God's sake to take a peep at Diodorus Siculus.¹⁰ As for the Count, he merely asked me, in the way of reply, if we moderns possessed any such microscopes as would enable us to cut cameos in the style of the Egyptians. While I was thinking how I should answer this question, little Doctor Ponnouner committed himself in a very extraordinary way.

"Look at our architecture!" he exclaimed, greatly to the indignation of both the travellers, who punched him black and blue to no purpose.

"Look," he cried with enthusiasm, "at the Bowling-Green Fountain in New York!"¹¹ or if this be too vast a contemplation, regard for a moment the Capitol at Washington, D. C."—and the good little medical man went on to detail, very minutely, the proportions of the fabric to which he referred. He explained that the portico alone was adorned with no less than four and twenty columns, five feet in diameter, and ten feet apart.

The Count said that he regretted not being able to remember, just at that moment, the precise dimensions of any one

of the principal buildings of the city of Aznac, whose foundations were laid in the night of Time, but the ruins of which were still standing, at the epoch of his entombment, in a vast plain of sand to the westward of Thebes. He recollected, however, (talking of the porticos,) that one affixed to an interior palace in a kind of suburb called Carnac, consisted of a hundred and forty-four columns, thirty-seven feet in circumference, and twenty-five feet apart. The approach to this portico, from the Nile, was through an avenue two miles long, composed of sphinxes, statues, and obelisks, twenty, sixty, and a hundred feet in height. The palace itself (as well as he could remember) was, in one direction, two miles long, and might have been altogether about seven in circuit. Its walls were richly painted all over, within and without, with hieroglyphics. He would not pretend to assert that even fifty or sixty of the Doctor's Capitols might have been built within these walls, but he was by no means sure that two or three hundred of them might not have been squeezed in with some trouble. That palace at Carnac was an insignificant little building after all. He (the Count), however, could not conscientiously refuse to admit the ingenuity, magnificence, and superiority of the Fountain at the Bowling Green, as described by the Doctor. Nothing like it, he was forced to allow, had ever been seen in Egypt or elsewhere.

I here asked the Count what he had to say to our railroads.

"Nothing," he replied, "in particular." They were rather slight, rather ill-con-

⁸ The Germans Franz Joseph Gall (1738-1828) and Johann Gaspar Spurzheim (1776-1832), his disciple, who were associates at the University of Vienna, were founders of the pseudo-science of phrenology. The German Franz Anton Mesmer (1733-1815) was the originator of mesmerism.

⁹ Concerning the condition of the moon.
¹⁰ Greek historian of the first century B. C.

¹¹ The reference is to a fountain in a small park at the lower end of Broadway, New York City, where the Dutch of New Amsterdam played at bowls.

ceived, and clumsily put together. They could not be compared, of course, with the vast, level, direct, iron-grooved causeways upon which the Egyptians conveyed entire temples and solid obelisks of a hundred and fifty feet in altitude.

I spoke of our gigantic mechanical forces.

He agreed that we knew something in that way, but inquired how I should have gone to work in getting up the imposts on the lintels of even the little palace of Carnac.

This question I concluded not to hear, and demanded if he had any idea of Artesian wells, but he simply raised his eyebrows, while Mr. Ghaddon winked at me very hard and said, in a low tone, that one had been recently discovered by the engineers employed to bore for water in the Great Oasis.

I then mentioned our steel, but the foreigner elevated his nose, and asked me if our steel could have executed the sharp carved work seen on the obelisks, and which was wrought altogether by edge-tools of copper.

This disconcerted us so greatly that we thought it advisable to vary the attack to Metaphysics. We sent for a copy of a book called the "Dial," and read out of it a chapter or two about something which is not very clear, but which the Bostonians call the Great Movement of Progress.

The Count merely said that Great Movements were awfully common things in his day, and as for Progress, it was at one time quite a nuisance, but it never progressed.

We then spoke of the great beauty and importance of Democracy, and were at much trouble in impressing the Count with a due sense of the advantages we enjoyed in living where there was suffrage *ad libitum*, and no king.

He listened with marked interest, and in fact seemed not a little amused. When we had done, he said that, a great while ago, there had occurred something of a very similar sort. Thirteen Egyptian provinces

determined all at once to be free, and to set a magnificent example to the rest of mankind. They assembled their wise men, and concocted the most ingenious constitution it is possible to conceive. For a while they managed remarkably well, only their habit of bragging was prodigious. The thing ended, however, in the consolidation of the thirteen states, with some fifteen or twenty others, in the most odious and insupportable despotism that was ever heard of upon the face of the Earth.

I asked what was the name of the usurping tyrant.

As well as the Count could recollect, it was *Mob*.

Not knowing what to say to this, I raised my voice, and deplored the Egyptian ignorance of steam.

The Count looked at me with much astonishment, but made no answer. The silent gentleman, however, gave me a violent nudge in the ribs with his elbows—told me I had sufficiently exposed myself for once—and demanded if I was really such a fool as not to know that the modern steam-engine is derived from the invention of Hero, through Solomon de Caus.¹²

We were now in imminent danger of being discomfited, but, as good luck would have it, Doctor Ponnanner, having rallied, returned to our rescue, and inquired if the people of Egypt would seriously pretend to rival the moderns in the all-important particular of dress.

The Count, at this, glanced downward to the straps of his pantaloons, and then taking hold of the end of one of his coat-tails, held it up close to his eyes for some minutes. Letting it fall, at last, his mouth extended itself very gradually from ear to ear, but I do not remember that he said any thing in the way of reply.

¹² Heron or Hero, of Alexandria, was a Greek mathematician and mechanic of the third century B. C. He invented a kind of steam engine, the principle of which was revived by the French engineer, Salomon de Caus (1576-1626) and others before its practical utilization by James Watt (1736-1819) by 1769.

Hereupon we recovered our spirits, and the Doctor, approaching the Mummy with great dignity, desied it to say candidly, upon its honor as a gentleman, if the Egyptians had comprehended, at *any* period, the manufacture of either Ponnonner's lozenges or Brandreth's pills¹³

We looked, with profound anxiety, for an answer,—but in vain It was not forthcoming The Egyptian blushed and hung down his head Never was triumph more consummate, never was defeat borne with so ill a grace Indeed, I could not endure the spectacle of the poor Mummy's mortification I reached my hat, bowed to him stiffly, and took leave

Upon getting home I found it past four o'clock, and went immediately to bed It is now ten A M I have been up since seven, penning these memoranda for the benefit of my family and of mankind The former I shall behold no more My wife is a shrew The truth is, I am heartily sick of this life and of the nineteenth century in general I am convinced that every thing is going wrong Besides, I am anxious to know who will be President in 2045 As soon, therefore, as I shave and swallow a cup of coffee, I shall just step over to Ponnonner's and get embalmed for a couple of hundred years

From
EUREKA
[1848]

IF THE propositions of this Discourse are tenable, the "state of progressive collapse" is *precisely* that state in which alone we are warranted in considering All Things, and, with due humility, let me here confess that, for my part, I am at a loss to conceive how any *other* understanding of the existing condition of affairs could ever have made its way into the human brain "The tendency to collapse," and "the attraction of gravitation are convertible phrases In using either, we speak of the reaction of the First Act Never was necessity less obvious than that of supposing Matter imbued with an ineradicable

equality forming part of its material nature—a quality, or instinct, *forever* inseparable from it, and by dint of which inalienable principle every atom is *perpetually* impelled to seek its fellow-atom Never was necessity less obvious than that of entertaining this unphilosophical idea Going boldly behind the vulgar thought, we have to conceive, metaphysically, that the gravitating principle appertains to Matter *temporarily*—only while diffused—only while existing as Many instead of as One—appertains to it by virtue of its state of irradiation alone—appertains, in a word, altogether to its *condition*, and not in the slightest degree to *itself* In this view, when the irradiation shall have returned into its source—when the reaction shall be completed—the gravitating principle will no longer exist And, in fact, astronomers, without at any time reaching the idea here suggested, seem to have been approximating it, in the assertion that "if there were but one body in the universe, it would be impossible to understand how the principle, Gravity, could obtain" that is to say, from a consideration of Matter as they find it, they reach a conclusion at which I deductively arrive That so pregnant a suggestion as the one quoted should have been permitted to remain so long unfruitful, is, nevertheless, a mystery which I find it difficult to fathom

It is perhaps, in no little degree, however, our propensity for the continuous—for the analogical—in the present case more particularly for the symmetrical—which has been leading us astray And, in fact, the sense of the symmetrical is an instinct which may be depended upon with an almost blindfold reliance It is the poetical essence of the Universe—*of the Universe*, which, in the supremeness of its symmetry, is but the most sublime of poems Now symmetry and consistency are convertible terms—thus Poetry and Truth are one A thing is consistent in the ratio

¹³ concocted by the English physician, Sir William Brandreth, these pills were a popular nostrum in Poe's day

of its truth—true in the ratio of its consistency *A perfect consistency, I repeat, can be nothing but an absolute truth* We may take it for granted, then, that Man cannot long or widely err, if he suffers himself to be guided by his poetical, which I have maintained to be his truthful, in being his symmetrical, instinct He must have a care, however, lest, in pursuing too heedlessly the superficial symmetry of forms and motions, he leave out of sight the really essential symmetry of the principles which determine and control them

That the stellar bodies would finally be merged in one—that, at last, all would be drawn into the substance of *one stupendous central orb already existing*—is an idea which, for some time past, seems, vaguely and indeterminately, to have held possession of the fancy of mankind It is an idea, in fact, which belongs to the class of the *excessively obvious* It springs, instantly, from a superficial observation of the cyclic and seemingly *gyrating* or *vortical* movements of those individual portions of the Universe which come most immediately and most closely under our observation There is not, perhaps, a human being, of ordinary education and of average reflective capacity, to whom, at some period, the fancy in question has not occurred, as if spontaneously, or intuitively, and wearing all the character of a very profound and very original conception. This conception, however, so commonly entertained, has never, within my knowledge, arisen out of any abstract considerations Being, on the contrary, always suggested, as I say, by the vortical movements about centres, a reason for it, also,—a *cause* for the ingathering of all the orbs into one, *imagined to be already existing*, was naturally sought in the same direction—among these cyclic movements themselves

Thus it happened that, on announcement of the gradual and perfectly regular decrease observed in the orbit of Encke's comet,¹ at every successive revolution about our Sun, astronomers were nearly unanimous in the opinion that the cause in

question was found—that a principle was discovered sufficient to account, physically, for that final, universal agglomeration which, I repeat, the analogical, symmetrical, or poetical instinct of man had predetermined to understand as something more than a simple hypothesis

This cause—this sufficient reason for the final ingathering—was declared to exist in an exceedingly rare but still material medium pervading space, which medium, by retarding, in some degree, the progress of the comet, perpetually weakened its tangential force, thus giving a predominance to the centripetal, which, of course, drew the comet nearer and nearer at each revolution, and would eventually precipitate it upon the Sun

All this was strictly logical—admitting the medium of ether, but this ether was assumed, most illogically, on the ground that no *other* mode than the one spoken of could be discovered, of accounting for the observed decrease in the orbit of the comet—as if from the fact that we could *discover* no other mode of accounting for it, it followed, in any respect, that no other mode of accounting for it existed It is clear that innumerable causes might operate, in combination, to diminish the orbit, without even a possibility of our ever becoming acquainted with one of them In the meantime, it has never been fairly shown, perhaps, why the retardation occasioned by the skirts of the Sun's atmosphere, through which the comet passes at perihelion, is not enough to account for the phenomenon That Encke's comet will be absorbed into the Sun, is probable, that all the comets of the system will be absorbed, is more than merely possible; but, in such case, the principle of absorption must be referred to eccentricity of orbit—to the close approximation to the Sun, of the comets at their perihelia, and is a principle not affecting, in any degree,

¹ Johann Franz Encke (1791-1865), German astronomer; the comet named for him has a periodicity of 33 years.

the ponderous *spheres*, which are to be regarded as the true material constituents of the Universe Touching comets in general, let me here suggest, in passing, that we cannot be far wrong in looking upon them as the *lightning-flashes of the cosmical Heaven*

The idea of retarding ether, and, through it, of a final agglomeration of all things, seemed at one time, however, to be confirmed by the observation of a positive decrease in the orbit of the solid moon By reference to eclipses recorded 2500 years ago, it was found that the velocity of the satellite's revolution *then* was considerably less than it is *now*, that on the hypothesis that its motion in its orbit is uniformly in accordance with Kepler's law,² and was accurately determined *then*—2500 years ago—it is now in advance of the position it *should* occupy, by nearly 9000 miles The increase of velocity proved, of course, a diminution of orbit, and astronomers were fast yielding to a belief in an ether, as the sole mode of accounting for the phenomenon, when Lagrange came to the rescue³ He showed that, owing to the configurations of the spheroids, the shorter axes of their ellipses are subject to variation in length, the longer axes being permanent, and that this variation is continuous and vibratory—so that every orbit is in a state of transition, either from circle to ellipse, or from ellipse to circle In the case of the moon, where the shorter axis is *decreasing*, the orbit is passing from circle to ellipse, and, consequently, is *decreasing* too, but, after a long series of ages, the ultimate eccentricity will be attained, then the shorter axis will proceed to *increase*, until the orbit becomes a circle, when the process of shortening will again take place,—and so on forever In the case of the Earth, the orbit is passing from ellipse to circle The facts thus demonstrated do away, of course, with all necessity for supposing an ether, and with all apprehension of the system's instability—on the ether's account.

It will be remembered that I have my-

self assumed what we may term an *ether* I have spoken of a subtle *influence* which we know to be ever in attendance upon matter, although becoming manifest only through matter's heterogeneity To this *influence*—without daring to touch it at all in any effort at explaining its awful *nature*—I have referred the various phenomena of electricity, heat, light, magnetism, and more—of vitality, consciousness, and thought—in a word, of spirituality It will be seen, at once, then, that the ether thus conceived is radically distinct from the ether of the astronomers, inasmuch as theirs is *matter* and mine *not*

With the idea of material ether, seems, thus, to have departed altogether the thought of that universal agglomeration so long predetermined by the poetical fancy of mankind—an agglomeration in which a sound Philosophy might have been warranted in putting faith, at least to a certain extent, if for no other reason than that by this poetical fancy it *had* been so predetermined But so far as Astronomy—so far as mere Physics have yet spoken, the cycles of the Universe have no conceivable end Had an end been demonstrated, however, from so purely collateral a cause as an ether, Man's instinct of the Divine *capacity to adapt*, would have rebelled against the demonstration We should have been forced to regard the Universe with some such sense of dissatisfaction as we experience in contemplating an unnecessarily complex work of human art Creation would have affected us as an imperfect *plot* in a romance, where the *dénouement* is awkwardly brought about by interposed incidents external and foreign to the main subject, instead of springing out of the bosom of the thesis—out of the heart of the ruling idea—instead of arising as a

² Johannes Kepler (1571-1630), German astronomer. Poe refers to the first of Kepler's three important laws of planetary motion—that the orbit of a planet is, with respect to the sun, an ellipse

³ Count Joseph Louis Lagrange (1736-1813) French geometer and astronomer

result of the primary proposition—as inseparable and inevitable part and parcel of the fundamental conception of the book

What I mean by the symmetry of mere surface will now be more clearly understood. It is simply by the blandishment of this symmetry that we have been beguiled into the general idea of which Madler's⁴ hypothesis is but a part—the idea of the vortical indrawing of the orbs. Dismissing this nakedly physical conception, the symmetry of principle sees the end of all things metaphysically involved in the thought of a beginning, seeks and finds in this origin of all things the *rudiment* of this end, and perceives the impiety of supposing this end likely to be brought about less simply—less directly—less obviously—less artistically—than through *the reaction of the originating Act*

Recurring, then, to a previous suggestion, let us understand the systems—let us understand each star, with its attendant planets—as but a Titanic atom existing in space with precisely the same inclination for Unity which characterized, in the beginning, the actual atoms after their irradiation throughout the Universal sphere. As these original atoms rushed towards each other in generally straight lines, so let us conceive as at least generally rectilinear, the paths of the system-atoms towards their respective centres of aggregation—and in this direct drawing together of the systems into clusters, with a similar and simultaneous drawing together of the clusters themselves while undergoing consolidation, we have at length attained the great *Now*—the awful Present—the Existing Condition of the Universe

Of the still more awful Future a not irrational analogy may guide us in framing an hypothesis. The equilibrium between the centripetal and centrifugal forces of each system, being necessarily destroyed upon attainment of a certain proximity to the nucleus of the cluster to which it belongs, there must occur, at once, a chaotic or seemingly chaotic precipitation, of the moons upon the planets, of the planets

upon the suns, and of the suns upon the nuclei, and the general result of this precipitation must be the gathering of the myriad now-existing stars of the firmament into an almost infinitely less number of almost infinitely superior spheres. In being immeasurably fewer, the worlds of that day will be immeasurably greater than our own. Then, indeed, amid unfathomable abysses, will be glaring unimaginable sums. But all this will be merely a climactic magnificence foreboding the great End. Of this End the new genesis described, can be but a very partial postponement. While undergoing consolidation, the clusters themselves, with a speed prodigiously accumulative, have been rushing towards their own general centre—and now, with a thousand-fold electric velocity, commensurate only with their material grandeur and with the spiritual passion of their appetite for oneness, the majestic remnants of the tribe of Stars flash, at length, into a common embrace. The inevitable catastrophe is at hand.

But this catastrophe—what is it? We have seen accomplished the ingathering of the orbs. Henceforward, are we not to understand *one material globe of globes* as constituting and comprehending the Universe? Such a fancy would be altogether at war with every assumption and consideration of this Discourse.

I have already alluded to that absolute *reciprocity of adaptation* which is the idiosyncrasy of the divine Art—stamping it divine. Up to this point of our reflections, we have been regarding the electrical influence as a something by dint of whose repulsion alone Matter is enabled to exist in that state of diffusion demanded for the fulfilment of its purposes—so far, in a word, we have been considering the influence in question as ordained for Matter's sake to subserve the objects of matter. With a perfectly legitimate reciprocity, we are now permitted to look at Matter, as created *solely for the sake of this influence*

⁴ Johann Heinrich von Madler (1794-1874), German astronomer.

—solely to serve the objects of this spiritual Ether Through the aid—by the means—through the agency of Matter, and by dint of its heterogeneity—is this Ether manifested—is *Spirit individualized* It is merely in the development of this Ether, through heterogeneity, that particular masses of Matter become animate—sensitive—and in the ratio of their heterogeneity,—some reaching a degree of sensitiveness involving what we call *Thought*, and thus attaining Conscious Intelligence

In this view, we are enabled to perceive Matter as a Means—not as an End Its purposes are thus seen to have been comprehended in its diffusion, and with the return into Unity these purposes cease The absolutely consolidated globe of globes would be *objectless*—therefore not for a moment could it continue to exist Matter, created for an end, would unquestionably, on fulfilment of that end, be Matter no longer Let us endeavor to understand that it would disappear, and that God would remain all in all

That every work of Divine conception must coexist and coexpire with its particular design, seems to me especially obvious, and I make no doubt that, on perceiving the final globe of globes to be *objectless*, the majority of my readers will be satisfied with my “*therefore* it cannot continue to exist” Nevertheless, as the startling thought of its instantaneous disappearance is one which the most powerful intellect cannot be expected readily to entertain on grounds so decidedly abstract, let us endeavor to look at the idea from some other and more ordinary point of view—let us see how thoroughly and beautifully it is corroborated in an *a posteriori* consideration of Matter as we actually find it

I have before said that “Attraction and Repulsion being undeniably the sole properties by which Matter is manifested to Mind, we are justified in assuming that Matter *exists* only as Attraction and Repulsion—in other words that Attraction and Repulsion *are* Matter, there being no

conceivable case in which we may not employ the term Matter and the terms ‘Attraction’ and ‘Repulsion’ taken together, as equivalent, and therefore convertible, expressions of Logic”

Now the very definition of Attraction implies particularity—the existence of parts, particles, or atoms, for we define it as the tendency of “each atom, &c, to every other atom,” &c, according to a certain law Of course where there are *no* parts—where there is absolute Unity—where the tendency to oneness is satisfied—there can be no Attraction—this has been fully shown, and all Philosophy admits it When, on fulfilment of its purposes, then, Matter shall have returned into its original condition of *One*—a condition which presupposes the expulsion of the separative ether, whose province and whose capacity are limited to keeping the atoms apart until that great day when, this ether being no longer needed, the overwhelming pressure of the finally collective Attraction shall at length just sufficiently predominate and expel it—when, I say, Matter, finally, expelling the Ether, shall have returned into absolute Unity,—it will then (to speak paradoxically for the moment) be Matter without Attraction and without Repulsion—in other words, Matter without Matter—in other words, again, *Matter no more* In sinking into Unity, it will sink at once into that Nothingness which, to all Finite Perception, Unity must be—into that Material Nihility from which alone we can conceive it to have been evoked—to have been *created* by the Volition of God

I repeat, then—Let us endeavor to comprehend that the final globe of globes will instantaneously disappear, and that God will remain all in all

But are we here to pause? Not so On the Universal agglomeration and dissolution, we can readily conceive that a new and perhaps totally different series of conditions may ensue—another creation and irradiation, returning into itself—another action and reaction of the Divine

Will Guiding our imaginations by that omniprevalent law of laws, the law of periodicity, are we not, indeed, more than justified in entertaining a belief—let us say, rather, in indulging a hope—that the processes we have here ventured to contemplate will be renewed forever, and forever, and forever, a novel Universe swelling into existence, and then subsiding into nothingness, at every throb of the Heart Divine?

And now—this Heart Divine—what is it? *It is our own*

Let not the merely seeming inexperience of this idea frighten our souls from that cool exercise of consciousness—from that deep tranquillity of self-inspection—through which alone we can hope to attain the presence of this, the most sublime of truths, and look it leisurely in the face

The *phenomena* on which our conclusions must at this point depend, are merely spiritual shadows, but not the less thoroughly substantial

We walk about, amid the destinies of our world-existence, encompassed by dim but ever present *Memories* of a Destiny more vast—very distant in the by-gone time, and infinitely awful

We live out a Youth peculiarly haunted by such dreams, yet never mistaking them for dreams As *Memories* we *know* them *During our Youth* the distinction is too clear to deceive us even for a moment

So long as this Youth endures, the feeling *that we exist*, is the most natural of all feelings We understand it *thoroughly* That there was a period at which we did *not* exist—or, that it might so have happened that we never had existed at all—are the considerations, indeed, which *during this youth*, we find difficulty in understanding Why we should *not* exist, is, *up to the epoch of our Manhood*, of all queries the most unanswerable Existence—self-existence—existence from all Time and to all Eternity—seems, up to the epoch of Manhood, a normal and unquestionable condition—*seems, because it is*

But now comes the period at which a

conventional World-Reason awakens us from the truth of our dream Doubt, Surprise and Incomprehensibility arrive at the same moment They say—"You live, and the time was when you lived not You have been created An Intelligence exists greater than your own, and it is only through this Intelligence you live at all" These things we struggle to comprehend and cannot—*cannot*, because these things, being untrue, are thus, of necessity, incomprehensible

No thinking being lives who, at some luminous point of his life of thought, has not felt himself lost amid the surges of futile efforts at understanding or believing, that anything exists *greater than his own soul* The utter impossibility of any one's soul feeling itself inferior to another, the intense, overwhelming dissatisfaction and rebellion at the thought—these, with the omniprevalent aspirations at perfection, are but the spiritual, coincident with the material, struggles towards the original Unity—are, to my mind at least, a species of proof far surpassing what Man terms demonstration, that no one soul is inferior to another—that nothing is, or can be, superior to any one soul—that each soul is, in part, its own God—its own Creator—in a word, that God—the material and spiritual God—*now* exists solely in the diffused Matter and Spirit of the Universe, and that the regathering of this diffused Matter and Spirit will be but the reconstitution of the *purely* Spiritual and Individual God

In this view, and in this view alone, we comprehend the riddles of Divine Injustice—or Inexorable Fate In this view alone the existence of Evil becomes intelligible, but in this view it becomes more—it becomes endurable Our souls no longer rebel at a *Sorrow* which we ourselves have imposed upon ourselves, in furtherance of our own purposes—with a view—if even with a futile view—to the extension of our own *Joy*

I have spoken of *Memories* that haunt us during our youth They sometimes pur-

sue us even in our Manhood—assume gradually less and less indefinite shapes—now and then speak to us with low voices, saying

“There was an epoch in the Night of Time, when a still-existent Being existed—one of an absolutely infinite number of similar Beings that people the absolutely infinite domains of the absolutely infinite space. It was not and is not in the power of this Being—any more than it is in your own—to extend, by actual increase, the joy of his Existence, but just as it is in your power to expand or to concentrate your pleasures (the absolute amount of happiness remaining always the same) so did and does a similar capability appertain to this Divine Being, who thus passes his Eternity in perpetual variation of Concentrated Self and almost Infinite Self-Diffusion. What you call The Universe is but his present expansive existence. He now feels his life through an infinity of imperfect pleasures—the partial and pain-intertangled pleasures of those inconceivably numerous things which you designate infinite individualizations of Himself. All these creatures—all—those which you term animate, as well as those to whom you deny life for no better reason than that

you do not behold it in operation—all these creatures have, in a greater or less degree, a capacity for pleasure and for pain—but the general sum of their sensations is precisely that amount of Happiness which appertains by right to the Divine Being when concentrated within Himself. These creatures are all too, more or less conscious Intelligences, conscious, first, of a proper identity, conscious, secondly, and by faint indeterminate glimpses, of an identity with the Divine Being of whom we speak—of an identity with God. Of the two classes of consciousness, fancy that the former will grow weaker, the latter stronger, during the long succession of ages which must elapse before these myriads of individual Intelligences become blended—when the bright stars become blended—into One. Think that the sense of individual identity will be gradually merged in the general consciousness—that Man, for example, ceasing imperceptibly to feel himself Man, will at length attain that awfully triumphant epoch when he shall recognise his existence as that of Jehovah. In the meantime bear in mind that all is Life—Life—Life within Life—the less within the greater, and all within the *Spirit Divine*”

1806 ∞ William Gilmore Simms ∞ 1870

SIMMS composed his own epitaph “Here lies one who, after a reasonably long life, distinguished chiefly by unceasing labors, left all his better works undone.” The words are not unjustified. His was the career of a man of extraordinary energy and ability, handicapped by even more extraordinary external obstacles. To some extent the adverse forces with which he contended have continued to operate since his death, with the result that not even yet is there general recognition of the quality and extent of his achievement.

When Simms was two years old his mother died. His father served under Jackson in the Creek War and remained in what was then the West—Mississippi and Alabama—leaving the infant son to the care of his maternal grandmother. Her stories of South Carolina history contributed to the boy’s creative development, as did a visit to his father on the frontier at the age of eighteen. He

studied and practiced law at Charleston but turned early to literature and journalism, becoming one of the first Southerners to depend on his pen for a livelihood and one of the most persistent in the attempt to establish a worthy literary magazine in the South. He was compelled, however, to look to the North for helpful literary associations and the first significant publication of his work. At Hingham, Massachusetts, in 1832, he wrote a long romantic narrative poem called *Atalantis, a Story of the Sea*, which, published in New York in that same year, was immediately successful. It was followed by his first book of fiction, *Martin Faber, the Story of a Criminal* (1833), also a popular success. Simms returned to Charleston, but not before he had become favorably known in literary circles in New York and had begun a friendship with Bryant which was to last for many years.

In *Guy Rivers* (1834) and *The Yemassee* (1835) Simms found the two fields, frontier adventure and historical romance, in which he was to do his best work. In 1836 he married the daughter of a wealthy South Carolina planter, and established the pattern which his life was to follow for twenty-five years: most of the year at "Woodlands," his father-in-law's estate, with steady writing, a few months each winter at Charleston, fairly frequent trips to New York and New England.

His production during these years was amazingly profuse and varied, and strikingly uneven. His historical romances of Revolutionary days in the South include *The Partisan* (1835), *Woodcraft* (1852), *The Forayers* (1855) and *Eutaw* (1856). Earlier history of the region was treated in *The Yemassee*, already mentioned, *Vasconcelos* (1853), a story of DeSoto, and *The Cassique of Kiawah* (1859). Among the "border romances" of frontier crime and adventure, in addition to *Guy Rivers*, are *Richard Hurdis* (1838), *Beauchampe* (1842), and *Charlemont* (1856). He wrote plays and much poetry, edited a volume of Shakespeare, turned out popular biographies of Marion, Greene, and John Smith. Yet he found time to befriend and help young Southern writers. Again and again he returned to the attempt to establish a worthy Southern literary magazine. Altogether he founded or edited ten periodicals, including *The Magnolia* (1842), *The Southern and Western Monthly Magazine and Review* (1845), and—most important—*The Southern Quarterly Review* (1849-55). For these and other magazines he wrote sketches, stories, political articles, and much literary criticism, including a particularly generous and discerning estimate of Cooper, whom he was often accused of imitating in his fiction.

But the South of those decades was an unrewarding field for literary endeavor. It withheld from Simms even the social recognition that he craved. In the North many of his books were well received, and he had warm literary friendships. But as the Civil War approached and Simms inevitably became a literary protagonist of his own section, he lost his Northern audience in large part without corresponding gain in the South.

The war wrecked his life. During the war years his wife and two of his children died. Sherman's army burned "Woodlands" and with it every volume of Simms' fine library. He was a witness of the burning of Columbia. Yet, facing the Reconstruction, he found means and spirit to help other Southern writers even more unfortunate than himself. "Somehow or other you always magnetize me on to a little strength," the young poet Timrod, sick and starving, wrote to him in 1866. He set himself with full courage and characteristic industry to the task of rebuilding. In 1869 he contracted for three romances to be written concurrently. The burden was too great for even his extraordinary powers. He died at sixty-four. "Simms' genius *never had fair play*," Paul Hamilton Hayne, his fellow-Southerner, declared. "The *man* was greater than his *works*."

Yet the works have lasting interest, the best of them offer positive pleasure to the discerning reader of today, and in even the poorest—for example, the sensational *Charlemont*—there is felt repeatedly the play of an active and sensitive mind. It is as easy to make fun of Simms as of Cooper. There are the same stilted conversations, the same insipid women, the same clumsy artifices of plot, and the same reliance on coincidence. In treatment of the frontier Cooper was greatly superior to Simms. The "border romances" are cheap and lurid melodramas in comparison to the Leatherstocking Tales. It is in the field of historical romance that Simms' positive qualities are most apparent. In *The Yemassee* and *The Cassique of Kiawah* he shows greater knowledge and understanding of Indian life, and a far deeper sense of the tragic significance of the inevitable conflicts between red and white, than Cooper ever achieved. His writing as a whole is more sensuous than Cooper's, richer in concrete detail, especially of place, and in general his prose is more pliable and less monotonous. In the Revolutionary romances there are qualities of warmth and dignity, proceeding from Simms' devoted enthusiasm for the whole body of his material, rarely to be matched in the corresponding works of Cooper.

Finally, though many of Simms' attempts to be funny are as painful as most of Cooper's, he did achieve the creation of one fine and memorable comic character, still one of the greatest in all American fiction. Lieutenant Porgy doubtless owes much to Falstaff, and to Simms' lifelong enthusiasm for Shakespeare. But essentially he is indigenous, American and South Carolinian. In his love of certain native foods and sports he is clearly a projection of Simms' own tastes and habits in the best "Woodlands" days. Porgy appears recurrently in several of the Revolutionary romances and is central in *Woodcraft*. He deserves, with his creator, a far larger place in the knowledge and enjoyment of American readers than they have ever held.

[W. P. Trent's *William Gilmore Simms* (Boston, 1892) is still the standard biography. Alexander Cowie has a thorough critical introduction to *The Yemassee* (New York, 1937) in the American Fiction Series.]

From
THE PARTISAN¹
[1835]

PORGY AND THE TERRAPINS

WHEN on the edge of the thicket where the horses were kept, and which skirted a long dark pond, which was fed by numerous sluices from the swamp, our forger came rather unexpectedly upon no less a person than Lieutenant Porgy.

What was the fat lieutenant doing in such a situation? What was the nature of that occupation which he pursued by the precious starlight, and when most honest men are sleeping? Davis could not divine the answer to his own questions. It was enough that the lieutenant was greatly in his way. Had Porgy been sleeping? No! He was bright enough when he found himself disturbed. But he had certainly been in a state of very profound reverie when the unconscious footstep of Davis sounded in his ears. Rifle in grasp, and crouching low upon the bankside, looking out upon the dark water which glittered in spots only beneath the starlight, the philosophic epicure was as watchful as a sentinel on duty, or a scout on trail. Davis could not say at first whether he lay flat upon the ground, or whether he was on his knees. To suppose him to be crawling upon all fours, would be a supposition scarcely consistent with the dignity of his office and the dimensions of his person. Yet there was so much that was equivocal in his attitude, that all these conjectures severally ran through the head of the woodman. He started up at the approach of Davis, disquieted by the intrusion, yet evidently desirous of avoiding all alarm. His challenge—"Who goes there?" though given in very quick, was yet delivered in very subdued accents. Our woodman gave the answer, and the tones of Porgy's voice underwent some change, but were still exceedingly soft and low. They embodied a good-natured recognition.

"Ah! Davis, my good fellow, you are just in time."

"For what, lieutenant?"

"For great service to me, to yourself, to the whole encampment. But no noise, my good fellow. Not a breath—not a word above your breath. He is a fool who suffers his tongue to spoil his supper. As quiet as possible, my boy."

"What's to do, lieutenant?" was the whispered query of Davis, much wondering at the anxiety of the speaker, who seldom showed himself so, and who usually took events, without asking for the salt or sauce to make them palatable.

"What do you see?" he continued, as the eyes of Porgy were straining across the imperfectly lighted pond.

"See!—what do I see? Oh! Blessed Jupiter, god of men as little fishes, what do I not see?"

And as he spoke, he motioned to Davis to sink down, crouch close, and creep towards him. Davis, much bewildered, did as he was required, Porgy meanwhile *sotto voce*, continuing to dilate after his usual fashion of eloquence—a style, by the way, that was very apt to bewilder all his hearers. Davis had never studied in the schools of euphuism, nor in any school, indeed, except that of the swamp. He fancied he knew the philosophy of the swamp as well as any other man, and that Porgy should extract from it a source of knowledge hitherto concealed from him, was a subject of very great amazement. He began, accordingly, to question the sanity of his superior, when he heard him expatiate in the following language.

"We live in a very pleasant world, Master John Davis. Nature feeds us in

¹ "Our narrative begins in South Carolina, during the summer of 1780," Simms explains in the first sentence of this novel. "The arms of the British were at that time triumphant throughout the colony." Porgy and the scout, Davis, were members of a guerilla or partisan band still maintaining resistance in swamps and forests. The title for the selection has been supplied by the editors.

all our senses, whenever we are willing and wise enough to partake. You breathe, you see, you smell, you taste, and you ought to be happy, Davis, why are you not happy?"

"Well, I don't know, lieutenant, I only know I ain't happy, and I can't be happy in this world, and I don't expect to be."

"Oh! man of little faith. It is because you won't use your senses, John Davis—your eyes. You ask me what I see! Blind mote, that thou art! Dost thou see nothing?"

"I see you, lieutenant, and the dark pond and water, and the big cypresses, and the thick vines and bushes, and just above, a little opening in the trees that shows where the stars are peeping down. I don't see nothing else."

"And what were the stars made for, John Davis, but to show you the way to other things? Look for yourself now, and let me show you the pleasantest prospect, for a dark night, that your eyes ever hungered over. Stoop, I say, and follow my finger. There! See to the lagoon just beyond that old cypress, see the dead tree half rolled into the water. Look now, at the end of the fallen tree—there just where the starlight falls upon it, making a long streak in the black water. Do you see, man of little faith, and almost as little eyesight! Do you not understand now, why it is that I rejoice, why my bowels yearn, and my soul exults? Look, and feast your eyes, Jack Davis, whom they call of Goose Creek, while you anticipate better feeding still hereafter. But don't you utter a word—not a breath, lest you disturb the comely creatures, the dainty delights, our quail and manna of the swamp—sent for our blessing and enjoyment by the bountiful Heaven, which sees that we are intensely deserving, and mortal hungry at the same time. Hush! hush! not a word!"

Here he stopt himself in the utterance of his own raptures, which were growing rather more loud than prudence called for. The eye of Davis, meanwhile, had followed the guiding finger of the epicure, and the

woodman nearly laughed aloud. But he dared not. Porgy was evidently too seriously bent to permit of such irreverence. The objects that so transported the other, were such as had been familiar to the eyes of both from their earliest consciousness of light. The little lagoon, or bayou, on the edge of which they crouched, showed them, drowsing on the old and half-decayed tree to which Porgy had directed his own and the gaze of Davis, three enormous terrapins of that doubtful brood which the vulgar in the southern country describe as the alligator terrapin—an uncouth monster, truly, and with such well developed caudal extremities as seem to justify them in classing the animal in this connexion. The terrapins lay basking, black and shining in the starlight, their heads thrust out, and hanging over the lagoon, into which the slightest alarm of an unusual nature would prompt them to plunge momentarily. Their glossy backs yet seemed to tickle with the water from which they had arisen. Their heads were up and watchful, as if preparing for that facile descent into the native home, a region black as Avernus. Porgy continued—now in a whisper—

"That's a sight, John Davis, to lift a man from a sick-bed. That's a sight to make him whole and happy again. Look how quietly they lie, that farthest one—I would it were nigher—is a superb fellow, fat as butter, and sticking full of eggs. There's soup enough in the three for a regiment, and now, my good fellow, if you will only be quiet, I will give you such a lesson of dexterity and stratagem as shall make you remember this night as long as you live. There never was a terrapin trapper that could compare with me in my youth. We shall see if my right hand hath lost its cunning. You shall see me come upon them like an Indian. I will only throw off this outer and most unnecessary covering, and put on the character of a social grunter. Ah, the hog is a noble animal—what would we do without him? It's almost a sin to mock him—but in making mock turtle, John Davis, the offence

is excusable a good dinner, I say, will sanctify a dozen sins, and here goes for one "

"But, lieutenant, them's alligator terrapins "

"Well "

"Well, nobody eats alligator terrapins "

"Nobody's an ass, then, for his abstinence, let me tell you, an alligator terrapin is the very prince of terrapins "

"Well, he's the biggest "

"And the best! His meat is of the rarest delicacy, and with my dressing, and the cooking of my fellow, Tom, the dish is such as would tickle monstrously the palate of any prince in Europe—that is, of any prince born to a gentlemanly taste, which is not to be said of many of the tribe, I grant you But, there's no time to be lost Hold my rifle, and witness my exertions "

Here he forced the rifle into the hands of the Goose-Creek forester, and prepared for the proposed achievement, which we may venture to say, in this place, requires a degree of dexterity and painstaking which few can show, and which no one would attempt, not stimulated by tastes so exquisite and absorbing as those of our epicure

Porgy's agility greatly beheld his appearance You have seen a heavy man move lightly, no doubt It requires a certain conformation to show this anomaly Porgy possessed this conformation His coat was off in a jiffy His vest followed it, and he was soon stealing away, along the edge of the hammock, and in the direction of his victims Davis had become interested, almost to the utter forgetfulness of his own victim, Sergeant Hastings He watched our epicure, as, almost without a sound, he pressed forward upon hands and knees, his huge form, in this attitude, appearing in the dusky light very like the animal whose outer habits he was striving to assimilate

The terrapins were a little uneasy, and Porgy found it necessary to pause occasionally and survey them in silence When

they appeared quiet, he renewed his progress, as he drew nearer, he boldly grunted aloud, after the porcine habit, and with such excellence of imitation that, but for his knowledge of the truth, Davis himself might have been deceived Porgy knew the merit of his imitation, but he had some scruples at its exercise but for the want of fresh meat in camp, and the relish with which he enjoyed his stew of terrapins, he would have been loath to make an exhibition of his peculiar powers Even at this moment he had his reflections on his own performance, which were meant to be apologetic, though unheard

"The Hog," he muttered as he went, "has one feature of the good aristocrat He goes where he pleases, and grumbles as he goes Still, I am not satisfied that it is proper for the gentleman to put on the hog, unless on occasion such as this The pleasures of a dinner are not to be lost for a grunt He must crawl upon his belly who would feel his way to that of a terrapin "

Thus fortifying himself with philosophy, he pressed forward to the great delight of Davis, who had become quite interested in the performance, and grunt after grunt testified to the marvellous authority which his appetite exercised over his industry The terrapins showed themselves intelligent Alas! the best of beasts may be taken in by man Porgy's grunts were a sad fraud upon the unsuspecting victims At the first sound, the largest of the three terrapins, having the greatest stake (Qu? steak) of all, betrayed a little uneasiness, and fairly wheeled himself round upon his post, prepared to plunge headlong with the approach of danger His uneasiness was naturally due to the importance of the wealth which had been intrusted to his keeping His bullet head, his snaky neck, were thrust out as far as possible from beneath the covers of his dwelling. Like an old soldier, he pricked his ears, and stood on the alert, but he was soon satisfied His eye took in the forms of his drowsy companions, and he saw no sign of danger

in the unbroken surface of the stagnant pond. A second grunt from the supposed porker reassured him. He had lived in intimate communion with hogs all his days. The sow had made her wallow beside his waters, and reared her brood for a hundred years along their margins. He knew that there was no sort of danger from such a presence, and he composed himself at his devotions, and prepared once more to re-knit his half-unravell'd slumbers.

"Beautiful creature, sleep on!" murmured Porgy to himself, in tones and words as tender as made the burden of his serenade, in the days of his youth, to the dark-eyed damsels upon the waters of the Ashley and Savannah. He made his way forward, noiselessly—the occasional grunt excepted—until he found himself fairly astride the very tree which his unconscious victims were reposing on.

You have heard, no doubt, of that curious sort of locomotion which, in the South and West, is happily styled "cooming the log?" It is the necessity, where you have to cross the torrent on the unsteady footing of a spear,—or rather, where you must needs cross on a very narrow and very slippery tree, which affords no safe footing. In plain terms, our fat friend squatted fairly upon the log, hands and knees, and slid along in a style which John Davis thought infinitely superior to anything he had seen. Telling the story long afterwards, John always did the fullest justice to the wonderful merits of the lieutenant, in some such phrase as this—

"Lord! 'twas as sleek going as down hill, with the wheels greased up to the hub!"

"Greased up to the hub!"

Porgy, you may be sure, was never suffered to hear of the villainous comparison.

The anxiety of Davis, at this point of the adventure, made him fidgety and restless. It required strong resolution to keep quiet. But, though himself anxious enough, the stake was too great to suffer our epicure to peril its loss by any undue precipitation. He moved along at a snail's pace, and whenever the huge tree would vibrate

beneath his prodigious weight, the cautious trapper would pause in his journey, and send forth as good a grunt as ever echoed in Westphalian forests. The poor terrapins were completely taken in by the imitation, and lay there enjoying those insidious slumbers, which were now to be their ruin.

Nigher and nigher came the enemy. A few feet only separated the parties, and, with an extended hand, Porgy could have easily turned over the one which was nighest. But our epicure was not to be content with less than the best. His eyes had singled out the most remote, because the largest of that sweet company. He had taken in at a glance its entire dimensions, and already, in his mind, estimated, not only the quantity of rich reeking soup which could be made out of it, but the very number of eggs which it contained. Nothing short, therefore, of this particular prize would have satisfied him, and, thus extravagant in his desires, he scarcely deigned a glance to the others. At length he sat squat almost alongside of the two—the third, as they lay close together, being almost in his grasp, he had actually put out his hands for its seizure, when the long neck of his victim was again thrust forth, and, with arms still extended, Porgy remained as quiet as a mouse. But the moment the terrapin sheltered his head within the shell, the hands of the captor closed upon him with a clutch from which there was no escaping. One after another the victims were turned upon their backs, and, with a triumphant chuckle, the captor carried off his prey to the solid tussock.

"I cannot talk to you for an hour, John Davis, my boy—not for an hour—here's food for thought in all that time. Food for thought did I say? Ay, for how much thought! I am thoughtful. The body craves food, indeed, only that the mind may think, and half our earthly cares are for this material. It is falsehood and folly to speak of eating as a mere animal necessity, the love of which is vulgarly designated an animal appetite. It is not so with me. The

taste of the game is nothing to the pleasure of taking it—nothing to the pleasure of preparing it in a manner worthy of the material, and of those who are to enjoy it I am not selfish, I share with all, and, by the way, John Davis, I feel very much like whipping the fellow who shows no capacity to appreciate I am a sort of Barmecide in that respect, though I suspect, John, you know nothing of the Barmecides”

“No, I never heard tell of them”

“So I suppose! Well, I won’t vex you by talking of fine people not of your acquaintance. Now, John, tell the truth,—did I not seem to you very peculiar, very remarkable, and strange—nay, something ridiculous, John, when you saw me crawling after the terrapins?”

“Well, to say truth, lieutenant, you did seem rather ridiculous”

“Ridiculous! do you say? Well, perhaps! I forgive you, Jack Davis, though there are times when to hint such a word to me, would insure you a broken head. A man of my presence ridiculous!”

“Oh! I don’t mean no offence, lieutenant”

“To be sure not! Do I not know that! But, John, think of the soup that we shall get out of these terrapins. Think of our half-starved encampment, and do you not see that the art which traps for us such admirable food, rises into absolute sublimity? Some hundreds of years from now, when our great-grandchildren think of the sort of life we led when we were fighting to secure them an inheritance, they will record this achievement of mine as worthy of Roman fame. But you don’t know anything of the Romans, John”

“Not a bit, lieutenant. Is it a kind of terrapins?”

“Yes, indeed! a kind of terrapins that crawled over the whole earth, and claimed it for their own.”

“You don’t say so!”

“True, every syllable, but the breed’s died out, John, and such as are left hav’n’t marrow enough in ’em for a stew for a

single squad. But, John, it was not the soup only that I thought of when I trapped these beauties. Did you ever feel the pleasure, John, of chasing a fox?”

“Yes, to be sure a thousand times. It’s prime sport, I tell you”

“But you never ate the fox, John?”

“No, indeed! the stinking creature!”

“Well, even if I shouldn’t taste these terrapins, the pleasure of their capture is a feast I have exercised my skill, my ingenuity—I feel that my right hand has not forgot its cunning. That, John, is the sort of practice that proves the true nature of the man. He is never so well satisfied as when he is contriving, inventing, scheming, planning, and showing how cunning he can be. Whether it’s red-fox or red-coat, John, it’s a sort of happiness to chase, and trap, and catch, run down and cut up”

“I reckon that’s true, lieutenant. I feel just so when I’m on a scout, or a hunt, or anything like it,” and John Davis was reminded of his practice with respect to Sergeant Hastings. He began to be impatient of the long speeches of Porgy, but there was no getting him out of the way, except at his own pleasure

“Talking of cutting up, John, brings up the terrapins to-morrow. You shall see what a surprise I shall give the camp. You shall see what a thing invention is! How beautiful is art! Now I shall dress each of these beauties in a different style. Steaks and soup you shall have, and enough to satisfy, in the old fashion. But I have some inventions—I thought of them as I neared the log, and when the cunning senses of that patriarch there almost found me out, a timely grunt silenced his doubt. With that grunt came the idea of a new dish. It was a revelation. That terrapin, I said, shall be compounded with the flesh of the porker that Joe Witsell brought into camp at noon. There shall be a hash that shall make your mouth to water. There shall be such a union of the forces of hog and terrapin as shall make them irresistible, and you will then learn the great

truth—great to us at short commons in the swamp—that alligator terrapin is a dish worthy to be set before a king”

John Davis looked dubiously, but said—

“Yes, I reckon, lieutenant”

“You reckon’ well, but whither do you go?” he asked, as he saw the other lay down his rifle and prepare to go

“I’ve got to scout for two hours, out here on the skairts of the swamp”

“Very good’ But before you go—have you a handkerchief about you?”

“A mighty old one, lieutenant”

“The very one for my purposes Mine is a new one, John, and meant for great occasions, when I am entertaining some of the big bugs in epaulettes Let me have it, —and—but—old fellow, won’t you help me home with my captives?”

“In course, lieutenant, I’ll take ’em all for you” And John soon had the monsters gathered up, and on his shoulders

“You are a good fellow, John, and must have your share of the hash as well as stew Be sure, John, that you don’t absent yourself to-morrow I wouldn’t have you miss the mess for the world There’s too much at stake, so remember A day lost to a good stomach is a serious grievance You not only cannot recall it, but it affects your health the day after Don’t incur any such peril”

And thus talking, Porgy led the way, and the two parties disappeared together, taking the backward route to the camp

WOODCRAFT¹
[1852]

PORGY PHILOSOPHIZES

THE MOMENT we choose for reintroducing Captain Porgy, and his late lieutenant to our readers, is one which is usually found to fulfil all the conditions of happiness to the ordinary mortal They have dined Crouched at ease, under the shadows of an enormous oak, they have feasted

upon the simple fare provided by the hands of their excellent cook, and have done the amplest justice to the thin slices of broiled ham, “done to a turn,” and the brown hoe-cake, in the proper composition of which, Tom had established in camp the most enviable reputation These constituted the sum total of their commissariat The sufficient potations of oily old Jamaica had followed, and with a sense of physical satisfaction which greatly brightened the prospect, Captain Porgy leaned back against the shaft of the tree, and closed his eyes in order justly to enjoy it

That complacent sort of reverie which usually occupies every mind, after the noon-day appetite has been subdued and satisfied, had already seized upon our corpulent captain Under its present influences, the state of his affairs began to look less gloomy The circumstances which more particularly pressed upon his thoughts at this juncture—the loss of his late employment, the involvement of his estates, the supposed abduction of all his negroes, the danger which threatened at the hands of certain creditors—sharks, in shoals, lying in wait, like tigers of the land, seeking what they may devour—these crowding and dismal figures upon his landscape which, before he dined, had rendered his thoughts a very jungle, worse than Indian, of lions, tigers, and snakes of mammoth dimensions—with the consummation of the noon-day meal, retreated from before his path, disarmed of most of their terrors, and, though still lurking and still hostile, looking so little capable of doing mischief, that our captain began to wonder at his own feebleness of soul which had, but a little while before, so greatly alarmed him on their account

A mild and soothing languor of mood, as if by magic, changed and modified all

¹This novel was first published as *The Sword and the Distaff* The title of the selection has been supplied by the editors Porgy and his companion have recently returned from the successful conclusion of their campaign.

the figures in his landscape and Nature, having gained time—which is the best capital, after all, as well in morals as in war—it was surprising how grateful and agreeable became the philosophy which she had taught our captain. He actually—to the amusement of Lance Frampton, who had tried in vain to soothe his melancholy mood as they rode together before dinner—began to chuckle aloud, yet unconsciously, during his reverie, and finally afforded to his young lieutenant an opportunity to twit him, good humoredly, upon his sudden change of humor, by snapping his fingers in the air, as if at the flight of some enemy, whom he had successfully combated.

"Well, I say, captain, you don't seem quite so sick of life as you said you were before dinner. I reckon you won't be shooting yourself, as you threatened, only a little while ago."

"Well, boy, what then? Is life less loathsome because one learns to laugh at it as well as hate it?"

"But you don't hate it, captain—not now."

"No, and for a good reason—because I no longer fear it. I see the worst of it. I see all that it can do, and all that it can deny, and I feel, let it do its worst, that I'm the man for it."

"And what's made you so much stronger now to bear, captain, than you were only an hour ago?" asked the youth, with an insinuating chuckle.

"Dinner, you dog, I suppose—dinner and drink. Is that what you mean? Well—I grant you. We are creatures of two lives, two principles, neither of which have perfect play at any time in the case of a man not absolutely a fanatic or a brute. The animal restrains the moral man, the moral man checks the animal. There are moments when one obtains the ascendancy over the other, and our moods acknowledge this ascendancy. Before dinner, my animal man was vexed and wolfish. It rendered me savage and sour. I could not think justly. I could not properly weigh and determine upon the value of the facts in my own

condition. I exaggerated all the ills of fortune, all the evils before me, my poverty, my incapacity, and the ferocious greed of my creditors. My soul was at the mercy of my stomach. But, the wolf pacified, my mind acquired freedom. The wild beast sank back into his jungle, and the man once more walked erect, having no fear. Philosophy, my boy, appears once more to comfort me, and the landscape grows bright and beautiful before my evening sun."

"Well, all's right then, captain, until you get hungry again."

"Poh, poh! boy—sufficient for the day is the evil thereof. God will provide. Vex me not with what to-morrow may bring forth, or refuse to bring forth. To-day is secure. That is enough, and the philosophy which to-day has brought, will, no doubt, reconcile me to-morrow. Hear you, Lance? It is the first policy in a time of difficulty or danger, always to know the worst—never to hide the truth from yourself—never to persuade yourself that the evil is unreal, and that things are better than they really are. When you know the worst, you know exactly what is to be done, and what is to be endured. In time of war, with the enemy before you and around you, you are required to see his whole strength, give him full credit for what he can do, and ought to do, and determine, accordingly, whether it be your policy to fight, or fly, or submit—whether you can fly—what will be your treatment if you yield, and what is the reasonable chance of safety or victory, if you resolve to fight. In time of peace the necessity is the same. Peace is only a name for civil war. Life itself is civil war; and our enemies are more or less strong and numerous, according to circumstances. One of the greatest misfortunes of men, and it has been mine until this hour, consists in the great reluctance of the mind to contemplate and review, calmly, the difficulties which surround us—to look our dangers in the face, see how they lie, where they threaten, and how we may

contend against them. We are all quite too apt to refuse to look at our troubles, and prefer that they should leap on us at a bound, rather than disquiet ourselves, in advance of the conflict, by contemplating the dangers with which we think it impossible to contend. I have just succeeded in overcoming this reluctance. I have arrayed before my mind's eye all my annoyances, and the consequence is that I snap my fingers at them. As old Jerry Sanford used to cry out when he was in a fight, 'Hurrah for nothing!' Jerry was a true philosopher. His motto shall be mine. Hurrah for nothing seems to me to embody the full amount of most men's matter for rejoicing."

"Well now, captain, it's a fine philosophy, I reckon, that'll bring a man to such a sort of feeling. But, if I may take the liberty, I'd just like to know, how such a philosophy can put a stop to the trouble, make the enemy quit the field, drive the creditors off the plantation, and fill the corn-crib when it's empty? I ask these questions with your permission, captain, seeing as how you've been good enough to talk to me upon your affairs, and your debts, and the troubles from the sheriff that you're so much afraid of."

"Afraid of the sheriff, boy! Who dares to say that of me! Never was I afraid of a sheriff in my life. D——n him! Let him come. I have the heart, or I'm no white man, to take the whole *posse comitatus* by the snout."

"*Posse comitatus*! Oh, I reckon you mean the deputies?"

"Ay, ay—the host of deputies—a legion of deputies if you will, from the Pee Dee to the Savannah. But you haven't caught my ideas, Lance. I must try and be more intelligible."

"I thank you, captain."

"You know, Lance, as well as anybody else, that I've been a d——d fool in my time."

"Yes, captain, to be sure."

Porgy's self-esteem was not pleased with so ready a concession.

"Well, boy, I don't mean exactly that

How the devil do you know anything of my folly?"

"Oh, I can guess, sir."

"Can you, indeed?" with a sardonic grin. "You are too knowing by half, sir—presuming to know, for one so young as yourself. I mean, boy, that I've done a d——d sight too many foolish things. This don't make a man utterly a fool."

"No, captain."

"Unless he continues to do foolish things, mark you."

"Yes, captain, I see."

"Most men, the wisest, do foolish things. I don't know, indeed, but that wisdom itself requires to go through a certain probation of folly, in order to acquire the degree of knowledge, which shall teach what folly is—what shape it takes, and how it will affect us. I suppose that it was in obedience to this law of nature, that my follies were performed. But my error was that I continued my probation quite too long. I was ambitious, you see, of the highest sort of wisdom. I made too many experiments in folly, and found them too pleasant to abandon them in season. The consequence was, that I began to grow wise only as I forfeited the means for further experiment. My wisdom had its birth in my poverty, and as it was through my follies that I became poor, I suppose, logically, I am bound to say that I was wise because I had been so great a fool. Do you comprehend me?"

"A little, captain, I think I see."

"You will understand me better as I go on. I wasted money—a great deal—ran into debt—sold negroes—mortgaged others—and when I joined the brigade, my plantation was mortgaged also—I can't tell you for how much. But, even if the British and torres had not stolen all the rest of my negroes, the sale of the whole of them would scarcely have paid the debt then, and there's some six years' interest since. A very interesting condition of affairs, you will admit, for my contemplation now."

"Very, sir."

"Now, to look fully these affairs in the

face requires no small degree of courage I confess, until I had finished dinner to-day, I was scarcely the man for it But that last draught of that blessed and blessing old Jamaica—did Millhouse and Tom get a good sup of it?"

"Pretty good, captain"

"They require good measure, both! Well Lance, boy, that last sup of the Jamaica seemed to warm up my courage, and I resolutely called up the whole case, didn't suppress any of the facts, looked at all the debts, difficulties, duns, and dangers, and said to myself, 'A fig for 'em all' Let the lands go, and the negroes go, and still—I'm a man!—a man!"

"That's the way, captain," responded the youth, with enthusiasm, seizing the extended hand of his superior, and pressing it with a real affection

"It was just when I had come to this conclusion, Lance, that I snapt my fingers I couldn't help it It was the spontaneous sign of my exultation, and as I did so, I thought I saw the d——d mealy face, blear eyes, hook nose, and utterly rascally whole, of my creditor M'Kewn, back out from before me, and take to the woods at a full run Along with him went the sheriff and the whole swarm of deputies, all of whom have been dodging about me the whole morning, shaking their d——d writs, ca sa's, fi fa's,² and a thousand other offensive sheets of penal parchment in my face I discomfited the wretches by that same snap of the fingers, and the adoption of old Jerry Sanford's cry of battle—'hurrah for nothing' has made me able to back poverty and the sheriff into the woods!"

From
VIEWS AND REVIEWS IN
AMERICAN LITERATURE
[1845]

JAMES FENIMORE COOPER
THE SPY

THE SUCCESS of the "Spy" was very great, and it at once gave Mr Cooper

reputation in Europe It may be said to have occasioned a greater sensation in Europe than at home,—and there were good reasons for this At that period America had no literature Just before this time, or about this time, it was the favorite sarcasm of the British Reviewers that such a thing as an American book was never read Mr Irving, it is true, was writing his sweet and delicate essays, but he was not accounted in England an American writer, and he himself,—no doubt with a sufficient policy—his own fortunes alone being the subject of consideration—took no pains to assert his paternity¹ The publication of the "Spy" may be assumed to have been the first practical reply to sarcasm, which, since that day, has found its ample refutation It was immediately republished in England, and soon after, we believe, found its way into half the languages of Europe Its farther and more important effect was upon the intellect of our own country It at once opened the eyes of our people to their own resources It was something of a wonder, to ourselves, that we should be able—(strange, self-destroying humility in a people springing directly from the Anglo-Norman stock)—to produce a writer who should so suddenly, and in his very first work ("Precaution" was not known and scarcely named in that day) rise to such an eminence—equalling most, excelling most, and second to but one, of the great historical romance writers of Britain This itself was an important achievement—a step gained, without which, no other step could possibly have been taken It need scarcely be said, that the efforts of a nation at performance,—particularly in letters and the arts,—must first be pre-

² "Ca" and "fi" are customary abbreviations of legal terms, "ca" for case and "fi" for fiat or order

¹ Irving's essay, "English Writers on America," published in the *Sketch Book* and included among the selections from Irving elsewhere in this volume, shows that this charge was unjust
